11-Oct-2022	078923531-001	Canadian Natural Resources Limited	18-Nov-2022		NTS: D 080-D/094-H-06	No	Helicopter	Passed Inspection (Complete)	18-Nov-2022	18-Nov-2022	Planned	This inspection replaces inspection 078692575 which will be cancelled. That inspection will be cancelled as an interpretation for grounding of the portable solar powered chemical pump has been accepted. The original inspection had a comment in regard to the torn insulation snake an insulation falling out. This comment has been addressed by CNRL. The pipeline inspection is limited in scope to the on lease equipment.						Central		12484	Well
12-Oct-2022	078516793-001	Pembina NGL Corporation	12-Oct-2022		DLS: 08-15-087-21	Yes	Truck	Passed Inspection (Complete)	12-Oct-2022	12-Oct-2022	Incident	Meet with Pembina instrumentation and electrical staff. Review the operator panel display screens with the instrument technician at the time of the incident and get a general description of what was occurring at the time leading up to the flare stack carry-over and fire. The technician felt that the flare KO pump discharge valve MOV 1839 may have failed to open as part of the flare KO pump sequence. Request this be looked at and questioned if this condition alarmed and removed the truck loading permissive. Pembina has agreed to function test the flare KO pump sequence prior to start-up, as well as test other truck loading permissive and alarm logic in the shutdown Key. Spoke with Pembina operations Supervisor, gathered the PSV on the flare KO released which meant there was a pressure build-up on the flare system, possibly from a blocked flame arrestor. This is currently under investigation and Pembina plans to service or replace the flame arrestor. Conduct an inspection of the tank terminal equipment. Action Items: 1. Request Pembina develop and submit a plan to safely re-start the tank terminal. 2. Perform annual electrical PM (TX calibrations/verifications) and S/D Key testing prior to the re-start of the terminal. 3. Submit the Mile 73 KeyWest Truck Terminal Expansion Control Narrative and Shutdown Key. 4. Submit bullet and flare KO level transmitter trending at the time of the incident. 5. Conduct an Engineering Review, and or Root Cause Analysis, and or a HAZOP of the incident and implement engineering controls to prevent a future incident of similar nature. Submit the review findings and corrective actions to the OGC. 6. Repair electrical QUAT O-ring seal on the cover and electrical tech cable on ESD 1601. 7. Pour electrical seal on truck load riser # 1 truck vapor pump suction scrubber LSHH 1611. 8. Pour electrical seal on truck load - riser # 2 truck vapor pump suction scrubber dump valve control switch.						Central	00003969		Facility, Pipeline, Well

13-Oct-2022	078548975-001	ARC Resources Ltd.	14-Oct-2022		DLS: 13-07-080-14	Yes	Truck	Passed Inspection (Complete)	14-Oct-2022	13-Oct-2022	Planned	Meet with Arc foreman, measurement technician and measurement coordinator, and operations staff. Reviewed the plant and gathering system measurement schematic. Arc is in the process of reviewing and redlining the information on the schematic in preparation for transition to new software ' Muddy Boots'. Discuss the schematic with Arc's measurement coordinator, the first draft will be complete by the end of the month. Suggest that production swing valves such as the valve at 16-13 that can swing production to either 13-7 or 5-35 plants be identified on the schematic. Request an updated measurement schematic once complete. Review plant production accounting meter list and audit production accounting meter, analyzer calibrations, and meter proving records. Noted on the Intricate E-Form the Arc meter ID was not recorded. Suggest to Arc this be added to assist in the cross referencing back to the Arc meter ID without the use of the meter table. Noted that the H2S analyzer frequency was not in the Excel EI PM Schedule. The Arc foreman agreed to add it at a bi-annual frequency. Question if the 13-7 inlet separator produced water meters are used in determining the gas multi-well effluent battery total water delivered to the 13-7 gas plant? Audit gas meter and truck-in liquid meter proving and analysis - found up to date in the gas plant Fisher ROC and Terminal Boss systems. Noted the Terminal Boss only accepts 4 decimal places for the meter factor. Suggest Arc review if the 5 decimal place meter factor on the proving report can be rounded either up or down for better accuracy in the Terminal Boss. Check that a write to EPOM 'Flash Config to Memory" is being performed after ROC parameter changes are made such as after updating the gas analysis in the ROC. Inspect plant fire and gas detection HMI display screens - no faults found. Verify that Enbridge and TC Energy sales OPP and OPC system and equipment calibration were being maintained regularly and were and up to date. Review the plant master control valve log- found up to date and signed off after the recent turn-around Sept 11-25, 2022. Action Items: 1. Submit a revised measurement schematic once on new Muddy Boots Software. 2. Are the inlet separator produced water meters used in the proration of produced water back to the wells in the gas multi-well effluent battery? If so, please identify the produced water meters as production accounting. 3. Inform the OGC of changes implemented as a result of the inspection finding suggestions above. 14-Oct-2022	078554729-001	Coastal GasLink Pipeline Ltd.	17-Oct-2022		From: NTS: D 031-F/093-P-05 To: NTS: C 046-F/093-J-16	Yes	Truck	Deficiencies Corrected	14-Dec-2022	17-Oct-2022	Incident	Inspection of ground movement / slide at approximately KP 145+700. Minor incident number 078540082-001. The incident occurred at approximately 11 am October 13th, 2022. Grade and blasting crews were working in the immediate vicinity. The slide material went down a 50 - 60% slope for approximately 75 meters and stopped 1 to 2 meters before entering the Little Anzac River, WC 42c, an S2. Slide material was deposited into the S2's, RRZ and RMZ. October 13th afternoon, crews were mobilized and began constructing an access road within the ROW boundary to the lower portion of the slide area. An excavator was winched to the toe of the slide area (off ROW) and began pulling back the material from the 20-meter RMZ. Two retaining / crib walls were installed (off ROW) to prevent slough material from continuing down slope. October 14th, A small sump was installed (off ROW) to capture water from a spring that started to flow after the slide. Sump water is being pumped back up the slope and discharged in a vegetated area. sediment fence was / is being installed along the bank of the WC. Excavation at the toe of the slide continues, as well as construction of a stable platform mid slope to allow a second excavator to relay material for loading into rock trucks. Please provide a plan for remediation and drawings that clearly show the slide area in relation to the construction footprint, the OGC footprint and the 300-meter corridor. Please provide the requested documentation on or before October 24th, 2022. Discussed installed ESC measures at approximately KP 146+500, all going to one location on the upper side of the flop and not being able to drain properly. Discussed ESC measures on the temp WC crossings not satisfactory and require maintenance.							South				Pipeline Project

