Please ensure this is resolved ASAP and contact me when completed. If no response, a deficiency will be given. Thank you,						Central	00008432, 00019340	10934	Facility, Pipeline, Well
15-Jul-2020	0655331802-001	PETRONAS Energy Canada Ltd.	20-Jul-2020		From: NTS: C 097-K/094-G-01 To: NTS: B 076-C/094-G-08	No	Truck	Passed Inspection (Complete)	20-Jul-2020	15-Jul-2020	Routine	COMMENTS: - The road going into this meter station (inactive) and just a bit further into the Cenovus suspended well at b-6-C/94-G-1, is in need of some repair/maintenance. There is a washout at approximately km5 of the 36.5 road, in which PETRONAS is the road permit holder. At this section, approximately 1/2 to 3/4 of the road surface is washed out. Due to the limited amount of travel of this road, it is not immediate, but does need resolved. -the meter station at c-97-K has blinds in the pipelines and looks to be decommissioned, but not abandoned. -no other concerns here at this time.						Central			Road

28-Jul-2020	0657114413-001	Trans Mountain Pipeline ULC	11-Aug-2020			Yes	Truck	Passed Inspection (Complete)	11-Aug-2020	31-Jul-2020	Routine	A joint inspection with the operator was conducted on July 28th and 29th, 2020 of the KingsVale Power Line Project. The following observations were noted and discussed with the operator at the time of the inspection. The road ditching is not consistent, issues ranged from no ditch, to shallow ditching , and ditches filled with debris Road banks have been cut to the tree line in several locations and have damaged roots of standing timber in several locations. Several culverts were observed to be to short for the road surface and several culverts have not been seated properly. At km 1.5 on the Tillery Road a chip truck has lost its load over the bank. Please ensure the road edge is repaired. Clean up of the wood chips has been referred to the B.C. Ministry of Environment for follow up. Three access roads have been deactivated. It was determined post inspection that the roads were deactivated without notification to the BCOGC, as required by the Licence of Occupation number 959921, Schedule A, Conditions 26 through 29. These roads are still considered to be in active status for inspection purposes and a conditional pass has been issued for this inspection. The failure to notify of deactivation has been referred to the BCOGC Manager of Enforcement for follow up. Location of deactivated roads, Unnamed access road from STR 3/3 to 3/4 The Kimble Creek West Road from its junction with the Kimble Creek Road to STR 10/5 on the ROW The Fortis Crossing access road from STR 22/1 to 22/2 , deactivation of this road is not complete and additional work is still required, as discussed with the operator. 5-Aug-2020	0659068B1-001	Coastal GasLink Pipeline Ltd.	12-Aug-2020		From: NTS: C 002-F/093-J-06 To: NTS: C 080-G/093-K-01	Yes	Truck	Passed Inspection (Complete)	12-Aug-2020	12-Aug-2020	Routine	A inspection of the section 4 ROW, was conducted on August 5th & 6th, 2020 with the operator in attendance. At the time of the inspection clearing and grading operations were being completed at several locations. The ROW was accessed at multiple locations between KP 334+760 and KP 263+500 with only a few minor concerns observed and were discussed with the operator at that time. Two of the stream crossing structures on Shoofly 40 require maintenance on the wing walls. These crossings were identified and discussed with the operator. The PNG hotline crossing located at KP 319+950 did not have the documentation / agreement at the site. The agreement was provided by end of day. Several archeological sites were observed to be marked and flagged / fenced appropriately. Several bird nesting areas were observed to be identified and flagged appropriately to prevent crews from accessing the area. Including the Northern Goshawk nest located at KP 263+500 which had a 500 meter buffer zone in all directions. Amphibian salvage was observed from KP 283+276 through to KP 283+522. There is very little top soil, the area here is harder and has a high clay content compared to the rest of the field which results in poor crops and yields. An attempt was made years ago to fix this using peat moss which had little affect on breaking the clay down to usable soil.					Central		04888	Pipeline, Well
10-Aug-2020	0658962S4-001	Kelt Exploration (LNG) Ltd.	11-Aug-2020		DLS: 02-10-088-23	Yes	Truck	Deficiencies Corrected	12-Aug-2020	10-Aug-2020	Planned	Routine Plant Inspection. Upon interviewing the plant operator on August 10th. it was identified that the Amine aftercooler had an H2S leak on august 8th. and was shut-in. On August 11, 2020, EMBC reports were checked. The incident and H2S release had not been reported. The plant operator was contacted on August 11 at 1:15 pm for more details. The operator stated that on August 8th. at approx.. 7 pm there was a high H2S alarm in the tank farm which alerted them. Operations investigated the source of the H2S leak, and traced it to the Amine cooler. A leak was identified when they crawled on top of the Amine cooler, setting off an alarm on personal H2S monitor. The operator also reported he could hear gas leaking. 17-Aug-2020	0660547219-001	Ovintiv Canada ULC	18-Aug-2020		DLS: 03-07-081-17	Yes	Truck	Passed Inspection (Complete)	18-Aug-2020	17-Aug-2020	Planned	Start-up Inspection Gas Lift Compressor K101 - Gas Lift Dehy Q350 - VRU K201 Meet with Ovintiv construction and operations staff. Review the gas lift measurement schematic and the project commissioning documentation. Verify all outstanding "A" deficiencies were closed, and that electrical seals in hazardous areas were inspected and packed and poured. Inspect the plant HMI that fire and gas detection in the new buildings were functional, with no faults. Verified that the Waste Discharge Permit was amended July 2, 2020 to include the new Gas Lift Dehy Q-350 emissions. Verified that remote shutdowns for K-101, K-201, and Q-350 were functional. Verified ESD function testing was completed Aug 16th. Spartan Controls was on-site commissioning the compressor panel, and mechanics were coupling the gas lift electric driver to the gas lift compressor. Perform a walkdown of the new processing piping and equipment. Inspected that critical pressure sensing isolation valves and PSV stop valves were car sealed open, and that isolation valves up and downstream of BDVs on the new process piping were car sealed open. Noted that the some car seals were not installed on new building skid edge flare isolation valves and on the ESDV 352 bypass. Some car seals were tapped to the valve due to the next step in the commissioning process and valve manipulation for the N2 and gas purging process. Verify that the Ovintiv mechanical contractor had inspected the new process piping, shoes, guides, and anchors, and confirmed all bolt-ups and flange torquing were complete. Found PSV-600 pilot in Q-350 Dehy not vented outdoors. Noted that new meters were not identified on the Gas Lift measurement schematic and tagged in the field as either "Accounting" or "Non Accounting". Ovintiv was given permission to proceed with N2 and gas purging for the commissioning and start-up of the new gas lift process piping and equipment. Action Items: 1. Dehy Q-350 PSV -600 - Vent the PSV pilot outdoors. 2. New gas lift meters - Identify on the gas plant measurement schematic and tag in the field as either "Accounting" or "Non-Accounting". Submit the revised gas plant measurement schematic. 3. Submit compressor and VRU panel inspection reports. 4. Submit completed and signed off plant PLC Site Acceptance Test (SAT). 5. Submit completed and signed off Final Turn-over and Pre Start-up Safety (PSSR) - Overall Document covering all systems. 6. Submit Dehy Q-350 Benzine emission test results - VRU down. 25-Aug-2020	0662263487-001	Coastal GasLink Pipeline Ltd.	29-Aug-2020			Yes	Truck	Passed Inspection (Complete)	29-Aug-2020	29-Aug-2020	Incident	An inspection with CGL and SA staff in attendance, was conducted on watercourse crossing that have had exceedance reports filed or are currently under 24 hour water quality monitoring. KP 295+800, exceedance, new bridge installation (not completed), RMA less than 10 meters measures to 7 meters both sides, This has been referred to the BCOGC Enforcement Manager for review and follow up. KP 306+800, exceedance KP 308+000, exceedance, QP to assess and provide report to the BCOGC with recommendations. 308+800, exceedance, QP to assess and provide report to the BCOGC for with recommendations. Contractor states that the PNG line and recreational quad trail are producing high NTU values prior to the water accessing the ROW. KP 309+400, bridge install KP 313+604 bridge install Common to most of the locations is a failure to establish and/or maintain Erosion and Sediment Control measures. It appears that ESC crew was not able to keep up to the stripping and grading of the ROW. Wing walls on bridge installations are not consistent in their construction . These items were discussed with both the operator and contractor at the time of the inspection and will be followed up on the next inspection to ensure these items have been addressed. It should be noted that stripping and grading of the ROW had been stopped at the time of the inspection and that additional staff has been allocated to establish ESC measures along the ROW. NTU levels from the start of the exceedance through to Sunday August 30, 2020, for all exceedances are to be submitted to the undersigned Inspector on Monday August 31, 2020. All exceedances will be referred to the BCOGC Manager of Enforcement for follow up and determination if additional action is required. CGL typical's for bridge approaches and wing wall construction are to be forwarded to the undersigned Inspector on or before September 8, 2020.						South			CIAS, Pipeline

2-Sep-2020	0665903351-001	KANATA Energy Group Ltd.	15-Sep-2020		NTS: A 054-C/094-B-16	Yes	Truck	Deficiencies Corrected	7-Oct-2020	2-Sep-2020	Planned	Planned Plant Inspection. Meet the gas plant operator on site. Inspect fire and gas calibration. Found that the gas detection was being calibrated on a 6 month interval which was not as per the manufacturers maintenance requirements. AIT-1000 was reading -6.9 LEL and AIT -1001 was reading -6.0 LEL with no gas present. We reviewed the General Monitor S4000CH calibration requirements in the manual which stated the calibration interval is 90 days. Noted other maintenance such as the plant critical shutdowns, accounting meter calibrations, and tank level transmitters were done at appropriate intervals. The operator was to follow-up on a note on the plant shutdown report May 19, 2020, where a reed switch was on order. Found the liner for the tank farm in poor repair and noted stagnant water from inside the containment had saturated the ground outside of the containment while the rest of the lease was dry. Upon inspection, various separations in the liner were noted, some on the corrugated metal walls of the containment and some holes were found in the upper liner inside the secondary containment area. This was brought to the operators attention. Smaller items noted at the time of inspection are listed as Action Items below. Action Items: 1. Follow-up on the May 19, 2020 plant shutdown report- reed switch replacement. 2. Electrically ground the inlet pipeline pig receiver spill catcher to piling 3. Natural gas generator- Install 1/4 SS tubing plug on the valve, on the balance line.						Central	00018016		Facility, Pipeline, Well

3-Sep-2020	0666611277-001	Altagas Holdings Inc.	16-Sep-2020		NTS: C 041-F/094-B-16	Yes	Truck	Deficiencies Corrected	29-Sep-2020	3-Sep-2020	Planned	Planned Inspection. Meet with the Area Superintendent, and operations staff. Inspect that the production accounting meters were being regularly calibrated. Verified that fire and gas calibrations were up-to date and there were no faults on the Facility HMI display. Perform a walkdown of the production equipment. Noted the inlet pig receiver spill catcher required grounding and should be emptied. Noted the production tanks required WHMIS product ID. Found the isolation valves on the BDV on the VRU- tank vapours to F.G. were not locked or car sealed open. Found the stage 2 discharge PSV pilots in compressors C-500- A, B. C not vented outside of the compressor buildings. Found on the three (3) compressors that the 2nd stage final discharge pressure sensing isolation valves under the decking were not car sealed open. Alta Gas operations staff responded quickly and addressed the critical valve car sealing on the same day as the inspection. Smaller items are noted as Action Items below. Action items: 1. Noted a cathodic deficiency tag was present on the main inlet pipeline. Questioned if it had been resolved. 2. Ground inlet spill catcher, and empty containment. 3. Submit the most recent Facility Shutdown Report for checks on critical shutdown devices. 4. Production tanks- Install WHMIS Identification.						Central	00018257		Facility, Pipeline, Well

4-Sep-2020	0664338665-001	PETRONAS Energy Canada Ltd.	4-Sep-2020		NTS: A 058-H/094-B-16	Yes	Truck	Deficiencies Corrected	23-Apr-2021	4-Sep-2020	Planned	Planned Inspection Meet with the operations staff on site. Noted recent site turn-around May 17 th - May 28 th 2020. The operator mentioned that the water Hub was to be de-commissioned. It was active at the time of inspection, pumping to b-8-/94-B-16. Inspect site A-58-H /94-B-16 car seal list. Found no date on the list to indicate when a car seal was installed, removed, or when the list was last updated or verified. Upon inspection of the station car seals various deficiencies were noted. In two cases isolation valves for blowdown valves were found closed. The fuel gas scrubber BDV isolation was closed with no car seal. The operator was notified at the time of inspection and opened the closed fuel gas scrubber BDV isolation valve, and locked it open. Dehy 1 BDV isolation was closed with the car seal broken, the operator quickly opened the valve. Dehy # 2 BDV isolation valve was open, but the car seal was found broken. Operations locks were installed. It was noted that there was no blowdown valve on the compressor suction header. In the event of a emergency shutdown (ESD) the compressor suction header piping would remain pressurized. Action Items: 1. Review and improve the station car seal program. Include operator training, a means to record the dates of installation, removal, and a verification. 2. Submit the updated and revised A-58-H/94-B-16 car seal list to the OGC for review. 9-Sep-2020	0664795357-001	Coastal GasLink Pipeline Ltd.	11-Sep-2020		From: NTS: C 006-J/093-I-04 To: NTS: A 077-A/103-I-02	Yes	Truck	Deficiencies Corrected	9-Oct-2020	9-Sep-2020	Routine	Routine inspection on road construction and upcoming bridge install in the Upper (North) Kitimat on September 9, 2020 as well as inspection of Road Permit 100102234 and associated crossings. Stream crossings CGL naming convention calls BR 128 and BR 129 it was noted that the South abutments of each crossing were within the stream channel. These are temporary structures and timeline of removal/replacement was not known at time of inspection. Permit condition 26(E) states that Bridge or culvert abutments, footings and scour protection must be located outside the natural stream channel and must not constrict the channel width. The oil and gas road regulation section 6 (2) states that the RP holder may construct or install a bridge that does not comply with subsection 1(c) if (a) the bridge is designed to pass expected flows during the period the bridge is anticipated to remain on the site, (b) the construction, installation and use of the bridge occurs during a period of low flow, and (c) the bridge, or a component of the bridge that is vulnerable to damage by high flow, is removed before any period of high flow begins. I will need to know what the plans are for these structures and the duration remaining on the site. This is a potential non compliance with permit condition 26(E) and stream flows are expected to increase as we move into fall and early winter. This is noted as a failure to adhere to the permit conditions in this inspection. 160.3.A Shoofly and temporary crossing UN 13-74 as well as SF-249 56 stream woody debris and branches were noted within stream channel. Non compliance with pipeline permit 100084230 permit condition 26 which states: 26. The permit holder must fall any tree that is harvested within its tree length of a stream or a wetland away from the stream or wetland, and must immediately remove any debris or soil deposited below the high water mark. This is also noted as a failure to adhere to the permit conditions during this inspection. Please provide follow up photos once materials are removed from the stream. SF-249 stream channel banks have also been impacted by equipment during the installation of the temporary crossing and caused sediment to enter the stream. ESC measures not in place at time of inspection. EPMR section 12 deficiency to install ESC measures at temporary crossing to stop sediment from entering the stream. Road construction in this area under the pipeline permit it was noted has vertical cuts on glacial till that are depositing materials into the ditch lines. Proper angle of repose of side cuts not completed, ROW area appears small and very little area to store decks, stumps and overburden. Top soil storage areas butting up to subsoil/overburden without delineation. Noted construction materials in ditch lines which impede the effectiveness of the ditches. Construction is outpacing the establishment of ESC measures and will revisit the site during rain event to see the full impacts of these construction activities. Other items noted during inspection: -Garbage, debris noted in ditch line and construction material on top of stream. -Access controls on forestry RP road in place and issue forwarded to FLNRORD C&E. -Vehicles idling for over 10 minutes without any operators present forwarded to EAO. 15-Sep-2020	066667643-001	Albright Flush Systems Ltd.	22-Sep-2020	23-Oct-2020	DLS: A 10-09-087-21	Yes	Truck	Deficiencies Corrected	24-Nov-2020	17-Sep-2020	Planned	The black hose running from the holding pond, over berm to off lease in to trees should be removed to prevent any accidental discharge. All records of any discharges are to be kept as per Oil and Gas Waste Regulation. Ensure holding pond is appropriately constructed and monitored regularly. Day of the inspection there was minimal freeboard on the pond with just a slight sheen on surface. The disposal well was inactive at time of inspection. Inspection was done after a rain event. The solids pad where vac trucks, etc. unload the base is sloped on one side to catch the unloaded contents in one cell with cement barricade block in the center to create two cells. At the top side of the slope it is then sloped the other direction on natural ground. (inverted "v") The front end loader was observed in the truck unload cell picking up solids backing out carrying contaminants out on tires and droppings from bucket to the other side of the inverted v and carrying over and dropping in to other cell. The front end loader has to also access wood shavings from an uncontrolled area to transport back to solids pad for mixing. Making several trips. At the bottom of the inverted v on the natural ground side is a small drainage ditch that runs to the bermed East side of the lease and from there to the holding pond. The lease is bermed all the way around. The lease is a cut and fill with the holding pond on the fill side. They have not been maintaining records for pump offs. The site is not fenced and there is evidence of wildlife on site. The site is manned till midnight with call out after. An active water source well was drilled and is in behind the disposal well pump building							Central	00018049, 00019788	14095	Facility, Pipeline, Well
15-Sep-2020	066697329-001	PETRONAS Energy Canada Ltd.	18-Sep-2020		NTS: B 008-I/094-B-16	Yes	Truck	Passed Inspection (Complete)	18-Sep-2020	15-Sep-2020	Planned	Start-up Inspection Meet the site construction managers. Review commissioning documentation. Verify that the shutdown key function testing was completed Sept 14th. Confirmed that flange bolting and torquing was complete. Inspect (1) new inlet ESDV, and (2) new sales ESDVs. Lube oil storage building, new inlet building, (3) new compressors, C-600, C-700, C-800, two (2) new dehys , Dehy 5 and Dehy 6, new VRU 3, new Generator 8000 and 8010, two (2) new sales gas meters FE-3900 and FE 3910, and one (1) new start gas meter FE 4006. Noted that FE-3900 was incrementing flow with the sales flow control valve closed. Request Petronas measurement technician investigate. Noted that not all locks or car seals on safety devices were installed at the time of inspection. Noted at the time of inspection there was a significant gas leak on FG piping underneath the decking of compressor C-800. This had the potential to result in an incident. Request Petronas report the occurrence using MAXIMO. Noted in C-700 that 1st, 2nd, and 3rd stage discharge PSV pilots were not separately vented outdoors. Action Items: 1. Submit the signed off Pre-Start-up Safety Review (PSSR). 2. Submit final PLC site acceptance test (SAT) handover documentation. 3. Submit an updated facility master car seal list. 4. Repair fault on combo LEL controller in Dehy 5. 5. C-700- Vent 1st, 2nd, and 3rd stage discharge PSV pilots separately to outdoors.							Central	00018060		Facility, Pipeline, Well

