VIA ELECTRONIC MAIL:

Dear

Re: Request for Access to Records – Response
***Freedom of Information and Protection of Privacy Act* (FOIPPA)**

I am writing further regarding your request for access to records relating to ***"A spreadsheet of all inspections with as many parameters applied as possible from April 3, 2017, to November 14, 2023."*** In response to your request, attached is a spreadsheet containing the data related to compliance and enforcement inspections conducted by the BCER. Please note, a copy of these records will be published on the BCER's website within a minimum of ten business days after release. To find out more about proactive disclosure of requests, please access the BCER website: BC Energy Regulator (bc-er.ca)

Your file is now closed.

Pursuant to section 52 of the FOIPPA, you may ask the Office of the Information and Privacy Commissioner (OIPC) to review any decision, act, or failure to act with regard to your request under FOIPPA. Please note that you have 30 business days to file your review with the OIPC by writing to:

Information and Privacy Commissioner
PO Box 9038 Stn Prov Govt
4th Floor, 947 Fort Street
Victoria BC V8W 9A4
Phone: 250.387.5629 Fax: 250.387.1696
Email: info@oipc.bc.ca

If you request a review, please provide the OIPC with a copy of your original request, a copy of the BCER's response, and the reasons or grounds upon which you are requesting the review. Further information on the complaint and review process can be found on the OIPC website: https://www.oipc.bc.ca. Please write FOIIntake@bc-er.ca, if you have any questions regarding your request or require any further clarification.

Sincerely,

D. Keough
BC Energy Regulator

No concerns were noted at the time of inspection however the inspection was during a cooler time and not during the recent thaw.						Central			Road - Active
4-Apr-2017	0170703I7-001	PETRONAS Energy Canada Ltd.	12-Apr-2017		NTS: D 007-H/094-B-16	No	Truck	Passed Inspection (Complete)	12-Apr-2017	12-Apr-2017	Planned	This inspection is for the wellheads and general lease maintenance etc. Another inspection will be issued for all the equipment downstream of the wing valves. There were no concerns noted at the time of inspection.						Central		29559, 29791, 29792, 31185, 31186, 31187, 31188, 31189, 31190, 31191, 31192	Wellsite - Active Gas
4-Apr-2017	0170715671-001	PETRONAS Energy Canada Ltd.	12-Apr-2017		NTS: D 007-H/094-B-16	No	Truck	Passed Inspection (Complete)	12-Apr-2017	12-Apr-2017	Planned	This inspection is for the well equipment downstream of the wing valve and includes the test separator. There are a couple of comments; the d-A-7 meter has some crusty produced water precipitate around the temperature probe and also the threaded joint on the water line from the separator has the same deposit. Please address these if not already done so. As a note, there are calibrations for the pressure switches etc. that are last dated from Jan 2016. For the Progress meter calibration tags please add a column on the back where the orfice plate changes are made so that the condition of the orfice plate can be checked off (clean, sharp edges, not bent, properly set in the right direction etc.). If the 2 ESD valves in the test separator perform a shut in function along with the operational flow control please clamshell the needle valve sensing point on the group line. Check your shut down key for the separator to determine if the engineer has made this a shut down feature and get back to me as to this function. Thank you						Central	00017884		Facility - Active

5-Apr-2017	0170968330-001	Canadian Natural Resources Limited	20-Apr-2017	26-May-2017		No	Truck	Deficiencies Corrected	28-Jun-2017	13-Apr-2017	Complaint	The Mile 132 Road (POR 165) was inspected on April 5 and 6th in response to users complaining about the road condition. This inspection will deal with the Mile 132 road (POR 165). There are numerous water and sediment issues on the Mile 132 Road that are affecting the running surface/crown of the road plus there appears to be potential impacts to the stream at about km 4.1. Almost all of the ditches, culverts and take offs have not been cleaned out resulting in water and sediment issues. General Order 2017-010 has been issued for timely corrective measures to be taken to minimize the sediment issues into the fish bearing stream at km 4.1 as well as to open all culverts, ditches, take offs and other water management structures for the entire length of the road. This is the second order to CNRL to address issues on this road since April 2015. The Mile 132 road is not built for the traffic that it handles and there is a real need for considering long term solutions.		OGRR	13 (2)(g) 13 (1)(a) 13 (1)(c) 12 (d)	Relates To Road Maintenance: Technical Relates To Road Maintenance: General	There is enough willow, alder and other brush species along various point of the road that are interfering with the ability of snow to be plowed back further off the road so that it doesn't flow down the road saturating the running surface, creating erosion and sediment issues. This needs to be addressed. The ditches and culverts were not functional on the dates of inspection and under General Order 2017-010 the culverts and takeoffs were made functional. These need to be monitored on a regular basis during snowmelt (and rain events) and action taken when and where required. The road surface and slope drainage systems are not all functioning as they should be. While some work was conducted in 2015 and some improvement made, there was no long term solution realized for the entire road and some of the issues are back to the same condition they were in April 2015. Below are some observations that have been made since April 2015; Crown and Running Surface: The crown and running surface of the road fails at the time it is needed most, during any thaw and rain event. The failure of the crown and running surface results in water running down and pooling on the road and it has contributed to significant impacts such as seen during the last 2 of 3 years at the fish bearing stream at km 4.1. This failure of the crown and running surface is also found at various sections along the road. Ditches: In places along the road there are 2 or 3 ditch lines that do not effectively move water to culverts and results in water flowing down the road and/or saturating the road bed. These need to be clearly defined to enable water to flow to where is can be removed from the road prism. Takeoffs: Grading operations have cut the ditch too deeply and water bypasses these drainage structures. Some of these have been addressed under General Order 2017-010. Please assess the entire road for these structures and ensure they remain functional. Please conduct a assessment for long term solutions for the Mile 132 road and submit an action plan by June 1, 2017. Work can certainly be undertaken while preparing a plan for the road. There are a few sections along the road whereby the road does not self drain and aggregate is required. The corner and hill at approximately km 5.5 has been hazardous for permit holders over the years. This is a corner on a hill that lacks sufficient aggregate to ensure safe usage. 6-Apr-2017	0170511851-001	LNG Canada Development Inc.	12-Apr-2017			Yes	Truck	Passed Inspection (Complete)	12-Apr-2017	6-Apr-2017	Routine	Routine inspection of the LNG Canada workforce accommodation centre (WAC) and stream crossings over Beaver creek. The WAC is in very good condition after winter. Drainage systems are functioning well and very little post construction settling noted. Prior to winter re-contouring and berms were placed to encourage drainage away from existing fish habitat. Drainage ditches and sediment pond also functioning well. Stream crossings are in good shape and have not seen heavy industrial use this winter. Minor maintenance required of silt fencing post snow melt but generally it has stood up well over the winter. No issues noted.						South			Stream Crossing
6-Apr-2017	0171342792-001	Canadian Natural Resources Limited	20-Apr-2017	26-May-2017		No	Truck	Deficiencies Corrected	20-Nov-2018	20-Apr-2017	Complaint	This inspection is for the Cameron River Road (PDR 169). This inspection came as a result of complaints as to the overall road conditions with frozen/plugged culverts, an overly slippery non-draining running surface and water running down the road as the main issues. Some of the critical areas for culvert thawing have been forwarded to CNRL Construction Supervisor and he has been active on those issues. As a result of the failure to open the culverts on the km 1-3 hill water and sediment has flowed to the culvert at about km 3 and into a potential wetland. This potential impact has been forwarded to Enforcement Section and will be assessed when the snow has melted. Please consider long term solutions for the issues on this road. To aid in identifying and understanding the complexities of the road issues it is best to drive it under wet conditions and the issues then become self evident.		OGRR	13 (2)(g) 13 (1)(c) 13 (1)(a)	Relates To Road Maintenance: Technical	The snow was not plowed off the road far enough and as a result the ditch is full of ice and the water is running down the road in quite a few areas. Some of the areas have been communicated to CNRL Construction Supervisor and work is being undertaken. Examples of where the snow was not moved back is the km 1 to km 3 hill, km 8-km 8.3, km 9.6. Aside from proper snow plowing, the willow, alder and other brush is impeding the snow being removed far enough off the road surface so that it doesn't flow down the road. The ditches could also be cleaned out to provide a deeper pathway for water movement. The km 8 intersection with the Dark Road has always been a problem for the culvert being frozen/plugged and water spilling onto the Cameron River Road creating a very slippery running surface as well as sediment movement. Currently there is water flowing from km 8.2 and from the first 2 or 3 culverts (plugged/frozen) on the Dark Road. There needs to be a fix to stop having so much water flow to this one spot. The culvert at this junction is damaged at the inlet and contributes to the problem. Other areas of concern in regard to ditches and culverts not being functional include but not limited to; km 4.5 (no ditch at all), 9.4, 9.6, 9.7. The ditches need to be opened up especially at km 9.4 that involves a stream/NCD. There are quite a few areas that do not have adequate aggregate to allow the road to self drain. This includes but limited to the km 8 hill, km 13-14 hill. When one drives on the rod during wet conditions, the areas that require aggregate are self evident. The road surface and slope drainage systems are not all functioning as they should be. Below are some observations that have been made in the last few years; Crown and Running Surface: The crown and running surface of the road fails at the time it is needed most, during any thaw and rain event. The failure of the crown and running surface results in water running down and pooling on the road. Ditches: In places along the road there are ditch lines that do not effectively move water to culverts and results in water flowing down the road and/or saturating the road bed. These need to be clearly defined to enable water to flow to where is can be removed from the road prism. In some cases the ditch doesn't exist or it is far too shallow. Culverts; There is a culvert at about km 4.9 that is 1/2 squished and needs to be replaced. This could be done when the work at km 5 is being done this summer as long as there are no impacts in leaving repairs for that length of time.	Central			Road - Active
6-Apr-2017	0171423953-001	PETRONAS Energy Canada Ltd.	20-Apr-2017			No	Truck	Passed Inspection (Complete)	20-Apr-2017	20-Apr-2017	Routine	This inspection is for the short road (permit #2430) to c-55-K / 94-B-16 located at approximately km 1.5 on the Mile 132 road. No concerns were noted at the time of inspection.						Central			Road - Active
7-Apr-2017	0170148581-001	Venturion Oil Limited	7-Apr-2017		DLS: 10-36-081-14	Yes	Truck	Passed Inspection (Complete)	7-Apr-2017	7-Apr-2017	OGC Requested	Investigative Inspection Meet the Venturion operator on site. Found the main sales gas ESDV closed and the battery flaring solution gas from the 10-36-81-14 well. The facility was flaring approx. 17 e3m3/day and was not approved to do so. One of the blowdown valves had been converted to work as the group separator back pressure control. Found that condition # 2 and # 3 stated below in the approval dated May 8, 2009 to Husky Oil Operations were not being met. Venturion Oil also failed to notify the Commission of a planned flaring event as per D&PR 43(1). Condition # 2 : "In the event that the Vapour Recovery unit (VRU) is not operating (routine or non-routine shutdown) in a reasonable manner to capture and recompress the storage tank vapors for more than two-hour period , the 10-36 battery must be immediately shut-down to minimize the resultant flaring of gas." Found the VRU was not running to capture production tank vapors. Condition # 3 " During the truck loading operation at the 10-36 battery, all vented gas from the tanks must be captured into the VRU system." Found the truck vent connection was going to a sweetening scrubber and was no longer being captured into the VRU system. Noted that the group and test oil and water meters were overdue for meter proving. Action Items: 1. Submit the last 6 months of well test data for the wells flowing to the 10-36 battery that shows water cuts and tests as per D&PR 58. 2. Submit the last 6 months of VRU run time records 3. Correct the 10-36 battery shutdown logic such that it will not allow the battery to operate if the VRU is not running for more than a two-hour period. 4. Correct flaring volumes reported to the OGC in IRIS since the sales gas shut-in Jan 18/17 and the battery start-up Jan 23/17. Flared volume = group meter FE-1000 + pilot +purge + tank vapors. Ensure the flared volumes reported to the Ministry of Finance (MOF) are correct for this period. 5. Prove test and group oil and water meters. Please reply to OGC concerning the above action items.						South	00007696		Investigative Use

7-Apr-2017	037034465-001	Ovintiv Canada ULC	10-Apr-2017		DLS: 13-29-079-17	No	Truck	Passed Inspection (Complete)	10-Apr-2017	10-Apr-2017	Complaint	This inspection was conducted in response to a land owner complaint of water being released from the well pad to adjacent property without the land owners consent. The complainant also questioned whether this water was tested prior to allowing it to leave the well pad. The inspection noted that the berms on the South & East side of the pad each had an opening which has allowed accumulated water/liquids to drain off the pad, potentially flowing to the adjacent land owned by the complainant. This inspection is tied to Complaint file #037011156-001.						South		25638	Complaint
10-Apr-2017	037044866-001	Canada Energy Partners Inc.	11-Apr-2017	26-Apr-2017	NTS: A 020-D/094-A-04	Yes	Truck	Deficiencies Corrected	28-May-2017	10-Apr-2017	OGC Requested	Meet Butler Ridge Energy Services on site. Verify that well site and disposal pump shutdowns were inspected and tested Feb 3, 2017 by Sharp Instruments. Alarm callouts were verified by Vipond Controls. The casing transmitter and tubing transducer had calibration tags dated Feb 3, 2017 . No calibration reports with "As found," " As Left " readings for the tubing and casing transmitters were able to be provided at the time of inspection. Could not verify the accuracy of the pressure readings transmitted to the SCADA system. Found the tubing transducer was mounted on the disposal pump discharge beside a pulsation dampener inside the pump building approx. 15 ft from the wellhead with (2) piping isolation valves in between. This does not meet Drilling and Production Regulation 74. The pump PSV was set at 1200 PSI on Dec 16, 2016. Found the disposal fluid meter was installed on the pump suction between suction filter pots and was not pipe fitted to ensure adequate downstream pipe diameters before a pipe elbow for non turbulent flow through the turbine meter. Found the disposal well surface casing vent was not piped outside the wellhead enclosure. The casing transmitter was not hard piped to the wellhead. It was being supported by instrument tubing, that had a visible leak. The electrical Tech cable connection to the casing transmitter was loose and had black tape on the cable end, and needed re-doing to ensure the electrical was explosion proof. Action Items: 1. Submit the tubing and the casing transmitter calibration reports. 2. In the event operations resume: a) Locate the tubing pressure transducer at the wellhead. The isolation valve to be locked or car sealed open, as a shutdown is associated to transmitter output. install a calibration/verification "tee" on the transmitter. b) Complete the installation of the pump building floor drain high level shutdown switch. c) Hard pipe the casing transmitter to the wellhead. The isolation valve to be locked or car sealed open, as a shutdown is associated to transmitter output. install a calibration/verification "tee" on the transmitter. d) Re-locate the disposal meter to the discharge side of the pump. Ensure the meter is installed as per manufacturer's specifications with adequate up and downstream pipe diameters to ensure non-turbulent flow and accurate measurement. Please respond to OGC concerning the above items and to the listed deficiencies through the KERMIT system.		D&PR	47 (f) 11 (3)(a)(b)	Relates To Fire Prevention Relates To Protection From Hazards	Found that the wellhead surface casing vent piping discharge was inside the wellhead enclosure and not safely vented to atmosphere. The surface casing vent piping is required to be piped outside of the enclosure. The well site was not free of garbage, debris and unused equipment. Contaminated soil, floating timber planks, a used oil drum, were found to be in the produced water tank farm containment berm. The tank dyke was approx. half full of water and had a visible oil sheen. Discussed the situation with contractor for Canada Energy, during the inspection, who said that the soil/snow mixture was material impacted by the produced water spill that occurred in March 2017 (Incident 036296420-001). According to cptractor the current plan, to address the impacted material and fluid within the secondary containment, is to remove the fluid (with vacuum trucks) and the soil, and then transport the material and fluid to appropriate disposal locations. The debris would also be removed at this time. Please provide disposal documentation to by May 15, 2017.	Central		22031	Wellsite - Waste Disposal
11-Apr-2017	037062896-001	Ovintiv Canada ULC	12-Apr-2017		DLS: 15-30-079-17	Yes	Truck	Passed Inspection (Complete)	12-Apr-2017	12-Apr-2017	Routine	This site was inspected due to an erosion concern received from a nearby land owner. The insp found that a drainage ditch (within pad) on north side of pad has eroded and transported soils west off site to the adjacent field. This was discussed with company staff and is scheduled to be addressed/repaired in the next 2 months. Concern was received from land owner That soil has been washed off the well pad and deposited in to field. I contacted landowner on Apr 12/17 advise of our inspection and that ECA would be addressing/repairing the soil erosion problem in the next 2 months.						South		11372	Wellsite - Active Gas
11-Apr-2017	037064129-001	Obsidian Energy Ltd.	12-Apr-2017		DLS: 14-21-083-18	No	Truck	Passed Inspection (Complete)	12-Apr-2017	12-Apr-2017	Routine	This inspection is a follow-up to Inspection #36116372-001. This inspection has been given a conditional pass on the premise an automated system to isolate the well will be installed on 14-21-83-18 (WA 29) by 8 am on April 20, 2017 Inspection #36116372-001: This inspection has been given a conditional pass on the premise that H2S Detection and an automated system to isolate the well will be installed on 14-21-83-18 (WA 29) by March 15, 2017. As per section 39(4) of the Drilling and Production Regulation, "if an uncontrolled flow of oil or gas from a completed well, other than a well suspended in accordance with section 25, could produce a hydrogen sulphide concentration greater than 100 ppm in atmosphere within 50 metres of the well, the permit holder of the well must install and maintain (a) an automated system to isolate the well in the event of an uncontrolled flow of oil or gas, and (b) if the well is located within 1 600 m of a populated area, a hydrogen sulphide detection and alarm system that is continuously monitored and is capable of activating the automated system referred to in paragraph (a)." Field Inspection completed on April 11, 2017: -A hydrogen sulphide detection and alarm system has been installed -An automated system to isolate the well has not been installed. Left 2 voicemail messages (April 11 & 12, 2017) with (Penn West). Spoke with (Predator) on April 12, 2017 who said the issue would be addressed. Please provide documentation to OGC by 8 am on April 20, 2017 that the: -automated system to isolate the well in the event of an uncontrolled flow of oil or gas has been installed -that the hydrogen sulphide detection and alarm system is capable of activating the automated isolation system						Central		00029	Wellsite - Active Gas

25-Apr-2017	0171924G8-001	ConocoPhillips Canada Resources Corp.	25-Apr-2017			No	Walk	Passed Inspection (Complete)	25-Apr-2017	25-Apr-2017	Complaint	I inspected ConocoPhillips Water Withdrawal Authorization with ConocoPhillips rep on April 18th 2017. The authorization and related paperwork were found to be in compliance. I was not able to travel down the pipeline ROW until April 24th. I mentioned my concerns would be any sediment and erosion along the ROW and Alexander Creek and that I would be back the week of April 24-28. He mentioned to me that the ROW is muddy and that it was communication with ConocoPhillips construction people that some ground work and reseeding would be needed. I inspected the Point of Diversion of Alexander Creek and the pipeline ROW on April 24 and 25 2017. There are concerns at the point of water withdrawal and that the steep hill has as deep gouge in it and resulted in some mud being created. There were 2 layers of silt fence installed but the last length is too short and saturated sediment will make it way around the end of the fence in time as the spring melt continues and will definitely fail if there is a rain event. This needs to be remedied immediately. There are sediment fences along the pipeline ROW that are full of sediment and are close to failing. There is already a sediment issue into a stream from one set of sediment fences on the first hill of the pipeline ROW. This will be forwarded onto OGC Enforcement for an investigation. There is action that is required immediately to stop water and sediment from traveling down the ROW and entering the draw towards the stream. This inspection will show as a PASS but there are issues associated with the water withdrawal activities that need to be dealt with immediately. The matter has been forwarded onto OGC Enforcement for an investigation instead of issuing a deficiency at this point in time.						Central			Water Withdrawal

26-Apr-2017	0172093I4-001	ConocoPhillips Canada Resources Corp.	26-Apr-2017		DLS: 04-17-088-24	Yes	Truck	Passed Inspection (Complete)	26-Apr-2017	26-Apr-2017	Planned	Measurement inspection Meet ConocoPhillips Measurement Specialist and Caron Measurement technicians on site. The 4-17-88-24 well has been shut-in for about 2 years and has recently been designated as an oil well. The well was started up on April 20, 2017 .The meter proving was for the oil meter on the 3 phase separator dumping to production tanks. It was noted that the meter proving taps were downstream of the dump valve. A gravimetric prove was attempted , but did not yield proving runs with consistent meter factors. The meter factor was not changed from the bench proved factor. Specialist agreed to relocate the proving taps to upstream of the dump valve and re-attempt proving the oil meter using a master meter. Action items: 1. Obtain a live oil sample and perform a laboratory analysis to determine a shrinkage factor due to gas entrained in the oil for the next meter prove. 2. Relocate the proving taps to upstream of the separator dump valve. 3. Install calibration tags on the 4-17 separator gas meter MVS, ensure next calibration date is displayed on the tag. Submit the Fisher ROC EFM Report for inspection. 4. Found that Caron Measurements Density Meter last calibration was Oct 31, 2013. Please ensure that they calibrate this instrument be for any further use. Please respond to OGC concerning the above action items.						Central		28246	Measurement
26-Apr-2017	0173563O5-001	Trans Mountain Pipeline ULC	5-May-2017			Yes	Truck	Passed Inspection (Complete)	5-May-2017	5-May-2017	Routine	All work that had been conducted at the time of inspection had been conducted in an environmentally responsibly manner. I have no concerns regarding the work being done associated to this permit.						South			Related Activities
27-Apr-2017	0173338B8-001	Ovintiv Canada ULC	27-Apr-2017		NTS: C 041-G/093-P-09	Yes	Truck	Passed Inspection (Complete)	27-Apr-2017	27-Apr-2017	OGC Requested	Start-up Inspection Meet with EnCana Project Team and Project Manager. Review the OGC Facility Permit conditions. Inspect that an ERP and a flare log were available in the control room. Inspect the plant accounting meter configurations, and commissioning reports. Inspect the electrical QAQC. An updated car seal list was provided at the time of inspection. Performed an spot check on a selection of car seals throughout the inspection of the production equipment. Witness a successful Mode 1 ESD function test when (2) fire-eye was tripped in the overheads compressor building Q-410. Action items: 1. Request that they submit a brief description concerning the levels of security protecting the facility PLC and network host system from external intrusion. Inquire as to if the PLC can be taken off factory defaults for an extra level of security. 2. Once the facility is pressurized and the HP and LP flare headers purge rates are set confirm if the HP and LP main flare meters are reading the correct purge rates. Determine if a (2) stage flare reporting structure (main flare meter + purge gas) is required. Found that the HP flare meter low flow cut-off was set 0.0 m/s. Confirm if this is within the manufacturers specification of +/- 5% accuracy. 3. Ensure that monthly flare reports are submitted as required. Follow-up with EnCana PA. 4. Ensure that written log of the VRU and the overheads compressor are kept. Follow-up withMaintenance Coordinator. 5. Request signed and dated flare meter maintenance report or SANCO Check Sheet is completed with flare metering commissioning. 6.Prior to start-up ensure the sales meter FE-1096 K-factor is set the same as tested by TransCanada Calibrations at 882.87 in both the Daniels US meter and in the Fisher ROC. Daniels commissioning report indicates the meter passed and the ROC could receive the max frequency of 5000 Hz when commissioned. Once the meter is operation verify that the meter is reading correctly. Use Daniels meter diagnostics. Develop a meter verification procedure (Speed of Sound Test Report) minimum requirement for delivery point facility to facility is semi-annual. Inform as to what maintenance will be conducted. Update the inlet/sales gas analysis with a blended analysis within 2 weeks of operation. 7. Add flow check documentation to the OGC Start-up Binder for all accounting meters. Submit the Start-up Binder to OGC with 48 hours after sales has commenced. 8. Notify the Commission of the date and time sales commenced. 9. Submit final Spartan Controls commissioning documentation (Wet -Test) for FE-5422 and FE-1097 when complete. 10. Provide on a USB data stick: a) Plant Shutdown key. b) Welded Piping Section QA/QC documentation (As discussed). c) Instrument and GHT tubing pressure tests data d) Facility Metering Schematic						South	00018346		Facility - Start Up