21-Oct-2022	078735688-001	Coastal GasLink Pipeline Ltd.	2-Nov-2022			Yes	Walk	Passed Inspection (Complete)	2-Nov-2022	2-Nov-2022	Routine	Inspection with the operator of the storage area located at KP 127+500. A warehouse is in operation at this location. Hydrocarbon staining was observed in proximity to the plastic bins and parked equipment. Discussed with the operator to initiate clean-up. Several housekeeping issues were observed, and each was discussed with the operator during the inspection. Several items are required to be stored in secondary containment. These items were discussed with the operator at the time of inspection and included batteries, DEF fluid and windshield washer fluid. ESC on the site requires maintenance at several locations and was discussed with the operator.							South			Pipeline, Road
24-Oct-2022	078572668-001	Methanex Corporation	24-Oct-2022		DLS: 06-14-084-16	Yes	Truck	Passed Inspection (Complete)	24-Oct-2022	24-Oct-2022	Complaint	Landowner complaint of not enough restoration work completed and still not enough topsoil in place on this old lease. Attended the site today with the landowner and the environmental consultant. The work done thus far was acceptable to the landowner. In his view it did not go far enough. I was able to find areas with heavy clay on what is the old lease. These would indeed reduce field productivity.							Central		04888	Pipeline, Well
24-Oct-2022	078573013-001	Canadian Natural Resources Limited	24-Oct-2022		DLS: 05-14-084-16	No	Truck	Passed Inspection (Complete)	24-Oct-2022	24-Oct-2022	OGC Requested	Landowner concerns of old wells on his field and lack of topsoil. This site was checked along with the main problem lease. There is no problem here currently, but he will be very interested in the restoration phase of this location.							Central		08735	Well

25-Oct-2022	078713313-001	KM LNG Operating Ltd.	4-Nov-2022			Yes	Truck	Passed Inspection (Complete)	4-Nov-2022	25-Oct-2022	Routine	Routine inspection of Kitimat LNG deactivation activities with Haisla liaison on October 25, 2022. Area H site perimeter road ripped and deactivated. Access to trail and viewpoint left intact. Rocks/lock block barriers in place to restrict vehicle access as well as being utilized to block access to reclamation areas and steep slopes. Area G perimeter access ripped and deactivated. Reclamation works still to be completed around pond/stormwater discharge. Area that has been reclaimed has been planted with a mix of Sx, Cw and Hw. General housekeeping required throughout the area, will be ongoing throughout the reclamation phase of activities. Noted sandbags/plastic tube in Area G outflow/watercourse. Please remove ASAP and provide photos to the BCOGC inspector. BCOGC requested the seedlot information for the planted Cedar, Hemlock and Spruce and this was provided prior to filing this inspection. Confirmed that the planted trees conform to the Chief Forester's Standards for Seed Use. No further action required Area L perimeter access ripped, and deactivated, small area reclaimed and planted. Borrow pit Z pipe/culverts removed and ditch re-established along Bish FSR. Access to site removed. Small bench adjacent to Bish filled in and soil storage at the top of the site has been planted. Area AZ rock burn adjacent to Bish FSR removed and transferred to borrow pit Z. Thin veneer of soil placed at toe of slope and has been planted. Minor pockets of rock remain. NLA water wells decommissioned as well as most of the monitoring wells. I was told onsite that a few monitoring wells remain onsite with a spring removal planned. Rock pad at base of the slope removed only small vehicle turnaround remains. Area has mostly been capped with topsoil and coarse woody debris and small areas have been planted. Rest of the planting to be completed in the spring. Access road intact with crossdrains/waterbars in place. Access to remain due to slope instability concerns. BCOGC road permit including the Bish and Bees IR access in good shape and no concerns noted during inspection. No noncompliance noted during inspection.							South			Pipeline, Road
25-Oct-2022	078734548-001	Coastal GasLink Pipeline Ltd.	2-Nov-2022			Yes	Walk	Passed Inspection (Complete)	2-Nov-2022	2-Nov-2022	Routine	Inspection with operator of POD - 001, Anzac River. The POD was not in use at the time of the inspection. Signage is in place and the permit is on location. The fish screen on the intake meets requirements. Water levels at the intake are below the 30cm requirement and the operator immediately pulled the intake from the water. Discussed with the operator the requirements for water depth and flow. The operator is to ensure that both requirements are met prior to use.							South			Pipeline, Road