16-Sep-2020	066698441-001	1195714 Alberta Ltd.	18-Sep-2020		DLS: 01-36-082-18	Yes	Truck	Passed Inspection (Complete)	18-Sep-2020	16-Sep-2020	Planned	Start-up Inspection - Flare System Upgrade For One (1) Flare Stack, One (1) Cryogenic Flare Header, One (1) Flare Knockout Drum, One (1) FKOD Pump, Removal of the Cryogenic Pit (SU-104) and all connecting piping, One ultrasonic flare meter and Cryogenic flare header purge meters, and the addition of new blowdown devices and associated piping, the replacement of several existing blowdown devices and PSVs, the replacement of some piping connecting into the existing flare header, and programming changes associated with emergency shutdowns and blowdowns. Site construction was not complete at the time of inspection. Construction of four systems, DCS Upgrade, Switch Gear Upgrade, Flare System Upgrade, and Valve upgrade is managed by PIMS. The Pre-Start-up safety review is the over arching document that must be signed off prior to commencing operations. Prior to commencing operations complete and submit Pembina's Pre-Start-up Safety Review (PSSR). Action Items: Flare Measurement and Reporting 1. Determine flare measurement reporting structure (single or two stage). 2. If two stage flare reporting is determined, initiate the MOC process to automate existing purge meters on the old flare header to electronic meters. Automate the daily volumetric report to calculate/ include the total flared gas = main flare meter + purge flare meters + pilot gas. 3. Ensure the total plant fuel gas does not include purge or pilot gas volumes. Within 30 days of commencing operations prepare and submit a binder with electronic version: 1. Plant Blowdown Logic- Provide screen shots (before and after) that show correct function of the new and existing plant blowdown valves. 2. Flare meter- Manufacturer Certifications, PDF of the meter configuration, Fisher ROC configuration and calibration reports, Vendor Commissioning Report. 3. Flare Meter - low flow cut-off calculation. 4. Gas plant - shutdown key (electronic version only). 5. Elspect- sign-off that electrical end device seals in hazardous areas have been packed and poured.						Central		00000932

Earlier in summer the road was in bad shape and was not passable by vehicle. -Signage must be changed to update new permit holder ASAP											Central		09003		Well
17-Sep-2020	0667868866-001	ConocoPhillips Canada Resources Corp.	22-Sep-2020		DLS: 07-14-088-23	No	Truck	Passed Inspection (Complete)	22-Sep-2020	17-Sep-2020	Routine	COMMENTS: - I have keys for access to this wellsite given to me by KELT in the past. -Both of these wells have not produced since July 2019. What this means is that the wells have reached inactive status (no production in past 12 consecutive months). So, your company has 60 days since end of July 2020, to complete the surface suspension work and submit the paperwork to the OGC. What this means is, your company now has a couple of days to disconnect the flowline from the wellheads at this site and chain and lock all valves on wellhead in order to achieve/maintain compliance. Please contact me as soon as this is complete to avoid a deficiency in near future. Thank you,											Central	00025768, 00025829	28718, 28878		Facility, Pipeline, Well

Dewatering effective at time of inspection. - Anderson Re-alignment: running clean, rip-rapped and seeded. Appears to be functioning well. - Site was extremely clean. No garbage spotted during inspection. - Moore Creek bridge: sediment fence to be installed on removed - Moore Creek offset: poly has been removed post incident. - South KRSC (pump off area): No standing water. Being monitored. Storm water system in place. - North Haul Rd: check sediment fencing. Otherwise all good.						South			Pipeline, Road
24-Sep-2020	06687124 1-001	ARC Resources Ltd.	28-Sep-2020		DLS: 03-09-081-16	Yes	Truck	Passed Inspection (Complete)	28-Sep-2020	24-Sep-2020	Planned	Tower Lake Inlet Liquids Measurement Upgrade Meet with Arc 3-9 plant lead operator and measurement specialist. ARC reported a recent plant turn-around that started on Sept 2nd. The Tower Lake inlet separator coriolis meter installation was complete and the meter was on-line Sept 9th. Review recent hydrocarbon liquid analysis. An oil relative density of 0.759 was used to configure the ROC Net Oil Calculation (NOC). Review the water cut analyzer calibration report. Review the coriolis meter configuration, transmitter calibration, and proving reports. Verify the meter was successfully proved, completed Sept 23rd. Requested the Master Meter proving record. Verify that the coriolis meter dry and wet Smart Meter Verification passed. Discuss the coriolis meter drive gain, density, and flow trending and alarms. These were individually trended. Suggest Arc consider adding a water cut trend, and trend four (4) parameters on one graphic. It was also suggested that Arc consider adding operator adjustable alarm to the four parameters. Inspect the coriolis meter installation. Noted a small amount of flow when the hydrocarbon dump valve was closed. It appeared the dump valve was passing or the valve control positioner was not precisely calibrated. Witnessed a meter zero when the operations staff manually blocked in the hydrocarbon liquid line. Action Items: 1. Tower Lake inlet separator hydrocarbon liquid dump valve and positioner- The valve appeared to be passing a small amount of flow @ zero percent open. It was not confirmed if this small flow was in the measurement range of the coriolis meter. Ensure the dump valve trim is sized correctly, the valve is seated, and the positioner is adjusted for zero flow @ zero percent output. 2. Measurement Performance- Consider adding water cut trending, a combined parameter trend graphic, and alarm set points as discussed at the time of inspection. 3. Tower lake inlet separator coriolis meter- submit the Manufacturer certification documentation.						South	00007743		Facility, Pipeline, Well
24-Sep-2020	06687368 4-001	PETRONAS Energy Canada Ltd.	28-Sep-2020		NTS: B 011-I/094-G-01	No	Truck	Deficiencies Corrected	26-Oct-2020	24-Sep-2020	Routine	COMMENTS: -The road access into b-11-I has many erosion channels forming and is sketchy in some areas around km5 especially. There are also a few old crushed culverts alongside the access road that need to be removed. Please contact me when this is complete or to advise me of a plan. Thank you. 29-Sep-2020	06705290 8-001	Painted Pony Energy Ltd.	1-Oct-2020			No	Truck	Passed Inspection (Complete)	1-Oct-2020	1-Oct-2020	Routine	This inspection is for the 2073 Road which is a north extension of the Dark Road off km 8 of the Cameron River Road. The 2073 road terminates at PPE's a-80-E / 94-B-16 well pad. The road has been signed and gated with the message "temporary bridge closure ahead". We dont have a record of this temporary closure. Please fill out and send in the temporary road closure report as found on our website. It is understood that PPE has been sold to CNRL and this temporary road closure will most likely remain until after the new operator has taken over the assets. It was noted at the first bridge the stream bank has been undercut and the bridge is supported mostly by a rig mat. Are there other problems with the other bridge or remaining road? Thanks						Central			Road

1-Oct-2020	067078865-001	Tourmaline Oil Corp.	1-Oct-2020		NTS: B 067-H/093-P-10	Yes	Truck	Passed Inspection (Complete)	1-Oct-2020	1-Oct-2020	Planned	Start-up Inspection for the addition of: Two (2) inlet compressors, One (1) sales compressor, One (1) Dehy, One (1) Inlet Separator, One (1) sales coalescer filter. Meet with Tourmaline site construction manager, operations, and commissioning staff. Review prepared commissioning documentation. Verified the site shutdown key was signed off by a BC licensed Engineer on Sept 29th. Verified that the process piping was mechanically complete, and that flange bolt-ups and torquing were complete. Review the measurement schematic and new meter Fisher ROC configurations. Question if the dehy sales meters and the inlet meters are "Production Accounting ", or if the TCPL sales meter is used to report the total battery gas into Petrinex. Request Tourmaline clarify this and up-date the measurement schematic if required. Reviewed the site valve car seal/lock list . Eight (8) interconnecting lines to phase 1 and phase 2 process piping will need to be opened. Verified that electrical seals in hazardous areas were inspected that they were packed and poured. Verified that the safety systems were function tested on Sept 31, 2020. Found no faults on fire and gas detection equipment. Verified that the compressor remote shutdowns were tested by Spartan Controls on Sept 27th. Witnessed (2) ESD function tests, one when K-2000-3 fire eye (AIT 2004-3) was triggered, and the second when a 50 % LEL gas sample was applied to Dehy LEL detector (AIT-3001-3). Perform a walkdown of the new process piping and equipment. Verified that an up-to-date site specific and corporate ERP were in the main control room. Action Items: 1. Metering schematic- facility dehy meters and inlet meters - confirm if designation as "production accounting" is correct. Meters are deemed to be "production accounting" if the metered volumes from these meters are used to report into Petrinex. Submit a revised measurement schematic. 2. Generator Installation mid November- Submit an email with PLC screen shots to show safety systems (fire/gas) are functional and confirm all fuel gas regulators are vented outdoors. 3. HP and LP flare purge meters- Submit an email on installation completion with PLC screen shots to show live purge gas measurement.							South	00017974		Facility, Pipeline, Well

5-Oct-2020	067564411-001	Coastal GasLink Pipeline Ltd.	20-Oct-2020		From: NTS: C 002-F/093-J-06 To: NTS: C 080-G/093-K-01	Yes	Truck	Passed Inspection (Complete)	20-Oct-2020	20-Oct-2020	Routine	An Arch "No Go" area was identified at KP 257+850. The No Go area is located between two active work spaces and borders the ROW. There is no flagging or fencing to establish the boundary of the No Go area to inform workers that this area is off limits. Please survey the boundary of the Arch "No Go" area and clearly mark to ensure workers do not enter. Please provide confirmation with pictures to the undersigned Inspector that the area has been marked and that no work has been completed to date, in the "No Go" area. This was discussed with CGL and SA Environmental Inspectors at the time of the inspection.							South			Pipeline, Road

6-Oct-2020	067232407-001	PETRONAS Energy Canada Ltd.	7-Oct-2020		NTS: C 082-I/094-A-12	Yes	Truck	Passed Inspection (Complete)	7-Oct-2020	6-Oct-2020	Planned	The site is in the process of being de-commissioned and abandoned. The pipelines in and out of the facility are abandoned. The facility status in the OGC KERMIT system still shows as "active". At the time of inspection it was noted that there are still fluids in the waste oil and glycol tanks, the compressor sump, and the produced water pump "y" strainer catch barrel. Could not confirm if the 400 bbl produced water and the under ground flare KO tank had been emptied and cleaned out. Request the site de-activation plan. Found the d-41-I/94-A-12 pipeline blind missing a stud and nuts. Action Items 1. Update the facility status in the OGC KERMIT system. 2. Submit the site de-commissioning report. 3. Drain all fluids as commented above. Ensure the flare KO, and produced water tanks are cleaned and empty. 4. The open compressor sump- drain of fluids and clean out. Submit a plan to deal with the issue of the sump filling up with rain water and overflowing. Ideally the sump and compressor pad should be removed. 5. d-41-I/94-A-12 pipeline - Install stud and nuts, and ensure the blind flange is adequately torqued.						Central	00000143		Facility, Pipeline, Well
6-Oct-2020	067232912-001	PETRONAS Energy Canada Ltd.	7-Oct-2020		NTS: C 029-K/094-A-12	Yes	Truck	Deficiencies Corrected	24-Nov-2020	6-Oct-2020	Planned	Last production was reported to be in 2016. The site is in the process of being de-commissioned and abandoned. The pipelines in and out of the facility are abandoned. The process piping purged and vessels had vapour phase inhibitor. Noted the facility and one (1) pipeline status listed below still show as "active" in the OGC KERMIT system. Walk through the site. Noted oil and glycol barrels on site and that compressor lube oil day tanks needed to be drained. Some compressor day tank over fill catches need to be drained and removed. Could not confirm if the compressor skid used oil tanks were drained. Petronas needs to clean up engine oil underneath the decking of the compressors. There is a possibility that the sprayed on liners may have holes or tears and oil could be leaching into the soil underneath the compressors. Found oil in the VRU oil reservoir. Could not confirm if the underground tanks such as the north pig receiver slop and flare KO tanks had been drained and cleaned. There were a number of secondary containments for chemical tanks (methanol and glycol) and the compressor lube oil storage dock containment that were found full and needed to be drained and removed. Dehy 3 reboiler vent line catch barrel needed to be emptied. Noted contaminated material and debris in the tank farm secondary containment area that needed to be removed, which may contain NORMs. Also noted electrical power was present in the inlet separator building, as gas detection equipment was energized. Action Items: 1. Complete the decommissioning of compressors and VRU. Remove fluids, glycol and oil barrels. Ensure used lube oil and day tanks, and over fill catches are emptied. 2. Ensure chemical tanks are emptied. 3. Drain and empty all secondary containments. 4. Consider removing chemical tanks and secondary containments. 5. Ensure all underground storage tanks are cleaned and emptied. 6. Clean-up oil underneath the decking of the compressors. 7. Ensure all electrical equipment in decommissioned buildings is off. Inspected site noting calibrations up to date and buildings kept clean inside. Action Items: 1.) Submit last ROW inspection. 2.) Fuel gas building had some open wiring and a regulator to vent outside. 3.) Containment under pig receiver needs grounding. 4.) LEL in treater building. Thank you for time taken during inspection.						North	00008086, 00003738		Facility, Pipeline, Well