28-Apr-2017	037258105-001	Canadian Natural Resources Limited	1-May-2017		NTS: A 085-H/094-A-13	No	ATV/Snow Machine	Passed Inspection (Complete)	1-May-2017	28-Apr-2017	Follow Up	Follow-up Inspection This inspection was initiated due an inquiry as to the values reported to the BC-S1B Monthly Disposal Sheet and subsequent email received on April 26 2017 from CNRL which shows SCADA trend on March 22 at 20:08 hrs of the tubing pressure exceeding of the max well head injection pressure of 8100 kpa for approx. 2 hours and 12 minutes. The maximum wellhead injection pressure reported on the BC-S1B was incorrectly reported for March 2017. Meet Techmation, electricianand use ATV to get into the site, due to extremely poor road conditions. Verify the disposal meter K-factor and that flow was accumulating back to the Fisher ROC ok. Witnessed (2) successful wellhead ESD valve closures at 7900 Kpa. Found the tubing and casing transmitters were ranged to 50,000 Kpa. The technician lowered the range to 12,000 Kpa to increase resolution. The Fisher ROC analog inputs for the tubing and casing were calibrated. The technician also enabled the Fisher ROC alarms for the tubing and casing transmitters and set values in the Fisher ROC. The idea is to generate an alarm on the SCADA host at the plant to allow the operator time to adjust the choke set point to avoid a high tubing pressure shutdown. Tubing- high alarm set at 7850 Kpa- Tubing high high alarm set at 7900 Kpa. Casing high alarm 500 Kpa- Casing high high alarm set 510 Kpa. Action Items: 1. Poll the a-85-H/94-A-13 Fisher ROC for the tubing and casing high, and high high alarm points. Generate and record (history) high and high high alarms on the SCADA host system for the tubing and casing transmitters at the c-18-I/94-A-13 facility. 2. Submit evidence (documentation) that shows SCADA data for the disposed volumes (recorded as yesterdays or the daily total) are being uploaded correctly into CNRLs Production Volume Reporting software (PRV). 3. Correct the BC-S1B report that was submitted for March 2017. Ensure the process that caused the error has been corrected. Please respond to OGC concerning the above action items. Please provide a copy of the procedure used and the results of the inspection to OGC by May 17, 2017. Please remove the debris from the secondary containment for the Produced Water Tank associated with the dehy. Please provide an update with photographs to OGC by May 17, 2017. As per Drilling and Production Regulation, Section 39(3) A permit holder of a completed well or facility must install and maintain fencing or take other access control measures to prevent unauthorized access to the well or facility if (a) the well or facility is located within 800 m of a populated area, or (b) a populated area is within the emergency planning zone for the well or facility. Please ensure access is restricted (IE acces through open gates) and the fence is maintained. The catchment bin under the truck load out for the tank farm is full of fluid with free phase hydrocarbons. Please address. Please provide disposal documentation to OGC by May 17, 2017. 2-May-2017	037278767-001	PETRONAS Energy Canada Ltd.	3-May-2017		DLS: 09-24-088-25	Yes	Truck	Passed Inspection (Complete)	3-May-2017	3-May-2017	Complaint	The OGC received notice of concern over the clean up of migrating contamination from Progress location 9-24-88-25. I would like to thank Progress Lead Operator for changing his other work task and accompanying me on this site visit. The following are some observations made on May 2 2017; 1) There is slumping of the fill material 2) There is a lot of rock in the fill material 3) There is no top soil on the fill material 4) There is no vegetation growing on the fill material 5) There are bucket width excavations that are still open and in the private land hay field 6) The fine soil particles have migrated off the fil material and into the hay field Generally this reclamation project is incomplete, no work was done on it last year and the landowner is not aware of when the reclamation will be completed. I am requesting an action plan by the end of the day on May 9, 2017 including a time frame to complete the outstanding work. I am also requesting a copy of sampling that was done to determine the extent of contamination. Please send that by the end of the day May 9, 2017. Thank you. This inspection will show as a "pass" due to system limitations, however, there are concerns that need to be addressed as per my comments.						Central		00279	Complaint
2-May-2017	037279850-001	PETRONAS Energy Canada Ltd.	3-May-2017			No	Truck	Passed Inspection (Complete)	3-May-2017	3-May-2017	Routine	It was noted that 3 concrete barricades have been installed at the bridge on the access to Progress location d-a-55-A / 94-B-16 located off approximately km 21.3 on the Gundy Mile 120 road. There are a few concerns on the access; 1) A review of road permit 4109 that Progress has does not include the bridge and the first section of road off Gundy Mile 120. This section of road is non-tenured. 2) The barricades were installed due to safety concerns with the bridge which is appreciated, however, there needs to be signage warning that the bridge is closed at a safe distance from the bridge as the barricades are not noticed until you are very close. 3) Since the well at the end of the road is Progress' you might consider expanding road permit 4109 to include the entire length of road including the bridge off Gundy Mile 120. What are your plans with this bridge and the road? I would like some feedback by May 10 2017 please. This inspection will show as a "PASS", however, there are concerns on the non-tenured portion of the road that Progress has been using for several years.						Central			Road - Active

Review a sample of mechanical QA documentation prepared for inspection of 10 spool sections associated with K-2400. During the audit Alstar noted questions and has responded via email as of May 4 2017. The email response is attached to the inspection report. A follow-up inspection will be arranged for the week of May 22, 2017 to audit the mechanical QA associated with on-site process pipe welding.						South	00018270		Facility - Construction Eng.
3-May-2017	037441210-001	Polar Star Canadian Oil and Gas, Inc.	10-May-2017			No	Truck	Deficiencies Corrected	6-Jul-2017	3-May-2017	Planned	COMMENTS: - This inspection is for the Polar Star Bratland Creek Road.		OGRR	13 (1)(a)	Relates To Road Maintenance: Technical	In attempting to inspect the Bratland Creek road (road #17841, I was only able to drive to km 3, where there was a large pool/pond of water that was breaching the roadway and flowing over the road due to a culvert not draining. The culvert is approx. 20 meters away from where the water is overflowing the roadway, but has no flow going through it. The roadway is eroding due to the overflow across the road. 4-May-2017	037357396-001	Black Swan Energy Ltd.	5-May-2017		NTS: C 038-C/094-H-04	No	Truck	Passed Inspection (Complete)	5-May-2017	4-May-2017	Planned	Construction Inspection Meet Allardyce Bower Consulting (ABC) Project Engineers. Walk through new phase 2 production equipment buildings. Discuss mechanical QA audit. Instrument tubing, and glycol heat tracing are considered to be process piping. It will be required to be included in the Mechanical QA package, and require a 10 min. visual leak test. Arrange to do the Mechanical QA Audit in conjunction with the Measurement Inspection on May 18 th. Action Items: 1. Verify with Black Swan Production Accounting (PA) if the new fuel gas buyback meter buyback on the Alliance meter skid is a PA meter . If so, add the PA meter to the metering schematic diagram BFD-00-01-001 and to the meter list and submit revised schematic and list. 2. Verify with Black swan PA if the level transmitters are used to report monthly opening and closing inventories. If so then these level transmitters and phase 1 tank level transmitters are also considered to be accounting meters. Please update metering schematic and list as required. Ensure that all the tank level transmitter configurations (existing and new) are printed and are available for inspection for the measurement inspection. DI-electric constants are different for water and condensate and will be inspected. 3. Alliance sales meter- Use diagnostic software to analyse and report meter performance. Check sales contract requirements for verification frequency and advise as to the requirements. Ensure that provisions are made to send the ultra sonic meter tube/run to Trans Canada Calibrations in 7 years as per the Measurement Guideline Table 2.5-1 Gas Meter Maintenance Frequency for calibration/verification. 4.Determine if the Alliance sales gas H2S analyser and water-dewpoint analyser have an ESD function associated with either high H2S or high dewpoint that would initiate the closing of the plant outlet ESD. If so then ensure the analyser sensing points are locked or car sealed open. 5.Acid gas compressor modulating PSV pilots- Consult the manufacturer and determine what affect tying the pilot vent port into either the HP or LP flare header would have on the operation of the pilot. Perform a HAZOP risk assesment to examine the risk of venting acid gas to the atmosphere in the event the pilot was to operate, or event of the pilot failure. 6. Ensure that the mechanical QA package includes mechanical QA documentation for process instrument tubing and the 10 visual leak test documentation. 7. Prepare a sample of 10 spools (Alliance sales tie-into the Spectra sales, refrig, amine, compressor, sales building, acid gas,) and a sample of mechanical QA documentation for on-site welded-piping for audit. Include in the mechanical QA package the Construction Data Report and a process map for the 1330-2 form registration with BC Safety Authority as discussed to list all the steps required to obtain a CRN. Please respond to OGC the above action items.						Central	00018237		Facility - Construction Env.

8-May-2017	037549870-001	Trans Mountain Pipeline ULC	18-May-2017			Yes	Truck	Passed Inspection (Complete)	18-May-2017	8-May-2017	Follow Up	Follow up site visit on Water Act permit 9642747 on May 8th with City of Abbotsford representative, BGC contractor and Kinder Morgan representatives. Stream flowing at the time of inspection. Red staining on rocks, originating upstream of site is an indicator of high water mark. There has been no significant high water since the release from the upstream quarry. Stream and stream banks are stable, no signs of displacement of in stream materials nor any signs of erosion from approaches. Invasive plants have been removed since last inspection and horsetail, grasses, gravels, fines and organics are slowly infilling the coarse rock in stream fill. Approaches have greened up quite well in a short period of time. Variable survival from riparian planting, approximately 2/3 survival noted from Kinder Morgan, some species are performing better than others but will fill in with time. A top up of riparian planting requested by the City was accepted by Kinder Morgan as long as NEB line of sight requirements are adhered to. No issues noted.						South			Stream Crossing

9-May-2017	037447282-001	Orphan Fund	10-May-2017		DLS: 09-04-080-17	No	Truck	Passed Inspection (Complete)	10-May-2017	10-May-2017	Routine	Surface water is being restricted from naturally draining off the adjacent field by the berm surrounding the well pad. The accumulated water has negatively affected the crop production on this piece of land. Possible resolution would be to establish a ditch on the east side of the pad to allow this water to drain north then west. There would have to be either a culvert installed or a swale cut in the access road to allow water to move off the field. The land owner has asked about resolving this problem. Water has also accumulated in the NW corner of the pad and is draining off the pad due to a breach (erosion) in the berm. I will test this water tomorrow if weather conditions allow.						South		21415	Wellsite - Inactive
9-May-2017	037448516-001	Sanling Energy Ltd.	10-May-2017		NTS: A 055-E/094-I-10	No	Helicopter	Passed Inspection (Complete)	10-May-2017	10-May-2017	Planned	2 suspended wells on location. Both are chained and locked. Surface casing vents checked, ok. Last production December 2006. A quantity of unused equipment and materials remains on the lease. As this site is beyond the 10 year inactive timeframe identified in the DPR "Unused Equipment" definition, it must be removed. Please submit a plan to OGC by May 31 2017 for removal of this unused equipment. (Photos available) Signs on location say "Spyglass" and need to be changed to current Operator. Emerg # is ok.						North		20473, 21293	Wellsite - Suspended

9-May-2017	0374525 93-001	Sanling Energy Ltd.	10-May-2017		NTS: A 052-E/094-I-10	No	Helicopter	Passed Inspection (Complete)	10-May-2017	10-May-2017	Planned	Well is suspended. Wellhead chained and locked. Landed with a helicopter but too wet to approach the well. Last gas November 2007. No surface casing vent flow check. Wellhead, well building, tower, 2 chem tanks on location. This well is approaching 10 years with no production. The "Unused Equipment" definition in the DPR requires the site to be free of unused equipment for sites inactive 10 years or longer. Please submit a plan to remove the unused equipment, to OGC. Photos available						North		20243	Wellsite - Suspended
9-May-2017	0374539 35-001	Sanling Energy Ltd.	10-May-2017		NTS: A 025-E/094-I-10	No	Helicopter	Passed Inspection (Complete)	10-May-2017	10-May-2017	Planned	Well suspended at time of inspection. Wellhead chained and locked. Surface casing vent checked, ok. No gas migration. Last gas production May 2009. Chemical observed in chem tanks; partially full. If site is to remain suspended for some time, consideration should be given to removing chemicals. Well sign displays as Spyglass. Should be updated to reflect current Operator. Wellhead, building, 2 chem tanks, TEG.						North		20471	Wellsite - Suspended
9-May-2017	0374549 13-001	Sanling Energy Ltd.	10-May-2017		NTS: A 013-E/094-I-10	No	Helicopter	Passed Inspection (Complete)	10-May-2017	10-May-2017	Planned	Well was suspended at time of inspection. Wellhead chained and locked. Surface casing vent checked, no flow. Last gas production October 2009. Two chem tanks remain on the location; one tank 3/4 full (methanol), one tank empty (cortron). Consideration should be given to removing the chemicals from this lease if it is to remain suspended for some time. Comment: 1) Pool of Cortron observed on floor of building. Evidence that some of it has leaked out the back wall of the building some time ago. Cortron tank is now empty but tank valve is closed; perhaps it is bypassing. Photos available 2) Signage on site is for Spyglass. Signage should be changed to reflect current Operator.						North		20244	Wellsite - Suspended

10-May-2017	037690028-001	FortisBC Energy Inc.	18-May-2017		From: NTS: D 076-J/092-G-02 To: NTS: D 016-C/092-G-07	Yes	Truck	Passed Inspection (Complete)	18-May-2017	10-May-2017	Routine	Brief stop in Maple Ridge at Westview park to view integrity dig in progress on the 1049 line, segment one. During pigging operations an anomaly was detected along the linear seam of the 323.8mm pipe. Site had been exposed and I was able to view the section of pipe prior to removal. Section of pipe where the anomaly was detected is to be removed and taken to the Fortis shop to verify. Excavated area within an existing park and no additional cutting or clearing was required. Pipe initially installed in or around 1957 and visually it still appeared to be in good shape. No issues noted.					South			Pipeline - Active

10-May-2017	037691547-001	FortisBC Energy Inc.	23-May-2017		From: NTS: D 008-K/092-G-02 To: NTS: C 056-K/092-G-02	Yes	Truck	Passed Inspection (Complete)	23-May-2017	10-May-2017	Routine	Routine inspection of FortisBC pipeline project 23984 segments 1, 2 and 3 under permit 100100312 also known as the CTS looping project on May 10, 2017. Looked at the Mariner Way track drill crossing and walked a small section of right of way, sediment controls still in place and crossing still underway at the time of inspection. Visited both sides of the Loughheed Highway crossing. Reeming completed and pipe pull about to commence (pulling just started at the end of my inspection). North side utilized a significant amount of mats to minimize ground disturbance. Cuttings, settled drill mud is being taken to Ground-X, a material disposal waste site. This was prior to the incident later in the day on May 10 and again on the 11th and I was unaware of the incident that occurred on May 4, these incidents are not included in this inspection and are currently under review. Site preparation, initial stripping and direct pipe operations in Surrey ongoing. Stopped by track bore just starting pilot hole on 104th and 140th street, approximately 140m drill which is the last long drill required on the South end of the project. Foundation works at the station sites is ongoing. No issues noted during inspection.						South			Pipeline - Construction Env.

Wellhead chained and locked. Meter skid locked. This site shows as active in Kermit. The last production date is December 2015. Please ensure the appropriate suspension notices have been submitted to the BCOGC.						South		17681	Wellsite - Inactive
15-May-2017	037615693-001	Orphan Fund	16-May-2017		DLS: 16-34-083-22	No	Truck	Passed Inspection (Complete)	16-May-2017	16-May-2017	OGC Requested	Site is shut in. Wellhead chained and locked. Site shows as active in Kermit. The last production report is dated Jan 2016. Please ensure the appropriate suspension reports are submitted to the OGC and a Form BC-11 to the Ministry of Finance. The south berm has been breached and water is running onto the lease from the surrounding land. Water is actively flowing from the lease at the access road entrance into the road ditching. Sampling was conducted at the point where water was leaving the lease and was found to meet acceptable limits. Chlorides <32, Hydrocarbons no sheen present in this water, Electrical conductivity .248, PH 7. There was hydrocarbon staining on the lease as well as hydrocarbon sheen in the water surrounding the building, pump jack and secondary containment tanks. Parc 400 tank secondary containment is overflowing onto lease (visible contamination). Methanol tank secondary containment is overflowing onto lease (visible contamination). 1/2 barrel by building entrance door is overflowing onto lease (visible contamination). Produced water tanks secondary containment is approximately 1/3 full. Hydrocarbon staining on ground around the building and pump jack. There is a visible hydrocarbon sheen on the water in and around the building and pump jack and wellhead. Pig cap requires a chain to be installed. Valve / bull plug by the pig station is leaking with ground staining. One culvert is plugged on the access road and the material around the culvert is sinking. Due to recent high water there is water running across the access road which is causing surface erosion channels to form. Water accumulation and berm inspection form completed and forwarded to OGC orphan sites.						South		26407	Wellsite - Inactive

There is an identifiable path the water has taken to leave the lease area. The land farm is more recent addition to the lease area. Where did the soil come from, what is the contamination and what are the plans for this? Thank you.				
16-May-2017	037832351-001	PETRONAS Energy Canada Ltd.	29-May-2017			No	Truck	Passed Inspection (Complete)	29-May-2017	26-May-2017	Routine	This inspection is for Progress road#3701 which is the access to b-75-D 94-A-13. This is located approximately at mile 109.5 on the Alaska Highway. There a crushed up culvert that needs to be removed. There is also a lease sign just before the decking site that should either be erected or removed. The amount of road under tenure according to our WHISTLER program appears to have a gap between where the access starts and the main access to facility d-87-D. Please check into this. Thank you. 18-May-2017	037698608-001	Black Swan Energy Ltd.	19-May-2017		NTS: C 038-C/094-H-04	No	Truck	Passed Inspection (Complete)	19-May-2017	18-May-2017	Planned	Mechanical Q/A Inspection Meet Allardyce Bower Consulting Inc. engineers on site. Review sample mechanical Q/A package for on-site welding for two spools for common vent line from truck-out vent to KO surge drum on the produced water and condensate tanks. Review Q/A example prepared for the OGC for Amine- Alco skid. Ask that spool drawings are added to example. Ask that for documentation to show that the Welder is qualified in that weld procedure with a gap no greater than 6 months + 1 day. Inspect the PSV pilots on phase 1 and phase 2 acid gas compressors. Phase 2 acid gas PSV pilots are to be switched to modulating pilots and the pilot dome vent ports are to be tied into the HP flare. Ok to vent the modulating PSV pilot spring casing vent port to atmosphere as there is a stainless steel diaphragm in the pilot separating the process side from the spring side. Inspect FE-42303, FE-54511 and FE-45803 and the Alliance Sales fuel gas buyback meter. Review the configuration for the new accounting meters in the HMI . Verify that the new liquids meters were pulsed back to the plant HMI. Sales gas buyback upstream diameter was corrected to match the meter run tag stamped dr value of 2.899 in. The sales meter 485 modbus communications were not installed at the time of inspection. Verify that the production tanks and LPG bullet levels have been added to the measurement schematic and are now deemed to be accounting (opening and closing inventory). Action items: 1. Alliance fuel gas buyback meter- Requires new flowcheck + screen shots and to correct the upstream pipe diameter on the calibration report to match dr value of 2.899 in. 2. Provide an example of the piping mechanical Q/A where the heat number is traced through all of the Q/A documentation for (1) manufactured spool. 3. Include in the mechanical Q/A documentation prepared for the OGC the Qualifications of the Manufacturers' third party " Global Quality Assurance" Q/A inspector. 4. Install Modbus diagnostic alarm(s) back to the plant HMI for the Alliance Ultra-sonic sales meter to indicate when maintenance is required. 5. Submit the revised measurement schematic. Please reply to OGC the above action items.						Central	00018237		Facility - Construction Eng.
19-May-2017	037709436-001	Shell Canada Limited	23-May-2017		DLS: 02-30-079-19	No	Truck	Passed Inspection (Complete)	23-May-2017	23-May-2017	Planned	Well has been abandoned. 23-May-2017	037735076-001	Shell Canada Limited	23-May-2017		DLS: E 02-32-079-18	Yes	Truck	Passed Inspection (Complete)	23-May-2017	23-May-2017	Routine	No problems found on inspection. Rig is very clean.						South		29639	Wellsite - Drilling Rig
23-May-2017	037737630-001	Tourmaline Oil Corp.	23-May-2017		DLS: 02-11-080-16	Yes	Truck	Passed Inspection (Complete)	23-May-2017	23-May-2017	Planned	Start-up Inspection- Condensate/Produced Water Pump Building Inspect produced water S-9000-1 and S-9010-1 tank level displays on the plant HMI. Noted that the S-9010-1 condensate-water interface transmitter was not set-up. Noted that the descriptor arrow for the pipeline on the HMI display was incorrect and showed the produced water was going to 13-25. It should be going to 12-14-80-16. The LPG pump building was not on-site. The produced water and condensate lines were in service. The LPG line was bled down and required purging. Inspect the LPG truck load-out. Found that a Tri-Mac truck while loading LPG was improperly grounded. The truck driver had the Scully ground clamp connected to the tanker mud fender and not connected to the Scully ground pin on the tanker. Inspect the produced water/condensate pump building. Inspect LPG bullet level transmitter indication in the plant HMI. Found S-9700 bullet level (104 m3) and S-9850 bullet (97m3), S-9750 bullet (95 m3), and S-9800 bullet (95 m3) . Two transmitters agreed, S- 9850 was close to 95 m3 but S-9700 transmitter indicated 104 m3 which was 9 m3 off of the two transmitters that agreed. Action items: 1. Contact Tri- Mac trucking company to report that a truck driver loading LPG was found to be improperly grounded during loading. Ensure truck ground procedures are reviewed and are being followed. (ie: ground the tanker to the Scully ground pin on the tanker). Perform spot checks during loading to ensure the truck drivers are connecting to the Scully ground pin on the tanker. 2. Check the calibration of LPG bullet level transmitters (S-9700, S-9750, S-9800, S-9850). The value displayed in m3 on the LPG bullet strapping tables indicates cubic meter volumes to one decimal place, but the plant HMI does not display to one decimal place. The plant HMI should indicate bullet levels to the same accuracy as the Strapping Tables (Maxfield Inc.). 3. Install a snow/ice shield and identify the ESD push button on the outside of the Produced Water Pump Building. 4. Commission/repair S-9010-1 condensate/water tank interface transmitter. 5. Correct the descriptor on the produced water line tag on the HMI display. The produced water is being pumped to 12-14-80-16 location. 6. Found the produced water truck load ground laying in the dirt. To protect the cable from damage a cable coil hanger could be installed on a post by the truck loadout. 7. LPG- Pump Building- Arrange for an inspection when the LPG pump building is ready/prior to operation. Please respond OGC concerning the above action items.						South	00026229		Facility - Start Up

25-May-2017	037831666-001	Black Swan Energy Ltd.	26-May-2017		NTS: C 038-C/094-H-04	Yes	Truck	Passed Inspection (Complete)	26-May-2017	26-May-2017	Planned	Phase 2 Leave-To-Open Inspection Meet with ABC Engineering field staff. Review a sample of documentation prepared for piping mechanical Q/A inspection. Review accounting meter, configuration, calibration reports that were in the binder prepared for the OGC. Found that FE-80733 Boiler fuel gas for plant process and heat utility boilers was not included as a PA meter. The OGC considers this meter to be an accounting meter for carbon tax reporting. Found that (3) liquids meters (debutanizer- LPG & C5+) and the condensate stabilizer may not be truly used for reporting to the MOF. ABC Engineering is to meet with the Black Swan PA of NR Force Consulting to clarify designation of these meters for both phase 1 and phase 2. Witness a successful ESD function test initiated by tripping BSH 90801 Fire Detector in the new Refrigeration Compressor Package. Perform a walk through and inspection of all production equipment. Found TFE insulator not installed between the pipe support and piling on the new Alliance sales gas line. The Alliance Sales Meter Building is to remain isolated (double block and bled) until the Alliance sales meter and analyzers (H2S+ water) are to be commissioned and communications are established back to the plant HMI. Found PSV stop valves in production packages not open at the time of inspection. Found that the piping bolt-up torqueing was being done at the time of inspection. The Commission will hold off issuing the LTO until confirmation is received that the above two items are complete. Action Items: 1. Add to prepared piping mechanical Q/A documentation for Welding Visual Examiners Qualification-Certificate from Natural Resources Canada- Visual Acuity test Report. A Manufacturer Shop Inspection Report and the Technicians Qualifications. 2. Submit - Amendment to the OGC for Acid Gas dilution control. 3. Review and Clarify designation all plant PA meters (Reporting to MOF) and submit a revised Measurement Schematic. 4. Alliance Pipeline- Install TFE slider to insulate the sales pipeline from facility piling. 5. Alliance Pipeline- Install spill catcher and ground. 6. Phase 2 Propane Accumulator- Install brass fitting, ground load point, install truck load grounding strap, and load procedure signage. 7. The Refrigeration Process Building has electrical rotating equipment. Examine the need for fire detection equipment. 8. Ensure all stop valves on PSVs in the plant are locked or car sealed opened prior to purge and pressurization. 9. Ensure piping bolt-up torques and Q/A is complete prior to purge and pressurization. 10. Submit the calculation for the gas plant classification. 11.Refrigeration Compressor- Complete bolt-up of Hot Start EXP electrical enclosures. Install valve handles on lube oil Separator PSV stop valves. 12. H-802 and H-807 Heat Medium- Check if spring casing on PRV- B0703 and PRV- B0203 can be changed to allow the casings to be vented outside the building. 13. Once the plant is in operation- Confirm LPG bullet, produced water, and condensate tanks levels agree when equalized and in common. 14. Install modulating pilots on the new acid gas compressor PSVs. Re-tube pilot dome vents to HP flare. Re-tube spring casing vents to atmosphere.						Central	00018237		Facility - LTO

29-May-2017	037982217-001	FortisBC Energy Inc.	7-Jun-2017		From: NTS: D 008-K/092-G-02 To: NTS: C 056-K/092-G-02	Yes	Truck	Passed Inspection (Complete)	7-Jun-2017	29-May-2017	Incident	Follow up on fluid release incidents adjacent to the Lougheed highway and also Mundy creek during trenchless drill operations for the CTS looping project on May 29. The release locations adjacent to the highway have been cleaned and there is no evidence of remaining fluid. The Mundy creek release was left "as is" as it was believed that any cleanup effort would be more detrimental to the stream, isolation of fluids within the stream was completed where practicable. Site visit on Mundy Creek occurred four days after release and only very minor amounts of drilling gel remained on a few larger diameter rocks and there was no visual evidence of suspended solids. The release that occurred throughout the evening of the 28th was being cleaned up at the time of inspection. No evidence of this recent event entering watercourses, dry land only. Requested turbidity reports and a wrap up of the Mundy creek release once the pipe pull had been completed and the stream isolation measures (sandbags) that were implemented during the release are removed from the creek. EMP and drilling execution plan was requested to check its conformance to CSA Z662 6.2.11.1 as well as records of the down hole pressure or "stick diagrams" for these events. A Form D has been requested by the Director of Security and Emergency management for these incidents to be submitted into Kermit within 60 days of the incident. The reporting of the last two incidents has been completed within the requirements for minor incident reporting, corrective actions implemented appear to be working.						South			Incident