28-Oct-2022	078643794-001	Tourmaline Oil Corp.	28-Oct-2022		NTS: B 054-I/094-B-09	Yes	Truck	Passed Inspection (Complete)	28-Oct-2022	28-Oct-2022	Planned	Inspection for Application Determination # 100109507 Meet Tourmaline commissioning staff on site. Inspect commissioning documentation provided for the wellhead and test separator electronic flow measurement (EFM), and for the shutdown and safety systems. A generic gas analysis was used to configure the wellhead and test separator EFMs. Once operations commence each well EFM must be updated with a gas analysis specific to that individual well. Once wells are flowing obtain a blended analysis from the group line for the test separator EFM gas analysis. Confirm there is a high flow velocity shutdown programmed into the EFM, and that the wells have remote shutdown capability through SCADA. Observed status: Flowlines from the wellheads to the meter skids, and from the group line to the sales riser are disconnected due to the well testing operations. The well testers are tied into the sales riser. WorkSafe BC has halted well testing operations concerning documentation for the bolt-up of Stream Flo 15,000 API casing bowls to Cameron 5,000 API wellheads. Tourmaline is working to resolve the concern. Inspect the generator and propane system. Inspect the test separator building equipment and piping. Request initial meter proves for the test separator water and condensate meters be submitted to the OGC. Action items once wells and test separator are in service: 1. Within the first month of operation prove the test separator water and condensate meters. Submit the proving records. 2. Update each well EFM and with a gas analysis specific to that well. Submit updated well EFM Reports to show that each gas analysis has been updated. 3. Update the test separator EFM gas analysis. Submit updated test separator EFM Report to show that the gas analysis has been updated.						Central	00037098	39742, 39743, 39744, 39745	Facility, Pipeline, Well

1-Nov-2022	078747484-001	Canadian Natural Resources Limited	2-Nov-2022		NTS: C 081-I/094-H-09	Yes	Truck	Passed Inspection (Complete)	2-Nov-2022	1-Nov-2022	Planned	The facility status in the OGC KERMIT data base indicates the facility as " Active". When in speaking with the CNRL Assistant Foreman it was indicated the "South Ring " facility operations has been suspended for a number of years. CNRL was asked to provide the OGC the date that operations ceased when notifying of the status change. 1. Notify the OGC of the facility status change. Determine and provide the date operations ceased. 2. Based on the information of when operations ceased, determine if section 24 of the Oil and Gas Processing Facility Regulation applies.						Central	00000740		Facility, Pipeline, Well
1-Nov-2022	078748065-001	Canadian Natural Resources Limited	3-Nov-2022		NTS: C 081-I/094-H-09	Yes	Truck	Passed Inspection (Complete)	3-Nov-2022	1-Nov-2022	Planned	Inspect gas plant HMI LEL safety system displays- no faults found. Noted CNRL has work order # 18528787 generated to install propane LEL sensors in the Refrigeration Process Building. Plant shutdown device testing and TX calibrations were done on plant shutdown Oct 17- 18th. Review production tank level transmitter, and gas meter calibration records - Plant Sales FE 1301, Fuel Gas FE-1302, BC Fuel Gas 3B4 FG Buyback, and Back-up Fuel Gas meters had recent calibrations on completed 10/18/2022. BC Inlet and AB Inlet gas meter calibrations were last performed 6/1/22. BC and Alberta Inlet condensate meters had recent proves last done 04/06/22. CNRL could not provide a record at the time of inspection for recent maintenance/calibration of the plant main flare meter. Found some tags on the BC 1 Satellite meters indicated calibrations were last done 11/08/2020. Inspect the gas plant production equipment. Found (1) Fisher 630 regulator on the glycol flash separator in the refrigeration process building not vented safely to atmosphere. Found in the Sales Compressor Building some up and downstream isolation valves on the sales units and on an inlet gas blowdown valve to flare were not locked or car sealed open. Informed the CNRL Assistant Foreman who mentioned there was a recent service and indicated the seals would be installed immediately. Action items: 1. Sales Compressor building - Install locks or car seals on all up and downstream blowdown isolation valves to flare. 2. Plant main gas flare meter - provide a recent record of maintenance/calibration in alignment with the BC Measurement Guideline or calibrate for 2022. 3. BC 1 Satellite meters- provide recent record of calibration or calibrate for 2022. 4. Refrigeration Process Building - Glycol Flash Tank back pressure to flare- Vent Fisher 630 regulator safely to atmosphere.						Central	00008268, 00000921, 00000760		Facility, Pipeline, Well

3-Nov-2022	078805253-001	Canadian Natural Resources Limited	7-Nov-2022		NTS: B 017-I/094-H-01	Yes	Truck	Passed Inspection (Complete)	7-Nov-2022	3-Nov-2022	Planned	The gas plant equipment (choke plant) is shut-in and decommissioned. The K- 2501 compressor is converted to air start. The sales meters FAC 8493 and FAC 8583 are no longer active. CNRL indicated that Receipt Point 802 is used to report sales gas from both b-17-I/94-H-1 and b-74-E/94-H-1. The one sales meter on site is non reporting (used as reference). The Alberta XBorder inlet condensate meter is reading inaccurately and has a work order to repair. Mentioned to operations staff that the isolation valve on PT-101A on Inlet A should be sealed open if there is a high inlet pressure shutdown setpoint associated which closes the inlet ESDV. Mentioned that the flammable gas symbol on the facility sign should be replaced as it is faded. Could not confirm at the time of inspection if the HP and LP flare meter calibrations were done for 2022. Verify fire and gas detection systems are being maintained and had no faults. Found (1) Fisher 630 regulator on the glycol flash separator not safely vented to atmosphere. Action items: 1. Update the facility type from " gas plant" to "compressor/dehy ". 2. Update (2) sales meters status (FAC 8493 and FAC 8583). 3. Tag the sales meter on site as "non-reporting" if using Receipt Point 802 to report sales. 4. Submit HP and LP flare meters calibration records or inspect and calibrate as required for 2022. 5. Repair X-border Inlet-C condensate meter. 6. Replace faded flammable symbol on lease sign. 7. Vent Fisher 630 regulator on the glycol flash tank in the dehy. 8. Inlet-A PT-101A - if high shutdown setpoint closes inlet ESDV then lock, or car seal open the isolation valve for pressure sensing on the instrument manifold. 3-Nov-2022	078812928-001	Canadian Natural Resources Limited	8-Nov-2022		NTS: C 038-G/094-H-04	No	Truck	Passed Inspection (Complete)	8-Nov-2022	3-Nov-2022	Planned	Upon building entry procedures, my personal monitor detected a small amount of H2S inside of the building. I did not enter. -I went to the facility at b-48-G/94-H-4 and spoke with the plant operator inside of the office building. I explained the low H2S findings at the c-38-G well. He looked at his computer and said to me that there was only a 1.8 ppm reading from that building. I explained that a reading of ZERO is acceptable. He said he would look into it. What were the findings of the leak? -I also suggested, that because there is no location signage at the access road for the c-38-G well, only on the building itself (which does meet the regulation requirements), that maybe a location sign could be posted at the beginning of the access road by the facility, or at the beginning of the access road to the b-48-G facility, or both, for the c-38-G well. As the well sits behind the large facility, it is not easily located, as there is only location signage for the b-48-G/94-H-4 facility, except on the well building itself.					Central		37395	Well