8-Oct-2020	0672989991-001	AQT Water Management Inc.	8-Oct-2020		DLS: 07-24-078-17	Yes	Truck	Passed Inspection (Complete)	8-Oct-2020	8-Oct-2020	Planned	Inspection For Special Project Order # 20-02-007 Amendment #1 Meet operations staff on site. Review permit conditions. Max wellhead injection pressure shall not exceed 16,375 Kpa. Confirmed that the first disposal operations under the new permit commenced on Sept 11, 2020. The main pump was down, and undergoing major repair. A replacement pump was coming out of the US. Inspected the pump discharge pressure transmitter. It was disconnected and open to atmosphere, the transmitter was reading -9.09 Kpa. It did not appear that the transmitter was calibrated, although there was a recent calibration tag, Oct 2, 2020. Inspect the well head. The operator had removed the tubing pressure transmitter and placed a pressure gauge on the tubing. The operator said the reason he did this was he did not trust the transmitter reading. Noted that the tech cable attached to the tubing pressure transmitter was no longer sealed in the STX EXP tech connector, exposing inner wire sheathing. Request that the pump discharge, the wellhead tubing, and casing pressure transmitters are re-calibrated using a regulated high pressure dry gas source. Could not verify the SCADA shutdown set points for the wellhead tubing and casing pressures. Could not verify if the injection pump discharge pressure VFD speed control set point was lowered from the previous setting under the old permit. Found that the disposal meter was last proved Jan 30, 2019, exceeding the calibration frequency of one year. Prior to commencing operations: 1. Disposal pump discharge, well tubing, and well casing pressure transmitters- zero and span calibrate using a high pressure dry gas source. Ensure the transmitters displays and outputs are reading the applied pressure (0, 25, 50, 75,100 %) range. Submit transmitter calibration records and test equipment dead weight standard calibration documentation. 2. Disposal meter- Prove the flow meter. Submit the meter proving record. 3. SCADA shutdown set points- Wellhead tubing and casing transmitters- submit screen shots of the alarm and shutdown setpoints. 4. Disposal pump discharge pressure speed control- Submit documentation for the setting of the set-point pressure at which the VFD speed control begins to slow the disposal pump down. 5. Well head tubing pressure transmitter- Repair the damaged tech cable. 6. Submit critical pressure sensing isolation valve lock/car seal list for all shutdowns associated with disposal operations. 7. Notify the OGC once disposal operations re-commence, a follow-up inspection will be arranged.						South	00026833, 00026834	35043		Facility, Pipeline, Well

8-Oct-2020	0673184897-001	Ovintiv Canada ULC	9-Oct-2020		DLS: 04-26-078-17	Yes	Truck	Passed Inspection (Complete)	9-Oct-2020	8-Oct-2020	Planned	Gas Plant Inspection Meet with the gas plant manager and operations staff. Inspect the plant PLC HMI gas and fire detection screens. No faults were found, all safety systems were functioning normally. Reviewed the plant daily flare logs for planned and unplanned flaring activity. Ovintiv gets top marks for recording the reason of the flaring activity and the flared volume on each log. Verified that plant accounting meter calibrations were being conducted as per the BC Measurement Guideline. Inspected that isolation valves upstream and downstream of major plant blowdown valves (BDV 1101, BDV 1102, BDV 1602, BDV 2101, BDV 2102, BDV 3104, BDV 5001) were car sealed in the open position. The overall impression at the end of the inspection was that the plant was operating smoothly and was being well maintained. There are no further concerns at this time. Thanks so much,						South	00018051			Facility, Pipeline, Well

Review the Technical Facility Permissions of the Amendment Application # 100106427, dated April 9, 2019. Confirmed the phase 2 expansion plant start-up meeting is scheduled for Oct 16, 2020. Condition 18 - Confirmed that the OGC had received the Fugitive Emissions Management Program, Management of Change Program, and Security Management Plan, on Oct 5, 2020. Condition 19- Could not verify that a NRM had a system in place to record VRU annual operating level, and to maintain written records of the VRU operating level. Request the NRM Project Manager respond and ensure condition 19 of the approval will be met. Review commissioning documentation. Receive the plant Shutdown Key and verify that the flare stack and incinerator systems have been commissioned. Request that NRM prepare a commissioning binder for the items in condition 15. Review the Facility and Gas Plant Start-up Inspection List. Comment that the facility sign at the entrance of the plant did not have a flammable gas symbol. Request the plant Pre-Start-up Safety Review (PSSR) be submitted prior to commissioning completion, as it had not been signed off, some commissioning activities were still in progress. The CO2, H2S, and Dewpoint analyzers required wet commissioning and a short piece of sample line tubing on each required insulation. Inspect the plant PLC HMI process, fire, and gas detection display screens. Found AIT 1140A-07 - LEL (Compressor A) and AIT 1308-03- H2S (Dehy) faulted, AIT- 1920-01 LEL Utility Heat Medium, and AIT 1308-02 with negative drift , requiring a re-calibration. Perform a walkdown of process equipment and piping. Found one (1) car seal not installed on the FG buyback ESD bypass. This was corrected at the time of inspection. Noted at the time of inspection that two (2) isolation valves on inlet separator # 1 and # 2 level columns, associated to high level shutdown, were not car sealed open. Found one (1) car seal had been broken and had fallen off a stop valve underneath the VRU liquids drain pump PSV. Recommend metal car seals with braided steel wire be used rather than plastic car seals. Action Items: 1. Repair faults on AIT 1140A-07 (Compressor A- LEL) and AIT 1308 (Dehy H2S) gas detection. 2. Recalibrate due to zero drift - AIT 1308-02 (Dehy LEL) and AIT 1920-01 (Utility Heat Medium). 3. Complete wet commissioning of AIT- 1210A (CO2) , AIT 1210B02 (H2S) , 1210-03 (Dewpoint) and insulate exposed SS tuning on sample lines outside of the analyzer building. 4. Facility Sign- Ensure Drilling and Production Regulation 77 is met. Install flammable gas symbol and H2S symbol on the first sign with the site location and emergency contact number on it. The H2S symbol should be removed from the PPE sign. All required information D&PR 77 should be on one (1) sign.						South	00007808			Facility, Pipeline, Well

20-Oct-2020	0678151775-001	PETRONAS Energy Canada Ltd.	26-Oct-2020		From: NTS: C 072-A/094-B-16 To: NTS: C 008-I/094-B-16	No	Walk	Passed Inspection (Complete)	26-Oct-2020	26-Oct-2020	Follow Up	This is a follow up inspection requested from the summer OGC helicopter inspection flights. This inspection is for stream crossing #10. This is described in your construction plan as having a stream classification of S3, 3.77m bankfull width, 1.3% average gradient. The stream was open cut and there has been some rock reinforcement of the stream bank that was cut for installation of the pipeline. Some rework of the riparian area has been completed and includes coconut matting and planted willow whips. These whips are few in numbers and there may be a need to plant more due to mortality which is common with this technique. When the vegetation has been established the sediment fencing will need to be removed as it degrades and loses its effectiveness. There is one roll of sediment fence that has not been installed and the roll is laying off to the north side of the crossing.						Central			CIAS, Pipeline

29-Oct-2020	068199615-001	Coastal GasLink Pipeline Ltd.	4-Nov-2020		From: NTS: C 006-J/093-L-04 To: NTS: A 077-A/103-I-02	Yes	Truck	Deficiencies Corrected	18-Nov-2020	29-Oct-2020	Routine	Routine inspection of construction activities in and around the North and South Hirsch creek drainages. South Hirsch at approximately 1.1km on road 50.1A inspected wetland crossing 60C2A as well as associated WC crossing 1559. No issues with the crossing however it was noted that the crossing was uneven as it was placed on upturned stumps and may be a potential safety issue during pipe installation. Travelled to the back end of North Hirsch creek to approximate KP 627+340 to view the active construction. Small amount of garbage noted at the back end of the construction, Please clean up newspapers and associated garbage in this area and ensure proper housekeeping is completed. WC 48D1 56 watercourse at KP 628+653 has had limbed and processed logs dropped in the stream as protection from adjacent blasting activities. This has resulted in material being placed within the stream that is currently inaccessible by machinery and are ineffective in preventing blasting material from entering the stream. Deficiency issued under EPMR Section 12, remove logs from within the stream. Streambed soil noted from WC UN 21-5 adjacent to the road, this material has eroded and is mixing with adjacent materials. Ensure all materials are separated, can be easily identified and secured from any potential erosion. Inspection then moved to 18.1km on the North Hirsch to RW 112 and recent construction on the pipeline ROW. Inspected UN 12-16 along RW 112 and had no issues with this S3 crossing. Pipeline ROW at approximately 642+250 noted topsoil stored at a very steep angle that will have potential for erosion. Ensure materials are separated and secured from erosion. Noted sedimentation in stream WC 716 that had bypassed ESC measures and was entering the stream. Ensure ESC measures are reestablished and monitor the area for further impact from adjacent construction and topsoil pile. Crossing 715.2T ESC measures (Coco matting) was established not only on the stream banks but also within the stream itself, please remove ESC measures from stream high water mark as there is risk of mobilization. No signage indicating either crossing 715.2T or 716 noted on site as well as coastal tailed frog signage was very worn but still readable. ROW KP marker 642+100 was attached to adjacent timber, it was not noted how it was attached but wanted to remind crews to not use nails in any trees to affix signage.						South			Pipeline, Road

13-Nov-2020	070353954-001	LNG Canada Development Inc.	14-Jan-2021		NTS: A 005-B/103-I-02	Yes	Truck	Passed Inspection (Complete)	14-Jan-2021	14-Jan-2021	Routine	**Inspection comments have been addressed since time of inspection. Comprehensive ESC plan has since been submitted to BCOGC and further works occurred** - Culvert 2: riling in soils on side of road from runoff - incident site (N. Haul Rd.): berm and re-grade in place. Water running to channel on N. side of the road, then to sump. - Pullout 2: no longer flooded. Keep eye on road materials piled directly in previous flood path. - Pullout 2-S: in good condition. Berms intact. - 4 way stop to culvert 1: no ESC. Deemed "low risk" but visible sediment plumes running into water (connected to Beaver Creek) - Culvert 1: no change. Exposed soils still with no ESC. Tire tracks redirecting water runoff, so not entering creek. Amphibian fencing still in place (located in previous floodplain) - Moore Creek bridge: new visible plumes in creek on SW. side of bridge. Same plume on NW. side. ESC improved, but still not effective. Water runoff on E. side being captured/blocked off. Pooled water is being tested before being discharged. - road surface looking much better						South	00018315		Facility, Pipeline, Well
13-Nov-2020	072079964-001	LNG Canada Development Inc.	17-Mar-2021		NTS: A 005-B/103-I-02	Yes	Truck	Deficiencies Corrected	16-Apr-2021	15-Mar-2021	Routine	Remote inspection of LNG Tank area, November 13/2020 - Details missing in QMS documents to specify how LNGC plans to monitor, test, and commission the LNG tank. - Document "Mechanical Basis of Calculation LNG Storage Tank (L001-01020-MS-5507-28965C-1200) Rev-A" issued for review only. All critical engineering documents must be issued for design or construction prior to construction activities beginning. Please submit design/construction stage document to OGC - Unable to determine/establish date on which test was conducted for WPS and PQR for stud welding dated June and July 2020. Please submit documentation to OGC showing date that test was conducted, or have welders re-qualify and submit that record (including test date). - A complete set of Inspection and Test Plans to control and monitor the LNG Tank construction activities has not been established. Please submit all relevant ITP documentation to the BCOGC and ensure plan is in place. - No evidence available to demonstrate that concrete testing reports are being reviewed, verified, and accepted by stakeholders (Terracon, LNGC, or JFJV). ITP should show stakeholder review/verification and acceptance. - Please clarify how NCR required response times are determined or tracked. Submit to OGC - Audit and surveillance plan only covers from 2018-12 to 2020-5. Please submit updated/current audit and surveillance plan to OGC **DEFICIENCIES** - No records made available to confirm that LNGC has performed any independent design reviews, as required by section 16, Appendix H of document "L001-000-QA-5880-0002 Technical Integrity Verification Plan". This is a non-compliance with section 4(6) of the LNG Facility Regulation (LNGFR) under OGAA, which states that "An LNG facility permit holder must prepare and maintain records that evidence the permit holder's compliance with subsections (1) to (5), as applicable." Please complete design review and submit to the BCOGC. - Records missing or not made available for multiple supplier qualifications and approval by LNGC/JFJV. This is also in non-compliance with section 4(6) of the LNG facility Regulation. Please ensure that suppliers of the 9% Nickle plates (Heat Number 59333), carbon steel (Heat Number for Plate reviewed was 829029 and 81182), insert plates (stamped with CH40388; 22-M-24; MS150421), and rebar (S300) are qualified/approved and this documentation is submitted to the BCOGC. - Quality audit and construction surveillance has not been carried out as required. This is also in non-compliance with section 4(6) of the LNGFR. Please complete quality audit and construction surveillance, and submit to OGC along with updated audit and surveillance plan (as mentioned in comments section). 25-Nov-2020	0705192002-001	Pacific Northern Gas Ltd.	19-Jan-2021		From: NTS: C 085-I/103-I-07 To: NTS: C 083-K/103-J-01	Yes	Walk	Passed Inspection (Complete)	19-Jan-2021	25-Nov-2020	Routine	Routine inspection of BCOGC permit 100111353 and associated emergency works due to landslide in and around the Lachmach area. First accessed area at approximately 3.5km on the Lachmach FSR. Clear span crossing installed across S3 stream, access and approaches very wet, discussed potential ESC installations, no sediment entering watercourse at time of inspection. Walked to dig site S0, log fill utilized on small crossings, areas saturated but running clean into adjacent wetlands, discussed potential of sediment issues into wetland with increased use. Proceeded to slide area which will be difficult to cross safely along pipeline ROW. Immediately past slide pipes and mats set up around S3 crossing area and streams running clean. Log fill was required to bypass slide safely, discussion followed as this is an S4 stream at the toe of the slide. Second access at 7.5km on Lachmach and associated clear span crossing, no impacts noted from install or previous machine crossing at this location. Follow up meeting provided by PNG to discuss and clarify permit application, associated works and S4 crossing at toe of slide. No non compliance noted during inspection.						South			CIAS, Pipeline
25-Nov-2020	0719601517-001	Coastal GasLink Pipeline Ltd.	2-Mar-2021		NTS: A 077-A/103-I-02	Yes	Truck	Passed Inspection (Complete)	2-Mar-2021	1-Mar-2021	Routine	**Any concerns found have corrected since time of inspection** Kitimat Meter Station: - Snow/dirt pile at NW corner piled directly into drainage ditch. No ESC around pile, nearby ESC downstream knocked over. - Filter ponds/Siltation ponds looked okay - Input from road surface at NE corner. ESC currently being installed. - Some minor garbage on site, likely from plowing. Was being picked up while on site. Continue to monitor and clean up as snow melts. Kitimat River/Dike Rd: - Water being released to vegetation looks extremely clear (significantly more clear than the natural river water) - Pressure testing ocurring on site at time of inspection - Some minor ESC damage from snow/flood. Maintenance required. Kitimat Flats to Pine Creek area: - Some ESC maintenance needed (minor) - Some soil mixing. Crew currently working to correct this and prevent further mixing. - Pictures to be sent of trench water discharge point (sump appeared turbid) - No work occurring above/around Pine Creek area. Water appeared clear. S. Hirsch: - WC731 (KM-657), water running clear. Crib wall slumping. Appears to be risk of failing.						South	00018343		Facility, Pipeline, Well

2-Dec-2020	069436317-001	Canlin Energy Corporation	8-Dec-2020		NTS: B 100-C/094-H-05	No	Truck	Passed Inspection (Complete)	8-Dec-2020	2-Dec-2020	Planned	COMMENTS: -In the Drilling and Production Regulations, it reads: Section 5 (1) If a well or facility is (a) closer than 100 m to the natural boundary of a water body, or (b) 100m or more from the natural boundary of a water body, but situated so that, given the topography or other relevant factors, it is likely that an uncontrolled flow of oil, gas, brine or another fluid may reach the water body, the permit holder must ensure surface-control features are in place, or surface-control measures have been taken, to contain escaping fluids. **I did not take a measurement, but I believe this well is closer than 100m from the creek below the lease. AND with the hill above the lease sliding, which you can visibly see, I have concerns what may happen in the spring thaw. You may want to give me a call to discuss. **Also, there looks to have been a release from of mud from your surface casing vent, as there is visibly mud down the side of the vent, as well as inside of the vent. I did not detect any gas flow from the vent, but due to the mud release, you should be contacting OGC Engineers, to report.							Central	00018569	01999	Facility, Pipeline, Well