30-May-2017	037897896-001	Tervita Corporation	30-May-2017		DLS: A 10-30-087-20	Yes	Truck	Passed Inspection (Complete)	30-May-2017	30-May-2017	Planned	Disposal Well Inspection Meet operator at 16-07-88-20 TRD Facility. OGC Reservoir Engineering in attendance. Review disposal well approval and conditions. Verify that injection pump shutdown was set at 14,800 Kpa and recently maintained. Verify recent meter verifications on mag flow water meters. Verify email alarms wellhead tubing through SCADA set at 14,500 Kpa High and 14,800 kpa High High. Verified the last packer isolation test Dec 1-2, 2016 passed. Verify the last reservoir fall off test passed. All pump shutdowns were recently checked. Tervita has done an excellent job maintaining equipment calibration, however it was noted that the entire SCADA system from the disposal well transmitters to the local Fisher ROC and then to the SCADA host require calibration. Found SCADA host reading -Tubing - 1109 Kpa and the wellhead Tx -152.48 PSI (1051.313 Kpa) = approx. 57.687 Kpa difference. Found the SCADA Host reading -Casing -125 Kpa and the wellhead casing Tx at 15.76 PSI (108 Kpa) approx. 8.36 Kpa difference. Action Items: 1. Arrange for a follow-up inspection to verify disposal well measurement integrity through the entire SCADA system. 2. Change wellhead tubing and casing transmitter displays to read in Kpa. 3. Calibrate wellhead tubing and casing transmitter current outputs (4-20 mA) 4. Calibrate the Fisher ROC analog inputs for tubing and casing transmitters. 5. Incorporate procedure to verify tubing and casing transmitters readings through to SCADA host computer display. 6. Recommend setting a casing pressure alarm in SCADA host at approx. 500 Kpa above normal operating pressure for an indication that there may be a loss of hydraulic isolation. Found set at 14,800 Kpa. Please reply to OGC concerning the above action items.						Central		28116	Wellsite - Disposal/Injection
30-May-2017	037898872-001	Albright Flush Systems Ltd.	7-Jun-2017		DLS: A 10-09-087-21	Yes	Truck	Passed Inspection (Complete)	7-Jun-2017	30-May-2017	Planned	Disposal Well Inspection Report Meet rep and the facility operator on site. OGC Reservoir Engineering was in attendance also. Inspect the wellhead (enclosure was removed) and injection pump building. Performed a glove test on the surface casing. Detected a small leak and LELs being released to atmosphere. Found no SCADA for continuous electronic monitoring and recording of tubing and casing pressures. The well was shut-in and a downhole pressure recorder was set to measure fall-off. Reviewed operations logs and calibration reports. Verify the disposal meter recent calibration and spare available. Found the disposal well injection pump high discharge pressure PSHH set too high at 2400 PSI (16,547 kpa) as the maximum wellhead injection pressure was 16,400 kpa. Noted that the disposal pump did not have a pump packing lube no-flow shutdown or packing leak detection. Action Items: 1. Contact BCER to report surface casing vent flow and perform a bubble test as directed. 2. Ensure the surface casing vent is piped outside of the wellhead enclosure when it is re-installed. 3. Tube the Cate-a-Dyne Fisher 912 regulator vent outside the wellhead meter enclosure. 4. Move the Wellhead tubing Tx to the top of the wellhead. 5. Install SCADA system with tubing and casing transmitters + water meter input. 6. Arrange for a follow-up inspection at the time of the SCADA system commissioning. 7. Lower the disposal pump high discharge pressure shutdown to 16,300 Kpa. 8. Ensure all settings/reports are in Kpa. Please reply to OGC concerning the above action items. 5-Jun-2017	0380017503-001	ARC Resources Ltd.	7-Jun-2017		DLS: 13-07-080-14	Yes	Truck	Passed Inspection (Complete)	7-Jun-2017	5-Jun-2017	Planned	Leave-To-Open Inspection Meet operator. Review accounting meter documentation, configurations, a calibrations. Inspect the acid gas disposal well tubing and casing transmitter configuration and set-up. Found that the tubing transmitter range was 0-20,000 Kpa. The acid gas max wellhead injection pressure is 20,000 Kpa. The transmitter range would not indicate if the max wellhead injection pressure was exceeded. Inspected that ESD function tests were completed on June 3, 2017. Found AIT-15502E Propane sensor in the refrigeration building in Fail state. Witness plant mode 1 ESD function test when AT-19254A in Bu-9250 was triggered. Witnessed ESD mode 3 function test when propane sensor AIT- 15502E high LEL Propane was triggered at 20 % LEL. Found condensate stabilizer H2S - AIT 16003A in Fail state. Witness acid gas ESDV function test using 50 % H2S on H2S sensor. The acid gas flowline ESDV, PCV closed and the subsurface valve control box solenoid dropped out. Checked that the acid gas subsurface ESDV control was in auto and was locked. Action Items: 1. HP, LP, acid gas flare meters- Consult the manufacture (dependent on flare stack pipe size) and obtain the max output frequency at 120 m/s. Test each flare meter MCU at the maximum output frequency. Ensure the Fisher ROC can read the max output frequency. 2. Correct production accounting turbine meters (FE-115101, FE-13BB51) where the input K-factor are in pulses/ m3. The conversion from pulses/US gal to pulse/m3 was found not to be correct. Take a photo of the input K-factor, the output K-factor, the meter s/n, and tag for the OGC start-up binder. 3. Truck-in coriolis meter documentation - Missing the manufacturer certification, the transmitter configuration, and the Smart Meter Verification Report. The meter will require a process zero once fluid is available to fill the meter tube. Spartan Controls to leave a final commissioning report. 4. Re-Flow Check FE-010050 1-34 to 2-25 meter. Found incorrect. 5. Develop an operations procedure to monitor the difference between the disposal pump discharge meters (FE-15910S, FE-15930S) and the sum total of all disposal volumes measured at each disposal well. 6. Re-range the acid gas disposal well to 10 % above the maximum wellhead injection pressure of 20,000 Kpa. 7.Repair faulty propane sensor AIT 15502E, faulty H2S sensor AIT-16003A, and tank farm H2S AIT 15803A 8. Found safety system global bypass max time at 720 min. What is Arc Resources corporate policy for maximum bypass time of fire and gas detection systems? Ensure this matches corporate policy. 9. Acid gas PIT-085003 and PIT 085004 - Install secondary lock on mono-flange pressure isolation valve. 10. Develop an annual maintenance plan for Guided Wave Radar level transmitters on the production tanks. Check with the manufacture if self-diagnostic software is available. 11.Look at the water disposal pumps (x2). Found that there is no lubricator no-flow shutdown. There is no way to detect if the lubricator pump drive belt fails and the piston packing lubricator fails to pump lubricant. .						South	00018270		Facility - LTO

6-Jun-2017	0380274417-001	ConocoPhillips Canada Operations ULC	7-Jun-2017		NTS: B 059-D/093-P-08	Yes	Truck	Deficiencies Corrected	20-Jun-2017	6-Jun-2017	Planned	Active Facility Inspection Action Items: 1. Found that sales compressors K- 1401 and K-1501 starter gas discharges vent to atmosphere and are not connected to the HP flare system. Reviewed OGC Industry Bulletin 2011-29 - Compressor Start Gas Venting. ConocoPhillips is to adhere to the Bulletin and notify of response. 2. Found K-1101, K-1201, K1301 isolation valves on either side of the compressor blowdown valves not locked or car sealed open. Ensure these valves are locked open. 3a. Discharge Transmitter- Lock open pressure sensing isolation valves (x2). 3b. Discharge Transmitter - Submit commissioning report for new PLC remote compressor ESD function test. 4. Install isolation valves on compressor exhaust sample points. 5. Install insulator between the sales pipeline and pipe support piling. 6. Install insulator between Noel east d-55-d/93 pipeline and support piling. 7. Produced water and condensate tanks and associated transmitters. Ensure the PAs are using the level transmitters for opening and closing inventories. Calibrate the transmitters. Found the production tanks not open to atmosphere. Ensure the level transmitters have compensating legs if tanks are not open to atmosphere. Update measurement schematic to show transmitters as accounting meters and submit a revised schematic. 8. Upgrade the fuel gas buyback transmitter installation to meet the OGC Measurement Guideline for Upstream Oil and Gas Operations installation requirements. 9. Recalibrate gas detectors K-101 comp, K101 Engine, and Process Building Center. 10. Found that the Dehy Tower PSV vents are piped in a manor to release gas close to ground level and the Dehy building. There is a potential for gas to be trapped between the Dehy Building wall and the Dehy drying towers. The PSV vents should extend above the eve of the Dehy Building to release gas as not to constitute a hazard. Install blow-off boots on PSV vent vertical piping. 11.Submit the original plant approval. Please reply to OGC the above action items.		D&PR	47 (f)	Relates To Fire Prevention	K- 1101, K-1201, K-1301, K-1401, K-1501 discharge PSV pilot dome pressure ports not vented outdoors. 8-Jun-2017	0382940O4-001	Oil and Gas Commission	16-Jun-2017				No	Truck	Passed Inspection (Complete)	16-Jun-2017	16-Jun-2017	Planned	- WAR185, UTM: 10 N 0600787, 6311222 - Weather was 25 degrees Celsius and sunny with light wind - By following coordinates and making site observations, site was assumed to be approx. 25m from the SE side of the Limbach road. - Well center was not confidently located - Two pits, approx. 1.5 feet wide and 1.5 feet deep, were in the ground in the general area. Hole #1 was round shaped and dry. Hole #2 was square shaped and had approx. 4 inches of water in it with an oily sheen floating on top. The two holes were approx. 10m apart. - Site was well vegetated with a mix of herbaceous, deciduous, and coniferous plants at all different stages. - Ungulate sign was observed - Amphibian (wood frog) present - No stains or irregular features were noted						Central			Wellsite - Restoration (COR)
8-Jun-2017	0384194B9-001	KM LNG Operating Ltd.	21-Jun-2017				Yes	Walk	Passed Inspection (Complete)	21-Jun-2017	8-Jun-2017	Routine	Routine inspection of KM LNG maintenance activities and review of POR 628 (also known as the 2.3km plant access road) deactivation, seeding, initial planting and follow up fill planting on June 8, 2017. Station D+000 to D+150 (measured from the end of the road) was fill planted this spring to increase the consistency of the stocking. The 2017 planted trees are just starting to flush at the time of inspection. Field seeding has been successful and area has greened up quite well and will spread and become thicker with time. No signs of erosion towards any of the drainages and slopes have remained stable. A significant amount of germinates (mostly Hw) were noted throughout. The 2016 planted trees are in variable condition throughout the area, some of the alder have recovered from the dieback noted last year and others appear to have received further damage over this years cold winter. Alder will take time establishing on site. As well, some of the 2016 planted conifers are preforming very well while others are having difficulty with the poor site and are showing signs of chlorosis. Overall the area has greened up well, slopes are stable and will fill in with planted and natural trees in time. Bish mainline is in good shape and no issues noted. North Logistics area cuttings that were planted last year have established well and lower area has greened up very quickly. Upper slopes are less rich and are greening up much more slowly. Small amounts of soil movement on the upper slopes is to be dealt with once area is reviewed by a terrain specialist.						South			Road - Deactivation

13-Jun-2017	038291566-001	Predator Oil BC Ltd.	16-Jun-2017		DLS: 07-08-083-18	No	Truck	Passed Inspection (Complete)	16-Jun-2017	16-Jun-2017	Routine	The office trailer has been boarded up and work was started on the cleanup of this location in the winter as access permitted. There are still issues that require attention and should be addressed when access road conditions allow this summer. Methanol tank secondary containment is full and overflowing onto the lease. There are surface water erosion channels on the lease that require remediation. Hydrocarbon staining in the ground around the compressor building. Note: the short cut road has had a land slide event and is blocked with dirt and trees approximately 1 km from the top of the hill. There is also an area with slumping in the road and tension cracks approximately 3/4 km from the top of the hill. The access road along the river has erosion channels and large ruts, Access with a 4x4 pick-up or ATV is possible at the present time. This may change with additional rainfall. Production Supervisor was contacted he will make a trip into the site next week to assess the situation and prepare a plan to get this work completed this summer as access allows. All issues pertaining to complaint 032529936-001 were addressed during the winter cleanup. Outstanding issues are not associated to the complaint.						South	00002665, 00008407		Facility - Inactive

Les Elliott and I had conversations back in 2012 about this very point. The Flaring and Venting Reduction Guideline states: 8.3 Limitations of Venting Gas Containing Benzene 4) Permit holders must complete a DEOS (Dehydrator Engineering and Operations Sheet), located in Appendix B of the Benzene Control BMP, to determine the benzene emissions from each dehydrator. The sheet must be posted at the dehydrator for use by operations staff and inspected by the Commission. The DEOS must be revised once each calendar year or upon change in operation status of a dehydrator. 5) Permit holders must complete and submit an annual Dehydrator Benzene Inventory List by email in accordance with Section 12 of the Benzene Control BMP. -You are currently in Non-compliance with this as the only DEOS submitted to the OGC was in 2012 when operator and I had the conversation back then. 18-Jun-2017	0183998112-001	Venturion Oil Limited	20-Jun-2017	21-Jul-2017	DLS: 11-34-081-14	Yes	Truck	Deficiencies Corrected	21-Jul-2017	18-Jun-2017	Complaint	Complaint Inspection Called out to investigate odour complaint. Noted the wind was moderate blowing from the west. Meet the operator on sight. Check the tanks for open thief hatches. Walk around the facility. Noted that the operator had sent a pig from 16-28-81-14 at 9:10 am. it caused high flow from the treater back pressure to flare at approx. 10:15 am. When asked what alarms came in the operator reported that at 4:04 am the HP flare status alarmed indicating flame fail. At 4:05 am the alarm cleared. At 11:46 am the LP flare status alarmed in, indicating the incinerator was out. it would take some time for the thermo-couple sensing incinerator flame to cool down and initiate the alarm. The complainant noticed strong burnt hydrocarbon odours at the residence at 11:30 am. During the course of the inspection it was noted that the LP flare purge gas meter was not reading any LP flare purge flow. The flow through the purge gas meter was restricted. It was also noticed that the HP purge gas meter was also sticking, restricting purge gas flow. There were signs that oil that was leaking out of the fitting on the HP purge gas meter end connection. The operator made a phone call and gave the purge gas meter model number to his instrument service technician to order a replacement. Noticed strong odors coming from the defy accumulator vent tank. The operator said that a citrus chemical can be added to the vent tank. The truck vent chemical was changed approx. 2 months ago. The operator said he would test the chemical to see if it needs replacement.	D&PR	78 (1.1)	Relates To Production Facilities	The HP and LP flare/incinerator system purge gas meters are not installed and operated as per manufacturers installation recommendations (points 4 and 5). Found that both the HP and LP purge gas meters were sticking, restricting flow and there was evidence of oil contamination on the outside of the instrument tubing fitting connecting the fuel gas supply to the HP purge meter. The manufacturer recommends the fuel gas system be flushed and cleaned of foreign matter and a filter installed. Consideration should be given to checking other end devices attached to the fuel gas system such as burner and pilot gas regulators to ensure they are operating as per manufacturers specifications. Taken from Muis Controls Ltd - Data sheet GMTS26CG Installation 4. Before installing the meter, the pipeline should be flushed to remove any foreign matter, or swarf, likely to collect on the float unit and magnet. 5. For ultimate protection a filter can be fitted upstream of the meter to remove large particles.	South	00000047		Facility - Active

20-Jun-2017	0185040065-001	Altagas Holdings Inc.	28-Jun-2017	26-Jul-2017	From: DLS: 04-32-088-24 To: DLS: 15-26-088-24	No	ATV/Snow Machine	Deficiencies Corrected	2-Jan-2020	26-Jun-2017	Routine	There was an initial inspection done on May 30 2017 on this pipeline just off of approximately km 13 on the Gundy Creek Road. This inspection found that fine sediment had travelled some distance down the gentle slope of the pipeline ROW and into the ditch at the road. There was also subsidence found on the pipeline as well as the new fiber optic line. A subsequent inspection on June 20 2017 by ATV on a section of the pipeline that crossed some hills found erosion that has exposed the fiber optic line, some erosion on the actual pipeline as well as some sediment that had gone off the ROW. Please travel the entire length of the pipeline to see if there are any more areas that require attention and submit a summary to OGC by July 28 2017. Thank you	EPMR	17 (a)	Relates To Conserving Soil	There is some deep erosion in the fiber optic line that has exposed the line itself in a few places along the pipeline ROW. There is also some drainage that comes onto the pipeline ROW and has followed the trench causing erosion and in some cases sediment has gone off the ROW and into the bush. These are identified by the silt fences placed along the ROW. The location where a significant amount of sediment has gone off the pipeline ROW is located at approximately latitude 56.6697 , longitude 121.7612. The impact of the sediment off the ROW needs to be assessed by an environmental company to determine what mitigation actions may be taken. Please have this assessment completed and submitted by July 28, 2017.	Central			Pipeline - Active

22-Jun-2017	038588686-001	Ovintiv Canada ULC	27-Jun-2017		DLS: 03-07-081-17	Yes	Truck	Passed Inspection (Complete)	27-Jun-2017	22-Jun-2017	Planned	Mechanical Process Piping Q/A Audit Meet with operator, Flour Canada Regulatory, and Contract Construction Manager, and Flour Canada Mechanical Q/A staff. Discuss ASME B31.3 Process Piping Mechanical Q/A Audit list and the preparation of documentation to demonstrate adherence to ASME B31.3. Action Items: 1. Flour to develop a Mechanical Completions Certificate (declaration) that covers off the mechanical completeness of the 64 sub-systems. The same could be done for electrical systems (Dynamyk). This will be requested at the time of the LTO inspection. 2. Prepare for the Mechanical Process Piping Q/A Audit a binder(s) with samples of the mechanical Q/A as discussed. Include (3) examples of Q/A for Vendor Packages, (10) manufactured piping sections in various locations of the plant, and (5) examples of mechanical Q/A where on-site welding was conducted. Ensure there is one example of a Non-Conformance Report. Measurement Inspection Action Items: 1. Check with Production Accounting (PA). Verify if the bullet level transmitters (product inventory) are used to report monthly opening and closing inventories. If so, then these transmitters are to be shown on the Measurement Schematic as PA meters. Develop an annual maintenance plan that will incorporate the use of self- diagnostics. Provide an example report. 2. Develop an annual maintenance plan (incorporating self-diagnostics) for accounting ultra-sonic meters. Provide a sample report. 3. Include a photo of the accounting meter orifice data plate for each PA orifice meter in the measurement binder that will be prepared for the OGC. For the Leave-To-Open (LTO) Inspection 1. Slug Catcher level bridles - Verify through the shutdown Key if the high level closes the inlet ESD valve. If so, lock or car seal open the isolation valves on the level bridle. 2. Pressure indicating transmitters connected to SDS- lock or car seal open pressure sensing isolation valves. 3. Verify that there are propane leak detection (LEL) sensors within proximity of the refrigeration compressor. Please reply to OGC for the above action items and to arrange for follow-up inspections for both the Mechanical Process Piping Q/A Audit and for the production accounting meter Measurement Inspection. 26-Jun-2017	0385352513-001	Tourmaline Oil Corp.	26-Jun-2017		DLS: 09-10-080-16	Yes	Truck	Passed Inspection (Complete)	26-Jun-2017	26-Jun-2017	Planned	Start-up Inspection for new wells (C,D,E,F,G,H,I,J,K). Inspect new wet meter configurations and EFM programming. Inspect the sour and group separator liquid meter (water and condensate) turbine meter configurations. The H-well pipe diameter was corrected in the Fisher ROC. Noticed there was oil staining on the ground by the wellheads after completions work. Noted a slight leak on the G-well surface casing vent. The sour pipeline pig sender pressure alert valve (PAV) had not been re-installed after the pipeline pressure test. Action Items: 1. Clean-up the contaminated soil around wellheads after completions work. 2. Perform a bubble test on the G-well surface casing vent. If the surface casing vent flow does not pass the bubble test submit the results to Engineering and follow required action as advised. 3. Install pressure alert valve (PAV) on the sour pipeline pig sender. Please respond to OGC concerning the above action items.						South		30209	Facility - Start Up

27-Jun-2017	0386279979-001	Painted Pony Energy Ltd.	7-Jul-2017			No	Truck	Deficiencies Corrected	25-Oct-2017	28-Jun-2017	Routine	This inspection is for road number 2136 which is on the Gundy Creek Road and starts in proximity to the km 14 bridge. This is a follow up to a concern over deep ditch that was noted earlier erosion at approximately km 14.5 on Gundy Creek Road. The ditch erosion has been landscaped so the ditch line and road prism is now intact. This inspection revealed that sediment originating from the the road has had an impact to the adjacent wetland/oxbow. On June 27, 2017 an inspection on the Gundy Creek Road, road number # 2136 under Painted Pony Energy Ltd found that excessive sediment from the road had entered a wetland/oxbow complex. The Oil and Gas Commission (OGC) is requesting that Painted Pony Energy Ltd. conduct the following actions: •On or before July 21, 2017, conduct appropriate works to prevent further sedimentation into the wetland /oxbow complex; •On or before August 7, 2017, submit a reclamation and remediation plan produced by a qualified professional, to address the existing disturbance. The plan will also specify a period of time for follow up monitoring. This issue will be forwarded onto the BC Oil and Gas Commissions' Enforcement Section for continued investigation.		EPMR	12	Relates To No Deleterious Materials Into Streams, Wetlands Or Lakes	There is a need to prevent any further sediment issues into the wetland/oxbow. The recontoured ditch line and take off need additional work to prevent the movement of sediment.	Central			Road - Active

27-Jun-2017	038877487-001	Tourmaline Oil Corp.	7-Jul-2017	22-Jul-2017		No	Truck	Deficiencies Corrected	19-Sep-2017	7-Jul-2017	Routine	On June 27, 2017 an inspection on the Mile 109 Road at km 1 and approximately 1.3, under road permit # 00278 to Tourmaline Oil Corp., found that excessive sediment from the road has entered the streams at those locations. The Oil and Gas Commission (OGC) is requesting that Tourmaline Oil Corp. conduct the following actions: •On or before July 21, 2017, conduct appropriate works to prevent further sedimentaton into the streams; •On or before August 7, 2017, submit a reclamation and remediation plan produced by a qualified professional, to address the existing disturbance. The plan will also specify a period of time for follow up monitoring. As an observation and comment there are 2 drainages that flow water into the ditch at these locations and these flows needs to be assessed for their contribution to this issue. Perhaps need to be directed into their natural drainage pattern which may be directly across the road instead of the ditch. This issue will be forwarded onto the BC Oil and Gas Commissions' Enforcement Section for continued investigation.						Central			Road - Active

28-Jun-2017	038628584-001	Venturion Oil Limited	28-Jun-2017		DLS: 10-36-083-14	Yes	Truck	Passed Inspection (Complete)	28-Jun-2017	28-Jun-2017	Planned	Permit Amendment # 100102820 Start-up Inspection Review Permit conditions with the operator. Found that Venturion was not ready to start-up. The site is waiting for Genogle Energy gas nominations to produce gas. An inspection was arranged for today but found that there were a number of items that need to be addressed prior to start-up. Inspect the new 205 HP compressor installation. Electrical work just being completed. Confirm a blowdown valve was installed in the compressor package. VRU discharge joins the group separator outlet to the inlet of the compressor. The compressor discharge goes to sales. Battery critical shutdown checks last done July 22 2016. Recommend that the critical shutdown checks are completed before start-up. The VRU control panel shutdown checks were last done Aug 10, 2016. Recommend the VRU shutdown checks are done before start-up. The pumpjack shutdown checks were last done Sept 14, 2016. Recommend the pumpjack shutdown checks are completed before start-up. Action Items: to be completed before start-up. 1. Sales Meter Enclosure-The sales meter transmitter cover was off. The operator mentioned that it was being worked on. The instrument service company was trying to communicate with the EFM transmitter to perform a calibration. Noted the discharge pressure transmitter PIT-400 was reading 10 kpa when bled down to atmospheric pressure. Last calibration July 22, 2016. 2. Fuel gas sweetening skid- The Roots fuel gas meter in the fuel gas sweetening skid was removed for service. Fisher 912 regulator on the Cata-dyne heater was not vented outside the building. The pressure sensing isolation valve for the fuel gas sweetening vessel high pressure ESD was not locked or car sealed open. Found approx. 20 bolts on the Galvanic H2S Analyser Adalet explosion proof box not installed. 3. VRU blowdown valve isolation valves (IX) were not locked or car sealed open. Methane LEL controller AIT 782A was found reading 3 % with no gas in the building. No VRU operations log on site. A log is to be maintained to record the VRU operating hours. An annual 95 % runtime is to be maintained as per Amendment condition # 4. Create a calculation to monitor the VRU operating runtime percentage. 4. Instrument air compressor building - ESD function - Found that the isolation valve for PIT- 900, for the instrument air low pressure shutdown, set at 500 Kpa falling, was not locked or car sealed open. Please notify OGC when the battery commences sales to Genogle Energy and that the above items listed have been completed prior to start-up.						South	00007696		Facility - Start Up

29-Jun-2017	038850274-001	Ovintiv Canada ULC	7-Jul-2017		DLS: 04-26-078-17	Yes	Truck	Passed Inspection (Complete)	7-Jul-2017	29-Jun-2017	Audit	Mechanical Q/A Audit Action items Meet with EnCana, Flour Engineering, and Ledcor construction staff. Review the ASME B31.3 Piping Mechanical Q/A Audit list. Request that EnCana prepare mechanical Q/A documentation for: (10) manufactured piping sections in various locations of the plant/facility. (5) examples where on-site welding was conducted. (3) examples of mechanical Q/A for manufactured skids. Discuss the need for EnCana to develop Mechanical Completions Certificate document, or a transfer of care, custody, and control (TCCC) declaration of overall completeness for all subsystems. This document will be requested at the time of the Leave-to-Open Inspection to assess readiness to start. Measurement Construction Inspection Action Items 1. Discuss the need to update the plant measurement schematic. NGL Bullet level transmitters will be accounting meters to report opening and closing inventories to MOF. 2. Question whether the plant fuel gas buyback is indeed an accounting (reporting meter) or if it should be a non-accounting (check meter) as TCPL sales meter will be used to report the plant sales volumes. 3. Request EnCana determine if the total HP flare header purge gas flow will be under the measurement range of the main flare meter. If so, set up a (2) stage flared gas reporting strategy were the total purge gas + the regulated pilot gas (estimate) + the main flare gas meter are added together to report the flared gas volumes. 4. Check PIDs to see if the purge gas and pilot supplies to the main plant flare are off of the metered plant fuel gas supply. If so, ensure that the production accounting has a means (method) in place to correct the reported plant fuel gas volume by subtracting the purge and pilot gas volumes (reported as flared gas). 5. Confirm with the maintenance planner that procedures are developed in MAXIMO for the annual maintenance of all accounting meters. Ensure that required vendor proprietary software is available to communicate with the accounting meters (level transmitters) and can be used to generate annual maintenance reports. General Plant Construction Inspection Action Items 1. Emergency generator- ground loadline and spill catcher. 2. Emulsion tank- Ensure containment berm meets permeability requirements. 3. Request a safety system map (schematic) for the refrigeration/compressor building to show placement of propane LEL sensors around the refrigeration compressor. EnCana to determine if the propane LEL leak detection sensors are appropriately placed in proximity of the refrigeration compressor. If not, perform a HAZOP to determine if propane LEL sensor placement is correct. 4. Due to the size and complexity of the plant request that EnCana Operations develop a means to ensure the Lock Out Tag Out (LOTO) is verified to be 100 % complete before the Leave To- Open approval is issued. Suggest that independent teams are used to install and check that the required locks or car seals are installed before start-up.						South	00018051		Facility - Construction Eng.