8-Nov-2022	078848828-001	Tourmaline Oil Corp.	10-Nov-2022		DLS: 13-25-080-16	Yes	Truck	Passed Inspection (Complete)	10-Nov-2022	8-Nov-2022	Planned	Meet with operations staff. Inspect plant operations fire and gas detection HMI display screens- no faults found. Review recent maintenance records. Verify plant shutdown checks and transmitter calibrations were recently done Aug 8 -13 2022. Production accounting gas meter maintenance records indicate the calibrations are being done on an annual basis. The BC Measurement Guideline Table 2.5-1 Gas Meter Maintenance Frequency states that the maintenance frequency for "gas plant meters used for reporting purposes." is "semi- annual". Perform a walkdown of production equipment. Noted the facility is clean and in good condition - This was relayed to operations staff. Found Train #2 de-butanizer LPG cooler PSV isolation valve was not locked, or car sealed open. This isolation valve was car sealed open on Train #1 debutanizer. Noted that some car seals installed on locking valves did not prevent the valve from being manipulated. The diameter of the wire on the car seal is not sufficient to prevent locking mechanism movement. Recommend installing a lock or a scissor clamp with seal. This was noted on the downstream isolation valves on the fuel gas blowdown valves to flare. Action items: 1. Gas plant reporting meters- update the gas plant PM scheduling to conduct gas plant reporting gas meter maintenance in accordance with the BC Measurement Guideline Table 2.5-1 Gas Meter Maintenance Frequency. 2. Train # 2 debutanizer LPG cooler PSV isolation valve- car seal open PSV isolation valve in accordance with the Oil and Gas Processing Facility Regulation - Maintaining Safety - section 19 (2). 3. Plant Wide - Locking valves for safety devices - ensure the valve cannot be manipulated without removing the car seal.					South	00007936		Facility

16-Nov-2022	078917146-001	Canadian Natural Resources Limited	18-Nov-2022			NTS: D 011-D/094-H-16	Yes	Truck	Deficiencies Corrected	5-Dec-2022	16-Nov-2022	Planned	8 % LEL was present in the inlet separator building. The flare stack had no auto-ignitor and was not lit. Operations staff arrived as the site inspection was concluding. Walk through and review inspection findings with the operator. It was pointed out that the car seals on the float column isolation valves for the fuel gas high level shutdown switch did not prevent the isolation valves from being closed without removing the car seal. The operator indicated these car seals would be redone. Discuss the safety concern and the need to restore pig barrel pressure alert valve (PAV) safety chains to original manufacturer specification (length and properly connect to end cap) to prevent the barrel end cap from being spun and removed without first removing the PAV. The operator agreed and said he would repair the safety chains as required. Noted oil underneath the decking in the compressor building. Action items: 1. Fugitive emissions - 8% methane found in the inlet separator building - quantify, report, and repair gas leaks. 2. Fire prevention - remove oil (combustible material) from underneath the decking of the compressor building. 3. Safety device - ensure all pig barrel PAV safety chains are restored to original manufacturer specification.									Central	000045596			Facility - Active

17-Nov-2022	078924996-001	Canadian Natural Resources Limited	18-Nov-2022			NTS: D 021-L/094-H-09	Yes	Truck	Deficiencies Corrected	5-Dec-2022	17-Nov-2022	Planned	Meet operations staff on site. Walk through the facility with the operator. Noted there was a fair amount of oil underneath the decking of the not in service compressor # 103. Action items: 1. Inlet header building- pig receiving operation - please examine this operation to prevent the venting of methane. In the inlet header the option exists to blowdown inlet line gas and liquids to the tank or to the flare system. It would be best to not normally blowdown inlet lines to tank when pulling-in a pig, as the operation risks venting gas to atmosphere when there will be a lit flare. 2. Compressor # 103- recommend cleaning up oil underneath the decking to prevent spillage.									Central	00004082, 00019489	12085		Facility, Well