8-Dec-2020	069670462-001	PETRONAS Energy Canada Ltd.	15-Dec-2020		NTS: A 052-K/094-G-02	No	Truck	Passed Inspection (Complete)	15-Dec-2020	15-Dec-2020	Planned	There are some comments regarding the cellars at two of the wellheads. The changes that have been made with these extra deep cellars are much better than what existed previously. The grate over the a-52 well cellar could be arranged better to close a gap and unevenness. This could be done when it is not frozen. For the a-a-52 well there could be more gravel placed in proximity to the base of the well head. Presently the ground is steeply sloped to the wellhead resulting in unsecure footing. Again this could be done when not frozen and with the gravel that is readily available around the well. The ground wire on the pigging barrel containment bin needs some maintenance. The pipeline inspection is limited in scope to the on lease equipment and locations where signage is expected to be located.						Central	00018009	28221, 29654, 29718, 29785	Facility, Pipeline, Well

At the time of the inspection, spillage appeared to be contained and cleanup was progressing. There are soils sloughing along the right of way and shoulder of the road. The pipeline is exposed between the break and 10-26 location. This inspection only took place between the riser past the break and the 10-26 location. Please forward to the inspector the information for the following questions by January 18, 2021: What are the final plans for this pipeline due to the proximity to the road and precarious placement on a decline to Beaton River? We understand that CNRL acquired this field in 2014. What are CNRL's abandonment procedures for a pipeline with unknown conditions, having sat inactive for an unknown time and in a high risk area. Status of pipeline in our records indicates pipeline is active. Is there an environmentally safe product that could be used instead of condy?						Central			CIAS, Pipeline

23-Dec-2020	069971005-001	Pavilion Energy Corp.	23-Dec-2020	7-Jan-2021	DLS: 04-24-086-20	Yes	Truck	Deficiencies Corrected	3-May-2021	23-Dec-2020	Complaint	I talked with operators. There was a complaint of off site odours yesterday, December 22, 2020. I made some observations as to the potential cause of the odours on and off site. A review of the last time this site was inspected found some issues with the dehy/stil column set up amongst other things. There are still odours coming from this system and the way the system is set up represents a hazard to operators and vac truck divers who are in immediate proximity to the vent pipe/thief hatch assembly. -						Central	00000262		Facility, Pipeline, Well

Inspection was not completed inside separator building. -Pressure gauges were in place on casing valves on wells B and H. Wells have been suspended but require bull plugs in place of gauges as per Oil and Gas Activity Operations Manual, Table 9A: General Requirements for All Inactive Wells. -Salt water drips and salt build up observed on site glass in separator #37. - Pipeline inspection was completed on portions of pipeline on 15-16-80-18 site only, No concerns were noted. OGC Inspector met with Lead Operator after inspection and reviewed inspection results. Work orders had already been entered for the site glass repair. A spill from C-ring #3 was reported and cleaned up. The inspection revealed no residual produced water in the affected area next to the C-ring. The water level in the C-ring has been lowered to 50% and the remainder of the fluid will be removed for fracking on Jan 27-29, 2021. After the fluid has been removed the C-ring will be dismantled and further soil testing and remediation will take place if necessary.							South	00026259		Facility, Pipeline, Well

15-Jan-2021	071450027-001	Coastal GasLink Pipeline Ltd.	10-Feb-2021		From: NTS: A 077-A/103-I-02 To: NTS: D 025-B/103-I-02	Yes	Truck	Passed Inspection (Complete)	10-Feb-2021	15-Jan-2021	Routine	Routine inspection of CGL pipeline ROW and associated areas in and around the community of Kitimat on January 15, 2021. Minor cleanup occurring in and around the DPI, mainly pump and hose removal. Fencing is established or in the process of being established along all open pits on the ROW. Streams are all running clean and the ROW is saturated and snow covered with the mild winter. There are a few pieces of equipment in pullouts but very little activity other than routine maintenance. Runoff noted going onto Haisla Village Road but was coming from a plugged municipal culvert and not from CGL activities. Minor damage to ESC measures noted due to grading/snow removal on non BCOGC road permit road, area has been repaired and was noted on follow up site inspection. No non compliance noted. High sedimentation risk to Kitimat River directly below. - Hunter Creek Camp: fuel storage capacity over 100,000 L (231,000 L on site). As per MOE regulations, site must be registered and follow conditions, or fuel storage capacity must be reduced.						South			CIAS, Pipeline
22-Jan-2021	070783819-001	Crew Energy Inc.	25-Jan-2021		From: DLS: 06-29-082-19 To: DLS: 11-29-082-19	Yes	Truck	Passed Inspection (Complete)	25-Jan-2021	22-Jan-2021	Routine	Inspected the installation of 10" Primus water line. Looked at flange setup on the pipeline right-of-way, including drip trays and talked about monitoring methods once the line is being used (inspect 2X daily and document). Observed the Primus line being pulled through the CN Rail crossing location. Rain line was crossed using a HDD bore. Depth of cover under the rail is ~4-5.5m. No concerns at this time. Talked to the Primus technical advisor on site about the product. He explained how the line was constructed and showed how the flanges were installed. No concern at this time. A follow up inspection is scheduled for when the line is in use.						South			Pipeline, Well
22-Jan-2021	070866327-001	Coastal GasLink Pipeline Ltd.	27-Jan-2021		From: DLS: 02-24-077-21 To: DLS: 03-23-077-21	Yes	Truck	Passed Inspection (Complete)	27-Jan-2021	26-Jan-2021	Routine	Inspection with operator January 21 and 22, 2021. Murray River HDD (entrance and exit) Entrance side has active water / ice issues on the upper pad from ground seepage. Water is being managed by pumping off. Some ground slumping was observed on the upper portion of the pad. Coldstream Creek at approximately KP 15+800 has been stripped to the RMA on both approaches. Active work on ESC measures is underway with water bars and ditching being established during the inspection. It is to be determined if pipe will be installed before spring breakup at this location or more ESC measure will be constructed. KP 29+600 Mix bury cover sumps on ROW are completed with extra soils to accommodate potential slumping. KP 29+900 HDD sump exit side is constructed and snow fenced, there is a 24 hour watch person at this location until appropriate fencing can be constructed. KP 33+260, UN 42-19 an S4, is isolated (little or no flow) with active trenching of the water course. Note: the down stream isolation plate was imbedded into a root mass that effects the seating of the plate. Thawing / trench dewatering of exposed pipe ends for tie in is being completed. KP 34+350 Water seepage from the upper bank has migrated down the ROW to Wetland WL-11728 at KP 34+516. There are areas of pooled water / ice along the ROW from KP 34 through to KP 38. ESC measures from KP 38 through to KP 40 have been started, (water bars and ditching). KP 40+973 "the Gorge" the steep slopes on both sides have been stripped to the RMA of the creek. It is to be determined if pipe will be installed or ESC measures will be completed to stabilize the slopes at this location prior to spring breakup.						South			CIAS, Pipeline

10-Feb-2021	071519934-001	Crew Energy Inc.	11-Feb-2021			Yes	Truck	Passed Inspection (Complete)	11-Feb-2021	11-Feb-2021	Incident	OGC officer met with Crew Energy supervisor Jody Disher in South Monias at km 409.5 on the 400 road. It is on this section of the new pipeline that during a air pressure test on a segment of new line, a leak was identified. Upon examination, two 1/8" holes were discovered in the pipeline liner. The holes appeared to have been made with a drill bit. The holes were repaired and the liner re-tested. Once the liner passed the second pressure test it was pulled back through the already installed pipeline. The RCMP were notified and Crew Energy is completing their own investigation. Photographs of the site and the affected piece of liner were taken and are available.							South			Pipeline, Well

16-Feb-2021	071825425-001	Canadian Natural Resources Limited	22-Feb-2021		NTS: C 033-J/094-G-03	No	Truck	Passed Inspection (Complete)	22-Feb-2021	22-Feb-2021	Follow Up	This is a follow up inspection to check on a deficiency for the open mouse/rat hole that was found in the fall of 2020. The casing was filled in and a steel plate with supports was placed on top. No concerns were noted. There are no concerns associated with the way the road was opened up. The decking on both bridges on the main access are well protected with matting. Please ensure water bars are re-established on the hill towards the lease to facilitate the main spring thaw. These were subtle and few in number but were sufficient to manage run off down the hill. There is some ground subsidence at the former pipeline riser where the pipe from Tidewater c-53-J meets that of c-33-J. This is at the junction of the 2 roads. This should be addressed at some point in time before all reclamation work has been completed.							Central	00010089, 00019582	12706	Facility, Pipeline, Well

23-Feb-2021	071999899-001	Coastal GasLink Pipeline Ltd.	4-Mar-2021			From: NTS: A 077-A/103-I-02 To: NTS: D 025-B/103-I-02	Yes	Truck	Passed Inspection (Complete)	4-Mar-2021	23-Feb-2021	Routine	Routine inspection of Section B (WP 4) on the South Hirsch road as well as the local Kitimat area on February 23, 2021 with CGL environment staff and Haisla liaison. Travelled to the back end of the South Hirsch, all temporary fencing installed at road junctions were open and not locked, with the snow build up on these fences they have been open for a while. Looked at the Hirsch creek crossing approach, significant rain over the weekend had completely frozen at time of inspection, no overland flow of water noted. Recreationalists (sleds, snow bikes) noted utilizing plowed roads to access the old "400" road as an alternate route to get to Robinson ridge. Pine creek was running slightly dark/organic filled from the recent rains but no inputs noted from CGL activities. Spent some time in and around 662+500 which has disturbed soils along the right of way. Crews onsite tightening up the ESC measures due to rapid snow melts, discussions occurred on what was planned in the short and long term. No non compliance noted during inspection. 24-Feb-2021	071851611-001	Cryopeak Northern Gas Supply Corp.	25-Feb-2021			NTS: C 076-G/094-J-10	Yes	Truck	Passed Inspection (Complete)	25-Feb-2021	25-Feb-2021	Planned	Joint inspection with Cryopeak Construction Superintendent and KZLNG Facility Operator. Pre-start inspection (LNGF Reg. Sec. 9) for the LNG Facility. (Inlet meter building and associated piping is a separate meter facility code and will be entered as an inspection when the code is generated). Meet with reps to review construction progress. Reviewed process piping flange bolt-up and torque records, cause and effect shutdown key, master lock/carreal list in KZLNG documentation binder. Complete Facility walkthrough to assess fire, gas and ESD readiness and function. All LNG Facility components are installed. Some A/V beacons being changed out. Mechanical, electrical, instrumentation/PLC work ongoing. Locks installed on some PSV's. Checked CRN numbers for BC compliance on vessels in inlet Meter building, Amine skid, all ok. Observed refridge compressor purging. Heat trace installed and operational (insulation on valves to be completed). Amine system is charged and warm cycling in advance of startup. Witness satisfactory ESD 101 function test as follows: i) when push button at exit gate was activated, ii) when gas detector at floor level on catwalk between A and B LNG tanks was triggered and iii) when fire eye below LNG tanks was triggered. Also, witnessed satisfactory A/V alarm test inside Cryopeak Control Room when Control Room pull station was activated. Action items in advance of the future LTO inspection: -ensure ESD 001 and 100 bypasses are locked out. -ensure all valve on flare pilot gas line are locked or cansealed open. -ensure all locks and carseals are installed per KZLNG Plant Valve Lock & Canseal list. -ensure all remaining A/V beacons are installed, tested and functional. -consider PM program for Ruffneck heater in inlet Meter building per manufacturers recommendations. -install direction and contents labelling on all flowlines (to be completed by May 15 2021). -please ensure commissioning documentation is available on a flash drive for downloading at future LTO inspection (see items 3 (a) to (f), 7, 9, on "Facility and Gas Plant Startup Inspection List") -autodialer to be installed and tested. -confirm power to lights and exhaust fan in inlet building. -confirm flare igniter has been function tested and alarms in HMI and callout on pilot gas shutdown, prior to commencing operations. -has KZLNG determined if an authorization and inspection is required from Technical Safety BC prior to commencing loading? -install Facility sign. Please keep up with any testing required by OGC Engineering. Inside the separator skid there is evidence of an old leak at the plate changer for the c-c-15 meter run. The crusty deposit may just not have been cleaned off entirely or it may have a slight leak. The pipeline inspection is limited in scope to the on lease equipment and where some signage would be expected.						Central	00017902	29113, 29296, 29301, 30742, 30765	Facility, Pipeline, Well
25-Feb-2021	071958187-001	ConocoPhillips Canada Resources Corp.	10-Mar-2021			No	Truck	Passed Inspection (Complete)	10-Mar-2021	2-Mar-2021	Planned	It is recognized that Operations started production a day or two prior to this inspection. There was still work being completed on site such as well testing, heat trace installation and fine tuning of equipment. A follow up inspection will be done in the near future to confirm the comments have been addressed. The following are some observations noted on the day of inspection; There is a lift gas system associated with these wells and most of the ball valves for the sensing lines for the lift gas ESD's were not locked in the open position. An example would be on the 13-22 well and the tag P0101-PSHH-108 to the pressure switch on the lift gas line. It is assumed that this is part of an ESD function and that after fine tuning the ball valves will be locked in the open position. Erica Lewis has recently provided info that the ball valves for the 14-22 piping have been locked in the open position. It is anticipated that this will be the same for all of the 13-22 series of wells c-13-22 separator skid compressed air piping is leaking at the fitting and is on the floor. It is like a light oil. This is behind the meter run. The grounding clamp on the chemical tank is loose. b-13-22 separator skid-condy site glass has a weeping leak. a-13-22 separator skid- produced water Y strainer tubing has a crusty deposit on the fitting.)-13-22 separator skid-no meter run calibration info. Weeping at fittings on methanol supply line to pump behind meter run.)-13-22-separator skid-weeping at fittings on methanol supply line behind meter run.)-13-22-separator skid-wax/methanol pump weeping product. MCC building- fuel line bypass for ESD only has a plastic zap strap installed as locking device. Replace with something better as per your other sites. Pipeline riser- on the small diameter pipeline, chain is not connected to the PAV on the pigging barrel.						Central			Pipeline, Road
25-Feb-2021	071958537-001	ConocoPhillips Canada Resources Corp.	2-Mar-2021		DLS: 14-22-088-25	No	Truck	Passed Inspection (Complete)	2-Mar-2021	2-Mar-2021	Planned	In talking to operator, the well site has just been handed over to operations. As such, it is understood that there are some fine tuning aspects for starting production to occur and that was taken into account for this inspection. As a comment for the 14-22-88-25 well, P0112-PSHH-108D appears to be part of the lift gas ESD system and if so, will need to be locked in the open position.						Central		38026	Well

26-Feb-2021	071949278-001	Cryopeak Northern Gas Supply Corp.	2-Mar-2021		NTS: C 076-G/094-J-10	Yes	Truck	Passed Inspection (Complete)	2-Mar-2021	1-Mar-2021	Planned	This was a joint inspection with (Cryopeak Construction Superintendent), (Cryopeak CEO) and (KZLNG Facility Operator). LTO inspection for the LNG Facility. LTO was granted Feb 27 2021. Meet with reps to review LTO preparedness. Reviewed LNG Facility Permit Conditions and all items in the "Facility and Gas Plant Startup Inspection" list. Discussed Received flash drive loaded with commissioning documentation. Confirmed that Technical Safety BC has provided approvals and will conduct a future site inspection at the loading area. Complete Facility walkthrough. Confirmed that Facility sign has the correct information and has been installed. Confirmed ESD bypasses at ESD001 and ESD100 are locked closed. Confirmed fuel gas/instrument air supply for pressure pilots at ESD001, ESD100 and ESD101 are locked/carsealed open and have clamshell in place where appropriate. Witnessed successful operation of A/V beacon outside Cryopeak Control Room (amber & blue lights, audible alarm), successful flame fail test on flare and re-ignition sequence. Confirmed auto callout to Operator by text message on flame fail test. After discussion with Company, temp sensor set point for both impoundments was established at -70°C in HMI. Also after discussion, fire and gas bypass timer set at 4 hour limit and confirmed onsite by instrument Tech. Witnessed successful A/V beacon test from pull station inside Loading Building. When activating outside push button at Loading Station, witnessed successful closure of LNG pump valves at LNG tanks, closure of valves on liquid and gas lines at Loading Station, and crossover valve. Witnessed alarm on HMI and A/V beacon from simulating closure of valve between LNG tanks 3 & 4. Confirm resolution of outstanding Valve FC-705 Actuator "A" type punch list deficiency from last week. Confirm presence of approved ERP in Control Room. Observed ground cable installation for buildings and standby generator. Action items requiring follow-up: 1) - on flare pilot gas line, confirm valves on either side of filter are locked or carsealed open. 2) - confirm that remainder of locks and carseals across the Facility have been installed as per the lock and carseal list. 3) -provide updated lock/carseal list, showing carseals on instrument air supply for ESD pressure pilot at ESD100 and ESD101. 4) - provide confirmation that the audible alarm on the Loading Building has been changed out to a more robust alarm. 5) - provide confirmation of annual and monthly tags installed on fire extinguishers throughout the Facility. 6) - provide signed TCCC. 7) - confirmation of successful bypass timer setting in HMI (i.e. screenshot of timer setting). 8) - documents from Cryosys binder to be emailed: COMPLETED. 9) - reminder to complete a Tabletop ERP exercise within 3 months of startup; see Emerg. Management Reg 4(3)(b). Please forward requested information in items 1 to 7 to OGC no later than March 16 2021.						North	00027127		Facility, Pipeline, Well