5-Jul-2017	039202179-001	FortisBC Energy Inc.	28-Jul-2017		From: NTS: D 008-K/092-G-02 To: NTS: C 056-K/092-G-02	Yes	Truck	Passed Inspection (Complete)	28-Jul-2017	5-Jul-2017	Complaint	Follow up on a complaint that alleged FortisBC contractors were the cause of a sediment release into Quibble creek during CTS looping project construction activities and an overall inspection of the construction on July 5, 2017. Viewed the side channel or slough that the complainant believed was impacted from construction activities. This channel connects to Quibble creek during high water. Photos submitted by the complainant did indicate a significant amount of sediment in this waterbody. This slough is man made with several culvert outlets that drain directly into this channel. Photographic evidence was provided by FortisBC showing visibly turbid water coming from these pipes. The origin of these drains is unknown but they are not related to any FortisBC operations. Sites where FortisBC contractors discharged sediment laden water were visited and there was no physical evidence that this activity was connected to the sedimentation noted in the adjacent slough. Overall site inspection noted unsecured spoil that, if conditions changed, could have the potential to enter quibble creek. Spoil was immediately secured and this potential was removed. Clarification was provided to the BCOGC on the process that is being used to confirm that there is adequate "bedding" for the pipeline prior to burial. An interim report was requested that detailed the archaeological activities to date. This was received by the BCOGC.						South			Pipeline - Construction Env.

6-Jul-2017	039032904-001	Ridgeback Resources Inc.	14-Jul-2017		NTS: B 006-D/094-H-11	Yes	Truck	Passed Inspection (Complete)	14-Jul-2017	6-Jul-2017	Planned	COMMENTS: OGC Technical Advisor, was in the area of well and stopped and spoke with the operators of this well. Asked the operators to fill out the "Appendix to Inspection Form". The operators said that they had removed the gauges from the well and were trying to retrieve the information but did not know how, therefore, the well was not being monitored at the time, but that no injection had taken place since April 2017. The operator filled in the inspection checklist indicating that all disposal well requirements were being met. However, pressure monitoring was not observed at the wellhead. The operator informed the inspector that the smart meters previously in place had been removed for download of data. Ridgeback Resources will be contacted by OGC Reservoir Engineering to ensure that all conditions of disposal approval Order 96-02-005 Amendment #1 are being adhered to. 6-Jul-2017	039034697-001	Sukunka Natural Resources Inc.	14-Jul-2017			Yes	Truck	Passed Inspection (Complete)	14-Jul-2017	14-Jul-2017	Complaint	Inspection is resulting from complaint number 038753930-001. Accompanied by one of the plant operators from the Sukunka gas plant during the inspection. No offsite odors were detected. There was an onsite odor coming from pig catchment trays. Complaint is located at a pipeline riser / pigging station with the sign B-44-E/093-P-05 GPS located off the east Brazion Road. Note: inspection of this site was delayed by a discrepancy in the signage located the site. Sign originally read B-44-B/093-P05 at the time of the complaint. Sign was changed to read B-44-E/093-P-05 by the time I inspected the site.						South			Complaint
6-Jul-2017	039079181-001	Westcoast Energy Inc.	18-Jul-2017			Yes	Truck	Passed Inspection (Complete)	18-Jul-2017	6-Jul-2017	Routine	Routine inspection of Water Sustainability Act and Land Act permit 100101732 on July 6, 2017. Initial site clearing and mobilization occurring during site visit. Clearing commenced July 6th and I was provided the EI report confirming that several bird sweeps had been completed with the last one done one day prior to clearing commencing. All nests were determined to be inactive except one Robin nest in the Southwest temporary workspace which has been buffered and no works were occurring in this area at the time of inspection. Fire hours were being used and works were shut down at 1:00pm with a two hour fire watch. Equipment checked prior to entering the site and stickers were placed on them indicating that they were both weed free and leak free. Invasive plants that were noted onsite were dug up and disposed. Soils were being stripped, separated and stored onsite. Reviewed all permit conditions with onsite staff and specifically discussed Forest Act requirements that timber marks are to be applied to all salvageable timber decks. Also discussed First Nation participation during in stream works (permit condition 12), in stream work timing windows, short term water use requirements and quarterly reporting guidelines that must be completed even if no water has been withdrawn. The next quarterly water report is due on or before July 25th. No issues noted.						South			Stream Crossing

7-Jul-2017	039088028-001	Chevron Canada Limited - Burnaby	18-Jul-2017		From: NTS: C 050-D/092-G-07 To: NTS: D 041-A/092-G-06	Yes	Truck	Passed Inspection (Complete)	18-Jul-2017	7-Jul-2017	Routine	Routine inspection of project 5242 pipeline replacement job number 28701388 adjacent to the Chevron refinery in Burnaby on July 7, 2017. All hot lines are now connected and active at the time of inspection. All concrete forms and lids in place, covered and seeded. Site is very clean and orderly, rock cairns have been placed over the vents to avoid damage. The seeding was very successful and the site looked very greened up since my last inspection in May. No issues noted and no further inspections required.						South			Pipeline - Construction Env.

11-Jul-2017	038948918-001	Ovintiv Canada ULC	11-Jul-2017		From: DLS: 15-27-079-17 To: DLS: 04-19-080-17	Yes	Truck	Passed Inspection (Complete)	11-Jul-2017	11-Jul-2017	Complaint	Looked at soil handling practices and sub soil drying techniques. Have dried out sub soils multiple times as rain events warrant. Have broken berms to stop water pooling and private land side to limit issues on adjacent private land. Accumulated water pumped to public road ditches. Dug a 10"x10" hole on undisturbed right-of-way(ROW) and compared with "A" soil layer on disturbed ROW and found soils to be very similar in nature. Shut down 9 construction days due to rain. Shut down 16 reclamation days due to rain. Have worked into rain when necessary to end in a manner not to cause issues. Had third party, EDI, out during construction and reclamation to ensure following Schedule "A" and best practices.						South			Pipeline - Construction Env.

Discuss construction schedule time frame milestones, and tentative inspection dates. Request in additional to the LTO inspection for train 2, that an inspection (s) are arranged to witness ESD function tests when partial plant control is switched over for train 1 inlet valves after the Sept/ 17 shutdown. Meet with Flour Engineering,WPC QC, and WPC QC and discuss requirements to provide documentation to demonstrate that the plant design and construction is in accordance with ASME B31.3. Walk through the plant new construction. Noted that there was some piping not properly decked, missing end caps, or the tape holding the end caps on the pipe was falling off and the internal bore of the piping was in contact with the muddy ground. Meet with Operations- Permitting staff. Discuss the need to maintain a written log of plant construction safety inspection walk-throughs. Action Items: 1. Prepare Mechanical piping Q/A material as requested. Arrange for an inspection date to review prepared material. 2. Arrange to an inspection(s) to witness ESD function tests at various stages of the construction project. 3. Arrange for inspection of any new plant accounting meters (construction, configuration, and calibration). 4. Arrange for Leave-to-open inspections of new process equipment prior to commencing operations of that equipment. 5.Submit safety plan for simultaneous operation with construction (SIMOPS). Ensure that the Permit issuer is conducting and logging plant construction safety walk-throughs for compliance with Safe Work Permit conditions. 6.Ensure mechanical Q/A is maintained for piping that is decked on site. (properly decked, out of the mud, with end caps securely in place). Please respond to OGC concerning the above action items. Thank you,						South	00018260		Facility - Construction Eng.

18-Jul-2017	0391779993-001	Bonavista Energy Corporation	24-Jul-2017		NTS: A 012-G/094-H-04	No	Truck	Passed Inspection (Complete)	24-Jul-2017	18-Jul-2017	Routine	COMMENTS: 1. The water in the flare pit at this location is nearly breaching the berm, and looks as if it has in the past. This water needs to be tested and then pumped off. Also, the fencing has been knocked down by wildlife and there is a trail of wildlife foot prints leading to the flare pit water. The fencing needs repaired to prevent the wildlife from accessing the flare pit water. 2. There is a lot of erosion channels across the lease, some fairly deep. Some of the erosion is coming from water running out of the old tank berm area, where the tank berm is breached, and is running across the lease, through the flare pit area and possibly off lease. As per section 7 of the Oil and Gas Waste Regulation, you need to prevent run off from leaving the lease prior to testing it. 3. I would like you to provide me with a copy of your Environmental Investigative report including the ground monitoring reports (ground monitoring wells onsite). 19-Jul-2017	0391104471-001	ConocoPhillips Canada Operations ULC	1-Aug-2017			No	Truck	Passed Inspection (Complete)	1-Aug-2017	19-Jul-2017	Complaint	POR 541 OGC File 9627428 AD 100064851 - Long Term All Weather Road - Erosion issues Starting at Km 0 - Cattle Guard filled with gravel/dirt - Road maintenance: technical 13. (1) A road permit holder must (a) ensure that road surface and slope drainage systems, including inlets, drainage structures, ditches, culverts, bridges, road crowning, insloping and outsloping, are functional, (b) remove all vegetative growth and cuttings from road surfaces, roadsides and inlets from drainage structures and ditches if (i) the vegetative growth impedes or reduces sight distance to the extent that the road is not safe for use by permit holders, (ii) the removal of the vegetative growth is necessary to enable placement of snow that has been removed from the road at a sufficient distance from the road surface to maintain the sight distance that is adequate for the safe use of the road by motor vehicles, or (iii) the vegetative growth is encroaching on the road surface such that the usable road width has been reduced to the extent that vehicles cannot safely pass each other at road widenings or turnouts, (c) unless the surface consists of ballast rock surfaces, grade the surface of the oil and gas road to facilitate industrial use, provide proper road surface drainage and prevent pooling on the surface by (i) grading during industrial use of the road as often as needed, avoiding creation of berms along shoulders, to provide a road surface that self drains, (ii) grading and shaping the existing road surface and shoulders, including turnouts, (iii) placing surface aggregate where necessary to provide a surface that self drains, (iv) loosening surface materials to a depth sufficient to remove potholes, rutting or wash boarding without causing contamination of the surfacing materials with subgrade materials or unsuitable ditch materials, and (v) grading only when the moisture content is suitable, (d) maintain turnout size, number and location to accommodate the vehicles that are in regular use on the road, and (e) ensure that signs, posts and markers, if any, are legible and visible. (2) If a road permit holder is using the oil and gas road in winter, the road permit holder must (a) remove snow from all or part of the travelled portion of the road, including sufficient turnouts, to provide for efficient and safe use by permit holders of the road, (b) remove snow to create breaches in snow berms for wildlife crossings, (c) not undercut cut slopes, (d) not blade gravel or other surface materials off of the road, (e) remove snow only from the portions of the road having roadbed support, including turnouts, and reshape any over-width ploughing as necessary to define the usable width, (f) if chains on the vehicles used to carry out oil and gas activities are not suitable or sufficient to enable safe use of the frozen oil and gas road, add sand to the bladed road surface as and when required to provide sufficient traction for the vehicles, and (g) during periods of snowmelt, (i) wing back or breach snow berms to facilitate surface drainage in a manner that prevents water flow along the road, and (ii) keep roadbed drainage ditches, drainage dips and culverts functional. Company rep. contacted August 01,2017							South			Complaint

24-Jul-2017	039210973-001	Storm Resources Ltd.	25-Jul-2017		NTS: D 026-D/094-H-03	Yes	Truck	Passed Inspection (Complete)	25-Jul-2017	24-Jul-2017	Planned	Disposal Well Start-up Inspection Meet with Storm Resources facility operator. Review the disposal well approval conditions. Request there is a copy left on site. Inspect disposal pumps 7500 A &B high pressure shutdown settings. Found the HH shutdown (s/d) set at 7800 Kpa above the max allowable wellhead injection pressure of 7,070 Kpa. Request it be lowered to an appropriate value. Storm opted to set the HH s/d at 7000Kpa. The high alarm setting was also lowered from 7200 Kpa to 6500 Kpa. Noted the last calibration on the disposal pump discharge pressure transmitter was Oct 9, 2015. Request these transmitters be calibrated. Travel to the disposal well. Verify that the tubing and casing pressure transmitters were reading correctly and the Fisher ROC analog inputs were calibrated. The local shutdown setpoint in the Fisher ROC was lowered from 7000 Kpa to 6900 Kpa. Verified the Fisher ROC shutdown, closed the wellhead ESD valve. Tested the remote shutdown from the main facility Critical Control System. Verify the meter factor was programmed correctly in the turbine flow meter head. Verified that the disposal meter volume was being measured and recorded correctly. Action Items 1. Lower the high shutdown setting on the disposal well hydraulic ESD pilot- Found at 9930 Kpa above the max allowable well head injection pressure of 7070 Kpa. 2. Re-calibrate the disposal well pump discharge pressure transmitters (PIT 7500A & PIT 7500B) Received an email response July 24, 2017 at 4:54 pm that the above items have been addressed. Thank you,							Central		07484	Wellsite - Waste Disposal

25-Jul-2017	040124615-001	Predator Oil BC Ltd.	31-Aug-2017		NTS: D 091-A/094-A-13	No	Walk	Deficiencies Corrected	20-Nov-2017	25-Jul-2017	Follow Up	COMMENTS: - In 2004 PennWest/Samson abandoned this well. In 2016 I found that the equipment had not been removed at time of abandonment. I put in the inspection to PennWest to remove this equipment and to clean up the oil/hydrocarbon that was leaking out of the dehydrator building onsite. PennWest has since removed all of the equipment on site, but where the dehydrator building had been leaking (off to right edge of lease as you drive onto location), there has been a pile of soaker rags, etc and an hydrocarbon sludge left behind. Since then PennWest has sold this site to Predator Oil BC, so now it is the responsibility of Predator to finish with clean up.	D&PR	50 (1)	Relates To Prevention Of Losses	An Environmental Investigation will need to be done by a qualified person/company to determine the extent of the contamination and submit the report to me. You will probably want to contact me in order to get my full explanation of why, what and where the spillage occurred. In the comments section I explained a bit of the background. 26-Jul-2017	039520006-001	Husky Oil Operations Limited	8-Aug-2017		NTS: B 085-E/094-G-02	No	Truck	Deficiencies Corrected	2-Oct-2017	8-Aug-2017	Follow Up	This is a follow up inspection following partial equipment removal from the site. This site does not appear on Husky's list of equipment removal plans. The following is a history of inspections and Husky Oil Operations Limited responses; Sept 19, 2012 -The garbage and unused equipment issue was brought to Husky's attention. A KERMIT response from Husky stated the site was cleaned up. Oct 29, 2015 - A follow up inspection found that the site was not cleaned up and there was unused equipment on site including but not limited to; stairs, concrete containment panels, chemical tanks and stands, pilings and an underground tank. Another deficiency was given. Husky responded that the deficiencies associated with this inspection had been corrected and requested closure. Nov 15, 2016 -again found there were still outstanding issues that needed to be addressed (pilings, garbage unused equipment etc.) and that an equipment removal plan was requested. One was received on August 15 2016 but did not have this lease on that list. July 26, 2017- found that more equipment had been removed but there are pilings and an underground tank that still remained on site. Any of the pilings that were cut off were not done at surface level as per industry bulletin 2016-03. There are also numerous pieces of garbage on site-orfice plates, steel rasher rings, foam, plastic, miscellaneous metal pieces etc. While it is recognised and appreciated that Husky is removing equipment and abandoning some wells in this field, this particular site has not been cleaned up to an acceptable standard despite attempts for almost 5 years.		D&PR	15 (3)(a)(b)	Relates To Protection From Hazards	There is a lot of small pieces of garbage (plastic, foam, small pieces of plastic, steel nuts etc.) where the equipment sheds used to be and probably the most efficient way to clean is up is with a rake and a shovel. It also appears that a sweep around the lease to look for materials that have been blown off the lease was not done. The pilings and underground tank also need to be removed as per Industry Bulletin 2016-03.	Central		08313	Wellsite - Suspended

1-Aug-2017	0395344611-001	Canadian Natural Resources Limited	3-Aug-2017		NTS: D 052-I/094-G-03	No	Truck	Deficiencies Corrected	22-Aug-2017	3-Aug-2017	Planned	Apparently this well has been identified in the Sikanni Area Plan as having some asset value with potential for reactivation. Is there any expected timeframe associated with this reactivation? Over a period of time the remaining equipment degrades to the point of not being useful and needs to be removed. For this location, there are 2 chemical tanks (1 plastic, 1 steel) and a meter skid. There is also what appears to be a water well on location that needs to be properly closed as per the Ministry of environment's BC Ground Water Protection Regulation. Please refer to the Water Stewardship Information Series bulletin as to the requirements. This will be followed up on future inspections		D&PR	18 (9)(a)(b)(c)	Relates To Casing Requirements	The surface casing vent is closed.	Central		08791	Wellsite - Suspended

1-Aug-2017	0395523979-001	Canadian Natural Resources Limited	4-Aug-2017			No	Truck	Deficiencies Corrected	2-Oct-2017	4-Aug-2017	Routine	This inspection is for the CNRL Mile 156 Road, road number # 101. This road saw increased activity this past winter with wells and facilities being abandoned and equipment removal. Since this road doesn't normally see a lot of use, a balanced approach has been taken for this inspection, however, there are still requirements that need to be met. The entire length of the road needs to be inspected and assessed on a regular basis. The following are some comments for items found during the inspection. The old decking for the km 17.3 bridge needs to be disposed of. There is a lot of owyed daisy at km 20.1. The Peace River Regional District has identified owyed daisy as one of the top 10 invasive species and should be controlled.		OGRR	12 (b)	Relates To Road Maintenance: General	The road prism is lacking in many areas including but not limited to approximately km 13.3 where the road is actually below the ditch line and there is only a ditch on one side of the road. Water collects here all the time resulting in deep ruts. The road crown at the 17.3 km bridge approach is concave and funnels water and sediment to the bridge deck. The same issue is for the km 12.9 bridge approach. This is evident based on observation and the resulting sediment on the decking. Any water take offs before the bridges have not been maintained and contribute to the problem. The slope below the bridge has slid into the stream and this needs to be prevented. There is a washout on the road at the north junction of the winter bypass which is located near the CNRL d-53-I lease. The undersized culvert is partially blocked off.	Central			Road - Active
1-Aug-2017	0395529779-001	Canadian Natural Resources Limited	4-Aug-2017			No	Truck	Deficiencies Corrected	2-Oct-2017	4-Aug-2017	Routine			OGRR	7 (a)	Relates To Structural Defects Or Deficiencies On A Bridge	The bridge decking at km 12.9 m is in a poor state as a result of this past winters' activities. The deck is shredded and the delineators are either knocked over or not present. They may have fallen into the stream. The bridge ahead sign is also damaged. Bridge at approximately 17.3 has no upright delineators, the bridge deck is shredded with 3 holes where the stream can be seen below.				
1-Aug-2017	0395797801-001	Saguaro Resources Ltd.	4-Aug-2017		NTS: B 024-H/094-G-08	Yes	Truck	Deficiencies Corrected	11-Sep-2017	1-Aug-2017	Follow Up	COMMENTS: -All pig barrel chains are to remain attached, -a bull plug missing at c-78-C inlet, -the chemical tank tubing line is a trip hazard. I received a report from operator in regards to Saguaro's plan for reducing the black smoke from the flarestack and will forward it to the appropriate persons for review. Saguaro is to get me the report for the results from the passive air monitoring that is being done onsite, as there are complaints for odours off of the lease. This is from the flare not burning properly and the overhead compressor being too small. 4-Aug-2017	039585871-001	Canadian Natural Resources Limited	8-Aug-2017			No	Truck	Passed Inspection (Complete)	8-Aug-2017	8-Aug-2017	Follow Up	There is concern over the geotechnical repair that was done at approximately km 5 on the Cameron River Road, PDR 169. An inspection on July 27 and August 1 found the banks of Darben Creek have been left exposed to erosion into the stream, there are trees that have been felled into and across the stream that need to be removed. There has been no significant work done to the exposed soil or stream banks between those inspection dates. Could you please provide an update as to the status of this repair work. Thank you. This inspection will show as a PASS only due to the limitations of KERMIT ,however, there are concerns about the status of the work at the geotechnical repair.						Central			Road - Active

Chained and locked. Still connected to flowline. Surface casing vent checked, ok. Last cal in meter bldg. < 2010. Comment: 1) Well shows as "Active" in OGC systems. Last gas production May 2012. Deemed to have Suspended status in July 2013. If not already done, please submit BC-11 to Ministry of Finance and Suspension Notice to OGC to revert the well to "Suspended".		D&PR	50 (1)	Relates To Prevention Of Losses	there is a leak from the wellhead. I did not smell it but I could hear it. I did not detect exactly where the leak was coming from. I drove to the main plant at km 10 on the Nig cut across, but there wasn't anyone there. I drove to where I could get cell reception and left a voicemail for rep at 3:25pm. At 3:53pm rep called me back as other rep wasn't available. Said he would contact the operator, called me back minutes later to let me know that the operator would go have a look and get back to us. called me again to say that the operator greased the valve but it did not completely go away. A wellhead company was to be called and will get back to me. I spoke with rep again on the phone today and Weir will be following up and rep will call me with a follow up. 18-Aug-2017	0398706658-001	Orphan Fund	18-Aug-2017		DLS: A 13-35-079-17	Yes	Truck	Passed Inspection (Complete)	18-Aug-2017	18-Aug-2017	Routine	All good on Inspection. Rig is well Maintained.						South		23810	Wellsite - Service Rig
18-Aug-2017	0398785539-001	Ovintiv Canada ULC	18-Aug-2017		DLS: 04-26-078-17	Yes	Truck	Passed Inspection (Complete)	18-Aug-2017	18-Aug-2017	Planned	Fuel Gas Partial LTO Inspection. Meet with Flour Canada Ltd., EnCana CSU Coordinator, and other EnCana reps. Review the plan to bring in buyback fuel gas from the TCPL sales to commission the Sigma-thermal glycol heater (plant utility heat medium), the glycol surge drum blanket gas system, the control room HVAC, the flare system purge gas system for the common flare header, the flare KO drum, and to ignite the flare stack. Witness a satisfactory Mode 1 shutdown initiated by manual pushbutton in the control room. The buyback fuel gas ESDV-5004 closed and fuel gas BDVs 8002 and 8004 opened. Inspect the Buyback fuel gas meter (FIT 8015) EFM configuration, trending, and the meter run installation.Review the flare meter configuration. Found the flare meter low flow cut off set at 0.0 m/s. Inspect that car seals have been installed as per PIDs supplied for the partial fuel gas LTO. The Lock Out Tag Out (LOTO) for double block and bleed valves will be completed after nitrogen purging and partial nitrogen pressurization is complete as per submitted PIDs. Check that Mechanical Subsystem Certificates for the fuel gas system were complete. Give EnCana permission to commence nitrogen purging of production equipment, as proposed. For the written partial Leave-to-Open (LTO) authorization: 1. Determine the flare meter minimum velocity (m/s) at 5% measurement accuracy from Manufacturer specification. Determine the minimum flow rate at that velocity using flare stack diameter (Q= V*A) . Determine the total plant purge gas rate, with a safety margin (suggest 1.5 X). Determine if the total purge gas flow rate is below the flare meter minimum flow rate. Set the flare meter low flow cut-off at an appropriate value as not to measure the purge gas. Verify the flare meter is not reading the purge gas at start-up when purge gas is turned on. 2. Confirm that all accounting orifice meter EFMs are using the dr value as stamped on the orifice meter run for the EFM pipe diameter and entered atmospheric value rather than the calculated value. 3. Confirm that the Fuel Gas Meter FIT-8015 diff and the static pressure have been re-calibrated and correct the upstream diameter entered into the EFM (use dr value). 4. Submit the TCPL gas analysis and use to configure the fuel gas buyback meter FIT 8015. 5. Submit a signed and dated LOTO sheet(s); To be completed by two teams working independent of one another. 6. Re-calibrate Building Q-8005 LEL. Check plant PLC A/D 4-20 mA calibration. Re-calibrate PLC A/D if required. Spot audit other LEL analogs to plant PLC and review Rockwell sign-off documentation of plant analog input calibration. 7. Submit an electrical end device seal completion declaration and applicable Dynamysk Certificates for fuel gas electrical subsystems. 8. Confirm that tape on vents and gooseneck on Q-8005 building have been removed. 9. Submit a revised car seal list showing the new car seals installed on the fuel gas KO drum level bridle isolation valves. Please send the response toOGC.		OGRR	12 (c)	Relates To Road Maintenance: General	Settlement observed on Hoffard Creek bridge endfills. Approximately 12" of the ballast wall is showing. Bridge is not passable with a truck. 21-Aug-2017	039892089-001	Pavilion Energy Corp.	21-Aug-2017		DLS: 13-10-085-21	No	Truck	Deficiencies Corrected	24-Aug-2017	21-Aug-2017	Complaint	Met operator on the access road - asked about the nature of the complaint. I asked about the site conditions. Said that there were no problems on site. I asked if the pollution control was locked open.Said it was not. I advised this is a high deficiency, and asked if they would like to come to the site with me. Declined, said it didn't have anything with to lock the valve open. I said, I would be issuing a high deficiency if the valve was not locked open when I arrived at site. Acknowledged and left. PSHH X1 locked open, PSHH X1 car sealed (metal clip) open. No spillage from packing. No odours. No gas detected on monitor. No issues with bull plugs. February 20, 2017 Inspection 35805294-001 we issued a high deficiency for this valve not being open and locked. May 9, 2017 Inspection 37440503-001, Inactive Well, Inspection Comments: As per the Drilling and Production, Section 49(2), a permit holder must lock or car seal any valve or device that can bypass or disable a pressure relieving valve or device, or an emergency shutdown device, at a producing well or facility. At this time of this inspection the pumpjack was not active. The valve between the wellhead and the pollution control is not locked open. Upon bringing the well (WA 11597) back into production please ensure the valve between the wellhead and the pollution control sensor is locked open.		D&PR	49 (2)	Relates To Emergency Shutdown Devices	The valve between the wellhead and the pollution control is not locked open. In addition to the response in Kermit, provide a photograph	Central		11597	Wellsite - Active Oil