17-Nov-2022	078956535-001	Pacific Northern Gas Ltd.	25-Nov-2022				Yes	Truck	Passed Inspection (Complete)	25-Nov-2022	17-Nov-2022	Routine	Routine inspection of PNG bank armoring on the Dasque road as well as quarry's one and three. Quarry three has had signage installed and no current activity during inspection. Site was clean and orderly with one spill tray that appeared to be left behind from machine mob/demobilizing activities. Discussed access control with PNG representatives while sites are inactive and agreed that the placement of large boulders at the entrance of the mine to restrict public access would be prudent. Once complete please provide follow up photos. WSA works under permit 100113959 has been completed and rock fill has been covered with parent material. Discussed decked timber onsite and potential for access by the public and potential fire hazard. Timber will either be dispersed onsite or, if possible, hauled away to minimize the potential for firewood collection, public use, and wildfire potential. WSA works under BCOGC permit #100114987 occurring during inspection. Water quality monitor onsite during inspection. Rock armoring ongoing but nearing completion. No concerns with these works noted during inspection. Quarry one on the Dasque was active and has had signage installed and ERP was provided upon request and reviewed. Minor comments made by the inspector that the emergency contact list did not contain any BCOGC contact information. Also discussed access control while sites are inactive and agreed that the placement of large boulders at the entrance of the mine to restrict public access would be prudent. Once complete please provide follow up photos. Also discussed decked timber onsite and the plan is to have the timber removed or dispersed onsite to reduce fire hazard and the potential for public to enter the site for firewood purposes. No noncompliance noted during inspection.									South				ADGA, CIAS

Much of hill under snow. No concerns noted. - Steep Slope 6D: ditching and prep for installation. Secondary containment maintenance required. - WC-CF005: snow covered at time of inspection - WC-671: reclamation complete. Snow covered at time of inspection. Bridge in excellent condition. All signage in place. No concerns at time of inspection. - WC-51074: reclamation complete. Snow covered at time of inspection. Bridge in good condition. - WC-673: bridge railing broken off onto creek bank. Secondary containment maintenance under light bank required. - WC-674: regular seasonal maintenance required - Hunter Creek Camp: fuel storage locker secondary containment rendered ineffective with plywood. Plywood to be removed. Small spill found under light tower. Cleaned up while on site and spill tray added underneath. Ensure all fuel containers are in secondary containment. Minor general housekeeping required.									South				CIAS, Pipeline Project
22-Mar-2023	079461928-001	Coastal GasLink Pipeline Ltd.	28-Apr-2023			From: NTS: C 006-I/093-I-04 To: NTS: A 077-A/103-I-02	Yes	Truck	Passed Inspection (Complete)	28-Apr-2023	28-Apr-2023	Routine	Section 8 West - Kitimat Town - ROW at KP 659+150: (non-BCER) sed. fence is down, deposition noted in watercourse. Splash guards need maintenance. No active construction on ROW at time. - Pine Creek Trib (660+325): water clear leaving ROW. Regular maintenance needed after snow melt. - WC UN 22-10: pumps in NCD to prevent sediment from entering Pine Creek. ESC maintenance is required at road. - WC UN 22-13: sump above big-O pipe directing runoff to vegetation. Potential maintenance needed at snow melt. - WC 3E-1: pipe recently installed. Backfill is ongoing. - WC UN 22-15: spill tray on angle with hydrocarbon sheen. Multiple secondary containments require maintenance. Water bottles in snow near generators. General housekeeping required. Active fish salvage occurring at time of inspection. Vehicle bridge removed to facilitate installation. Pipe installation occurring to up crossing. - WC 510-73: (discharge location) water running clear. Iron staining noted throughout streambed. Additional discharge location noted ~20m downstream (flowing clear. Placed on gravel bar with plywood and dissipator. Not active at time of inspection). Checked dam #1, functioning well. Additional block nets noted in channel. 2 (non-project related) cars noted as being partially buried in stream channel. No algae blooms. - WC 3002T4: juvenile salmonids noted. Water within guidelines during inspection (~12 NTU). Iron deposition and staining noted. Sand substrate, low flow, and tidal influence. Discussed low D.O in section. No algae blooms. (Transect #3:) same as previous transect. DO okay. No algae blooms. - WC 741.1T: crossing completed. Hole repaired (patched with bentonite). Site still isolated and pump around ongoing (aquadam). Will be isolated until tie-ins completed. Iron staining evident throughout watercourse (inclusive of upstream from crossing). No non-compliances issued.									South				CIAS, Pipeline Project

28-Mar-2023	0794624499-001	Trans Mountain Pipeline ULC	28-Apr-2023			Yes	Truck	Passed Inspection (Complete)	28-Apr-2023	28-Apr-2023	Routine	Anderson Creek: grade on slope complete, ESC measures are in. Evidence of flow in creek but dry during inspection. Geotextile under the bridge has been cut back (removed from high water mark). Additional lock blocks have been placed at approach. BC 705a: crossing to be completed. Bridge has been installed BC- 706a1 and BC-706a2: crossing in at 706a1, wetland being sheetpiled, viewed water treatment and trenchwater discharge area. 706a1 reclamation has been completed and vegetation re-growth has started, willow staked. BC-708 (Nevin Creek): discussed crossing, bridge installed. Pipe not yet installed. Prepping for crosing (trying to bring down water table). Viewed discharge area adjacent to watercourse and discussed de-watering. Gravel bottom in stream and noted as salmon bearing. Peach Creek (BC-716): followed up on sinkhole. Hole is ~5m at widest and ~2m deep. Please provide reclamation plan to BCER after professionals have been engaged. Continue to monitor sinkhole and provide updates to BCER throughout and post freshet. Browne Creek Wetland and BC-719 (Browne Creek): Viewed creek, discussed reclamation, installation complete. Browne Creek and Vedder section tied in. Discussed bridge removal. Viewed past de-watering site for evidence of sedimentation.						South			CIAS

KP 12+720 - Grizzly Creek - This crossing has been mostly completed with the trench and pipe being buried and the rip rap being tied into the existing rip rap that was placed on the older right of way during the last flood event in this area. All work that was completed is well done, there are no concerns here.

P40 - Commotion Creek - Preparation work is being conducted at this time for the open trench across the creek. No in stream works have been completed yet with the exception of a few locations where the ice was cut through to measure water and ice depths. Rip rap is being hauled to the site, all work conducted to date looks good with no concerns. I will be attending this site next week when the in stream work is being done.