3-Mar-2021	072028035-001	Pavilion Energy Corp.	8-Mar-2021		DLS: 06-19-086-19	Yes	Truck	Passed Inspection (Complete)	8-Mar-2021	3-Mar-2021	Complaint	COMMENTS: -was called to odour complaint. I called rep and agreed to meet at site. I arrived at site and we discussed the complaint and what I could smell onsite. -I noticed the 400 bbl production tank had a thief hatch open, but says the tank is out of service. I asked that it be labeled as such. -then over to the pumpjack and I noticed a sour/strong odour coming from the exhaust of PJ. Says its running off of sour fuel gas. There is a propane tank beside the PJ but not in use. -the thief hatch was also open on the pop tank beside the separator. Propane tank beside separator building. -Would close thief hatch and label tank. -Further discussions will follow							Central	00000106	02575, 03723	Facility, Pipeline, Well
3-Mar-2021	072028613-001	Pavilion Energy Corp.	8-Mar-2021		DLS: 04-24-086-20	Yes	Truck	Passed Inspection (Complete)	8-Mar-2021	3-Mar-2021	Complaint	COMMENTS: -this is associated with the odour complaint (#71973067-001) and also inspection # 72028035-001 at 6-19-86-19. -after leaving 6-19-86-19, we arrived at the facility. Immediately while driving around the dehydrator area, I could smell H2S. We parked and discussed the findings. We looked at the underground tank, and the thief hatch that is only about 4'-5' high, right at about head height. Due to the height of the thief hatch, venting occurs too low and blows across the lease. Poor for working conditions on lease. Mentioned that there was an OGC approval to replace the underground tank with a fiberglass tank that they had. Was just waiting on warmer weather to begin. -Further discussions will follow							Central	00000262		Facility, Pipeline, Well

9-Mar-2021	072086133-001	Coastal GasLink Pipeline Ltd.	15-Mar-2021		From: NTS: C 002-F/093-J-06 To: NTS: C 080-G/093-K-01	Yes	Truck	Passed Inspection (Complete)	15-Mar-2021	15-Mar-2021	Routine	Inspection of pipeline ROW and Water Course crossings with the operator, from KP 336+040 to KP 309+400. Machine clean up with ESC being completed after clean up. KP 331+400 PNG hot line crossing, crossing agreement on location, one of the plywood walls on the crossing has been pushed out by snow and requires maintenance. KP 329+514, WL 332, S3, isolation with water flowing in 2 channels, up stream and down stream plates installed on both, pump around to diffuser down stream on both with clean water flowing down stream. Required extra pumps and hose in place. Bridge approach crib walls on both sides have been pushed out and require maintenance. One submersible pump inside the isolation plates is pumping to the up stream pump around on the up steam side of the plate. Water is clean but this pump inside the plates is considered to be pumping trench (grey) water and should be directed to a well vegetated area as required by grey water procedure. Pump off is to a pig pen set up, filter bag inside caged secondary containment. The cloth for the secondary containment has holes cut for wires to attach the cloth to the cage. Once the secondary containment has been cut it is no longer effective. KP 323+900 to KP 322+900 (app) long down hill slope, surface water was observed to flowing down one side of the ROW at the low end of the slope (323+900). This slope requires ESC measures to be installed. KP 322+200, WC-326, S3, water course restoration trench has been completed, bridge is still in place. KP 319+300, tie in welding crew, 4 welders on site, weld procedure WPDS CG-SAE-03 Rev 1 produced on site, (manual and semi-auto) repair procedure 2020-01-06 Rev 1 produced on site, welders certifications X 2 and PQR's produced on site, Welding Inspector Level 1 verified, 100% visuals, 100% UT after 24 hours , coating applied after 24 hours. KP 315+930, WC-321, S3, active pump off from sump KP 313+600, WC-320, S3, ESC on approaches, some bridge repairs completed, cleaning bridge deck during inspection, active pump off from sump associated to ESC. KP 309+400, WC 315, S3, Isolation with up stream and down stream plates, fish screens and fish nets across the creek, WQ monitoring in place, pump around with diffuser down stream, clean water, active back fill of the trench at the time of the inspection.							South			CIAS, Pipeline
9-Mar-2021	072216764-001	Tourmaline Oil Corp.	26-Mar-2021		NTS: C 031-H/094-B-09	No	Truck	Deficiencies Corrected	6-Apr-2021	26-Mar-2021	Planned	On your permitted section of road R2260 segment 9 on the way to well site c-31-H / 94-B-09, there is some orange coloured plastic fencing to be removed. This was probably identifying a feature that was to be avoided during construction of the road ROW. It is located south of the junction with Canfor's 4100 road and on the east side of the ROW. No rush to remove, just whenever the snow is gone.						Central	00025566, 00025567, 00025568	28232, 28233, 28234	Facility, Pipeline, Well

KP 308+800, WC 4C1, pipe in and water course restoration completed. Crib walls on bridge approaches pushed out and need repair. Building crane pad to complete sheet piling and sand point operations for tie in as a spring was uncovered during trenching operations up slope of the crossing. KP 308+100, WC 3C1, pipe in and water course restoration completed, bridge requires maintenance, active pump off from sump beside water course, bridge approaches have been mulched. KP 301+891, WC 309, Machine work both slopes installing ESC. KP 301+250 pump off from large sump located at the base of 2 slopes onto the PNG ROW. filter bags have been placed on the snow covered PNG ROW and a CGL brush pile and soils pile. Discussed with the operator that pump offs are required to be to well vegetated area. Operator states that an agreement is in place with PNG to pump off to their ROW. Agreement was not produced on site and an information request has been sent to CGL Regulatory for a copy of the agreement.						South			CIAS, Pipeline
10-Mar-2021	072089537-001	Coastal GasLink Pipeline Ltd.	15-Mar-2021		From: NTS: C 002-F/093-J-06 To: NTS: C 080-G/093-K-01	Yes	Walk	Passed Inspection (Complete)	15-Mar-2021	15-Mar-2021	Routine	Inspection of the sheet piling, sand point workings and WC SRR-6, S4 crossing. from approximately KP 298+000 to KP 297+ 500, with operator. Pump off to filter bag along side the rig matted work area. Pig pen and cage have been set up but to handle 2 - 6" lines from the sand point operation, but were not operational at the time of the inspection. Discussed the holes in the cloth for the wire tie down placement for the secondary containment cloth on the pig pen cage. During the inspection an active 3' line was disconnected from the filter bag for draining. Water from the line and the filter bag was allowed to spill out onto the ground. Discussed with the operator the requirement for a line drainage procedure. WC SRR-6, there is a clear span bridge crossing and a log fil / clay crossing with a culvert. CGL has stated that the log/clay crossing may be required to complete the sheet piling. I have requested that CGL submit a request to OGC permitting to leave both crossings in until the sheet piling is completed, at which time the log/clay crossing would be removed. A second inspection will occur once permitting has reviewed the request.						South			CIAS, Pipeline

12-Mar-2021	072207523-001	Coastal GasLink Pipeline Ltd.	26-Mar-2021		From: NTS: A 077-A/103-I-02 To: NTS: D 025-B/103-I-02	Yes	Helicopter	Passed Inspection (Complete)	26-Mar-2021	12-Mar-2021	Routine	Aerial review of Section 8 (WP 4) pipeline right of way with CGL environment team. Falling crews have been active in and around KP 598+000 to 605+000. Access to these sites is by helicopter only and noted that there was no clearing around streams as buffers were in place. Visibility with the helicopter footage was quite good and only the higher elevations through icy pass there was poor light, cloudy conditions. Crushing activities occurring in the North Hirsch area as well as some soil pile maintenance. Active areas in the North Hirsch were field checked by the BCOGC after viewing and filed as a separate inspection.						South			CIAS, Pipeline
12-Mar-2021	072222810-001	Coastal GasLink Pipeline Ltd.	26-Mar-2021		From: NTS: A 054-H/093-L-01 To: NTS: C 008-I/093-L-02	Yes	Helicopter	Passed Inspection (Complete)	26-Mar-2021	12-Mar-2021	Routine	Aerial review of Section 5, 6 and 7 (WP 3) pipeline right of way with CGL environment team. Footage received was generally clear with some spots of overcast. Noted some public use on Section 5 ROW by snowmobiles and in WC 1130 (59C1) at KP 374+500 Ormann Creek the public crossed a frozen stream that did not have access structures. Activity noted around 391+500 and 402+000 as ESC crews working in these areas and on WC 414. Also noted ESC works on WC B3C1 at approximate KP 425+000 as well as WC 7C2 at approximate KP 450+500 and WC 106C1 at approximate KP 447+200. Requested follow up photos from all these sites and all have been provided to the BCOGC. Open Trench is being backfilled at 434+500 and the backfilling is anticipated to take approximately a week to complete. Decked merchantable wood is also being removed in several areas as cold temperatures allow. Clearing and raking is occurring on several locations on Section 7.						South			CIAS, Pipeline

18-Mar-2021	072152837-001	Westcoast Energy Inc.	19-Mar-2021			Yes	Walk	Passed Inspection (Complete)	19-Mar-2021	19-Mar-2021	Routine	Inspection with operator, cross section of water course work. KP 25+256, WC 51, S3, active isolation of flowing creek. Up stream plate installed, no down stream plate, upstream pump around, grey water pump out, trench excavation at the time of the inspection, clear span bridge in place. Grey water pump to ditch on existing ROW through filter bag and diffuser. Discussed; 1) the up stream plate does not reach stream channel banks, poly, sandbags and piled soils around ends of the plate, water seepage under plate. 2) the requirement to pump off to a well vegetated area. 3) the requirement for down stream plate / dam as required by typical drawing. 4) the requirement for the pump around to be diffused before entering the down stream portion of the creek. 5) the requirement for bridge maintenance. Corrective actions were started immediately for discussed items. KP 18+979, WC 39, S3, Dry Crossing meets typical drawing requirements. Partial up stream dam in place as a precaution. Dewatering trench, 2 - 3" lines to filter bags. Clear span bridge in place. Discussed; 1) line 1 filter bag has a hole in it and the bag is not effective. 2) line 2 filter bag is a max capacity and back pressure is causing water to leak out around the hose inlet causing it to be only partially effective. 3) clear span bridge requires maintenance. Corrective Actions were started immediately for the bags to be replaced and up sizing the filter bag for line 2. KP 19+047, WC 40, S3, Dry crossing meets typical drawing requirements. Clear span bridge in place. Dewatering trench, 1 - 3" line to filter bag. Discussed; 1) Bridge requires maintenance. 2) Filter bag has a hole in and is not effective. Corrective action was started immediately for the filter bag to be replaced. KP 15+219, WC 29, Bridge has been removed, channel has partial restoration, some ESC work is still required and Final restoration will occur in the summer of 2021.						South			Pipeline, Well

18-Mar-2021	072420824-001	Pacific Northern Gas Ltd.	1-Apr-2021		From: NTS: C 085-I/103-I-07 To: NTS: C 083-K/103-J-01	Yes	Walk	Passed Inspection (Complete)	1-Apr-2021	1-Apr-2021	Routine	Monitor and maintain pullouts and signage on road to ensure public access remains safe - Temp clearspan at 3.5km: approaches are snow covered, creek is running clear. Monitor for snow melt and sedimentation potential into creek. - Access route is mostly snow covered except for some melt pockets and NCD crossings. Monitor snow melt for sedimentation issues. - ESC recommended at crossing downstream of dig S2 (at discretion of EI on site) - Discussed proposed slide area bypass while on site - Monitor S3 beside slide during high water/freshet conditions - isolations in place. Excavation ongoing , small section of pipe exposed. Stream running clear, ESC is effective.						South			Pipeline, Road

25-Mar-2021	072203536-001	Altagas Holdings Inc.	25-Mar-2021		From: NTS: C 010-L/094-A-12 To: DLS: 02-35-088-24	No	Truck	Passed Inspection (Complete)	25-Mar-2021	25-Mar-2021	Routine	This pipeline (25638) has issues related to erosion and sediment deposition into streams. There is also some deep trench erosion. The Operator for this pipeline took a long time to figure out as there were a few assets transferred between 3 different companies within the field in 2020. AltaGas is now the Operator of this pipeline. Only the first 2.0 kms from your 95 Road facility to the west on segment 2 was inspected and the above issues were found. Since AltaGas is now the Operator, there is action that is required on your part to address the sediment into the streams issue prior to spring freshet. The trench erosion also needs your attention. Any erosion control structures currently in place by the former Operator are not effective, especially with the sediment into stream issues. Also water bars on the pipeline have failed. Since only the first 2 kms were inspected, there remains the other kms of pipe line that needs to be assessed and addressed by AltaGas. This inspection will show as a PASS due to the fact that the issues occurred under the former Operator but these will need to be addressed by AltaGas, the new Operator to prevent any further impacts. A follow-up Audit Report will be issued with findings and recommendations once the audit is complete. As per the OGC 2021 Executive Business Plan, Pacific Canbriam has been selected for a production accounting audit for the wells connected to the gas multi-well effluent battery b-24-H/94-B-8 (BCBT 0007834) delivering to the b-72-A/94-B-8 gas plant (BCGP 0017909) and the b-24-H/94-B-8 gas plant (BCGP 0007834). The audit will focus on the BC Measurement Guideline requirements for wet gas measurement, well testing, group measurement and sampling, and production accounting methodologies for proration, allocation, and reporting purpose. A letter detailing the focus of the audit with the specific audit questions was emailed to Pacific Canbriam Operations Lead and Area Superintendent to forward to the appropriate persons in Calgary as a designed respondent(s). An FTP site will be setup and permission granted to the designated audit respondent(s) to upload the audit response with supporting documentation, records, and reports. Once the designed respondents(s) have been selected please reply to OGC and an FTP site will be setup and permissions granted to upload the audit response, and supporting documents, records and reports. 30-Mar-2021	072288350-001	Coastal GasLink Pipeline Ltd.	31-Mar-2021		From: DLS: 02-24-077-21 To: DLS: 03-23-077-21	Yes	Truck	Passed Inspection (Complete)	31-Mar-2021	31-Mar-2021	Routine	Inspection of the Murray River HDD (entrance) with operator. Casing hole has been enclosed with metal panels to prevent material from sloughing in and water from entering. Water is still seeping into the casing hole at the time of the inspection. It was observed that water management of the site is constant (24 hours) in the form of a pump off located on one corner of the matted pad. It was also observed that water appears to be accumulating under the matts from the tiered benches above the HDD pad. Water was observed ponding behind the Rig Managers trailer opposite the pump location. Water management does not appear to be effective in controlling the water prior to reaching the HDD location. This was discussed with the operator and I was informed that a plan is prepared but not fully implemented to date. An information request will be submitted to CGL Regulatory to determine the date for effective water management for this site. Discussion onsite with the CGL Geotechnical Engineer provided assurances that the ground is stable at this location.						South			Pipeline, Road
30-Mar-2021	072288928-001	STRATHCONA RESOURCES LTD.	31-Mar-2021		DLS: 11-11-086-18	Yes	Truck	Deficiencies Corrected	9-Apr-2021	30-Mar-2021	Follow Up	Noted odours upon arrival. Utilize FLIR and vent from UGT had steady flow. Operations found valve open on 5 way manifold vent. Noted middle, south side tank's pressure relief has small leak while dumping in tank farm. AIL 205 off comp and AIH 203 off separator indicated faults on display outside buildings. H2S settings were 10 PPM and 30 PPM on tags for SD. Please confirm separator logic while in fault mode. OEDS to be updated. Guard for sight glass on aux coolant compressor. Regulator for blanket gas in treater should be vented outside. 30-Mar-2021	072470977-001	PETRONAS Energy Canada Ltd.	8-Apr-2021		NTS: D 066-J/094-B-16	Yes	Truck	Deficiencies Corrected	19-Apr-2021	7-Apr-2021	Planned	Thanks to rep for accompanying me on these joint inspections. I appreciate the There information we share and our discussions. The pipeline inspection is limited in scope to the on lease equipment. The lease needs to have a clean up from the initial construction. There is hardware, zap straps, drilling mud etc. that needs to be cleaned up. There are also similar items within the meter skids that should be removed including rags as they are combustible. For the d-c-66-J flowline there are 2 bolts and nuts that need to be installed on one of the pilings. Only half of these were installed. The hardware is sitting on the base of the piling. Minor staining by pipeline out to disposal. P 603 PSHH sensor leaking on body. Action Items: 1.) Submit annual cathodic survey summary report. 2.) Confirm status of treater's isolation as LEL not functioning.						Central	00007341		Facility, Pipeline, Well
6-Apr-2021	072473492-001	PETRONAS Energy Canada Ltd.	7-Apr-2021		NTS: C 082-L/094-G-01	No	Truck	Passed Inspection (Complete)	7-Apr-2021	6-Apr-2021	Planned	COMMENTS: -The surface casing vent handle on well c-82-L is under water/ice and is not usable. The handle needs to be accessible. The handle should be raised above water levels, -the surface casing vent handle on the c-A82-L well has been chained and locked with the other valve handles on the wellhead...the guidelines say when chaining and locking the wellhead valves, all valve handles should be chained and locked EXCEPT the surface casing vent handle. SO this needs to be corrected/changed. Dont lock the surface casing vent handle.						Central	00020137	08897, 15963	Facility, Pipeline, Well