24-Aug-2017	039964249-001	Ovintiv Canada ULC	25-Aug-2017		DLS: 03-07-081-17	Yes	Truck	Passed Inspection (Complete)	25-Aug-2017	24-Aug-2017	Planned	Measurement Inspection Meet with Flour Canada, and other EnCana representatives. Inspect documentation that was prepared for plant accounting meter specifications, centrifugates, transmitter configurations, and calibrations. Verify that the low flow cut-off was set at 0.3 m/s in the flare meter configuration for sensors #1 and # 2. Verify that all orifice meter run configurations in the Fisher ROC were correct. Verify production tank level transmitters (NGL, produced water, and condensate) were configured correctly and reading back to the plant host. Verify K-factors on coriolis meter transmitters matched K-factors programmed into the Fisher ROC. Verified that K-factor on Ultra Sonic meter transmitters matched k-factors programed into the Fisher ROC. Action Items: 1. Submit (include in the OGC measurement binders) EFM Station Reports (EFM program parameters) for all production accounting meter runs connected to the Fisher ROC. 2. Submit (include in the OGC measurement binders) Manufacturers certifications, and specifications for all accounting meters. 3. Submit (include in the OGC measurement binders) performance evaluations for all production accounting gas meters connected to the Fisher ROC. 4. Install orifice meter run data tag on FE - 5002 and FE-3003 meter runs. 5. Submit (include in the OGC measurement binders) delivery point location and contact information for NGL disposition. 6. Submit (include in the OGC measurement binders) Flare meter FIT 6001- Flow Check at max pulse output frequency (150 m/s) or max velocity as specified in the flare stack engineering design sizing calculation sheet. 7. For all production and accounting ultra sonic meters perform within 2 weeks of operation - " Ultra Sonic Meter Test and Inspection" This will be considered as the part of the performance evaluation. Submit the test reports to the OGC within one month of operation. 8. For all production accounting coriolis meters within the first month of operation perform and submit vendor "wet meter" commissioning reports. 9. For production accounting mag meters (FE-9131, 9140, 9141, 9142, 9143, 9144, 91278, 91278, 9127C, and 91270) verify the K-factors are correctly programmed in the meters and the Fisher ROC.Submit (include in the OGC measurement binders) Fisher ROC configuration, and meter configuration reports. Within 3 months of operation (90 days) perform and submit baseline verifications with the meter tube full and no flow. 10. FE-6002 Vortex meter- Use Prolink Software- Submit (include in the OGC measurement binder) the meter configuration, confirm the K-factors match in the meter and in the Fisher ROC. 11. Found FE-9134 , FE- 1173, missing the "transmitter Configuration Report". Include in OGC measurement binder. 12. Found FE- 9166 missing " EFM -Cal Report" . Include in OGC measurement binder. Please reply to OGC concerning the above action items.						South	00018136		Measurement

What is Black Swans plans for drilling this well?		D&PR	15 (1)	Relates To Protection From Hazards	The location signage for this well is still in the name of Carmel Bay. Please update the Permit Holder name and emergency # and any other pertinent info required on location signage.	Central		29149	Wellsite - Inactive
25-Aug-2017	039973272-001	Canadian Natural Resources Limited	25-Aug-2017		DLS: 14-34-085-20	Yes	Truck	Passed Inspection (Complete)	25-Aug-2017	25-Aug-2017	Incident	Checking on recent incident involving flare carry over and landowner complaint of oil spray on close by crops. I met the CNRL and Enviromental company reps on location. Majority of carry over crude oil volume is close to the stack and on lease. There was a mist of oil visible(oil drops) on the crops adjacent to the lease as well and that area is estimated at 55m x 90m. This is going to be mowed down and disposed of along with the contaminated soil. Landowner agreed to the plan and will cut a buffer around the affected crop as well. Soil testing in the field was being planned and the lease soils had been tested and the removal area was marked out. Equipment was arriving for work as I left the site. B-A well has staining on wing valve handle, and there is an audible leak from the Hi-Low pressure sensor off the Low sensor connection B-B well lower master valve is leaking causing ground staining, PIT on top of well tree has an audible leak from the needle valve B-C well ESD has staining occurring on the bottom, an audible leak from the ESD, and master valve handles both have staining occurring. B-C flow line has a leak at the orifice plate within the meter building D&PR 50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes. Other observations on site include freestanding stairs (B-45 well) which are not grounded. All findings of this inspection and inspection 0400431138-001 were relayed to a Murphy employee on Friday, August 25.						South		24745, 24746, 26055, 26056	Wellsite - Active Gas
25-Aug-2017	0400079228-001	Sanling Energy Ltd.	30-Aug-2017		DLS: A 16-04-078-15	No	Walk	Passed Inspection (Complete)	30-Aug-2017	30-Aug-2017	Planned	A surface casing vent was not observed on the well upon inspection. A surface casing vent assembly is required as per Section 18(9) of the Drilling and Production Regulation. Please submit a plan to address this within two weeks. There was no well tree at the time of inspection, only the flanged casing and annulus valves. Fence panels surround the casing and the site is adequately signed. D&PR 18 (9) A well permit holder must ensure that a well is configured such that (a) the surface casing annulus can freely vent, (b) excessive pressure cannot occur at the surface casing shoe, and (c) the surface casing is equipped with an open valve. The well shows as "cased" in our systems with no production record. As per Section 25 of the Drilling and Production Regulation, within 60 days of the well becoming inactive the well must be suspended. Please advise of any immediate plans to produce the well, otherwise all necessary steps must be taken to physically suspend the well and update its status. D&PR 25 (1) In this section: "inactive" , in relation to a well, means a well that has not been abandoned but (a) has not been active for 12 consecutive months, or (b) if the well is classified as a special sour well, has not been active for 6 consecutive months. (2) The well permit holder of an inactive well must submit a report to the commission within 30 days of the suspension of a well. (3) The well permit holder of a suspended well must establish a program of inspections sufficient to ensure the ongoing integrity of the well. (4) The well permit holder of a suspended well must maintain records of the inspections referred to in subsection (3). (5) The well permit holder of an inactive well, within 60 days of the well becoming inactive, must suspend the well in a manner that ensures the ongoing integrity of the well. 28-Aug-2017	039994838-001	Ovintiv Canada ULC	28-Aug-2017		DLS: 03-07-081-17	Yes	Truck	Passed Inspection (Complete)	28-Aug-2017	28-Aug-2017	Planned	Leave-to-Open Inspection Meet with Flour Canada, and EnCana. Review the plant permit conditions. Clear up concerns with Enbridge using FIT 5001 for temporary flow measurement to the South Peace pipeline running to the McMahon gas plant. Witness successful Mode 1 and Mode 2 ESD function tests. Verify that there were no faults on fire and gas detection equipment. Verify that the flare stack was pre-commissioned. Perform a walk through of main process areas and production equipment. Action items: 1. Confirm that the isolation valves on either side on BDVs 1101, 1102, 2101, 2102, 3101, 6101, 5001, 3001, 3002, and 3003 are car sealed open. 2. Inform the Commission when the PSV settings on the instrument air receiver are lowered from 1100 Kpa to 1034 Kpa for Cat-D fluid. 3. Ensure appropriate K-factors are programmed into the plant mag meters and the Fisher ROC EFM for (FE-9111, 9131, 9140, 9141, 9142, 9143, 9144, 9127A. 9127B, 9127C, and 9127D) Submit documentation to show that the revised K-factors have been entered. 4. Submit a revised plant car seal list. Please respond toOGC concerning the above action items.						South	00018136		Facility - LTO
28-Aug-2017	040045252-001	Ovintiv Canada ULC	29-Aug-2017		DLS: 03-23-077-15	Yes	Truck	Passed Inspection (Complete)	29-Aug-2017	29-Aug-2017	OGC Requested	Well pad is still under construction, soils have been separated and final fill of road and laying of pad in progress. Off-lease water discharge noted at the southeast corner of lease pad. Observations discussed with EnCana representative; solution recommended was a sediment fence to prevent erosion and restrict further off-site water movement. O&GWR 7(2)(e)(iv) Subject to subsection (3) and section 8 of this regulation, the operators of equipment or facilities are authorized to discharge to land the following wastes: water used in hydrostatic pipeline testing, accumulated precipitation in flare pits and surface runoff from sites associated with equipment and facilities identified in sections 4 and 6, if the discharge does not cause erosion or result in measurable downward and outward movement of soil, rocks, snow, ice, mud or debris. Drainage channel cut in the west bank, then along the south of the lease leaving site in the southeast corner. Water currently the only thing travelling off-lease but sedimentation/erosion will likely become an issue. Lease access road material is clay being pulled from wet spot at the northwest corner of the lease, could be unstable material. Water buildup also along south side of road, if still remaining on next visit will instruct to put up sediment fence there also (culvert location). EnCana Rep was Site Supervisor, with Klassen Construction.						South		33314	Wellsite - Construction Env.
28-Aug-2017	0400462250-001	Transaction Oil & Gas Ventures Inc.	29-Aug-2017		NTS: A 087-B/093-P-01	No	Truck	Passed Inspection (Complete)	29-Aug-2017	29-Aug-2017	Planned	East plastic storage tank (believed to be corrosion inhibitor but tank not clearly labelled) pipe fitting for drain has been removed, causing contents to drain into secondary containment. Approximately 1/10 full. Contents now pose a safety hazard. D&PR 15 (3) A well permit holder must ensure (a) that the well site is maintained in a condition so as to minimize hazards, including but not limited to hazards associated with pits, holes, storage of materials and equipment, and (b) that the well site is free of garbage, debris and unused equipment. The well status found in our systems is both completed and suspended, last recorded production in May 2012. The necessary paperwork should be submitted for well suspension and the well physically suspended. Suspension activities include valves being chained and locked. D&PR 25 (1) In this section: "inactive" , in relation to a well, means a well that has not been abandoned but (a) has not been active for 12 consecutive months, or (b) if the well is classified as a special sour well, has not been active for 6 consecutive months. (5) The well permit holder of an inactive well, within 60 days of the well becoming inactive, must suspend the well in a manner that ensures the ongoing integrity of the well. D&PR 50 (3) A well permit holder must take every reasonable precaution to protect wells, whether connected to flow lines or not, against damage or interference from unauthorized persons or activities. The well's lower annulus flow line is missing a bull plug in a ball valve, and the tubing assembly on the top of the well tree is missing two caps on needle valves and a bull plug. D&PR 50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes. Inspect prepared binders with accounting meter configurations, and calibrations. Verify the Fisher ROC could receive input pulses from inlet meter FE-1101 at the maximum output frequency of 5000 hz. Confirm with Flow Check software for FE-1101 with a pulse output of 5000 Hz that the inlet flow equated to 260 MMSCFD which is above 198 MMSCFD expected for each process train. Inspect accounting meter construction, and tagging. Found that some meters were missing tags to identify them as either production "accounting" or "non-accounting" meters. Action Items: 1. Confirm with the meter run manufacturer if the average dr value should be used for the AGA flow calculation. If so, correct the pipe diameter entered into the Fisher ROC for orifice meter runs FE-6103, FE-6603, and FE 1010. 2. Replace missing meter run AGA data tags for FE- 6103 and FE-6603. 3. Ensure all plant meters are identified (tagged) as either "accounting" or non-accounting". 4. FE-8015- Correct EnCana EFM Report. The upstream diameter should be 2.623 5. For all production and accounting ultra sonic meters perform within 2 weeks of operation - " Ultra Sonic Meter Test and Inspection" This will be considered as the part of the performance evaluation. Submit the test reports to the OGC within one month of operation. 6. For all production accounting coriolis meters within the first month of operation perform and submit vendor "wet meter" commissioning reports. Please respond toOGC concerning the above action items. Thank you,						South	00018051		Measurement

1-Sep-2017	0405580l4-001	Direct Energy Marketing Limited	25-Sep-2017		NTS: D 014-D/094-P-13	No	Helicopter	Deficiencies Corrected	23-Nov-2017	1-Sep-2017	Planned	The reason for the late submission of this inspection is that OGC inspector was waiting for a response from Direct Energy. Called operator on Sept. 6/2017.		D&PR	15 (3)(a)(b)	Relates To Protection From Hazards	Unused fencing must be removed.	North		03427	Wellsite - Abandoned
5-Sep-2017	0401523S2-001	Secure Energy Services Inc.	8-Sep-2017		DLS: 16-05-079-14	Yes	Truck	Passed Inspection (Complete)	8-Sep-2017	5-Sep-2017	Complaint	Inspection following nearby landowner odour complaint. - Hi/Hi and Lo/Lo must be locked out in injection buildings - Two PSV's must be locked out in CT Building, and either vented to atmosphere or tied into flare (currently venting inside building) - Site was otherwise in good condition. Operator on shift was helpful in answering any and all questions. - In regards to the odour complaint, the operator on shift had already found the issue and fixed it. Landowner was notified of this.						South	00007796		Facility - Active
5-Sep-2017	0401611096-001	Ovintiv Canada ULC	5-Sep-2017		DLS: 04-26-078-17	Yes	Truck	Passed Inspection (Complete)	5-Sep-2017	5-Sep-2017	Planned	Leave-To-Open Inspection Meet with Flour Canada, and EnCana. Check that plant approval conditions were meet. Conduct ESD function tests with Rockwell Automation. Witness a satisfactory Mode 1 plant shutdown. Verify that all fire and gas system detectors were functional . Witness a mode 2 ESD function test when 50 % propane sample was applied to ATT 2512G in the train 1 refrig/compressor building. Verified field and control room propane readings agreed. Spot check production equipment and car seals. Found (2) car seal numbers on the Train 1 Slug Catcher inner bridle not recorded correctly. Found (1) car seal on the inlet side of PSV 1102B and (1) car seal on the discharge side of PSV 1102A number not recorded correctly. Verified accounting meters upstream diameters (dr) values were corrected in the Fisher ROC for FE- 6103, FE-6603, FE-1010. Found that Slug Catcher 2 inlet meter FE-1601 was polling the wrong pressure transmitter for the AGA flow calculation in the Fisher ROC. The error was corrected at the time and the correct transmitter was configured for meter run FE-1601. Action Items: 1. To meet condition (11) on the Facility Permit EnCana is to build a Monthly Flaring Report spread sheet to summarize daily flaring reports. 2. To meet condition 12(c) on the Facility Permit EnCana is to build a spread sheet to track the conservation efficiency of the HP reciprocating compressor. 3. Submit an electronic copy of the Plant Emergency Shutdown Logic Chart, signed and stamped by a professional engineer. 4. Submit an electronic copy of the plant master car seal list, dated and signed by operations. 5. Upon admission of propane into the refrigeration process-submit confirmation that all fire and gas detection forces in the plant PLC have been removed. If for some reason a force must remain then the PLC force must be authorized and tracked. 6. Due to some errors that were found when recording car seal numbers on the plant master car seal list the OGC requests EnCana examine the methods used and seek ways to optimize the process to reduce potential errors in the future. Please respond to OGC concerning the above action items. Thank you,						South	00018051		Facility - LTO

6-Sep-2017	0402033 13-001	Tourmaline Oil Corp.	6-Sep-2017		NTS: A 021-I/094-B-09	Yes	Truck	Passed Inspection (Complete)	6-Sep-2017	6-Sep-2017	Planned	Start-up Inspection for Temporary Compressor , 2000 bbl Produced Water Tank, and New VRU. Meet Connect Control Systems PLC programmer, and Tourmaline Oil operations staff. Review the permit conditions. Review start-up binder that Tourmaline prepared for the OGC. Site ESD function tests were completed Sept 5, 2017. Inspect the temporary compressor package. Found that there were some Fisher Controls instrumentation (such as : 67CFR regulators, 4150 controller, 119 switching valve) using natural gas supply that were not safely vented outside the compressor package. Inspect the new 2000 bbl tank, and VRU package. Action Items: 1. Temporary Compressor- Ensure D&PR 47 (f) is met. Vent all Fisher Control instrumentation that is using a natural gas supply outside of the compressor package. (Fisher 4150 controller on the side of the compressor panel, Fisher 67CFR regulators, Fisher 119 switching valve on the engine pre/post lube pump control.) 2. Temporary Compressor- Ensure that CSA Z662 4.14.2.11 is met. Emergency valves and controls should be clearly identified by signs. (such as ESD push buttons, suction, discharge, bypass, and blowdown valves). 3. Temporary Compressor- Lock or car seal open (x2) pressure isolation valves for the compressor high discharge pressure shutdown, 4. Install a load procedure sign for the 2000 bbl tank truck-out. Please respond to OGC concerning the above action items. Thank you,						Central	00007924		Facility - Start Up

6-Sep-2017	0404950 67-001	PETRONAS Energy Canada Ltd.	25-Oct-2017			No	Truck	Passed Inspection (Complete)	25-Oct-2017	20-Sep-2017	Planned	This inspection is for road # 3593 which accessed Progress well b-11-K / 94-B-16 off of the Townsend Road. It has been noted that the bridge work has been completed and that a sign has been posted which says " 1 ton only across bridge". This sign is not a normal bridge weight restriction sign and one is asked the question is this bridge rated to 2,000 lbs. or the weight of a 1 ton truck which may weigh 3.5 tons? With such a minimal weight allowance, I am requesting the as built drawings and a rationale as to why the load rating is so low for a new bridge. It also needs to be recognized that at some point in time the well site equipment will need to be removed off of b-11-K 94- B-16 and b-a-11-k / 94-b-16 on the far side of the bridge and the bridge is apparently not capable or handling those loads.						Central			Road - Active
7-Sep-2017	0402487 01-001	Canadian Natural Resources Limited	8-Sep-2017		NTS: D 031-H/093-I-15	Yes	Truck	Passed Inspection (Complete)	8-Sep-2017	8-Sep-2017	Planned	Some minor staining around wellhead. Spoke with operator, issue dealt with asap.						South		05699	Wellsite - Suspended

7-Sep-2017	040256301-001	Ovintiv Canada ULC	8-Sep-2017		DLS: 04-07-081-17	Yes	Truck	Passed Inspection (Complete)	8-Sep-2017	7-Sep-2017	Planned	Start-up Inspection Meet EnCana reps and Manager EI&C on site. Review the binder prepared by EnCana for the OGC with the tube storage production accounting narrative, the Inventory Management System design, the measurement schematic, level transmitter configurations and initial set up, the production accounting meter configurations, initial commissioning, and Smart Meter Verifications (no flow empty pipe). Confirmed that ESD function tests were performed by Project Manager, Rockwell Automation on Sept 6/17. Review and accept a signed copy of the shutdown logic charts for the tube storage inlet and outlet. Accept electrical Q/A final sign-off from Dynamysk. Witness ESD function tests of the tube storage inlet and outlet ESDVs. Wet commissioning filling of the tube storage is scheduled for Sept 18 /17. Reviewed and accept the hydrostatic test reports done by Triple J Pipelines in May/17. Action items: 1. Tube Storage- Develop a mass balance inventory algorithm calculated and evaluated at rollover (8:00 am daily) for leak detection with alarm capability through the Signet OCC System. The mass balance is to be based on the equation: Inlet + Tube inventory = Outlet + tube leftover inventory. 2. Install a barricade or permanent (fencing) for protection around the tube storage level transmitters where they come up out of the ground at surface level. 3. Submit an electronic version of the tube storage shutdown logic charts. 4. Submit accounting meter wet commissioning reports. 5. Submit accounting meter initial proving reports. 6. Submit survey results that confirm that the slope on all tubes are equivalent. 7. Lock or car seal the root and manifold valves open on the inlet and outlet pressure transmitters connected to ESD function (eg. PIT 1302, PIT 1110, PIT 2302). 8. Submit a revised car seal list. 9. Re-map LIT-7405- adjust threshold for echo curve. 10. Notify when the initial accounting meter proves are to be scheduled. 11. Tag all non-production accounting meters. Please respond to OGC concerning the above action items Thank you,						South	00026226		Facility - Start Up

8-Sep-2017	040291863-001	Canadian Natural Resources Limited	12-Sep-2017			No	Truck	Passed Inspection (Complete)	12-Sep-2017	11-Sep-2017	Follow Up	This is a follow up inspection for Cameron River Road (PDR 169) at approximately km 5 where the geotechnical repairs were made during July /August 2017. There is a concern regarding the rip rap placed in and about Darben Creek. As part of the overall work plan and from communications with CNRL the earth that has moved towards and into Darben Creek was to have been pulled back and the stream banks were to be rip rapped with angular rock. The earth from the road failure has moved earth towards and into Darben Creek constricting the stream width. My observations on Sept 8th found that the earth had not been pulled back and that there mostly round rock placed in proximity to and in Darben Creek. The installation of this rock without pulling back the toppled earth caused by the slumping road has made the constriction on Darben Creek more permanent. In the past, the earth would just be eroded away by the stream as the slump toppled earth to the stream. The width of Darben Creek above and below this section is many times wider. This constriction doesn't fit with normal stream morphology which usually has an outside corner the same width or wider than the rest of the stream unless there is a natural rock formation which deflects the stream flow. This constriction has a high likelihood of preventing or restricting fish passage and may have some impact on stream flows. A fisheries assessment was done for the bridge installation at km 6 identifying restrictions to fish passage due to culvert installations. This constriction may also be an additional restriction to fish passage. Due to the above concerns I am requesting that CNRL obtain a certified professional familiar with streams and fisheries in NEBC to conduct a site visit and assess the works conducted in relation to normal stream morphology, effects on fish passage and water flow and any other pertinent information. Please have them report on their observations and recommendations as well as any plan of action that may be needed. Please have this report submitted to BCER by Sept 29, 2017. There are some concerns and an information request has been made. Thank you						Central			Road - Construction
8-Sep-2017	040295650-001	Direct Energy Marketing Limited	11-Sep-2017		NTS: D 074-C/094-J-09	No	Truck	Passed Inspection (Complete)	11-Sep-2017	8-Sep-2017	Planned	Wellhead chained and locked. 8-Sep-2017	040296756-001	Bonavista Energy Corporation	11-Sep-2017		NTS: A 008-G/094-H-04	No	Truck	Passed Inspection (Complete)	11-Sep-2017	8-Sep-2017	Follow Up	COMMENTS: -site has been cleaned up, but rig anchors and pipeline riser/valves still remain onsite. The pipeline risers/valves have guards/barriers in place. -Wellhead is chained and locked -Flare pit fencing has been erected and repaired -Signage is now good						Central		00967	Wellsite - Suspended
8-Sep-2017	040307879-001	Canadian Natural Resources Limited	12-Sep-2017			No	Truck	Passed Inspection (Complete)	12-Sep-2017	12-Sep-2017	Follow Up	This is a follow up to inspection 037134792 relating to deficiencies on Cameron River Road, PDR 169. There have been 3 extensions requested and given for the required work on this road. The last extension expired on July 31st 2017. A system generated second notice was sent to CNRL on the same day. Subsequent travels in the area and a formal inspection on Sept 8 2017 found that the deficiencies for inspection 037134792 still have not been addressed. This issue will now be forwarded onto the OGC enforcement section. This inspection will show as a PASS only due to the limitations with the KERMIT system, however, there are the deficiencies that are still outstanding. Thank you						Central			Road - Active
8-Sep-2017	040348810-001	Tourmaline Oil Corp.	13-Sep-2017			No	Truck	Passed Inspection (Complete)	13-Sep-2017	13-Sep-2017	Follow Up	This follow up inspection is subsequent to inspection # 38877487 conducted at km 1 and approximately 1.3 on the Mile 109 road (PDR 278). The following are observations and comments made on Sept 8th 2017 for the reclamation and remediation works that have been conducted to address the issues; -the use of black steel pipe for cross drain culverts ensures a long lifespan and the ability to withstand any impact by traffic -the placement of the culverts and one take off appear to be adequate -there is a good wide ditch established -there was some grass seed found along the exposed soil -good armouring of the ditch blocks Some items to address or be aware of; -Eco-Webs' detailed description of the issue (page 3) ,works required (page 6) and operational activities (page 7) include reconstructing and armouring the stream back into its original path. This has not been done especially at the main km 1 culvert (S6 stream) and the concern is that the stream will continue to flow in a braided path and not in the channel it had created naturally. With the silt fence downstream of the outlet there is potential for the stream to be deflected away from its natural path. Please consult with Eco-Web in re-establishing the flow into the original channel to avoid braiding and re-establish the natural hydrological features of this stream over the distance that was impacted. Please have this work completed by October 13 2017. Thank you. - the culvert at km 1 has an internal deflect is its installation and this may require some maintenance if the road surface starts to sink. - please keep monitoring the site for needed adjustments such as rock placement at culvert inlet and outlets, possible erosion issues within the ditch line, revegetation and eventual removal of the silt fence when vegetation is well established and the silt fence is no longer needed or is in disrepair. Overall we were satisfied with the robust work that had been completed along this stretch of road plus the addition of a cross drain culvert further up the road at about km 6.5 to eliminate a long run of ditch water that was causing deep erosion. This new strategy appears effective for the amount of water presently pooling on site. Three culverts now placed under road access, no flow currently - no silt fencing or hydroseed present. Two wells surveyed and finishing touches on berm at the time of inspection.						South		33314	Wellsite - Construction Env.
12-Sep-2017	040435434-001	Secure Energy Services Inc.	19-Sep-2017		NTS: C 088-J/094-A-12	Yes	Truck	Passed Inspection (Complete)	19-Sep-2017	12-Sep-2017	Planned	COMMENTS: -at time of site visit, the operator of site stated that he had only been at this job and facility for about two months or less. Was not able to answer many of my questions and did not really know where to find the information. Was able to call his supervisor/co-operator. Supervisor said I should contact his supervisor for more answers, as he was not able to provide all answers. -Operator also mentioned to me that the SCADA was not working onsite as of that morning, and that he had contacted Herman to report it was not working. At time of site visit, said the SCADA was still not working. When I asked what the Maximum Wellhead Injection Pressure (MWHIP) is for this facility, he was not able to answer. Also, when I asked to see a copy of the Packer Isolation Test (PIT), was unable to provide, as he stated that there was not a copy at the facility site. So I was unable to determine if the last test was a PASS. Since then, a copy of the PIT has been emailed to me.						Central		29846	Wellsite - Disposal/Injection
12-Sep-2017	040437675-001	Murphy Oil Company Ltd.	19-Sep-2017		NTS: D 040-A/093-P-09	No	Truck	Passed Inspection (Complete)	19-Sep-2017	19-Sep-2017	OGC Requested	In response to an odor complaint made regarding the C-Rings adjacent to D-40-A/93-P-9 well pad, Dawson Creek OGC Operations Supervisor requested an Operations Officer attend. No off-site odors were noted along the 209 Road at the time of inspection. On site, plastic piping from the plant disposal line in the C 39 A well building into one of two C-Rings is now in place on the site. The piping output into the C-Ring was observed to be approx. 1 meter above the fluid level, with staining on the lined wall below. This was noted as a possible cause of the strong odors. From speaking with two Murphy employees, it was discovered that pumping operations were shut down shortly after they began due to complaints of strong odors. In addition, some condensate had separated off the top of the separator at the Enbridge plant upstream which was then transported into the C-Ring along with the produced water. The addition of condi was caused by too high of volume running through the plant and has been dealt with. A 400 barrel tank was being brought in to remove any condi from the C-Ring and the piping from the plant to the C-Ring is to be purged. Moving forward, one of the Murphy representatives stated there will be no further pumping until odor control chemical injection is put in place and the C-Ring output piping is extended toward the bottom of the C-Ring to prevent agitation of its contents. Odor and condi related issues are being dealt with accordingly. - Two C-Rings now on site; -Both are approx. 1/3 capacity, north one is giving off odors, dark fluid -south confirmed to be water-filled (holds cover down) -4" plastic piping running from C39A well building (disposal line from the plant) into the north C-ring						South		24389	ProducedWaterStorage
12-Sep-2017	040452278-001	Ovintiv Canada ULC	19-Sep-2017		DLS: 15-24-077-15	No	Truck	Passed Inspection (Complete)	19-Sep-2017	19-Sep-2017	Routine	Erosion and off-lease water discharge is occurring at the southeast and southwest corners of the lease pad. Observations were discussed on site with an EnCana representative on Sept 19, 2017; controls to be implemented. O&GWR 7(2)(e)(v) Subject to subsection (3) and section 8 of this regulation, the operators of equipment or facilities are authorized to discharge to land the following wastes: water used in hydrostatic pipeline testing, accumulated precipitation in flare pits and surface runoff from sites associated with equipment and facilities identified in sections 4 and 6, if the discharge does not cause erosion or result in measurable downward and outward movement of soil, rocks, snow, ice, mud or debris.	EnCana representative is Rob Conroy, Lease and Roads.					South		32158	Wellsite - Construction Env.
12-Sep-2017	040458010-001	Ovintiv Canada ULC	20-Sep-2017		From: DLS: 06-19-077-14 To: DLS: 15-24-077-15	No	Truck	Passed Inspection (Complete)	20-Sep-2017	19-Sep-2017	Routine	Erosion and sediment controls in place require maintenance. Observations discussed on site with EnCana representatives on Sept 19, 2017. Section of pipeline from 15-24-77-15 well pad to Bissette Creek was walked. Current controls are from construction phase for the purpose of work conducted last winter; maintenance to existing erosion controls and additional controls to be implemented in the next two weeks, weather permitting. Sump directly east of site, off RoW, is also to be subsequently tested and addressed. O&GWR 7(2)(e)(v) Subject to subsection (3) and section 8 of this regulation, the operators of equipment or facilities are authorized to discharge to land the following wastes: water used in hydrostatic pipeline testing, accumulated precipitation in flare pits and surface runoff from sites associated with equipment and facilities identified in sections 4 and 6, if the discharge does not cause erosion or result in measurable downward and outward movement of soil, rocks, snow, ice, mud or debris. 13-Sep-2017	040369946-001	Altagas Holdings Inc.	14-Sep-2017		NTS: C 041-F/094-B-16	Yes	Truck	Passed Inspection (Complete)	14-Sep-2017	13-Sep-2017	Planned	Facility Start-up Inspection Meet with EPFC representatives , EPFC Project Commissioning Engineer, Lead C & SU. EPFC Instrumentation Construction Manager, E&I , and Altagas representative, Construction Manager. Review the facility permit conditions, commissioning documentation, accounting meter configurations, and transmitter calibrations. Confirm that all process piping is mechanically complete. Witness (2) satisfactory Mode 1 ESD function tests, first when a 50 % LEL gas sample was applied to AIT 0500 and AIT 0501, and then when fire-eye AIT 0505 high high was triggered using a UVIR test lamp in Compressor C. Perform a walk through of new production equipment. Found that the load box for the Hydrocarbon Drain Tank was outside of the containment wall. When inspecting the instrument air system (2) PSVs on air receivers (one inside and one outside the Instrument Air Building), with the air system pressurized, were found to be effectively rendered inoperable, as they had ty-raps around the valve handles, still in place from shipping. The ty-raps were removed immediately. (2) Electrical seals in hazardous areas were found not poured, despite electrical QA documentation that indicated all electrical seals had been inspected that they were packed and poured. A pressure alert valve (PAV) on the inlet pig receiver was found not to be closed and possibly damaged. The pig receiver was isolated and blown down, but the production flowline was live. The safety chain attaching it to the receiver barrel was found to be altered from OEM condition, and had (2) clip style detachable links added. Action Items: 1. Ensure D&PR 50 (1) is met. Move the Hydrocarbon Drain Tank load box back, to be within the containment wall. 2. Repair/replace the pressure alert valve (PAV) on the inlet pig receiver. Restore the PAV safety chain to original length (OEM) and remove detachable chain links. 3. Pour electrical seals in the Dehy Still Column Condensing Tank enclosure, and in the inlet Separator Building, on TS-0100. 4. At start-up, once flare purge gas is on, ensure that the main flare meter low flow cut-off is set at an appropriate value as not to measure the purge gas. The purge gas will be measured and reported using the purge gas meters. Total flared gas reported = main flare meter + purge gas meters+ flare pilot gas. 5. Submit the Commissioning/Start-up, Measurement, and Mechanical QA binders that were reviewed. Please respond to OGC concerning the above action items. Thank you,						Central	00018257		Facility - Start Up