Work Spaces: Numerous work spaces were inspected. All were adequately sized. There are no concerns regarding workspaces at this time.
Access:
167738 (diamond willow relocation area) - proper location and proper size

Work Spaces:
167760 and 167776 (Diamond Willow) - both locations in the proper location and of proper size.
167807 and 167813 (P3 Fur Thief) - Both in proper location and properly sized
167762 - blast rock storage, will require ongoing monitoring to ensure proper reclamation of this area
KP 25.5 - Diamond Willow relocation area. Well marked with ribbon and a great job has been done to work with the local Indigenous group to attempt to retain the Diamond Willow trees in this area.
12. Identify all production meter sample points.
13. Change meter identification tag on Dilution Gas FE 4550-2 to "accounting".
14 Submit a revised measurement schematic for entire plant (Phase 1 and 2).

Please reply to OGC concerning the above action items.
5. Include the Watts declaration + punch list in the OGC LTO Commissioning Binder.
6. Perform check when starting sweep gas to flare and setting header sweep gas rates that the main flare meter is not measuring the total header sweep gas.
7. Physically verify that a flare stack pilot flame fail initiates a plant " block and hold".
8. Arrange an inspection once the NGL LACT and booster pump packages are installed.
9. Refrig- Propane Accumulator - Install a load procedure sign.
10. K-600, K-601, K-602, K- 603- Separately vent 2nd and 3rd stg PSV pilot domes safely to the outdoors.
11. Truck Vapor Surge Drum - Vent Cata-dyne heater exhaust hood outside of the enclosure.
16. T-717 Amine Drain, T-711 Amine Surge, T-712 Water Storage – Vent Fisher 912 regulators on Cata-dyne heaters. Disconnect the propane supply to the Cata-a-dyne heater on the water storage tank.
17. Re-target fire detection in the Amine and Refrigeration for optimal coverage. Ensure all fire-eyes are targeted for optimal coverage.
18. Pull all plastic caps on the spring casing vents on Fisher 67CFR regulators.
19. Tighten conduilet bull plugs- Amine Re-boiler, Inlet Separator TSH-10101
20. Install missing pipe bull plug on the H.P flare KO pump discharge.
21. Propane accumulator- move load-line ground closer to the load point.
22. Perform a sensitive leak test on acid injection piping in the acid gas compressor package and where practicable on the plant and acid gas well flowline process piping.
23. Arrange for an inspection of the CI/C4 LACT unit prior to commencing operations.

5. Provide an example of the written record and documentation to show how Amendment condition 19 - VRU 95 % annual operating performance will be monitored and recorded.
6. Submit G3 - Form once commissioning and handover from construction to operations is complete.
7. Inlet separator # 1 and # 2 - Level column isolation valves - car seal open isolation valves.
8. VRU- liquids pump PSV stop valve- Replace broken car seal.
9. Utility and Process Heat Medium BMS Panels - repair faulty low panel purge pressure switches.
10. Submit the signed off Pre-Start-up Safety Review (PSSR).
Visible plume in Moore Creek, coming off the Moor Creek bridge (funneling off Haul Rd.). No ESC measures along most of Haul Rd.
- Large chunks of erosion/scour/sloughing off side of Haul Rd. into utilities corridor. Water then running along utilities corridor below erosion directly into Moore Creek with no ESC measures.
- Large quantities of water (stream-like) running over pullout 2 on N. Haul Rd. Origin/cause appears to be on Chevron property. OGC to follow up with Chevron, then will communicate back with LNGC.
- General facility site was extremely wet with large deep pools of water (up to truck running boards). However, ditches are being dug to drain site into discharge pond.

Positive items:
- Anderson Creek re-alignment and pond: seems to be holding up extremely well despite the heavy rain event
- Turbidity incident site (N. Haul Rd): incident site appears to be in good conditions. Incident no longer visible. Berm and sump being put in, road being re-surfaced to enhance road drainage.
- Pullout 2 (plant side): Creek looking great, spawning salmon in channel. ESC holding up well.
- N. Haul rd (general, above 4 way): No issues found. Road surface clean.
- Water discharge pond: still lots of freeboard left. No concerns.
- Fish salvage operations: RP Bio/Lead provided excellent information regarding the fish salvage operation and measures taken to prevent fish mortality. No issues or concerns at this time.

JFJV/LNGC has not yet conducted any audit of its Weld Console program to assure the quality of weld input data is correct as required by Project Quality Plan. (quality plan site and module yard (L001-00000-QA-5798-2101_R0))

- JFJV has not yet qualified WPS and PQR for site welding. Missing information in welder qualification/tests.

- No approval status available for special quality control processes for site such as painting, coating, insulation, welding, perlite, pneumatic testing, hydrotesting, pre-commissioning, commissioning and cool down etc. with the team.

An FTP site will be set up and permission granted to a designated audit respondent to upload the audit response with supporting documentation, records, and reports. The OGC KERMIT system will be used to track permit holder responses and correspondences. Following the audit submission and review, a Follow-up Audit Inspection Report will be generated to communicate findings and action items if required.

An Information Request will be submitted for a detailed water management plan for this area. It was also observed that there is a lack of monitoring of the water lines and pumps.
KP 301+892, WC 309, an S3, sloughing on the East slope to the water course but not entering the water course at the time of the inspection. A plastic flume has been installed to prevent soils from entering the water course. Water Quality Monitoring is in place. Plans for slope repair are to be completed by a QP prior to work commencing.
KP 302+535, NCD 325, minimal ESC on slopes consisting of Aspen Wattles, travel lane on the West slope was covered with mulch and left open.
KP 322+200, WC 326, an S3, sloughing on both slopes, fish salvage underway at the time of the inspection, water quality monitoring in place.
KP 325+000, sloughing on ROW, contained to the ROW.