9-Apr-2021	0725004331-001	PETRONAS Energy Canada Ltd.	12-Apr-2021		NTS: C 048-K/094-G-02	No	Truck	Deficiencies Corrected	17-May-2021	12-Apr-2021	Planned	It was noted that the ice build up at one of the culverts was removed by heavy equipment and that many other culverts appeared to be steamed open. Good job identifying this and your actions to help handling the run off associated with the continuous/ year round water movement on the road right of way. This action may help mitigate water flow damage. Upon checking road permits in iMap BC it was noticed that apparently the road permit to West Fraser Mills was retired in March 2020. Please confirm the status of this road and if you haven't already done so, you will need to apply for a road permit. There are some issues with your grounding cables that all may or may not be related to theft and Operations for pigging. The grounding clamp and cable for the chemical tank has been cut and removed. It appears this may have been placed on the pigging barrel catchment bin to make up for the missing ground wire as a black cable was found attached to the bin but not to the piling. This is normally a green coloured cable. The ground wire on your propane bullet at the meter run skid has also been cut and removed. Other ground wires are still in place. Please check all grounding and bonding. The pipeline inspection was limited in scope to the on lease equipment.						Central	00025647, 00025673	28416, 28469	Facility, Pipeline, Well

13-Apr-2021	0725960951-001	Coastal GasLink Pipeline Ltd.	21-Apr-2021		From: NTS: B 003-E/093-K-03 To: NTS: A 002-I/093-L-02	Yes	Truck	Passed Inspection (Complete)	21-Apr-2021	20-Apr-2021	Routine	Church Hill (378+650): 56 at base of hill in good shape, minor signage in the area needing replacement or repair, minor water pooling and leaving ROW without ESC (water running clear though), hanging culvert overtop ESC (non-issue at time of inspection. No water flowing through culvert), some minor general ESC maintenance - Backside of Church Hill (382+420)(RW 1260.4): (non-OGC) road needs maintenance, sediment leaving ROW but was currently being filtered out via snow and vegetation (traced to Wetland WL0683, water was clear well prior to entering the wetland), issue address on day of inspection* - Mueller Ranch: access is private drive, some flagging repair required sites have been separated by agricultural activities, temporary snow fill still in place due to COVID staff shortage (too wet to breach snow fill, geo-cloth around snow fill), soil piles well shaped and signed - Endako Mine Rd: bore under roads is complete, pits are open but snow fence is in place, pump out of tench is occurring (water going to vegetation off ROW), some minor ESC maintenance and re-establishment of cross drains recommended, some minor erosion on ROW, ESC in place on West side of crossing - Pine Rd./Wetland 110-16 area: did not freeze over winter, corduroy unable to be removed due to concerns of environmental damage.						South			Pipeline, Road
13-Apr-2021	0726000866-001	Coastal GasLink Pipeline Ltd.	21-Apr-2021		From: DLS: 03-23-077-21 To: NTS: D 031-F/093-P-05	Yes	Walk	Passed Inspection (Complete)	21-Apr-2021	21-Apr-2021	Routine	An inspection was completed with the operator from KP 75+000 to 73+930. KP 75+000, surface water was observed running down the ROW and draining into the ground along the crush filled trench. Small sink holes were observed in the Canfor road that crosses the ROW approximately 25 meters from where the water was observed entering the crush filled trench. CGL is to determine if water from the ROW is impacting the Canfor road. KP 74+673 An NCD has been winterized prior to freshet. It appears that work to the bank up hill of the NCD may cause water to flow onto the ROW and not through the NCD channel. CGL is to confirm that water will be directed into the NCD channel. KP 74+500 to 73+980 The travel lanes through the water berms have not been closed up. This area was supposed to have been completed for freshet. KP 74+500 A sump has been dug and lined with woven fabric at the end of the water berm. The water is being held in the sump / catchment pond, running through the woven fabric into the fill material and exiting the down hill side of the fill approximately 2 meters down the bank. KP 74+400 A sump lined with woven fabric has been dug at the end of the water berm. This sump is in fill material from a flop. Water is running under the woven cloth, into the fill material. KP 73+980 to 73+930, Slope 17A , Large rocks have been placed across the ROW to prevent access to the slope. ESC has been completed on the slope with water berms draining onto the ROW through Coir Logs. An information request will be submitted for the site specific ESC plans for this slope. 14-Apr-2021	072538327-001	Canadian Natural Resources Limited	19-Apr-2021	20-May-2021	NTS: C 002-J/094-B-09	No	Truck	Deficiencies Corrected	21-May-2021	15-Apr-2021	Planned	I talked with Operator (on site supervisor installing new lift system on wells). Thanks for our discussions. The pipeline inspection is limited in scope to the on lease equipment and where signage may be expected. For wells c-c-2 and c-d-2, it was noted that the ESD's were closed and it was thought that it was due to the plunger lift system install. It was noted upon entering this inspection that the wells status is actually suspended. Please ensure there is positive isolation with the flowline and pipeline so there is no chance of pressure build up. A follow up inspection will happen in the near future to confirm this. 22-Apr-2021	072621294-001	PETRONAS Energy Canada Ltd.	22-Apr-2021		NTS: B 008-I/094-B-16	No	Truck	Passed Inspection (Complete)	22-Apr-2021	22-Apr-2021	Audit	Petronas Energy Canada has been selected for a measurement audit for the wells linked to B-008-I/94-B-16 (BCBT- 0018060) delivering to BCGS 3164663 and the b-89-I/94-B-16 gas plant (BCGP 3166645).The audit will focus on applicable sections of the Drilling and Production Regulation (D&PR) and the BC Measurement Guideline (BCMG) chapter 6 and 8 requirements for wet gas measurement, well testing and sampling, group measurement and sampling, and production accounting methodologies for reporting purpose. The following questions will form the basis of the audit: 1. Please provide a measurement schematic with a list of the surface locations of the well pads and wells connected to the proration battery. 2. Please submit ECF test records, spread sheets, lab analysis reports, to demonstrate sufficient well testing and sampling to meet battery gas, oil, and water proration targets. 3. Are there any wells associated to the selected battery with a liquid-to-gas ratio (LGR) greater than 0.280 m3/e3m3? If so, show that each new well is tested in accordance with BCMG section 6.34. 4. Is there a system or software to determine and monitor the frequency of new and existing well testing and sampling? 5. For new wells in the reporting battery, please provide an explanation of the production accounting methodology, including any process modeling assumptions (if applicable), used to determine initial condensate shrinkage factors, and gas in solution (GIS), if applicable, before the laboratory compositional analysis results are applied. Provide the time frame (spread sheet) for each well in the reporting battery in which the initial assumptions are applied before the laboratory analysis results are applied. 6. Is a gas sample obtained at the time of the well test, the compositional analysis results downloaded into the EFM, and applied to calculate a new ECF for the following month'sestimated gas production? 7. Explain how the ECF is determined and applied to correct the wet gas monthly volume. Is theECF applied in the EFM or applied in the production accounting? 8. If the test separator was not in a state of equilibrium are gas and hydrocarbon sample pairs validated before being applied to the production accounting? Is there a test or evaluation process in place to re-sample if a laboratory test result is determined to be invalid?9. For new wells and initial flowback within the first 6 months, is the test separator performance evaluated? Is water cut in the test separator condensate leg checked? Explain any other tests or checks done to ensure the test separator performance is optimal and achieving good phase separation. 10.For the selected reporting battery and group point please provide: i) a description of the measurement, sampling, and analytical equipment. ii) the meter/analyzer calibration/proving and sampling frequency, as per BCMG Table 8.4-1. iii) the most recent meter calibration/proving records with associated laboratory analysis results. iv) an explanation of how production accounting determines the total gas, the shrunk condensate, and the produced water, to prorate back to the associated wells. 22-Apr-2021	072631309-001	PETRONAS Energy Canada Ltd.	6-May-2021		NTS: B-A 071-H/094-B-16	No	Truck	Passed Inspection (Complete)	6-May-2021	23-Apr-2021	Planned	There are bubbles coming up in the water filled area right beside the b-a-71-H wellhead. The bubbling pauses once in a while for a few seconds. Please investigate this and report back to with your findings. This may be a surface casing vent leak that is coming from a fitting under the water, gas migration or a casing issue. I did not get any LELs registering on my personal gas monitor. Update: A follow up visit on May 5th 2021 found the water was gone but there was a small hole in the ground where the bubble were coming from. This has been marked with a flagged stick. For the b-c-71-H well- the mouse / rat hole has subsided and could be topped up with a shovel when the ground dries out. It is evident now by the puddle that has formed but may not be so visible when the ground dries out. The trucker grounding clamp for the chemical tank has been cut and removed. It was not found anywhere on the lease. There is one old rig mat that needs to be removed when equipment is available and the ground is dry. 27-Apr-2021	072742300-001	Pacific Canbriam Energy Limited	17-May-2021		NTS: A-A 087-G/094-B-09	No	Truck	Passed Inspection (Complete)	17-May-2021	4-May-2021	Planned	There was a salt water spill reported and cleaned up in 2018 under incident # 045249510-001. I attended the spill in 2018 and spoke to the operator as well as other Suncor staff. With the sale of Suncor to Pacific Canbriam in the works, I was told that the spill info would be passed along to the new operator which it was. The site appears to have been cleaned up and any requirements were completed. For this inspection, it was noted that the spill exclusion area which consists of barbwire and chicken fencing has been knocked down by wildlife (ungulates in particular) and there are numerous fresh tracks in proximity to where the lease run off is pooling in the animal tracks. The BC OGC is requesting that new sampling be done as it appears that the contamination is coming to the surface or is migrating from the lease. The fencing will also need to be maintained and improved so that it is not knocked over. Please send the sampling results by June 17th 2021 to OGC Thank you. 29-Apr-2021	073284402-001	Coastal GasLink Pipeline Ltd.	9-Jun-2021		From: NTS: A 077-A/103-I-02 To: NTS: D 025-B/103-I-02	Yes	Truck	Passed Inspection (Complete)	9-Jun-2021	29-Apr-2021	Routine	Routine inspection of pipeline section B in and around the North and South Hirsch area on April 29, 2021 with Haisla liaison. Noted enhanced ESC measures in and around 0.5km on Wathl FSR to protect watercourse 6E and no sediment noted entering the stream. Timber marks noted on decked ROW wood from the meter station powerline project adjacent to the Wathl FSR. Accessed the Hirsch creek crossing from the North Hirsch side. Noted sumps and hose lines set up across slope on the South Hirsch side of the crossing. House keeping noted and ongoing in the area. Unfortunately a small, non reportable spill was noted in the area that was traced to non BCOGC or CGL/MSJV personnel. This was actioned immediately by MSJV staff and their efforts were greatly appreciated. Walked perimeter of the laydown at 11.2km on the North Hirsch. NCD IN082 was running clean and the site was well organized with some discussions with minor perimeter ditching reinstatement potential due to the past winters snow removal activities. Travelled to WC 718, 719 and 720 and no sediment noted into the watercourses and the crossing structures were compliant. Travelled to 18km on the North Hirsch and inspected WC 716. Very minor sedimentation noted in watercourse but ESC crews and equipment just completing site works and sedimentation expected to drop within a very short time once works completed. Working further East along the ROW WC 715.2T, NCD UN 12-38 and WC 715 which all had no issues. No non-compliance noted during inspection.						South			CIAS, Pipeline
30-Apr-2021	072728775-001	Canadian Natural Resources Limited	3-May-2021		NTS: C 016-L/094-A-11	No	Truck	Passed Inspection (Complete)	3-May-2021	30-Apr-2021	Planned	COMMENTS: -The c-A16-L well, WA# 4036, has the surface casing vent handle chained and locked, along with the wellhead valve handles. As per the OGC guidelines, all valve handles on the wellhead must be chained and locked, with the EXCEPTION of the SCV handle. The scv handle needs to be unlocked and remain unlocked. -No other concerns here at this time.						Central	00001756, 00018608	02742, 04036	Facility, Pipeline, Well

3-May-2021	072813767-001	Coastal GasLink Pipeline Ltd.	7-May-2021	22-May-2021	From: NTS: C 090-G/093-J-10 To: NTS: D- 072-F/093-J-10	Yes	Helicopter	Deficiencies Corrected	24-Jun-2021	7-May-2021	Routine	Inspection with operator of Section 3, from KP 194+000 to KP 244+485. KP 203+200, Ponding water observed on the ROW encroaching on an S4 watercourse, please monitor to ensure the watercourse is not effected. KP 209+500, WL 0367, Log crossing over the wetland has become displaced from high water flows. KP 212+800, Crooked River DPI exit site has been flooded by rising water from the Crooked River. Water quality monitoring is required, delays in establishing the WQM have been caused by difficulty in procurement of equipment required for the set up. KP 217+600, sloughing from cut material on the downhill aspect was observed. It appears that the slough has remained on construction footprint. CGL is to monitor this location and delineate if additional sloughing occurs and report to BCOGC. KP 220+609, NCD 106C, The east slope of the ROW has sloughed with active movement of mud slurry into the NCD water flow, causing sediment laden water to move down stream. The NCD is not believed to run to fish bearing waters. Minimal ESC was observed on the east slope, primarily consisting of Aspen wattles. Sloughing will require assessment and repair. A second inspection of this site will be required to determine the potential impacts of the sediment laden water on the NCD and surrounding area. KP 226+700, sediment laden water was observed off ROW and into the tree line. It was requested at the time of the inspection that CGL delineate the impacts and report back to the BCOGC. KP 227+744, WL11S53, Site of previously reported exceedance. A sediment deposit was observed in the Wetland from the previous exceedance. A temporary repair was observed to the ESC from the previous exceedance. A small sediment plume was observed in the wet land which appeared to be coming from a water bar at KP 227+950. Please refer to the issued deficiency for additional comments. KP 229+650, Active pump off from a sediment trap on the ROW back onto the ROW down chainage, in an area with active surface water flow across the ROW. Water was observed to be clean leaving the ROW. Discussion with the CGL representative that dewatering back onto the ROW is a poor water management practice and dewatering of ROW water should not be into flowing water unless part of an isolation procedure. KP 229+910, WC 118C, There has been a bank failure on this watercourse that appears to be off the construction footprint. It was observed that soil piles along the boundary of the ROW caused surface water to accumulate, this may have saturated the stream bank. It should be determined if this may have attributed to the bank failure. CGL is to have QP complete a geotechnical investigation of this site to determine the cause of the bank failure and report findings to the BCOGC. An information request will be submitted to CGL. KP237+223, WL 3647, WC 124C, Several water pumps, light plants and generators left running with out personnel to monitor. Pump off to containment; containment requires maintenance. KP237+300, 3 sections of welded pipe have rolled off the supporting dunnage and are not up against the ESC for the wetland. KP 242+300, NCD 270.12, WL Wet242.28, the East slope of the ROW has sediment laden water draining to the S/E corner of the WL / NCD. This area requires additional ESC to prevent the sediment laden water from entering the wetland / NCD.						South			CIAS, Pipeline