15-Sep-2017	040444236-001	Canadian Natural Resources Limited	19-Sep-2017			Yes	Truck	Passed Inspection (Complete)	19-Sep-2017	19-Sep-2017	Follow Up	Thanks to operators for meeting me on the Cameron River Road (POR 169) on September 15 2017 to look at the deficiencies identified in inspection 037134792 that have yet to be addressed. There were 2 extension given and 2 second notices sent out. This follow up inspection will also address the geotechnical repair work that was conducted at km 5 on Cameron River Road. We travelled in one truck and stopped at spots along the road that require work as described in the inspection. This included areas of brush (km 1-3 hill, km 4 corner), plugged or damaged culverts, some that had not been identified and marked with a steel post, areas where there were grader berms, multiple ditch lines or no defined ditch or crown to the road and generally the water was not able to flow off the road or make it to a culvert. These were common themes along the road and show the need that after a period of time sending a grader down the road doesn't solve the issues on an old road as the road has a tendency to become flatter in profile and the ditch becomes shallow or non-existent. The km 8 hill presents a few challenges to address the amount of water and its' velocity which causes sediment transport as well as making the hill very slippery when there is a thaw or rain event. For the geotechnical repair work, we looked at the Darben Creek and the concerns that I had in regards to the work that was completed in regards to constricting the width of the stream. In the last follow up inspection (040291863) I had asked that a qualified professional take a look at the work that was done conduct an assessment and make a plan for any remediation works. I am looking for a plan from that qualified professional in the time frame stated in that inspection. When they have a plan made please e-mail that to me. Please keep in mind the conditions in the amendment (100102510) to application determination number 100080358, especially condition #11 " in accordance with alternative timing and associated mitigation recommended by a Qualified Professional and accepted by the Commission". This inspection will show as a PASS but there are concerns about addressing the deficiencies. Thank you						Central			Road - Active
15-Sep-2017	040445204-001	Canadian Natural Resources Limited	19-Sep-2017		DLS: 10-02-083-21	No	Walk	Passed Inspection (Complete)	19-Sep-2017	19-Sep-2017	Planned	Windfall across access road approximately 400 meters from the site. Wellhead is chained, locked and connected to the flow line. Strong odor on site. low level H2S alarm in building. Contacted Assistant Production Foreman who will send a crew out immediately. Crew found 15 PSI on the hi line and the meter run vent cracked. Line was isolated and depressurized. Later in the week a crew will be sent out to disconnect the flow line and blind pipeline. 20-Sep-2017	040497138-001	NorthRiver Midstream Energy Limited	21-Sep-2017		From: DLS: 10-26-078-17 To: DLS: 14-21-078-17	No	Walk	Passed Inspection (Complete)	21-Sep-2017	21-Sep-2017	Complaint	Off-site water discharge and erosion noted at multiple locations along the pipeline RoW from the 223 Road crossing to the uphill side of the 90 degree corner east of the 8-31-77-15 W6 Riser. Erosion also occurring in the east ditch of the 223 Road, washing out the shoulder - MOTI Road, have made complainant aware. Water is channeling, carrying sediment off the RoW northward at the lowest point of the 90 corner. The force and quantity of water has likely increased due to the deteriorating of the middle of three ridges breaking up the slope; water is now running overtop of the ridge and eroding a path alongside the ATV trail to the lowest ridge. Erosion is also occurring at the northeast corner of the riser, on the north side of the ATV trail, with sediment being carried west and then north into an adjacent field (sediment deposits approaching the tree line along 223 Road); the bank to the SE of the riser fence is also beginning to erode with water flow travelling into the ditch of the 223 Road. ATV trails are also causing added erosion potential and water flow vectors across the slope. Please contact the undersigned inspector for further details, and with a plan to deal with the erosion occurring at the site. O&GWR 7(2)(e)(vi) Subject to subsection (3) and section 8 of this regulation, the operators of equipment or facilities are authorized to discharge to land the following wastes: water used in hydrostatic pipeline testing, accumulated precipitation in flare pits and surface runoff from sites associated with equipment and facilities identified in sections 4 and 6, if the discharge does not cause erosion or result in measurable downward and outward movement of soil, rocks, snow, ice, mud or debris. 21-Sep-2017	0405111820-001	ConocoPhillips Canada Operations ULC	22-Sep-2017		NTS: A 045-D/093-P-08	No	Truck	Passed Inspection (Complete)	22-Sep-2017	22-Sep-2017	Planned	A 45 D well shows as active in our systems; however, the well is chained and locked and disconnected from flow lines. As well, last production recorded was in May, 2011. Please complete the necessary steps to suspend the well and update its status. D&PR 25 (1) In this section: "active" means (a) production, injection or disposal of fluids, (b) drilling or completion operations, and (c) with respect to a well designated under section 2 (7), monitoring reservoir pressure or obtaining other formation information. "inactive" , in relation to a well, means a well that has not been abandoned but (a) has not been active for 12 consecutive months, or (b) if the well is classified as a special sour well, has not been active for 6 consecutive months. (2) The well permit holder of an inactive well must submit a report to the commission within 30 days of the suspension of a well. (3) The well permit holder of a suspended well must establish a program of inspections sufficient to ensure the ongoing integrity of the well. (4) The well permit holder of a suspended well must maintain records of the inspections referred to in subsection (3). (5) The well permit holder of an inactive well, within 60 days of the well becoming inactive, must suspend the well in a manner that ensures the ongoing integrity of the well. Valve handles have been chained and locked but the chain ineffective at preventing valves from being turned. D&PR 50 (3) A well permit holder must take every reasonable precaution to protect wells, whether connected to flow lines or not, against damage or interference from unauthorized persons or activities. Stained ground below annulus valves and on the ground and wellhead flange from the master valve assembly						South		07160	Wellsite - Inactive
21-Sep-2017	0405132202-001	ConocoPhillips Canada Operations ULC	22-Sep-2017		NTS: B-A 048-D/093-P-08	No	Truck	Passed Inspection (Complete)	22-Sep-2017	22-Sep-2017	Routine	Comb/Ex LEL alarm on personal monitor sounded upon entry into meter skid. Audible leak appears to be coming from the rear of Fisher Controller box. Inhibitor leak on floor of meter skid D&PR 50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes. 22-Sep-2017	0406988857-001	Sanling Energy Ltd.	6-Oct-2017		NTS: A 067-G/093-P-01	No	Truck	Passed Inspection (Complete)	6-Oct-2017	2-Oct-2017	Planned	Staining below pressure gauge at the top of the well tree Staining below annulus valve on flow line side Comb/Ex LEL alarm sounded on personal monitor upon entry to meter building SCADA unit off actuator is continually venting to atmosphere causing odor at the rear of the building D&PR 50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes. Other observations include: -no chain on the cap of the far pigging station from the meter building -foxtail and yellow sweet clover invasive plant species present along the access road from Highway 52 to the site						South		11481	Wellsite - Active Gas
22-Sep-2017	0407000090-001	Tidewater Midstream and Infrastructure Ltd.	2-Oct-2017		NTS: A 057-G/093-P-01	No	Truck	Passed Inspection (Complete)	2-Oct-2017	2-Oct-2017	Planned	The sign at the entrance to the lease reads "Delphi Energy Corporation". The sign must be updated to reflect the current ownership and emergency contact information. D&PR 15 (1) Until the well is abandoned, a well permit holder must ensure that a permanently legible and conspicuous sign is displayed and maintained at each well, and that sign must show all of the following: (a) the name of the well permit holder; (b) emergency notification information, including a telephone number; (c) the location of the surface site of the well as specified in the well permit; (d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1; (e) if the well may produce gas containing 100 ppm or greater of hydrogen sulphide, a poisonous gas symbol from Schedule 1; (f) after March 1, 2011, if the well may produce gas containing 10 ppm or greater of hydrogen sulphide, a poisonous gas symbol from Schedule 1. The wellhead is still connected to flow lines but the lines have been flanged and the meter skid removed from the site. The well's valves have been chained and locked and last production was in 2011. The necessary steps need to be taken to physically suspend the well and update its status in our systems. D&PR 25 (1) In this section: "inactive" , in relation to a well, means a well that has not been abandoned but (a) has not been active for 12 consecutive months, or (b) if the well is classified as a special sour well, has not been active for 6 consecutive months. (2) The well permit holder of an inactive well must submit a report to the commission within 30 days of the suspension of a well. (3) The well permit holder of a suspended well must establish a program of inspections sufficient to ensure the ongoing integrity of the well. (4) The well permit holder of a suspended well must maintain records of the inspections referred to in subsection (3). (5) The well permit holder of an inactive well, within 60 days of the well becoming inactive, must suspend the well in a manner that ensures the ongoing integrity of the well. Other observations include: -Cap on pigging station of pipeline header on site does not have a chain -A log deck approximately 200m before the lease site along the access road, please inform Operations Officer of future plans to remove/burn said debris -Foxtail and Sweet Clover invasive plant species are present along the access road						South		25138	Wellsite - Inactive

3-Oct-2017	040763705-001	Tourmaline Oil Corp.	3-Oct-2017	18-Oct-2017	DLS: 03-18-080-17	Yes	Truck	Deficiencies Corrected	9-Nov-2017	3-Oct-2017	Planned	Gas Plant Inspection Meet Tourmaline Oil operations, and E+I staff. Inspect the plant fire & gas detection maintenance records. Inspect the records of the plant shut down checks, and accounting meter calibrations. Found that the accounting meter calibrations were overdue, last done May 2016. Found that level transmitters on that the condensate tanks (S-9000-2, S9100-2, S9200-2) were tagged as non-accounting meters. These meters are accounting meters and are used to report Supply Opening and Disposition Closing inventories to the Ministry of Finance (MOF) on the BC-19 form. The condensate tank level transmitters were installed on blanketed tanks without a compensating leg on the transmitter. The level readings would be affected by pressure changes in the tank blanket gas pressure. Found the compensating leg on the produced water tank level transmitters (S-9200-1 S9300-1) were shut in. The level transmitters on the produced water tanks would be production accounting meters used in the allocation of produced water back to the wells reported on the BCS-2 Form. Inspect train 1 and train 2 production equipment. Inspect that locks and car seals were installed as per regulation. Action items: 1. Repair the flare stack flame fail alarm. Inform as to the expected time to complete repair. 2. Repair Fire detection AIT- T6050 in Refrig Train 2. Malfunction alarm came in at 6:48 am. 3. Ensure the insulator kit is installed on the 16-15-80-18 slipstream line after "smart" pigging is completed. 4. Identify the train 1 and 2 de-butanizer reflux meter as " non-accounting". 5. NGL bullets - Label FT-9710 "out of service". 6. Inlet ESD-1000 pilot isolation valve - Install a signed and dated lock out tag " out of service". 7.Train 1 Methanol Storage 1000 gal tank- Ground tank, install load procedure signage, and supply truck ground cable and clamp. 8. Train1 Petro-Therm Tank- Ensure WHMIS label is installed once product is in the tank. 9. Glycol tank outside refrig 1- Ground tank, install load procedure sign, and truck ground cable and clamp. Please reply to OGC concerning the above action items and through the KERMIT system for the attached deficiencies. Thank you,		D&PR	53 (a)	Relates To Measurements	1. The level transmitters on the condensate tanks (S-9000-2, S9100-2, S9200-2) are not reading the correct level as the differential pressure transmitters are installed without a leg to compensate for blanket gas pressure effect on the indicated level reading for the reporting of Supply Opening Inventory and Disposition Closing Inventory to the Ministry of Finance (MOF). 2. The compensation leg for the level transmitters on the produced water tanks (S-9200-1, S9300-1) were shut in. The indicated level in the produced water tanks was not accurate as the tank blanket gas pressure was affecting the level measurement for produced water allocations back to the wells reported to the MOF on BCS-2 form. 3. Found that production accounting meter calibrations were overdue. Maintain all production accounting meters as per the OGC Measurement Guideline for Upstream Oil and Gas Operations Manual. Submit all 2017 production meter accounting calibration reports once completed.	South	00007819	Facility - Active

Another observation on site is a well-used truck track which travels under the sales line between the meter building and the riser. The pipe is no higher than approx. 7 ft. If a larger vehicle were to attempt going under, they may hit and rupture the piping as it is unprotected. The hazard should be eliminated by height limitation markings on the pipe or removal of the track or restricting that access.						South		16678, 18740	Wellsite - Active Gas
3-Oct-2017	040863195-001	Tidewater Midstream and Infrastructure Ltd.	5-Oct-2017		NTS: B-A 014-J/093-P-01	No	Truck	Passed Inspection (Complete)	5-Oct-2017	5-Oct-2017	Planned	Last production recorded was in December 2009. There is no indication of any down hole suspension, suspension exemption or update of the well's status to suspended and it currently shows in OGC systems as completed. The necessary steps need to be taken to physically suspend the well and update its status to suspended as it falls under the definition of inactive. D&PR 25 (1) In this section: "inactive" , in relation to a well, means a well that has not been abandoned but (a) has not been active for 12 consecutive months, or (b) if the well is classified as a special sour well, has not been active for 6 consecutive months. (2) The well permit holder of an inactive well must submit a report to the commission within 30 days of the suspension of a well. (3) The well permit holder of a suspended well must establish a program of inspections sufficient to ensure the ongoing integrity of the well. (4) The well permit holder of a suspended well must maintain records of the inspections referred to in subsection (3). (5) The well permit holder of an inactive well, within 60 days of the well becoming inactive, must suspend the well in a manner that ensures the ongoing integrity of the well. Ground staining in the cellar below the annulus valves Staining on the casing from the master valve Main fuel gas supply line on site near ground entrance has a valve which is able to be opened and a regulator (uncapped) that the gas would flow through to atmosphere D&PR 50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes. Meth tank and secondary containment still present; secondary containment contains a reddish colored liquid. If there is no plan for immediate use, removal is recommended as per Section 15 (3)(b) of the D&PR under the "is related to a decommissioned activity" definition of unused equipment. Other observations on site include: -Flow lines still present on site, some which are uncapped/unflanged and being supported by pieces of wood or unsupported altogether						South		21548	Wellsite - Inactive
3-Oct-2017	040869338-001	Ovintiv Canada ULC	5-Oct-2017		NTS: D 004-J/093-P-01	No	Truck	Passed Inspection (Complete)	5-Oct-2017	5-Oct-2017	Planned	Meter Building: -Appears to be a mouse issue Riser on site: -Drain near pigging station has staining on the ball valve and the bull plug is cross-threaded causing a leak and staining on the ground below D&PR 50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes. 3-Oct-2017	0409182805-001	Predator Oil BC Ltd.	10-Oct-2017	1-Jul-2018	NTS: B 068-B/094-A-13	No	Truck	Deficiencies Corrected	28-Aug-2018	3-Oct-2017	Planned	COMMENTS: -wellhead valves are chained and locked -No Surface Casing Vent Flow (SCVF) -vegetation growing up to and around the wellhead area. As per suspension requirements, there must be a 10 meter radius around the wellhead free of vegetation. -Flare pit onsite that is fenced. There is no sheen on the water and good vegetation present.		D&PR	15 (3)(a)(b)	Relates To Protection From Hazards	This well last produced in 1999. Therefore, the equipment that remains onsite, ie: steel pipe frames and the steel frame and piles where a building would have been, needs to be removed from this site. "Unused Equipment" is considered any equipment, including piling, that has been out of use or service for more than 10 years. As this well has not produced since 1999, it definitely meets the criteria for removal.	Central		03809	Wellsite - Suspended
3-Oct-2017	0409182805-001	Predator Oil BC Ltd.	10-Oct-2017	1-Jul-2018	NTS: B 068-B/094-A-13	No	Truck	Deficiencies Corrected	28-Aug-2018	3-Oct-2017	Planned			D&PR	15 (1)	Relates To Protection From Hazards	No visible location sign found anywhere. Install proper signage as per the Drilling and Production Regulation with all pertinent information.				
3-Oct-2017	0409878995-001	Predator Oil BC Ltd.	10-Oct-2017		NTS: B 035-H/094-A-13	No	Truck	Passed Inspection (Complete)	10-Oct-2017	3-Oct-2017	Planned	COMMENTS: - a suspension report must be submitted to the OGC, as this well has not produced in 31.29 months. Within 60 days of well becoming inactive (inactive = 12 months of inactivity), a suspension report must be submitted to the OGC. -most of the location signs leading into location are incorrect. Off of the mile 98 road, at the km 18 road, there is a location sign that reads b-35-H/94-A-14. The sign should read b-35-H/94-A-13. This applies to al but one sign heading into location. Also, at the site, there is a sign on the wellhead building and it also reads 94-A-14. This location is in the 94-A-13 block and al signage that is incorrect needs to be corrected. -ALL emergency numbers on ALL signs need to be changed to the PREDATOR emergency number. I have noticed on some signage, the emergency number is updated with the new PREDATOR Oil BC Emergency number sticker, but many signs have been missed, or the new number added to the signage, when it should be replacing the old emergency number that belonged to PENNWEST. Don't leave the old emergency numbers visible, this includes all the pipeline signage that needs to be updated. -As per the suspension requirements, vegetation must be controlled within a 10 meter radius of the wellhead. On this lease there is vegetation growing 3-4 feet high and up to and around the equipment and wellhead. This needs to be addressed. -there is a needle valve that requires a bull plug at the end of the meter cupboard. This will need to be installed prior to re-starting this well. The ESD and hi/low sensing points have been removed, so will also need before restart. -There is a c-ring, meter cupboard, propane bullet, wellhead cover, etc on lease. Comb/Ex of 11 D&PR 50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes. Last production from the 100/05-23 well was in July 2016 yet the well shows as active in the OGC database. No suspension exemption was observed in a systems check; thusly, if there are no immediate plans to produce the well, the necessary steps need to be taken to physically suspend the well and update its status to suspended as it falls under the definition of inactive. Please inform Operations Officer of any plans to put the well back into production. D&PR 25 (1) In this section: "inactive" , in relation to a well, means a well that has not been abandoned but (a) has not been active for 12 consecutive months, or (b) if the well is classified as a special sour well, has not been active for 6 consecutive months. (2) The well permit holder of an inactive well must submit a report to the commission within 30 days of the suspension of a well. (3) The well permit holder of a suspended well must establish a program of inspections sufficient to ensure the ongoing integrity of the well. (4) The well permit holder of a suspended well must maintain records of the inspections referred to in subsection (3). (5) The well permit holder of an inactive well, within 60 days of the well becoming inactive, must suspend the well in a manner that ensures the ongoing integrity of the well. Erosion noted at the southeast corner of the site, some controls currently in place.						South		21528	Wellsite - Inactive
4-Oct-2017	0409329286-001	Ovintiv Canada ULC	6-Oct-2017		DLS: A 05-23-077-15	No	Truck	Passed Inspection (Complete)	6-Oct-2017	6-Oct-2017	Routine	A-5 well: Ground staining below both annulus valves, bubbling from the first flow-side annulus handle assembly B-5 well: Heavy staining from master valves onto casing and the adjacent ground -Comb/Ex LEL alarm sounded on personal monitor upon opening B-5 line heater. B-5 line heater LELs of 23 -Fisher 67 tied into actuator near FY-200 SCADA unit at line heater in continuously venting to atmosphere Meter Building: Staining below ball valve drain off globe valve on both A-5 flow lines, with and without check valve, after meter -Orifice plate leaks on both A-5 and B-5 flow lines D&PR 50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes. B-5 well ESD open at the time of inspection; however, A-5 was shut in. Both wells show as active in the OGC database with last production records from July 2016. It appears B-5 has been brought back into production and no suspension exemption was observed in a systems check for A-5. Thusly, if there are no plans to bring A-5 back into production in the near future, the necessary steps must be taken to physically suspend the well and update its status to suspended. Please inform Operations Officer of any plans to bring A-5 back into production. D&PR 25 (1) In this section: "inactive" , in relation to a well, means a well that has not been abandoned but (a) has not been active for 12 consecutive months, or (b) if the well is classified as a special sour well, has not been active for 6 consecutive months. (2) The well permit holder of an inactive well must submit a report to the commission within 30 days of the suspension of a well. (3) The well permit holder of a suspended well must establish a program of inspections sufficient to ensure the ongoing integrity of the well. (4) The well permit holder of a suspended well must maintain records of the inspections referred to in subsection (3). 6-Oct-2017	040967209-001	Ovintiv Canada ULC	6-Oct-2017		DLS: 15-27-079-17	Yes	Truck	Passed Inspection (Complete)	6-Oct-2017	6-Oct-2017	Planned	Measurement Inspection Meet Flour Canada, EnCana. Review accounting meter transmitter and Fisher Roc configurations, calibrations. Found that the calculated average US meter tube ID (dr) was not entered into the Fisher Roc. This was corrected at the time, but printed Fisher EFM reports and Flow Check reports will have to be revised for submission. Found Fisher ROC pulse input conversion value for coriolis meter FIT-7005 set at 10,000 and did not match the transmitter value programmed by Spartan Controls of 100,000. Tyrel verified the pulse output value in the meter, and corrected the value in the Fisher ROC. Screen Shots of the ROC pulse input general parameters for the coriolis accounting meters will be added to the OGC Measurement Binder. Verify that production tank level transmitters were configured correctly. Physically inspect a sampling of the plant meter runs for construction and proper identification tagging. Action Items: 1. Confirm with that the production accounting is correct for the reporting of fuel gas to the Ministry of Finance. Purge meter volumes to be subtracted from the plant fuel gas meter (FE 8080) volume. Demonstrate how that is to be done as the purge gas meters are manually set and read. 2. Confirm at the time of plant start-up when the purge gas is put on and set that the main flare meter is not reading the combined purge gas supplied to the flare system. 3. Install AGA meter tube data plates on all production accounting orifice meter runs. 4. On meter run FIT 7723 supply recent calibration report for the water cut analyzer. If not available then the water cut analyzer AE 7721 must be calibrated within 30 days of operation. 5. Complete ROCNOC communications wiring for FIT-1005. Configure Sig Net with condensate, water+ salt content analysis. 6. Update OGC Measurement Binders with revised ROC EFM Reports and Flow Check reports for the accounting orifice meter runs, screen shots of pulse inputs configuration for coriolis meter runs. 7. Install grease fittings in orifice meter runs FE- 8080 and FIT 8015. 8. Notify OGC of scheduled coriolis meter proves, to give opportunity to witness. Please reply to OGC concerning the above action items. Thank you,						South	00018260		Measurement
6-Oct-2017	041135557-001	Direct Energy Marketing Limited	13-Oct-2017			No	Truck	Deficiencies Corrected	19-Dec-2017	13-Oct-2017	Routine	This inspection is for bridges at 1.8km and 8.1km on Direct Energy Yoyo Road, PDR 77. Some issues of note were observed; failing log ballast wall, shifting timber ballast wall, absence of silt boards, ballast wall endfill settling and exposing concrete deck edge, missing delineator. See deficiency for engineering inspection requirement on these two bridges.		OGRR	14 (2)(a)(b)(c)	Relates To Bridge Maintenance	Please arrange to have detailed inspections completed on these two bridges by a qualified person. See Oil and Gas Road Reg section 14 for details. 7-Oct-2017	040968348-001	Venturion Oil Limited	10-Oct-2017	7-Nov-2017	DLS: 11-34-081-14	Yes	Truck	Deficiencies Corrected	9-Nov-2017	7-Oct-2017	Complaint	Inspection as result of Odour and Noise Complaint # 40968328-001 Called out at 5:36 pm. Nearby residents complaint of oil/condensate smell coming from Venturion 11-34-81-14 battery. Arrive on site at 7:15 pm and meet the Venturion operator. Noticed benzene odours off lease when at the entrance to the site. When questioned as to the source the operator responded that they were coming from the dehy accumulator vent scrubber. He mentioned it needed emptying. Interviewed the operator in the control room. Confirmed that a Tidy truck and trailer had been on site at and was transferring fluid between the produced H2O tank and oil tank, and then getting a load of oil from the oil tank. The total time the truck was hooked up to the production tank truck vent system and scrubber was between approx. 1.5 hours (3:30 pm and 5:04 pm). The operator explained that if the recycle pumps were used it would take a long time to transfer the oil in the produced H2O tank to the oil tank, so the pump on the Tidy truck was used. Inspected the site. The operator confirmed the compressors had been running steady and had not shut down. Confirmed the sales gas trend was steady. No odours were coming from the flare or the incinerator, they were both lit. Found high LEL 17 on 4-way monitor before entering into the recycle pump building. The building had oil that was leaking from the recycle pumps and process ping in a catch underneath the pumps. The operator felt that with the Cata-dyne heaters running LEL would be coming out of the oil in the catch. It was mentioned that this was not a safe atmosphere and the leaks on the pumps and the ping need to be fixed and cleaned-up. Inspected the generator building for the down hole source water flood pump. Found CO readings of 17 inside the building with vents open and good air flow through the building and noticed the smell of gas around the fuel gas regulators. The fuel gas system piping and regulators need to be checked for gas leaks and repaired. Leave site at 8:00 pm.		D&PR	78 (1.1)	Relates To Production Facilities	1. The production tank truck load vent system is not engineered to prevent off lease odours. Nearby residents are experiencing off lease odours when trucks are loading and using the vent system. 2. The dehy accumulator vent system is not engineered to prevent off lease odours.	South	00000047		Facility - Active