KP 552+570, BC-74a, S6, restored channel with existing 900 culvert in place that was not disturbed by pipeline construction
KP 552+610, BC-74b, S6 restored channel that joins BC-74a and flows into existing 900 culvert not disturbed by pipeline construction

Action Item:
1) Ancillary access # 0162068, operator has not provided the spatial data at the time of the writing of this inspection. Please ensure that the data is provided to OGC on or before August 31, 2021.
2) BC- 69, Please provide stream classification documentation that supports the on ROW construction work as non-fish bearing. Please provide the requested information to OGC, on or before August 31, 2021.
3) BC 74a and BC 74b, signage indicates both are S6 classification. Signage also indicates they are fish bearing, the S6 classification is non-fish bearing. Please provide stream classification documentation to support the ROW construction work as non fish bearing.
LNG Loading Line - Cantilever bridge
- Piles 35 and 36 observed from cantilever bridge
  - Pile records associated with installation requested
    - Verifications later completed. No issues.
- Bent 08 observed from cantilever bridge
  - Identification marks recorded (HS-TR-08-2 TYPE 3) and bolt torqueing records (including calibration records) requested
    - Verifications later completed. No issues.
  - Weld records requested for Bent 08 cross bracing.
    - JFJV provided a statement confirming that non-destructive testing was not carried out after the installation of Bent 8 bracing prior to the coating activities commencing as required by section 6 (Welding) of the Inspection Test Plan for Structural Bracing Installation (L001-06600-QA-5733-2206).
    - As per subsection 9(1)(a) of the LNG Facility Regulation before beginning operation an LNG facility permit holder must do "test the components and systems of the facility in accordance with CSA Z276". As per clause 4.3.2 of CSA Z276-18, a permit holder is required to "establish the required level of quality assurance for each component". Also, as per clause 4.5.3 of CSA Z276-18, "the quality assurance program should ensure that the … acceptance tests, and installation of components are in accordance with the provisions of this Standard". As per the quality assurance program submitted to the Commission prior to LTC, the LNG Canada Inspection Test Plans must be followed.
    - Submission of the retesting records for the Bent 08 Weld after removal of paint is required.

KP 199+700, discussed with operator having the EI assess for sediment off ROW
KP 199+600, discussed with operator having the EI assess the upper bank on the ROW where there is some slumping occurring.
KP 191+762, WC 2128, trench sloughing, Deficiency has been issued previously.
KP 191+682, WC 207, S2, clear span with ESC, only one approach to bridge remaining, bridge is scheduled for removal with in two weeks.
KP 190+150, Old Mill site (CN/Parsnip contaminated site), 3 contaminated soil piles, WQ monitoring in place, application is at OGC for review.
Field Auxiliary Room, FAR030:
- Ongoing installation / construction in area
- Fire alarm system, requested CAN/ULC-S537 verification records. Reviewed section C6.5 deficiencies and requested documentation confirming deficiencies are tracked for future action. - Humidity data logger (for preservation), requested a copy of the calibration record. Noted that these are off the shelf items which come packaged with a calibration certificate, sample demonstrated. - No non-compliances identified - FOLLOW-UP: Pending submission, evidence that CAN/ULC-S537 section C6.5 deficiencies are tracked for future action.
KP 636+080, BC 205A, NCD, culvert with geo lined channel and matted crossing
KP 636+210, BC 205B, wetland, culvert installed with matted crossing and geo lined channel
KP 636+470, BC 205C, NCD-W, culvert installed, matted crossing, ends of the culvert are damaged and water is flowing under the matts, maintenance is required
KP 636+660, BC 206, NCD, culvert with matted crossing, no concerns noted at the time of the inspection
KP636+810, NCD, culvert with matted crossing, no concerns noted at the time of the inspection
KP 636+990, BC 206B, NCD + WL, culvert installed and matted crossing, ESC installed, no concerns noted at the time of the inspection
KP 637+060, BC 207, NCD, culvert with matted crossing, ESC installed, no concerns noted at the time of the inspection
KP 637+150, NCD, culvert with matted crossing, ESC installed, no concerns noted at the time of the inspection
KP 637+240, BC 209, S6, matted crossing with a gravel and geo lined channel, no concerns noted at the time of the inspection
KP 642+690, BC 222A, NCD, NCD features removed from ROW, discussed with the operator features are to be re-established, pump off to standing water along highway ditch, discussed with the operator pump off to stable surface only
KP 643+260, BC 224, S2, Sundt Creek, isolation crew prepping the creek, there were no concerns noted at the time of the inspection.
12. Verify with Arc Resources production accounting (PA) if the two meters on the disposal pump discharge can be used as reference (non-account). The meters at the disposal wells should be used to report the disposal volumes.
13. Submit contact information for the person responsible for the Pembina LACT Unit commissioning.
14. Inlet Separator Building- Install ESD push button cover on the west door ESD.
15.Recycle compressor- Install sight glass guard on the lube oil day tank.
16. Propane Refrigeration Building. Perform HAZOP Review of propane sensor placement. Found mounted in 4 corners of the building and not in close proximity to the refrigeration compressors.

Please reply to OGC
e) Gathering system and sales pipeline schematic.
11. Conduct a HAZOP to examine the risk of ESD failure due to a freeze off or blockage in the restriction that is on the discharge side of the quick release on the inlet and outlet ESDVs in the inlet area.
12. Install grounded spill catchers on pigging valve senders and receivers in the inlet /outlet area.
13. Identify the product in the production tanks.
14. Check with Engineering as to whether isolation valves on PCVs that are connected to the flare header that double as blowdown valves in an ESD condition should be locked or car sealed open.
15. Prior to commencing operations ensure all PLC forces are removed. If a PLC force must remain once the facility is in operation then authorization is given and it is logged.