4-May-2021	072825743-001	Coastal GasLink Pipeline Ltd.	10-May-2021	25-May-2021	From: NTS: C 002-F/093-J-06 To: NTS: C 080-G/093-K-01	Yes	Helicopter	Deficiencies Corrected	9-Nov-2021	10-May-2021	Routine	Inspection of section 4 with operator from KP 244+500 to KP 317+000. KP 248+500Pump off from ROW onto logging road. See deficiency for additional comments. KP 251+900, turbid water is accumulating on the ROW in proximity to the wetland and should be monitored to ensure it does not enter the wetland. 258+900, Sediment laden is being pumped from a sediment trap on the East side of a flowing NCD to a sediment trap on the west side of the NCD. The West sediment trap is overflowing onto the ROW and into the NCD. The West sediment trap is being pumped into the standing timber at the same location where flowing water from a water bar is entering the standing timber. See the deficiency for additional comments. KP 260+100, Sediment laden water is accumulating off the edge of the log deck site and has the potential to enter the wetland. Additional ESC measures are required . KP 290+250, WL WET290.2, Sediment laden water is accumulating along the edge of the wetland and has the potential to enter the wetland, additional ESC measures are required. KP 295+900. SR#4, an S4, water quality monitoring in place, there is bank sloughing approximately 125 meters upstream of the ROW. RE 1530.2.0 is the travel way around SR#4 ROW crossing due to steep terrain. RE 1530.2.0 is a rig matted access that has little or no ESC measures in place. This has resulted in 2 sources of sediment laden water being able to enter SR#4, caused by CGL traffic using RE 1530.2.0. An Information Request will be submitted to CGL for clarification on who is responsible for ESC on this access. KP 295+900 through KP 296+500. The following pump offs were observed. 1) KP 295+900, An unclassified drainage entering SR#4 within the ROW has been sandbagged and the water is being pumped to a work space at approximately KP 296+00. (This unclassified drainage runs through RE 1530.2.0 and becomes sediment laden.) The water runs through the work space and enters a ditch that empties into a sediment / water trap at approximately KP 296+100 2) KP 296+100, water from the standing timber is being contained off the ROW by the soil piles on the North aspect. This water is then being pumped across the ROW to the vegetated area on the south aspect. NOTE: at the time of the inspection the hose line was disconnected in the middle of the ROW and clean water was flowing onto the ROW. 3) KP 296+200, sediment / water trap has been dug on the ROW, sediment laden water is being pumped to the sediment /water trap at KP 296+100. 4) KP 296+100 sediment /water trap is being pumped approximately 300 meters to KP 296+400 and allowed to flow onto the ROW. This water is the returned by ditch to the KP 296+100 sediment / water trap. 5) KP 296+300, water from an old logging road is being pumped across the ROW from North to South 6) KP 296+400, water is being pumped from the Standing timber across the ROW from North to South 7) KP 296+450, sediment laden water is being pumped from a sediment / water trap on ROW across the ROW to the South aspect						South			CIAS, Pipeline

6-May-2021	072817849-001	Coastal GasLink Pipeline Ltd.	7-May-2021		From: DLS: 02-24-077-21 To: DLS: 03-23-077-21	Yes	Truck	Passed Inspection (Complete)	7-May-2021	6-May-2021	Routine	April 4 - Site tour with Rob Koivuneva looking at pipeline right-of-way between KP 29 and 41. Attempted to access Murray River pipeline bore site, but were unable to get down to exit pad site due to wet access and limited vehicle traffic into the site. Inspected slope 84 KP 40+867 - 40+940. Grading activities were occurring at the time of site visit. Everything looked good. May 7, 2021 - Observed tie-in activities at KP 61+710. All welding procedures were on-site at the time of visit. Observed NDT (AUT) at KP 61+746. Observed pipe being cut to length for tie-in using oxy-fuel cutting method. Pipe was aligned using clamps and observed root weld while on-site. All the pipe in this section was protected using rock guard due to coarse rock parent material. Backfill material was being screened (<20mm) using an "outlaw" excavator attachment. This material was then being hauled with rock trucks and used to backfill the pipeline trench. Field visual inspection reports were observed on CGL iPad. Welding crews were finishing the last weld on this section before heading home for 1 month. Welding operations will resume in June. No concerns observed during site visit.						South			Pipeline, Road

6-May-2021	073666807-001	Coastal GasLink Pipeline Ltd.	2-Jul-2021		From: NTS: B 003-E/093-K-03 To: NTS: A 002-I/093-L-02	Yes	Truck	Passed Inspection (Complete)	2-Jul-2021	6-May-2021	Routine	Routine inspection of CGL Section 6 pipeline and associated storage areas on May 6, 2021. Six mile pit road housekeeping occurring during inspection, bell hole open in pipeline for repairs that are still to be completed and partial roach still intact from install which indicates only minor settling of soils around the pipe has occurred (to date). Wetland crossing 0884, pipe installed and matted crossing still intact to access pipe laydown. Area is greening up already and no issues noted. Seven mile camp, Area A snow storage area, ESC measures in place with sediment ponds. Still historical snow in the area, clean water leaving the site and pump offs occurring when necessary. Area C SW sediment pond turbidity curtain established and outflow created to the ROW. Drainage structure/construction recommended to handle overflow situations through adjacent ROW but not required. 92C1 53 crossing pipe in place and crossing structure also still in place. Stream re-established with rock and terraced bank structure, final bank restoration still to be completed and no issues noted. Area C SE sediment pond outflow established to stream 92C1. Area C East ditchline appears to be functioning well and outflow sediment pond full and was noted on site that this pond was scheduled for a pump down. Road 4 to WC crossing 445 (54) ESC foreman onsite doing daily rounds and no issues with the site and crossing. Noted all bridges were in excellent shape after winter snow clearing activities, signage, delineators, splash guards etc...all in good shape and no maintenance items noted. WC crossing 445a, crossing in place and no issues noted. Road 3 to WC crossing 444 reviewed sedimentation incident with staff onsite, area has had two weeks of monitoring without further reported inputs. WC 434 (54) approaches were quite wet during melt but dry at time of this inspection and ESC measures have been effective with some additional minor works noted. Laydown 28 additional ESC measures have been effective and no further sedimentation leaving site at time of inspection. No visual impacts noted on impacted stream and all downstream areas checked and confirmed. Laydown 27 and small portion of Section 5 pipeline inspected, noted danger tree felled across fish bearing stream. Requested removal if there would be no impacts to the stream, it was removed and followed up on subsequent BCDGC inspection. No non-compliance noted during inspection.							South				Pipeline, Road

18-May-2021	073252750-001	Storm Resources Ltd.	4-Jun-2021		From: NTS: A 048-G/094-H-04 To: NTS: D 027-G/094-H-04	No	Helicopter	Passed Inspection (Complete)	4-Jun-2021	4-Jun-2021	Planned	This aerial inspection was to check on Changes In and About Streams (CIAS) and general pipeline ROW environmental conditions. No main concerns were noted.						Central			Pipeline, Well
18-May-2021	073267070-001	Black Swan Energy Ltd.	4-Jun-2021		From: NTS: B 038-C/094-H-04 To: NTS: D 046-C/094-H-04	No	Helicopter	Passed Inspection (Complete)	4-Jun-2021	4-Jun-2021	Planned	This inspection was limited in scope to Changes In and About a Stream (CIAS) and for any pipeline ROW environmental concerns.						Central			Pipeline, Road
18-May-2021	073268957-001	Altagas Holdings Inc.	7-Jun-2021		From: NTS: A 033-I/094-B-09 To: NTS: B 043-J/094-B-09	No	Helicopter	Passed Inspection (Complete)	7-Jun-2021	4-Jun-2021	Planned	This aerial inspection was limited in scope to Changes In and About A Stream (CIAS #4904-05) and any environmental concerns noted on the pipeline ROW.						Central			Pipeline, Well
18-May-2021	073277571-001	Tourmaline Oil Corp.	8-Jun-2021		From: NTS: C 060-A/094-B-16 To: NTS: A 051-B/094-B-16	No	Helicopter	Passed Inspection (Complete)	8-Jun-2021	7-Jun-2021	Planned	This aerial inspection is limited in scope to assessing environmental conditions along the pipeline ROW. There are a few decked wood and slash piles along the ROW that need to be disposed of. Options may include distribution along the ROW or under appropriate and allowable conditions, burning, provided adjacent trees won't be impacted. The ROW repair work that was completed last year east of Blair Creek appears to be stable. This erosion and subsidence deficiency was identified during a ground inspection in 2020.						Central			Pipeline, Well
18-May-2021	073288336-001	Tourmaline Oil Corp.	8-Jun-2021		From: NTS: B 093-I/094-B-09 To: NTS: A 021-I/094-B-09	No	Helicopter	Passed Inspection (Complete)	8-Jun-2021	8-Jun-2021	Planned	This aerial inspection focused on Changes In and About a Stream (CIAS) and any environmental concerns noted along the ROW.						Central			Pipeline, Well
18-May-2021	073290109-001	Tourmaline Oil Corp.	8-Jun-2021		From: NTS: C 048-A/094-B-16 To: NTS: B 093-I/094-B-09	No	Helicopter	Passed Inspection (Complete)	8-Jun-2021	8-Jun-2021	Planned	This aerial inspection focused on Changes In and About a Stream (CIAS) and any environmental concerns on the ROW noted at the time of the flight.						Central			Pipeline, Well
18-May-2021	073297127-001	ConocoPhillips Canada Resources Corp.	11-Jun-2021		From: DLS: 02-23-088-23 To: NTS: A 034-I/094-A-12	No	Helicopter	Deficiencies Corrected	29-Jul-2021	8-Jun-2021	Planned	This aerial inspection focused on Changes In and About a Stream (CIAS) and any environmental concerns on the ROW. There was also 2 on ground site visits. Since there is sediment depostion into the Blueberry River, this inspection has been referred to the OGC Enforcement Section						Central			Pipeline, Road
18-May-2021	073297863-001	ConocoPhillips Canada Resources Corp.	30-Jun-2021		From: DLS: 02-10-088-23 To: DLS: 02-23-088-23	No	Helicopter	Deficiencies Corrected	7-Sep-2021	8-Jun-2021	Planned	This aerial inspection focused on Changes In and About a Stream (CIAS) and any environmental concerns along the pipeline ROW. There are issues with crossing 4357-5 where the stream has been diverted from its channel. This has been forwarded to OGC Enforcement for his investigation. It is recognized that ConocoPhillips became the Operator for this pipeline in Sept 2020 after the asset was acquired from KELT.						Central			Pipeline, Road
18-May-2021	073308062-001	PETRONAS Energy Canada Ltd.	30-Jun-2021		From: NTS: A 040-I/094-B-16 To: NTS: D 032-I/094-B-16	No	Helicopter	Passed Inspection (Complete)	30-Jun-2021	14-Jun-2021	Planned	This aerial inspection focused on Changes In and About a Stream (CIAS) and any environmental concerns found on the ROW. Just a comment that some lath and flagging and other items were noted within the in the pipeline ROW that was bored under the stream. I just want to confirm that this will be part of Petronas' spring inspection as per the Environmental Inspection Plan for the pipeline. Good job in following guidelines and leaving the riparian vegetation while boring under these small streams.						Central			Pipeline, Road

27-May-2021	073590643-001	KM LNG Operating Ltd.	29-Jun-2021			Yes	Truck	Passed Inspection (Complete)	29-Jun-2021	27-May-2021	Routine	Routine inspection of Kitimat LNG permits in and around the Bish creek area on May 27, 2021 with Haisla Liaison. Bish road permit 9635729 is still in excellent condition. L panel construction holding up well and geotech instrumentation still in place and being monitored. Road was also very clean with a significant amount of public traffic no garbage was noted anywhere. Minor signage requirements were noted and completed. Area G mine site, not a formal mines inspection but maintenance requested and completed on snow fencing established around borrow pond. Access also discussed and more barriers placed around entrance to borrow site. Also asked to confirm phone number on mine signage will go to a qualified mine manager. To note that as of this time the mines inspection staff are planning on having their quarterly meeting in Kitimat in late July of this year and, COVID allowing, plan on visiting the BCOGC mine permits in the area. Area I regrowth looks good from the road from past reclamation activities. Area A2 has some spoil storage but is also greening up quite well. Walked the perimeter of Area A and site is clean and well organized. Plant site and North Logistics Area both are greening up, well organized and no garbage noted on site. No non compliance noted at this time.						South			Pipeline, Road

10-Jun-2021	074972256-001	LNG Canada Development Inc.	10-Nov-2021		NTS: A 005-B/103-I-02	Yes	Truck	Passed Inspection (Complete)	10-Nov-2021	10-Nov-2021	Routine	Technical inspection of LNG Tank, June 10-11, 2021: LNG Tank outside Exclusion area in place at time of inspection so unable to fully approach base of tank. Checked locations and positions of temperature sensors and heating conduits - Locations clarified and it was noted that there are 24 temperature sensors in base slab - No issues or concerns. Area found to be well maintained and barricaded - no instrumentation installed yet at time of inspection. Requested associated inspection and test records including base slab temperature sensor records Material Laydown Area Steel rebar and plates visually inspected - Identification and traceability marks verified, noted for further verifications. Verifications later completed. No issues or concerns. Material records associated with rebar tags requested as well as other materials, Later reviewed. No concerns. Information related to welder qualifications and procedures requested - No concerns. Inspection and test plans for LNG tank construction requested - No issues Inside of Tank Bolting activities on suspended deck occurring during inspection. Requested bolting procedure - No issues. Cooldown piping visually inspection. Pictures and heat numbers recorded for verification purposes. Inspected welded joints. Several unplanned openings were noted. Close or overlapping welds noted. Inspection and test records requested to demonstrate the integrity of these weld joints. Records of welders and performed NDE requested. No issues found post review, however clarification around the overlapping welds and tests was required. It was eventually determined that a test which was completed had a clerical error in the record, and the records were updated to correct this. This process did cause delay to this inspection report - No concerns Roof of Tank Information and pictures related to plate welds collected for further review and verification. Piping associated with safety instruments not installed at time of inspection - No concerns Welding Consumable Storage Humidity meter and temperature gauge used once daily to check conditions in storeroom. Daily log checked. Whiteout noted, but clarified it was simply a time error that was corrected. Discussed measurement equipment functionality and calibration - No concerns OTHER Records reviewed and verified related to inspection and test plan. Social distancing discussed on site						South	00018315		Facility, Pipeline, Well

15-Jun-2021	073523861-001	Trans Mountain Pipeline ULC	29-Jun-2021			Yes	Truck	Passed Inspection (Complete)	29-Jun-2021	28-Jun-2021	Routine	Inspection with operator of the Kingsvale Power Line Project from 22/01 to 01/06. Several areas of excessive mulch have been left on the Powerline ROW and Road ROW, and are preventing the re-growth of vegetation. This was discussed with the operator at the time of the inspection. The operator is aware of locations. Howarth Creek , S3, RMA is intact and water is flowing clean at the time of the inspection. 11/02 to 11/01, Road on crown land has drainage issues, discussed with the operator on site. An IR will be submitted to provide a plan on how the drainage issue will be corrected and to provide a completion date for the work. Otter Creek currently has a culvert and dirt fill, signage states S6 and Fish Bearing. An IR will submitted for clarity on Otter Creeks classification and if fish bearing or not and to determine if the current culverts meets requirements. 13/02, the access road at this location has water draining over the surface from a spring in close proximity. This was discussed with the operator during the inspection to have the drainage issue corrected.						South			Pipeline, Road
15-Jun-2021	073746633-001	Explor Geophysical Ltd.	12-Jul-2021			No	ATV/Snow Machine	Passed Inspection (Complete)	12-Jul-2021	12-Jul-2021	OGC Requested	This inspection was completed at the request of the BC Oil and Gas Commission. ATVs were utilized to travel approximately 17 kms throughout the program area. No concerns were noted for the following activities; ground disturbance, slashing, shot hole drilling and garbage/debris. There were no flowing hole observed. The dogleg at roads, pipelines were okay. Some were better than others as is could depend on which way the operator was travelling from. Starting from the road/pipeline would make it easy to have a "textbook" dogleg while coming out of the bush would be more difficult. Overall, the sight lines were limited as required.						Central			Pipeline, Well