10-Oct-2017	015152963-001	Quattro Exploration and Production Ltd.	11-Oct-2017		NTS: B 081-I/094-P-16	No	Helicopter	Passed Inspection (Complete)	11-Oct-2017		Assessment Scoring	This is deemed an "abandoned" well in KERMIT. OGC inspectors found a casing with a metal cap on this site. A rod is welded to the casing with no location marker. Outside the casing is an intermediate casing that is cemented. Spoke to Supervisor with OGC and he indicated that this well was abandoned down hole but may require "cut and cap" to be completed.						North		07170	Wellsite - Abandoned
10-Oct-2017	041011697-001	Ovintiv Canada ULC	11-Oct-2017		DLS: 15-27-079-17	Yes	Truck	Passed Inspection (Complete)	11-Oct-2017	10-Oct-2017	Planned	Train 2 and Common Area LTD Inspection Meet with EnCana representatives and Flour Canada. Review the plant permit conditions. Inspect the plant HMI. Witness a satisfactory Mode 1 shutdown test when the mode 1 manual push button in the control room was pressed. Walk through train 2 process areas and buildings. The inspection revealed some issues with fire and gas detectors. Some were in fault, some were not powered up, some were reading 27 LEL- AHH. Fire eyes on the Calf System in the Emulsion Pump Building were de-energized. The EnCana site Construction Manager was requested to email confirmation that all safety systems are verified to be functional and the fire/gas./smoke PLC summary table issues have been corrected. There were some faults that didn't show up in the summary table. Once the OGC received this confirmation the LTO authorization will be granted. Action items: 1. Remove all PLC forces in the Logic Designer software prior to introducing hydrocarbons into the Train 2 process piping. If a force must remain then it must be authorized and recorded. 2. At the start-up of train 2 confirm that the train 2 flare header purge gas is not being measured by the main flare meter. 3. Submit the signed and stamped plant shutdown key prior to LTO. The OGC will request a soft copy. Please reply to OGC concerning the above action items. Thank you,						South	00018260		Facility - LTO

11-Oct-2017	041155607-001	Keyera Energy Ltd.	13-Oct-2017			No	Truck	Passed Inspection (Complete)	13-Oct-2017	13-Oct-2017	Follow Up	This is a followup inspection for the bridge at +/- 7km on the Mason Road in the Buckinghorse area of BC, on PDR 2164 (incorrectly identified as PDR 160 on inspection #33390052). Please provide a copy of the most recent bridge inspection, or if one has not been done, please complete and submit one one by Oct 31.17. See Oil and Gas Road Reg section 14 for standards. Bridge is generally in good condition. The following items were noted as requiring attention: 1) Concrete approach barriers have settled into the road shoulder fill and/or pushed out of place by mechanical equipment. 2) Fines from the running surface are spilling around the endwall/bridge deck joint onto the ground below, building up on the ground and migrating towards the creek over time. 3) Absence of silt boards along the length of the bridge are permitting fines to fall off the bridge below the bull rails into the creek. 4) Ballast wall planks do not extend all the way to the ground behind the pilings. The cloth is currently holding back the endfill but will fail eventually, allowing endfill to escape, causing a void where the running surface meets the bridge deck. 5) Road alignment and grade on upchain approach encourages water to run towards the upchain endfill and bridge deck. 12-Oct-2017	041134908-001	ARC Resources Ltd.	13-Oct-2017		DLS: F 16-13-079-15	Yes	Truck	Passed Inspection (Complete)	13-Oct-2017	12-Oct-2017	Planned	Start-up Inspection For D16-13-79-15, E16-13-79-15, and F16-13-79-15 Wells and Production Equipment. Meet with Arc Resources site construction manager and Tarpon E+I contractor. Inspect the Station Shutdown Report and commissioning documentation. Request the report be left on site. Inspect Fisher ROC gas meter configurations and EFM transmitter calibrations. Verify K-factor programing in electronic turbine meter heads for the D16-13 separator water and condensate meters. Witnessed a test of the D16-13 water and condensate turbine meters back to the Fisher ROC to confirm correct readings. Confirmed that each new well had H2S detection by the flow choke, and that there was a pilot flame failure control on the flare stack. Found that the D-well had significant surface casing vent flow. There was a slight vent flow detected on the F-well. It was mentioned that the connecting piping from the wellheads to the Meter and D-well Separator package did not have torque marking on the connecting flanges. The OGC is requesting that on the next project that studs and nuts on connecting process piping show torque markings. Action Items: 1. At start-up test the flare stack flame control and wellhead ESD function by initiating a pilot flame failure. 2. Perform bubble test on D16-13 and F-13-16 wells. Submit results to Engineering. Perform surface casing vent flow and pressure build-up test if required. 3. Install unique well identifier signage at the D,E,F wellheads. Please reply to OGC concerning the above action items. 17-Oct-2017	041514476-001	Bonavista Energy Corporation	23-Oct-2017	23-Nov-2017	NTS: B 076-L/094-A-14	No	Truck	Deficiencies Corrected	1-Mar-2018	17-Oct-2017	Follow Up	COMMENTS: - this site was last inspected by me on February 24, 2016. There is a meter building being overgrown by trees and vegetation at this pipeline gathering point. The comment from BonaVista at last site inspection to my comment of this needing to be removed via an email was..."Good morning, just a follow up to that line you found in Umbach that we were investigating. Took a little while but we ultimately found it did indeed belong to Bonavista. As such we have taken care of the line discontinuation and deactivation paperwork (see email string below). The well shack removal will have to wait till there is a consultant and other work in the area to combine with." I recently followed up on this last site visit and found the meter building is still there in place and has not been removed as of yet. Therefore, I am now entering it as a deficiency. The last inspection number in KERMIT is 028530314-001 for the inspection in February 2016.						Central	00008314		Facility - Inactive

18-Oct-2017	041440508-001	ConocoPhillips Canada Operations ULC	20-Oct-2017		NTS: A 034-E/093-P-01	No	Walk	Passed Inspection (Complete)	20-Oct-2017	20-Oct-2017	Planned	The well shows as completed in the OGC database as of 2007. The well is chained and locked. No suspension exemption was observed in a systems check thusly, the necessary steps need to be taken to physically suspend the well and update its status to suspended as it falls under the definition of inactive. D&PR 25 (1) In this section: "inactive" , in relation to a well, means a well that has not been abandoned but (a) has not been active for 12 consecutive months, or (b) if the well is classified as a special sour well, has not been active for 6 consecutive months. (2) The well permit holder of an inactive well must submit a report to the commission within 30 days of the suspension of a well. (3) The well permit holder of a suspended well must establish a program of inspections sufficient to ensure the ongoing integrity of the well. (4) The well permit holder of a suspended well must maintain records of the inspections referred to in subsection (3). (5) The well permit holder of an inactive well, within 60 days of the well becoming inactive, must suspend the well in a manner that ensures the ongoing integrity of the well. The site is mostly vegetated and low in invasive species.						South		21849	Wellsite - Inactive

18-Oct-2017	041521226-001	Predator Oil BC Ltd.	23-Oct-2017		NTS: D 091-A/094-A-13	No	Walk	Passed Inspection (Complete)	23-Oct-2017	18-Oct-2017	Follow Up	COMMENTS: I spoke with operator on October 18, 2017 in regards to this location. He informed me that the line locators had been to site, and that the piece of piping had been removed. But was told that another piece remains, the one going to the old tank area where an old earth berm still resides. The soiled soaker pads and rags have been removed. I went to location and found that the piece of piping remains to the tank area. I put orange flagging on the piece sticking out of the ground so it would be easily identified. asked me for more time to remove the piping and asked for a week. I verbally gave him 30 days, which he said would be better. So, hopefully you can have the piece removed by November 17, 2017. **Please contact me as soon as this has been completed**						Central		04471	Wellsite - Abandoned
19-Oct-2017	041366267-001	Ovintiv Canada ULC	19-Oct-2017		DLS: 04-26-078-17	Yes	Truck	Passed Inspection (Complete)	19-Oct-2017	19-Oct-2017	Routine	Very large flare with excessive black smoke was observed coming from the facility. I decided to stop in and find out why. Spoke with the Project Quality Manager on site and found out that there was a planned shut down this morning. When the computer software was initiated for the shut down it somehow affected the secondary blowers in the flare stack and they shut down resulting in the flare having incomplete combustion. EnCana staff are currently troubleshooting this issue to fix the problem with the secondary blowers so this does not happen again in the future. I explained that our legislation does not allow black smoke and that I would be passing this information along to other C&E staff so they are aware of the issue. 23-Oct-2017	041555616-001	Canadian Natural Resources Limited	27-Nov-2017			No	Truck	Passed Inspection (Complete)	27-Nov-2017	24-Oct-2017	Follow Up	This is a follow up inspection for the road and stream bank repairs done at km 5 on Cameron River Road (Road # 169) as well as unused bridge materials. Upon review of the plan developed by Diversified Environmental it was noted that the stream width was to be a minimum of 6.5 meters in width measured from the base of the armoured stream bank, a sediment fence was to be installed and the area grass seeded. A follow up of the works that have been completed found that the stream width is 3.6 meters from the bank material that has fallen in the stream and present wetted width and 4.9 meters from the presently stable stream bank, which is less than prescribed minimum of 6.5 meters. The works will be further evaluated in the spring. The silt fence has not been installed and the last snow free site visit found that no vegetation seed was sown. Please install the silt fence and conduct vegetation seeding as soon as practicable. The orange coloured I beams for the bridge that was supposed to be used as an alternative for crossing Cameron River need to be removed. The 2 I beams are located at the quarry/borrow pit at km 0.5 of the Mile 132 Road and have been sitting there for approximately 2-3 years. This will show as a PASS but there are some items to attend to when ground conditions permit.						Central			Road - Active

24-Oct-2017	041646903-001	Ovintiv Canada ULC	27-Oct-2017		NTS: B 031-K/093-P-01	No	Truck	Passed Inspection (Complete)	27-Oct-2017	27-Oct-2017	Planned	B-A 31 K well: -Ground stained below non-flow side annulus valve and master valve -Low pressure vent is venting audibly to atmosphere; odor and fumes from vent line Bull plug on smaller diameter pigging station (B-A 31 sales line) drain is cross-threaded and heavily corroded. Pigging cap chain also appears too long. D&PR 50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes. Signage does not indicate there are two wells on the site or differentiate between the two; the active well (B-A 31 K) is not signed as "B-A 31 K/93-P-1" on the well or the meter skid, and the only sign on site is "B 31 K/93-P-1" at the entrance B 31 K well: -No signage indicating the presence of the well near the cellar and surface casing -Hazard prevention (cement barricades) is inadequate. The well cellar and surface casing have been left uncovered/uncapped and wildlife tracks were found between the barricades and the well cellar. D&PR 15 (1) Until the well is abandoned, a well permit holder must ensure that a permanently legible and conspicuous sign is displayed and maintained at each well, and that sign must show all of the following: (a) the name of the well permit holder; (b) emergency notification information, including a telephone number; (c) the location of the surface site of the well as specified in the well permit; (d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1; (e) if the well may produce gas containing 100 ppm or greater of hydrogen sulphide, a poisonous gas symbol from Schedule 1; (f) after March 1, 2011, if the well may produce gas containing 10 ppm or greater of hydrogen sulphide, a poisonous gas symbol from Schedule 1. 15 (3) A well permit holder must ensure (a) that the well site is maintained in a condition so as to minimize hazards, including but not limited to hazards associated with pits, holes, storage of materials and equipment						South		21247, 21254	Wellsite - Active Gas
24-Oct-2017	0416647906-001	Tidewater Midstream and Infrastructure Lt	27-Oct-2017		NTS: D 017-J/093-P-01	No	Truck	Passed Inspection (Complete)	27-Oct-2017	27-Oct-2017	Planned	Staining at the base of the CVS Controls actuator on the flow line before the meter skid Staining from SCADA and solenoid connected to the flow line actuator within the meter skid Staining below the meth tank drain within the meter skid D&PR 50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes. Other observations: -Fisher High Low Pressure Switch Controller and associated steel tubing lines within the meter skid are no longer in service and should be removed as they constitute unused equipment under Section 15(3) of the D&PR. -Methanol pump system PSV is missing the top pin -Pop tank (unknown contents and quantity as gauge is broken), piping, methanol tank, as well as a secondary containment tray and tank stand all present at the west end of the site. Please inform Operations Officer of future plans for this equipment.						South		23718	Wellsite - Active Gas
24-Oct-2017	0416649181-001	Tidewater Midstream and Infrastructure Lt	27-Oct-2017		NTS: D 018-J/093-P-01	No	Truck	Passed Inspection (Complete)	27-Oct-2017	27-Oct-2017	Planned	Comb/Ex LEL alarm sounded on personal monitor upon entry to the meter building Five vent lines at the rear of the meter building with stained tips, appears to be ground staining below one Meth tank gauge appears to be leaking D&PR 50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes. Both (2) Fisher 912 regulators for catadyne heaters are not attached to lines allowing vapours to vent to atmosphere D&PR 47 A permit holder must ensure all of the following: (f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere Valve on tubing from flow line to Fisher 4660 High Low Pressure Switch is not locked or car sealed. D&PR 49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment, at a producing well or facility. Other observations: -Well cellar is water-filled and not covered at this time -The pop tank secondary containment berm appears inadequate to fulfill Section 50 (2) of the D&PR due to erosion and washout of the berm. The company is being requested to conduct a closer inspection, please inform Operations Officer of your findings prior to November 15, 2017.						South		23654	Wellsite - Active Gas

30-Oct-2017	0417299537-001	Black Swan Energy Ltd.	2-Nov-2017		NTS: C 038-C/094-H-04	Yes	Truck	Passed Inspection (Complete)	2-Nov-2017	30-Oct-2017	Planned	Start-up inspection for K-606 Compressor Meet with ABC Engineering and Black Swan operations staff. Review LTO start-up binder. Found that sample Mechanical QA documentation for piping samples was not consistent to show that the Weld Procedure Specifications and the welder Performance Qualifications matched. Found the Weld Procedure Qualifications for the Weld Procedure Specifications were missing. Inspect the new compressor package and new process piping. Check that fire/gas detection for K-606 were reading correctly back to PLC HMI display. At the time of the inspection the plant Generator #1 shut down on overspeed causing refrigeration and the main process compressors to shutdown and blowdown. Operations staff mentioned that the generator load bank may not be functioning correctly and that the issue was looked at the week before. Action Items: 1. Correct the Mechanical Q/A documentation as required. 2. Submit the start-up binder to the OGC 3. Repair issue with the main plant generator load bank and load/speed control to prevent unnecessary shut downs and blow downs as a result of generator engine overspeed. Please respond to OGC concerning the above action items. Thank you,						Central	00018237		Facility - Start Up

31-Oct-2017	0418835471-001	PETRONAS Energy Canada Ltd.	3-Nov-2017		NTS: A 029-J/094-G-02	Yes	Truck	Passed Inspection (Complete)	3-Nov-2017	31-Oct-2017	Planned	Routine Gas Plant Inspection Meet with Progress operations. Inspect the fire/gas calibration/maintenance. Found as per manufacture recommendations. Generally a good inspection. Process and refrigeration compressor maintenance- ok. Car seals were in place as required. Request a measurement schematic to identify accounting meters. LPG bullet level transmitters are not shown on the measurement schematic as accounting meters. These meters will be used to report month opening and closing LPG product on site. Inspect accounting meter calibration maintenance. Found the inlet condensate meters were not proved biennially as per OGC variance. Found the flare meters were not being annually maintained. During the course of the inspection it was noted that for transmitters, pressure switches ect. that the calibration tags said see report for the calibration date. To facilitate an efficient inspection process the OGC would prefer the calibration date be written on the tag. Action Items: 1. Revise the measurement schematic. LPG bullet level transmitters as PA meters. Check with PA if condensate and produced water tank level transmitters are used for reporting inventory to the Ministry of Finance. 2. Submit calibration reports for inlets V-1000 and V-1100 gas meters. 3. Maintain the plant flare meters. pull transducers, zero check/adjustment, generate maintenance reports. 4. Sales pipeline- ensure the rubber insulator is fully underneath the pipe between pipe and final pole. 5. Repair sight glass guards as required in K-2700 and K-2800 buildings. 6. Next compressor panel include testing of the cooler vibration transducer shutdown function. 7. De-ethanizer overhead meter and motor fuel gas meter- Install missing LAMICOIDs to identify meter as "accounting" . 8. Bench prove the inlet V-100 and V-1100 condensate meters biennially. Ensure a copy of the Measurement Guideline variance is with both meters. Please reply to OGC concerning the above action items. Thank you,						Central	00007925		Facility - Active

1-Nov-2017	0418048O0-001	Crew Energy Inc.	2-Nov-2017		DLS: 10-14-082-20	Yes	Truck	Passed Inspection (Complete)	2-Nov-2017	1-Nov-2017	Planned	Phase 2 Start-up Inspection Meet with the site construction manager, Electrical/Instrumentation construction manager, control system specialists with Vipond controls, and Crew Energy operations staff. Review configurations and calibrations for new production accounting meters. Confirm that the mechanical O/A was completed and that the safety systems were function tested Oct 30 th and Oct 31. Review the facility black start-up plan with Crew operations staff. Inspection the installation of new phase 2 production equipment. Noted the TCPL metering package, LPG pump to Alliance, and the new LPG bullet level indication was not commissioned. Action Items: 1. Submit for all production tanks and LPG bullet guided wave level transmitters PDF version of the transmitter configurations. Develop an annual inspection and maintenance plan for the production tank and LPG bullet level transmitters and submit to the OGC. 2. Submit a copy of the Lease Turn-over Document from construction to operations. 3. Label ESD push buttons outside of new process buildings. 4. Label gas detection controllers as to the type of gas being monitored (either propane or methane) with a Lamicoid ID tag. 5. For the start-up binder request a signed and dated letter from Vipond Controls that the safety systems and ESDVs were function tested Oct 30-31, 2017. 6. Transfer the VRU runtime hours from old PLC program to new PLC program and maintain a written record of the VRU operating efficiency (require 95 % annual efficiency). 7. Notify the OGC within 24 hours of phase 2 commencement of operations. Please respond to OGC concerning the above action items. Thank you,						South	00018074		Facility - Start Up

The surface has been cleared and disturbed, lease has been constructed, a well is being drilled, but I was not able to see a location sign anywhere at location. I was not directly at the well hole itself, as there is a rig drilling, but was at location and measured wellsite dimensions.						Central		31875	Wellsite - Construction Env.
9-Nov-2017	0423354056-001	Pacific Northern Gas Ltd.	28-Nov-2017		From: NTS: D 096-F/103-I-07 To: NTS: B 096-F/103-I-07	Yes	Truck	Passed Inspection (Complete)	28-Nov-2017	9-Nov-2017	Incident	Field visit of Incident #0416051140-001 MP 250 of PNG 10" line located at 28.5km on the Copper River FSR with Doug McRae. Two 4" bypass lines have been established. The bypass lines were strung along a island in the middle of the newly created side channel but the alignment prevented it from being entirely on the island and part of the bypass is in the river and also the upstream and downstream ends of the bypass are below high water mark. Stress has been relieved from the 10" pipe exposed in the incident. The twin 4" heavy wall pipe bypass is exposed and will potentially be at risk during significant rain events or the next freshet. PNG is currently looking at six different options for the permanent pipe replacement location. Survey crews were adjacent to the washout during this inspection and PNG has made me aware that more professionals will be arriving to assess the situation. In stream works were minimal and only included machine crossings, works on the island and shoring of the bypass at either end of the washout. PNG will continue to monitor the site and keep the BCOGC informed of any developments.		D&PR	25 (5)(a)(b)	Relates To Inactive Or Suspended Wells	According to our records, this well last flowed in August 2016. It needs to be properly suspended.	South			Pipeline - Active

The pictures showed oil on the ground around the wellhead and also on the equipment. I called and spoke to Sheldon Wiebe and he explained that this was winter access only and that there had been a packer leak back in April 2017. The pictures did not indicate a date on them, but there was plenty of vegetation in the pictures, which looked to be growing in and out of the pumpjack itself and quite a bit of vegetation around the lease and up to the equipment on lease. - Sheldon said the road would be plowed open and a vac truck sent in for clean up. - I followed up and found that there was a clean up done and found everything in order. -If in the future there is a leak of any kind, it needs to be reported in a timely fashion to the OGC and a clean up done also in a timely manner. 5-Dec-2017	042772965-001	ConocoPhillips Canada Operations ULC	11-Dec-2017		NTS: D 087-K/093-P-01	No	Truck	Passed Inspection (Complete)	11-Dec-2017	11-Dec-2017	Follow Up	The fluid leak from the yellow globe valve noted in the Oct 6, 2017 inspection appears to have been resolved. Bubbling leak noted from the bull plug/ball valve on the "To B-82-L" line near the ground entrance; the leak is enough to have caused fluid droplets on the snow below. Please inform Operations Officer once the leak has been resolved. Both the "To B-82-L" and "From D-73-K" pigging station chains are inadequate. The "To B-82" chain is not fastened at one end due to a broken car seal and the "From D-73" chain is too long. The "To B-82" chain issue was noted in the previous site inspection and should be dealt with immediately. Please notify Operations Officer once the pigging chain concerns have been addressed. D&PR 50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes. CSA Z662 4.3.13 Pressure design for components — Closures 4.3.13.1 Except as allowed by Clause 4.3.13.2, the materials and design for closures shall be as specified in the ASME Boiler and Pressure Vessel Code, Section VIII, Division 1. Components fitted with a closure shall be designed to ensure that pressure cannot be trapped in any area of the component, when the closure is opened, due to the presence of internal devices or equipment. Components fitted with a quick-opening closure, such as a pig or scraper sending or receiving device, shall be equipped with suitable isolation and venting equipment. Where practical the component shall be equipped with a pressure indicating interlocking device. Notes: 1) Any pig or scraper sending or receiving device should also be equipped with a pressure-indicating device separate from the trap pressure venting connection. 2) Closures should be designed in consideration of the requirements of ASME Boiler and Pressure Vessel Code, Section VIII, Division 1, Non-Mandatory Appendix FF. 3) For sour service, see Clause 16.4.2. 8-Dec-2017	0430763A1-001	Trans Mountain Pipeline ULC	19-Dec-2017			Yes	Truck	Passed Inspection (Complete)	19-Dec-2017	8-Dec-2017	Routine	Routine inspection of emergency in stream works near TMPL KP 996.7 North of Hope BC on December 8th with Kinder Morgan staff. Works included ditch cleaning and unplugging of culvert. Stream dry/subsurface at time of inspection. Debris removed from ditch line and culvert inlet. Additional armoring has occurred along ditch to prevent further washouts. Remaining material utilized in roadbed or dispersed adjacent to the road in the right of way. Hydrocarbon spill noted at approximately 1km on access road was determined to be not caused by these emergency works completed by Kinder Morgan. No issues noted.						South			Stream Crossing
8-Dec-2017	0433680I0-001	Westcoast Energy Inc.	3-Jan-2018			Yes	Truck	Passed Inspection (Complete)	3-Jan-2018	8-Dec-2017	Routine	Routine inspection on December 8, 2017 of BCOGC access, workspace and change in and about a stream permit 100102813 and 100102814 issued to Westcoast Energy with staff from the nearby compressor station. Location of the works is also known as the Coquihalla 6 crossing. Aerial crossing and construction was completed two to three weeks prior to inspection. Soils and coarse woody debris have been redistributed and no garbage was noted in or around the site. Hydrocarbon spill was noted along the access road on the south side of the project. This spill appears to have occurred very recently and is not from the construction activities. I questioned Kinder Morgan who also had works further up the road but after inspection found that this could not have occurred from their activities. There is significant public use on the road and they are the suspected cause of the spill. A pile of rocks was noted also on the South side of the project adjacent to the river within the riparian reserve zone that has been discussed and will be removed by the spring in snow free conditions. Re-vegetation is still to be completed and is also scheduled for this spring. I will revisit the site once the re-vegetation and rock pile removal is completed.						South			Stream Crossing