15-Jun-2021	073774723-001	Coastal GasLink Pipeline Ltd.	15-Jul-2021		From: NTS: C 080-G/093-K-01 To: NTS: B 003-E/093-K-03	Yes	Truck	Passed Inspection (Complete)	15-Jul-2021	15-Jun-2021	Routine	Routine inspection of CGL Section 5 on June 15th. Inspection began at kickoff to Section 5 at approximate KP 337+250. Grubbing has just begun in this area. One area isolated due to invasive plant presence, area being worked by single machine allocated to that area with support staff onsite to clean any soils/debris from machine prior to it leaving the isolated area. Areas of dense mulch due to clearing activities stored separately from topsoil piles. Amphibian salvage and pump offs occurring on ROW as well as bird sweeps working ahead of the grubbing crew, some minor springs and NVC's noted. Laydown 2A not being used at this time, scouring and minor sedimentation noted leaving site footprint, but no adverse effects noted. Discussed future and potential of remediation of the site. Laydown 10A pipe storage area, all surface water flow is directed to one corner of the site. Water, minor sediment leaving site into adjacent clear-cut but no adjacent watercourses or sensitive features close to site. ESC crew onsite and working to manage runoff. CPESC is aware and has drafted plans to manage surface runoff at the site. Travelled to Pine road access at approximate KP 397+750. Road RW 1195 noted old, closed bottom culvert on a class S3 stream. Minor outlet drop may prevent fish passage if fish present in the system. Discussions internally within BCOGC on the future of this structure but use for crossing and accessing the ROW can continue with structure intact, may look at removal of the pipe when road deactivated but still not confirmed. WC 409.2T S3 crossing no issues, minor disturbance within 10m required to install crossing. WC 409.1T S4 crossing structure in place and ESC measures have been established. KP 396+850 to 397+000 area of wet, saturated organic soils looked good with no rutting or water issues and soils well piled. WC 408.3T S4 in more organic substrates with well cut banks, structure in place as well as ESC measures. Wetland 11 016 new fabric and corduroy established and much improved over the prior access. Area ribboned off "no access" due to nesting birds in the area. Revisited slope at KP 398+500, cross drains and ditches have been filled in to create access to facilitate pipeline construction. No noncompliance noted.							South			CIAS, Pipeline, Road

At the time of the inspection the ROW from poles 5 t0 4 had been felled with ground cover in place. No concerns noted at the time of the inspection.							South			Pipeline, Road
16-Jun-2021	073687212-001	Coastal GasLink Pipeline Ltd.	7-Jul-2021		From: NTS: B 003-E/093-K-03 To: NTS: A 002-I/093-I-02	Yes	Truck	Passed Inspection (Complete)	7-Jul-2021	16-Jun-2021	Routine	Routine inspection on CGL Section 6 pipeline construction with a focus on welding as well as some follow up on Section 5 crossings with ALP liaisons representing Saik'uz, StellatLen, TLtaz'en and Burns Lake First Nations. Inspected the field storage of the bottles (welding gas) and consumables at seven mile camp. Bottles stored upright and well labelled with process in place for shipping and receiving of new bottles and return of the used bottles. Consumables (wire/rods) being kept in heated, dry storage area and being monitored daily. Could not enter building due to covid but appeared all consumables still in wrap and no open boxes noted. If monitoring being completed suggested sign off sheet noting temperature and humidity (daily record) for documentation purposes but no issues with the storage area. Viewed the welder qualification site at the pipe laydown yard and discussed field qualification procedure with the CWB level 3 inspector overseeing the activities. Welder qualification area was well set up and no issues noted. Viewed the onsite welding being completed and requested PQR's for all the welders and certifications for all inspectors completing visual inspections. Documentation has been provided to the BCOGC by CGL. Inspected laydown 2B and noted enhanced ESC measures since previous inspection and discussed the ongoing daily monitoring of the area. Also discussed the potential future use of the site and remediation. WC 44C2A and wetland 0821 vehicle crossing inspected and no issues noted. Travelled to TCR-1 and noted enhanced ESC measures onsite with sumps and crossdrains in place and no sediment entering the stream. TCR-3 vehicle crossing in place and ESC measures are functioning. No non compliance noted during inspection.							South			CIAS, Pipeline, Road

30-Jun-2021	073822325-001	Coastal GasLink Pipeline Ltd.	20-Jul-2021		From: NTS: A 077-A/103-I-02 To: NTS: D 025-B/103-I-02	Yes	Truck	Passed Inspection (Complete)	20-Jul-2021	30-Jun-2021	Routine	Routine inspection of CGL pipeline activities in and around Kitimat townsite and North Hirsch FSR on June 30, 2021. Initial meeting discussed activity during high to extreme fire hazards and mitigations in place as well as the ongoing 5100 training for staff and contractors. WC 722 55 stream isolated with bypass pumps in place and operational, discussed backup pumps, maintenance and testing of pumps. Secondary containmnent in case of spills with the larger 6" pump needs maintenance and was discussed onsite. Riparian topsoil separation noted. No downstream dam set up with the isolation discussed and no issues, outlet on large diameter rock functioning well. Active work area, trench drilling occurring while onsite. WC 721 27 56 stream with barely defined channel preparation work occurring prior to crossing, channel is nearly dry. WC 721 52 active salvage occurring prior to crossing, machine preparations have occurred well away from high water mark and no concerns with this area. WC 720 52 guide log on crossing structure to be put back in place after preparation work completed adjacent to stream, low flow at this time of year, lots of algae noted in streams due to heat. Riparian topsoil storage close to stream but ESC measures in place. DPI adjacent to Kitimat River follow up post flood event. Area held up well ESC/soil piles still in place, minor sand deposits noted on ROW. Fish salvage conducted post flood. Kitimat river still high at time of inspection and even stream 51073 which is typically dry had sustained flow. Looked at ongoing pipeline works behind Civeo camp from KP 663+000 to 664+450. Sheet piling ongoing, amphibian salvage occurring ahead of piling activities. Well points not required, pumping off-ditch water to adjacent vegetation. Active ditching and backfilling occurring during inspection. WC 739.1T partial isolation in place utilising sheet piles. Remaining piles will be driven into place once preparation work is completed. No Non-compliance noted during inspection.						South			CIAS, Pipeline, Road

The onsite record of trips and volumes shows that on July 5, 2021 a total of 10 trips . The operators truck log shows a total of 8 trips for July 5th. Note operator stated he hauls 16.5 cubic meters, logs show 16 cubic meters. The July 6th on site log has had no entries, operator stated this was loading the second trip of the day from this location. The onsite log was filled out by the operator and CGL representative. Note: one complete set of numbered pages has been removed from the onsite log. Note: Boxed screened intake and hose are also present at this location (at waters edge), the screening does not meet permitted requirements and should not be used until adequate screening is in place as required by condition 13 of the permit. CGL - POD 20E, 7000 cubic meters daily limit, 2-4" submersible pumps inside an open topped screened box supplying the Sukunka HDD. Total volume to date 939.3 cubic meters, as per pumping contractor. Note: there is a discrepancy from this volume and the volume recorded by the HDD (753.2 meters) of 186.1 cubic meters. CGL - POD 13, 120 cubic meters daily limit, No permit on site, on site log has no entries, no pump or hose line at this site. Inspection has a conditional pass pending review by the BCOGC Manager of Enforcement.						South			CIAS, Pipeline
6-Jul-2021	073707717-001	Crew Energy Inc.	7-Jul-2021			No	Truck	Passed Inspection (Complete)	7-Jul-2021	7-Jul-2021	Follow Up	Inspection is a follow up to complaint #73346305-001 regarding discarded matting debris in workspace at km 1 on the Monias Lake road. Crew Energy is re-building this segment of road access to 4-17-81-21 and had committed to cleaning up debris left behind at this work space by past road users. Follow up inspection has identified that this clean up was completed. Thank you						South			Pipeline, Well
6-Jul-2021	073734381-001	Canadian Natural Resources Limited	9-Jul-2021		DLS: 02-34-087-21	Yes	Truck	Passed Inspection (Complete)	9-Jul-2021	6-Jul-2021	Planned	Met with Operations and inspect site. Site is being kept in very good shape with calibrations current on F&G and meters along with station shut downs. Action Items: 1.) Submit UT off liquid dump lines V109 inlet. 2.) Submit annual cathodic survey summary report.						Central	00003164		Facility, Pipeline, Well

6-Jul-2021	073745232-001	Coastal GasLink Pipeline Ltd.	13-Jul-2021		From: DLS: 03-23-077-21 To: NTS: D 031-F/093-P-05	Yes	Truck	Passed Inspection (Complete)	13-Jul-2021	12-Jul-2021	Routine	Inspection with operator of the Sukunka HDD entrance side, 42" ream to approximately 353 meters. Not actively reaming at the time of the inspection, tripping out to inspect the reamer. Permits and Environmental Management Plans produced on site. Water Quality Management in place with no anomalies to date. Produced the WQM daily records (electronically), on site. Site has sound mitigation in place. The water line from POD 20E has 2 de-pressure lines. The de-pressure line at the HDD has no sediment filter bag and is a cut hose line draining directly to an area beside the rig mats for the pad. The de-pressure line closest to the Sukunka River has a sediment filter bag. Holes were observed in bag making in not effective. At the time of the inspection on site records showed a total volume of 753.2 cubic meters of water be utilized by the HDD. Pumping records show a volume of 939.2 cubic meters of water being supplied to the HDD. A difference of 186.1 cubic meters. This was discussed with the operator and will be looked into. Mud returns are being land spread on the pipeline ROW and timber deck 4.						South			CIAS, Pipeline
6-Jul-2021	073750058-001	Coastal GasLink Pipeline Ltd.	13-Jul-2021			Yes	Truck	Passed Inspection (Complete)	13-Jul-2021	12-Jul-2021	Routine	Inspection with operator. CGL - POD 01, 150 cubic meters daily, site log book and permit on location. CGL - POD 14, 180 cubic meters daily, site log book and permit in place, fixed inlet line with fish screen, two trucks present at time of inspection and on site log book shows 180 cubic meters withdrawn at 1:20 pm. Trucks were advised that this POD was now shut down for the day. A review of the on site log shows overages on volumes withdrawn in June. It is my understanding that a self report for those overages is being drafted and will be submitted to the OGC. CGL - POD 16, 150 cubic meters daily, on site log and permit on location, fish screen on intake hose. Returned to POD 14 at 2:45 pm, observed one truck loading water. Operator was aware that the POD had reached the daily withdrawal limit, but stated he was filling up for the first load in the morning and would be recording this load on tomorrows on site log entry. Truck was told to stop loading and issue was discussed with CGL representative on location. Inspection has a conditional pass pending review by the BCOGC Enforcement Manager. WC 722 SS pipe is in the ground and stream re-established, bell holes open on either side of stream. Discussion on stream reclamation onsite but crossing looked good. WC 722.2T 56 dry at time of inspection. Pipe in ground and stream re-established to culverts on ROW access road. WC 721 Amphibian and fish salvage occurring at time of inspection and preparation for isolation occurring. Rock drilling outside of high-water mark also occurring at time of inspection. Noted gate and security established at approximately 630+600 at edge of ROW as per direction from BCOGC. Road 190.0.B travelled to the backend of the road construction approximately 200m from the top of cable crane hill. WC 681 at 625+510 sediment in stream noted, culvert not embedded and water running through road grade and collecting sediment and depositing downstream. ESC crew response was immediate but sedimentation still in stream with follow up photos provided on July 18. Wetland 9104 water from wetland running through road grade with no culvert installed and creating downstream sediment. Wetland has been notched to allow for drainage, but no structure placed in roadbed. WC 176C Soil pile noted close to stream, ensure ESC measures in place to avoid sedimentation into adjacent stream. Wetland 11 784 topsoil pile immediately adjacent to wetland and sediment noted in wetland, ESC measures established and follow up photos provided to the BCOGC. However, even after the ESC measures were established wetland still had sedimentation. Viewed the Spyder Hoe trespass area and photo documented for file. Esc measures in place and functioning. Viewed overblast area and photo documented for file. Very large diameter rock in blast area, will be difficult to remove. Damage noted to adjacent timber. Deficiency issued under the ENVIRONMENTAL PROTECTION AND MANAGEMENT REGULATION Section 12 No deleterious materials into streams, wetlands or lakes for WC 681, Wetland 9104, and Wetland 11784. 21-Jul-2021	074393966-001	Coastal GasLink Pipeline Ltd.	14-Sep-2021		From: NTS: C 006-J/093-L-04 To: NTS: A 077-A/103-I-02	Yes	Truck	Passed Inspection (Complete)	14-Sep-2021	21-Jul-2021	Routine	Routine inspection of CGL construction activities in the Upper Kitimat area and follow up on report of in stream works in watercourse UN 13-2 on July 21, 2021. BCOGC RP road crossings have been improved and bridges were compliant. Noted temp fencing on BR 128 bridge approach but road was open for traffic. Access control has not been approved for this BCOGC road and please remove this fencing so it does not inadvertently get placed without proper approvals. Viewed site UN 13-2 and documented the activities that had occurred. Requested incident (root cause) analysis, fish habitat impact assessment, WQM data and the site specific WC crossing plan. All documents have been provided to the BCOGC at the time of this report. Travelled to the end of construction at Lake L661. Road has been pioneered almost to the end of the lake on the SE side. POD in place and signage established, active drilling and blasting in area and ESC measures in place at the outflow of L661 (West end). Bridge established at WC 685 SS with significant seasonal flow, steep gradient and avalanche chute, no issues noted.						South			CIAS, Pipeline

22-Jul-2021	074459249-001	LNG Canada Development Inc.	22-Sep-2021		From: NTS: C 055-B/103-I-02 To: NTS: C 025-B/103-I-02	Yes		Passed Inspection (Complete)	22-Sep-2021	22-Jul-2021	Routine	Routine inspection of LNG Canada site activities on July 22, 2021. Raw water intake is nearing completion, sheet piles still intact but pumps shut off and water infiltrating. Crane was being assembled while the inspection was in process and will remove the sheet piles once approved for use on the site. Sediment containment booms and hydrocarbon booms in place until works are completed. Minor scour protection still required under the pier, gabion wall still under construction and minor revegetation still to be completed. No issues noted with the inspection of the Raw Water Intake area. HDPE pipe installation occurring during inspection. Direct pipe road crossings active at time of inspection as well as welding of casing. Welding procedure and welder qualification records provided to the BCOGC upon request. Visual inspections also occurring at time of inspection. Visual inspector qualification records and sample documentation of visual inspection records provided to the BCOGC upon request. Welding procedures, documentation, and qualifications all in order, no issues noted. In trench housekeeping requested as work area around active drill congested in and around welders. Items removed immediately and photos provided to the BCOGC. Mud waste being stored in Tervita bin for removal once crossings complete. Please let the BCOGC know how the drilling mud is disposed of once that occurs. Minor maintenance of ESC measures requested around watercourse on ROW. This was completed immediately after request and follow up photos provided. BCOGC is also requesting photos of 54 stream channel re-establishment once completed on ROW. Beaver dam #12 removal authorized under BCOGC permit 100100705 inspected post removal, no issues noted. Also visited beaver dam removal site 13 and 14 although works had not commenced at time of inspection. In stream works occurring in Anderson Creek. Isolation and fish salvage occurring at time of inspection. Fish salvage permits provided to BCOGC inspector upon request. Bypass in place with 3x48" pipes that allow for fish passage. Anderson creek running very clean at time of inspection. Moore Creek open cut utilities installation occurring at time of inspection. Flume established across open cut, back up pumps on site and available if required. BCOGC requested notification once channel re-established. LNGC followed up with notification and photos of the channel re-establishment. General overview and discussions of the load line piling operations, no concerns noted during inspection. Kitimat river side channel South channel two is now open, it is intertidal and is vegetation is beginning to re-establish. Minor works still to be completed and the rest of area still under construction at time of inspection. No noncompliance noted during inspection.						South			CIAS, Pipeline