8-Dec-2017	043378439-001	Westcoast Energy Inc.	3-Jan-2018			Yes	Truck	Passed Inspection (Complete)	3-Jan-2018	8-Dec-2017	Routine	Routine inspection of BCOGC Water Sustainability and Land Act permit 100101732 on December 8, 2017 issued to Westcoast Energy with staff from the nearby compressor station. Location of the works is also known as the Coquihalla 14 crossing. All construction activities were completed at time of inspection. Only the North end of worksite was inspected due to staff being unsure whether permission was given to cross private property. North end was free of garbage, soils had been redistributed and temporary structures had been removed. Minimal impact was noted where crossings were established and certain areas of the works were left in better condition than was noted preconstruction. Minor water ponding noted but inspection was completed after a significant rainfall event. Re-vegetation of the site is still required and will revisit the site once this is completed. I also still need to look at the South side of the works across the private property. No issues noted with this inspection and will revisit in the spring of 2018 along with the Coquihalla 6 crossing. Areas of the site were close to highway and garbage/debris from the public was cleaned up by contractor.						South			Stream Crossing

12-Dec-2017	042858274-001	AltaGas Ltd.	13-Dec-2017		NTS: D 058-F/094-B-16	Yes	Truck	Deficiencies Corrected	2-Jan-2018	12-Dec-2017	Planned	Facility Inspection Met with Alta Gas at site. Inspect fire and gas records, station shutdown reports and meter calibrations. Reviewed fire and gas on PLC. Found AIT 2301 Q230, AT 2410 Q240, AT2811 Q280 and AT 7011 Q700 on Blair 2 were faulted at time of inspection. Toured Blair 2 and the Blair 1 sites. There had been a turnaround in September and found carseals needed for isolation valves off PSVs, high level SD off flare knockouts and sensing lines to ESD along with bull plugs missing which should be inspected closely after completion of work. It would be good idea to walk through site to confirm carseals required. Bridles on bullets require carseals , it was noted that new lowered bridle to be installed to deal with glycol issues. Blair 1 had two fire eye faults in Comp 900. Action Items: Blair 2 1.) Repair of the PVRV that was leaking which Josh noted from by water/condensate tanks. 2.) Missing end cap on transmitter and missing conduiet plug in Primary Refridge unit. Cover for wiring in secondary refridge unit. 3.) Sight glass guards for Q210, Q220 and Q230 oil tanks. 4.) Grounding required for glycol drain and load procedure outside refridge building. Blair 1 1.) Grounding required for tank and load procedure outside refridge building. 2.) Sight glass guard on generator oil tanks. Please reply to OGC for Action Items and to KERMIT for deficiencies. Thank you,		D&PR	78 (1.1)	Relates To Production Facilities	Blair 2 Comp 900 both fire eyes faulted.	Central	00007442		Facility - Active

12-Dec-2017	042877028-001	Canadian Natural Resources Limited	13-Dec-2017		NTS: D-A 068-L/094-A-11	No	Truck	Passed Inspection (Complete)	13-Dec-2017	12-Dec-2017	Planned	COMMENTS: -There is chemical that has leaked into the bottom of the meter cupboard. There are many soaker pads, that are soaked lying in the bottom also. It looks like some of the chemical has leaked out the floor and down the pile, but it looks to be minimal. Cleaning up the chemical mess would eliminate the leaking out of the floor of meter cupboard and onto the ground. -Also, both lids are not on the chemical pumps. These need to remain in place as the moving parts are a hazard. Please ensure the lids are put back in place if the pump is operational.						Central		25512	Wellsite - Active Gas

12-Dec-2017	043150780-001	Painted Pony Energy Ltd.	20-Dec-2017			No	Truck	Passed Inspection (Complete)	20-Dec-2017	20-Dec-2017	Routine	This inspection is for the Mile 132 road also known as PDR 165. On the day of inspection (Dec 12, 2017) the road was inspected to km 13 and was in good winter condition with the snow pushed well away from the running surface where there was less willow and alder. The only comment in regards to current grading maintenance is to keep the snow and ice from building up along the bull rails on the bridges. Currently this is building up and can present a safety issue. It is recognized that speed limit signs have been posted at the bridges and some new "must call" signage on corners with reduced visibility. As the new permit holder, I am taking this opportunity to bring to your attention some of the deficiencies found during an inspection conducted in April 2017 and prior to Painted Pony Energy taking over the road. Some of those are still relevant as the former permit holder had just started to address some of them when the road was transferred to Painted Pony Energy. There was also an assessment and plan for long term solutions to have been completed before June 1, 2017. We are not expecting Painted Pony to conduct this assessment unless the required maintenance is not being done to a satisfactory standard. Below are findings from the April 2017 inspection; 1) The corner and hill at approximately km 5.5 has been hazardous for permit holders over the years. This is a corner on a hill that lacks sufficient aggregate to ensure safe usage. 2) The road surface and slope drainage systems are not all functioning as they should be. While some work was conducted in 2015 and some improvement made, there was no long term solution realized for the entire road and some of the issues are back to the same condition they were in April 2015. 3) The crown and running surface of the road fails at the time it is needed most, during any thaw and rain event. This failure results in sediment laden water running down and pooling on the road and has contributed to significant impacts including, but not limited to, the bridge and fish bearing stream at km 4.1. This bridge and stream have been the subject of an investigation and publically available General Orders were issued in 2015 and 2017. A high priority for Painted Pony is to ensure that water and sediment flow to this bridge and stream is monitored and corrective action taken before any further impacts occur. There should also be consideration in finding a long term solution. 4) In places along the road there are 2 or 3 intermittent ditch lines that do not effectively move water to culverts and results in water flowing down the road and/or saturating the road bed. These need to be clearly defined to enable water to flow to where is can be removed from the road prism. There is enough willow, alder and other brush species along various points of the road that are interfering with the ability of snow to be plowed back further off the road so that it doesn't flow down the road saturating the running surface, creating erosion and sediment issues. 5) Grading operations have cut the ditch too deeply and water bypasses takeoff ditches . Also some of these are filled with sediment and require clean out to continue proper function.						Central			Road - Active

CSA Z662 4.3.13 Pressure design for components — Closures 4.3.13.1 There is a commentary available for this Clause. Except as allowed by Clause 4.3.13.2, the materials and design for closures shall be as specified in the ASME Boiler and Pressure Vessel Code, Section VIII, Division 1. Components fitted with a closure shall be designed to ensure that pressure cannot be trapped in any area of the component, when the closure is opened, due to the presence of internal devices or equipment. Components fitted with a quick-opening closure, such as a pig or scraper sending or receiving device, shall be equipped with suitable isolation and venting equipment. Where practical the component shall be equipped with a pressure indicating interlocking device.						South			Pipeline - Active

The well is chained and locked, and has not been in production according to online records and no suspension exemption was observed in a systems check. Thusly, the necessary steps need to be taken to physically suspend the well, if not already completed, and update its status to suspended as it falls under the definition of inactive. D&PR 25 (1) In this section: "inactive" , in relation to a well, means a well that has not been abandoned but (a) has not been active for 12 consecutive months, or (b) if the well is classified as a special sour well, has not been active for 6 consecutive months. (2) The well permit holder of an inactive well must submit a report to the commission within 30 days of the suspension of a well. (3) The well permit holder of a suspended well must establish a program of inspections sufficient to ensure the ongoing integrity of the well. (4) The well permit holder of a suspended well must maintain records of the inspections referred to in subsection (3). (5) The well permit holder of an inactive well, within 60 days of the well becoming inactive, must suspend the well in a manner that ensures the ongoing integrity of the well. 31-Dec-2017	043338628-001	Secure Energy Services Inc.	31-Dec-2017	15-Jan-2018	DLS: 16-05-079-14	Yes	Truck	Deficiencies Corrected	19-Jan-2018	31-Dec-2017	Routine	At approx. 5:06pm, the Operations Officer observed black smoke coming from one of the flare stacks on site. Secure employees on site at 7:00pm stated there has been a performance issue with the flare stack blower which is causing the flare to give off black smoke when the plant is receiving loads of condensate. Employees noted that a technician is needed to reset the parameters of the blower which should fix the issue. Approx. 6 truck loads of condensate per day with 30 minutes of black smoke following each load (3 hours total of black smoke release) The relevant technician will likely be heard from by Tuesday. This issue should be resolved as soon as practicable within the given deficiency timeframe and in the meantime every effort should be made to reduce the quantity and duration of black smoke released. 8-Jan-2018	046721661-001	Painted Pony Energy Ltd.	17-Jan-2019		NTS: B 017-G/094-B-16	Yes	Truck	Passed Inspection (Complete)	17-Jan-2019	9-May-2018	Planned	Thanks to Painted Pony Energy staff for attending this inspection. The inspection on this site detected some low LELs and low oxygen in some buildings due to the fact that it was very cold and the buildings were buttoned up tightly. They opened some of the cold air and exhaust vents to allow for more ventilation and the LELs and oxygen levels returned to normal. There was some minor produced water crusting on some flanges so ensure these are tightened up. For the pipeline inspection, only the on site riser and signage was inspected. Meet with EnCana representatives. Review prepared commissioning documentation. Verify that electrical QA was complete and end device seals were packed and poured in hazardous areas and signed off. Verify that fire, gas detection, and manual ESD push buttons were functional. Inspect the new phase 2 emulsion and produced water de-sand and disposal pump equipment and buildings Q-170, Q-180, Q-640, Q-660, and V-131. Noted at the time of inspection: The package provider, Westpower was working on structural supports in Q-180 to correct piping alignment and stress issues on piping connected to pumps. Witness a satisfactory Mode 1A function test by triggering fire detector 1802A in Q-180 building. Action Items: 1. Measurement- Ensure that the reported facility fuel gas volume is corrected by subtracting new purge meter (6084) volume. 2. Submit a revised measurement schematic for the site. 3. Within 90 days submit the revised (as-built) facility shutdown key in Excel format. 4. Submit confirmation that LOTO is removed and car seals are installed as required post purge. 5. Submit the revised facility master car seal list within 24 after start-up. 6. Ensure that the PSV on the nitrogen system for process piping purge is set appropriately to protect the lowest pressure rated component in the piping system before starting the nitrogen purge. 7. Ensure LOTO is removed and PIT 1081 pressure sensing isolation valves are car sealed open prior to putting the water disposal pipeline into service. 8. Pour the electrical seal on the ground permissive at the emulsion sand slurry truck- out. For the above action items please reply to OGC Thank you,						South	00018346		Facility - Start Up

15-Jan-2018	0438334464-001	Cenovus Energy Inc.	19-Jan-2018			No	Truck	Passed Inspection (Complete)	19-Jan-2018	19-Jan-2018	OGC Requested	AD #: 100100516 Bridge and Temporary Access Road to A-43-O/93-P-1 AOGA #: 00147401 Water Sustainability Act Section 11 #: 0003560 The associated Temporary Access was inspected, including the portion of road between the Kiskatinaw Road and A-43-O/93-P-1 and the clear span bridge installed across the Kiskatinaw River. At the time of inspection, silt fencing was staked between the bridge abutments and river channel on both banks but the fencing is not buried thusly rendering it ineffective if snow melt or a rain event were to occur. Road ditching leads down to these silt fenced areas with no erosion controls in place. No issues were observed at the second crossing location identified in the Eco-Web Fish and Fish Habitat Assessment; however, if considerable snow melt or a rain event occurs, sediment delivery from the road into the stream may be an issue given their proximity. A Cenovus representative was contacted and stated that the work on site is expected to be complete within the next couple weeks after which time the bridge will be removed and that erosion or sediment control issues that arise in the meantime will be dealt with accordingly. The following applies for Inactive wells. D&PR 25 (1) In this section: "active" means (a) production, injection or disposal of fluids, (b) drilling, completion or workover operations, and (c) with respect to a well designated under section 2 (7), monitoring reservoir pressure or obtaining other formation information; "inactive", in relation to a well, means a well that has not been abandoned but (a) has not been active for 12 consecutive months, or (b) if the well is classified as a special sour well, has not been active for 6 consecutive months. (2) The well permit holder of an inactive well must submit a report to the commission within 30 days of the suspension of a well. (3) The well permit holder of a suspended well must establish a program of inspections sufficient to ensure the ongoing integrity of the well. (4) The well permit holder of a suspended well must maintain records of the inspections referred to in subsection (3). (5) The well permit holder of an inactive well, within 60 days of the well becoming inactive, must suspend the well in a manner that ensures the ongoing integrity of the well. Meet with EnCana facilities commissioning staff. Leave a copy of the Produced Water Disposal Special Project Approval on site. Request that the copy be posted. Inspect the new disposal pump equipment, process piping, and disposal well equipment . Found at the time that there was a temporary disposal pump package on site which was reported to be running since Nov 2017. Verify that the high discharge set point on the temporary pump was set at 9300 Kpa, and the setting on the temporary well hydraulic ESD was set at 9300 Kjpa. Witness (2) satisfactory mode 1 ESD function tests when a manual ESD push button was pressed. Verified the inlet ESD and fuel gas ESD valves closed. Reviewed commissioning documentation, and process piping bolt-up (Torque Mapping). Verified the disposal well tubing and casing transmitters were calibrated and SCADA pressure readings were correct in the c-41-G/93-P-9 control room. Action Items: 1. Install a vented spring casing on Fisher 67 regulator. for the disposal well ESD valve actuator and vent the spring casing outdoors as the supply is fuel gas. 2. Vent the solenoid separately for the disposal well ESD valve actuator out side of the enclosure. Do not tie-in with the Fisher regulator vent for above. 3. Generate a meter diagnostic report for the water disposal meter FQIT 5615 meter tube full /no flow) and leave a copy in a pouch with the meter. Please reply to OGC concerning the above action items. 24-Jan-2018	043934658-001	NorthRiver Midstream Energy Limited	25-Jan-2018		DLS: 15-24-080-15	Yes	Truck	Deficiencies Corrected	26-Jan-2018	24-Jan-2018	Planned	Acid Gas Disposal Well inspection Meet Enbridge Operations Coordinator, main plant operator, and plant maintenance technician. Review the acid gas disposal well order conditions. Speak with Enbridge Acid Gas storage Engineer, and resolve compliance issues with conditions (i) and (m) of Order 09-16-001 amendment #2. Verify acid gas compressor #1, #2, #3 maintenance reports, last done august 15, 2017. Verify acid gas flowline transmitters maintenance and shutdown setpoints were set below MWHIP of 13,700 kpa. Verify that LEL and H2S gas detection maintenance at the disposal well is being performed at regular intervals. Walk through and inspect the acid gas pipeline and disposal well equipment. At the time of inspection maintenance reports for the acid gas meter FIT-001001 could not be produced. The technician indicated that he was performing maintenance , but had no report. Request that a Smart Meter Verification Structural integrity Method report be generated at each inspection as supporting documentation that the meter maintenance is being conducted, and that records are being kept as per D&PR 38(2) and the Measurement Guideline. At the time of inspection the ESD loop on the Halliburton hydraulic panel was found to be tripped (pressure =zero PSI) with the disposal well in operation. In this state there is a risk of damaging the subsurface check valve as the protective sleeve would not be engaged to prevent check valve flutter and repeated contacting the of check valve flapper on the seating surface. After a review of the Dec 2017 and Jan 2018 15-24-80-15 West Doe Acid Gas log sheets it was noted that there were some gaps in the operator inspection logs of 3 or 4 days. Thank you for your cooperation in the inspection process.		D&PR	49 (2)	Relates To Emergency Shutdown Devices	1. Car seals not installed (1) root and (2) pressure sensing isolation valves (open position) on PIT-000083 for ESDV 000012. 2. Car seal not installed on (1) root valve (open position) at the 15-24 well tubing pressure transmitter PIT 000081. Received email rep on Jan 24/18 at 3:48 pm confirming the car seals were installed. Please reply through KERMIT and this deficiency will be satisfied. Thank you,	South		23946	Wellsite - Disposal/Injection

26-Jan-2018	0440262604-001	Pavilion Energy Corp.	26-Jan-2018		DLS: 04-24-086-20	Yes	Truck	Passed Inspection (Complete)	26-Jan-2018	26-Jan-2018	Planned	General Order 2018-001 Inspection Found that safety system repair work was still in progress. Met operators on site. Pimms Production instrument technicians were on site verifying/repairing station shutdowns. Discussed with operator if he felt that a low instrument air pressure shutdown was important to address the safety concern of indeterminate valve position. Agreed that valve failure mode, such as having an inlet or sales valve closed or a blowdown valve open while in operation was a concern and agreed to install the low instrument air pressure shutdown. LEL sensors were being installed on the White compressor skid at the time, and had not been installed in the main separator building. The compressor was running at the time in bypass. Upon using entry procedure for the compressor building a high LEL was monitored. Pavillion was told to shutdown immediately and fix the gas leak.The manual ESD push button on the compressor was pressed. Witnessed the (2) inlet valves close, the sales pressure control valve close, and the blowdown valve open. Talked to Russel, and he agreed that the sales control valve should not be used as an ESDV. He agreed it would be best to move the shutdowm solenoid to the Enbridge OPP ESDV and instructed Pimms to do so. Inspected the compressor building once the gas had cleared out and found the high discharge pressure SD sensing isolation valve was closed. The Compressor mechanic tighted the compressor valve packing on cylinder 2 but it did not stop the leak. A seal to repair the leak was ordered. Opon inspection of the station computer display it was found that there was high LEL in the Booster compressor building. Allowed the building to air out and inspected it to find (2) Catalytyhe heaters not running and the temperature safety shut-off valves were ty-raped open. The operator was informed and was instructed to remove the ty-raps and to shut off the fuel gas outside the building until such time all gas leaks were repaired. This is a very unsafe practice, serious safety issue, and needs to be addressed. Request the company holds a Safety meeting to discuss. At one point the LEL gas detection in the Booster Compressor ceiling reached 86 LEL. Once all the safety systems are functional, and gas leaks are fixed please call to arrange to do an inspection to lift the General Order. Thank you,						Central	00000262			Facility - Inactive

1-Feb-2018	0443325676-001	Pavilion Energy Corp.	2-Feb-2018		DLS: 14-26-085-20	Yes	Truck	Passed Inspection (Complete)	2-Feb-2018	1-Feb-2018	Incident	Inspection Level 1 - Flare Stack Carry-over and Fire KERMIT Incident # 044312150-001 Arrive on site at 12:33 pm. Accent Energy vac truck was on site cleaning up the spill at the base of the flare stack and oil spray on the snow outside the fence line. Talked to company rep, he estimated the spill to be approx. 1.5 m3. Meet the operator on site. Get some details around the initial response to the incident. The flare KO high level flagged in, but was clear at the time, as the vac truck sucked out the flare KO tank. The treater high level was still flagged on the annunciator panel. Ask for maintenance records. The flare KO level high level alarm and shutdown switches were replaced and verified functional by ACE Instruments in July 2017. The operator mentioned that the mechanic working at 4-24-86-20 was the first to respond, the other operator had to come from town arrived later. Asked if the flare auto-ignitor was working, the operator said no. Found at the time of inspection the inlet ESDV in the inlet header building was closed, but the one inch bypass valve around the inlet ESD valve was unlocked and open. A blue handle block valve downstream of the inlet ESD valve had been manually closed. The other inlet ESDV closed. it had no bypass. The heat medium line heater had boiled over, spilling heat medium on the ground. Inspect the compressor building. The compressor was not in service and blinded off. The solution gas was being diverted from the compressor suction to flare through a control valve. Made note that there was no control solenoid on the compressor suction divert valve to flare from the station control panel to open the valve on a station ESD. Action Items: 1. Investigate and report as to the cause, and remedial actions taken. Submit a Post Incident Report to EMP@bcogc.ca within 90 days for KERMIT Incident # 44312150-001 . 2. If the compressor suction divert valve is the only blowdown valve, install a solenoid and connect to the station ESD relay string. 3. Test all station shutdowns before start-up. 4. Report and clean-up the heat medium line heater spill. 5. Create a form (log) to record critical locks and car seals on valves. It should identify the valve, the valve position (open or closed), when and who installed it or removed it, and ensure a level of safety and accountability to the operations of the site. Apply to all facilities. 6. Repair the flare stack auto-ignitor prior to start-up. Please respond to OGC concerning the above action items.						Central	00000056		Facility - Active

6-Feb-2018	0444481672-001	PETRONAS Energy Canada Ltd.	8-Feb-2018		NTS: A 079-J/094-G-01	Yes	Truck	Passed Inspection (Complete)	8-Feb-2018	6-Feb-2018	Planned	Acid Gas Well Inspection Meet Progress Energy Lead operator. Review approval conditions, inspection reports, operator log and inspect SCADA host display. Inspect the disposal well site and verify with EPSCAN Industries technician that the wellhead tubing and casing transmitters were reading correct back to the Fisher ROC. Findings: 1. The Progress Energy SCADA system tubing pressure alarm was set at 25,000 Kpa. It was lowered to 9800 Kpa. 2. The Progress Energy SCADA system casing pressure alarm set at 0 Kpa. It was increased to 1030 Kpa. 3. No wellhead high tubing pressure shutdown programmed into the Fisher ROC to close the flowline and subsurface ESDV. Progress Energy is relying on Enbridge Jedney plant acid gas compressor shutdown. as not to exceed the MWIP of 9800 Kpa. 4. The casing high pressure shutdown in the Fisher ROC is set at 690 Kpa. Should be set at 1030 Kpa as per condition 2(f). 4. No trending was apparent on the Progress SCADA host. Trending would have to come from Enbridge Jedney plant 5. No Visual indication of pressure on the wellhead tubing and casing pressure transmitters. 6. No visual display of the flowline temperature. RTD probe only. 7. Acid gas flow meter flow rate is not displayed on the Progress Energy SCADA. 7. Freeze protection is insulation on pipeline. Wellhead is not insulated. No methanol injection. 8. Operator log sheets do not indicate subsurface control valve panel gauge readings and output pressure to the subsurface ESDV. 9. Techmation ESD Checklist and Test Record does not indicate that the remote ESD from the Progress Energy SCADA and the remote shutdown from the Enbridge Jedney plant have been tested and are functional. 10. No records available for the last inspection of the flowline corrosion control coupon. 11. No records available on site of the last packer isolation test. 12. No records available at the time for the last surface casing vent flow test. Please respond to OGC concerning all of the above findings. Thank you.						Central		09637	Wellsite - Waste Disposal

7-Feb-2018	044501441-001	Ovintiv Canada ULC	9-Feb-2018		DLS: B 13-33-078-17	Yes	Truck	Passed Inspection (Complete)	9-Feb-2018	7-Feb-2018	Planned	Disposal Well and Pump Building Inspection Meet with Encana operations staff and WRH Production Co-ordinator. Review the conditions in Order # 17-02-018.. Check that safe guards were in place as not to exceed the wellhead tubing pressure of 12,170 Kpa. Inspect the pump building, disposal well, and SCADA panel displays. Detected surface casing vent flow. Action Items: 1. Post a copy of the last packer isolation test in the pump building. 2. Vent Fisher 67 CFR regulator spring casing outside of the wellhead enclosure. 3.Complete SAT with True North Automation.. 4. Verify with a dead weight that the wellhead tubing and casing transmitters are reading the correct all the way through the entire SCADA system. Check that the LCD displays on the transmitters match the dead weight values. 5. Correct the display on the main panel. Alarm setpoint configuration screen- the wellhead tubing pressure " Actual" was displayed as -10.4 Kpa which was the casing pressure. On the main screen the wellhead tubing and casing pressures were displayed graphically opposite to were they should be displayed. 6. Perform a bubble test on the surface casing and submit results to Engineering. Follow direction from them as to whether a vent flow pressure build test will be required. 7. Disposal Water Meter - Perform a self-diagnostic test. Leave a copy of the self-diagnostic test in a pouch with the water meter. Please reply to OGC concerning the above action items. 9-Feb-2018	0445134815-001	Pavilion Energy Corp.	13-Feb-2018		DLS: 14-26-085-20	Yes	Truck	Passed Inspection (Complete)	13-Feb-2018	9-Feb-2018	Planned	Facility Start-up Inspection Flare Stack Carry-over Incident # 44312150-001 Meet the operator and electrical/instrument contractor Pimms Production on site. Confirm with Pimms that all of the battery shutdowns back to the facility PLC were confirmed to be functional. Inspect that critical car seals were installed and recorded as required. The start up bypass/re-pressurization valve around the group separator ESDV was confirmed to be locked closed. Inspect the flare ignitor, now functional. At the time off inspection it was found that the flare header purge gas line from the treater main gas line, through a 1 inch line to the flare header was plugged off. An attempt was made to clear the blockage in the line, but it could not be removed completely. Oil was found in the treater gas line and in the flare header. These lines were drained at the time. The site was left down for the evening. Spoke with Russel Gonie of Pavilion Energy, he agreed to install a purge gas Roto-meter, repair or replace the plugged purge gas line, and establish purge gas flow in the flare header, before starting up the next day. Action items: 1. Submit records for critical valve car seals. 2. Install a Roto-meter for the flare header purge gas. Please respond to OGC concerning the above action items.