Please reply to OGC concerning the above action items. Thank you to all that participated to make this a satisfactory inspection.

Bioassay or an equivalent value determined by another bioassay method approved by a director, (v) the liquid is discharged at a rate at which there is no accumulation of effluent on the surface of the ground, (vi) the discharge does not cause erosion or result in measurable downward and outward movement of soil, rocks, snow, ice, mud or debris, and (vii) the discharge is on to a stable slope.
(3) The operators who are authorized to discharge the wastes referred to in subsection (2) (e) must (a) (i) obtain written consent of the land owner for any discharges of waste to private land, (ii) analyse the discharge for the parameters listed in subsections (2) (e)(ii), (iii) and (iv) before each discharge and record that analysis, (iii) record the volume of discharge after each discharge, (iv) retain, for a period of 5 years, all records specified in paragraphs (ii) and (iii), and(v) make those records available for inspection by an officer.

(c) the permit holder has established and documented work procedures sufficient to ensure that the operation can be conducted safely, and
(d) the operation is conducted in accordance with the procedures referred to in paragraph (c).

CIAS, Pipeline

Erosion occurring in the northwest corner from the well site onto adjacent private land
O&GWR 7(2)(e)(vi) Subject to subsection (3) and section 8 of this regulation, the operators of equipment or facilities are authorized to discharge to land the following wastes:
water used in hydrostatic pipeline testing, accumulated precipitation in flare pits and surface runoff from sites associated with equipment and facilities identified in sections 4 and 6, if the discharge does not cause erosion or result in measurable downward and outward movement of soil, rocks, snow, ice, mud or debris. (3) The operators who are authorized to discharge the wastes referred to in subsection (2) (e) must (a)(i) obtain written consent of the land owner for any discharges of waste to private land,

C-D 55 A well flow line leak near the meter building immediately after the PSV line
D&PR 50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes.
High-Lows missing from the active wells; however, during a follow-up inspection on August 17, 2017, Hi-Lows were being installed, and AMOT/ suspended well issues on site had been dealt with.

CIAS, Pipeline

D&PR 15 (3) A well permit holder must ensure
(a) that the well site is maintained in a condition so as to minimize hazards, including but not limited to hazards associated with pits, holes, storage of materials and equipment, and (b) that the well site is free of garbage, debris and unused equipment.

Definition of unused equipment:
"unused equipment" means equipment, at an oil and gas activity site, that
(a) is related to a decommissioned activity,
(b) is dismantled or partially dismantled to render the equipment inadequate for use,
(c) is in a derelict condition, or
(d) has been inactive for 10 years or longer,

16-Sep-22	2023-1292	LNG Canada Development Inc.		TRUCK	COASTAL	Completed	In Compliance	Major Project	* South Haul Rd/Estuary area: some minor garbage, crew picking up while on site * HVL Pad and kink pad: minor garbage, rag to be removed from creek (update has been provided since inspection) * Moore Offset: works complete * Anderson Creek: gravel has been removed at side channel inlet. * KRSC: functioning well, no concerns * North Haul Rd: no concerns. Discussed drainage. * LNG Tank area: garbage and food waste on site. Area to be cleaned up. * Train 1 area: garbage has been cleaned up since last inspection. Area very tidy. * General facility area: general construction garbage and debris to be picked up.										
29-Sep-22	2023-1290	LNG Canada Development Inc.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Inspection Date: September 29, 2022 (PART 2) The following items were inspected and observed during a routine technical inspection. Condensate Pumps * Per P&ID, condensate pumps have commissioning mesh installed in suction strainer * Requested details that mesh was installed as specified * Evidence provided, no concerns * Requested information on planned timing for removal or description of how this task will be transitioned to operations if not removed * Statement provided indicating strainers will remain after RFSU. Progressive removal and replacement by LNG Canada as part of operations activities. * No concerns. Refrigerant Piping * Reviewed 4 sections of refrigerant piping which can be isolated via automated valves and are not equipped with TRVs * Drain valves were noted to be accessible on all 4 piping runs * Back-to-back dissimilar check valves were tagged with "Class 1 Check ValvE – Safety Critical". Requested: * Demonstration that the valves were included on the Safety Critical Element equipment list * Check Valves managed within the broader SCE of the piping system * No concerns * Records of testing at the module yard or vendor shop * Records show that fabricator verified orientation of valves. No further testing described. * Confirmation as to whether these valves would be tested routinely by operations * Statement provided by LNG Canada indicating their intention to develop a risk-based and condition based inspection and testing program for critical check valves. Statement also includes design intent for critical check valves (e.g. preventing backflow, PRV sizing). * No concerns. * Some control valves were equipped with plates indicating "Warning Trim Size Impacts Relief Sizing". This is consistent with P&ID Note										
29-Sep-22	2023-1290	LNG Canada Development Inc.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Stub Piles * Discussed process of making up connection between the module and stub piles * Noted different designs of supports * Clarification that the design varies based on loading * Noted shims between module and stub piles * Shim height defined by surveys prior to sail away * Noted double nuts on bolted stub piles * Reportedly snugged tight, no tensioning or torquing * Requested QA Pack for a stub pile on A1EJ Gridline D3 for review * Information provided * No concerns General * Information was provided comparing design accelerations from sea voyage to actuals. * Actuals noted to be lower than design * Digital copy of records requested for A1ED and A1EJ * Records shared * No concerns * Housekeeping and garbage noted to be improved compared to prior inspection										

29-Sep-22	2023-1289	LNG Canada Development Inc.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Inspection Date: September 29, 2022 (PART 1) The following items were inspected and observed during a routine technical inspection. LNG Tank & Area * Entered the tank at the 0° ground level entrance. Active installation of 9% Ni plates ongoing via elevated working decks. Portions of the floor had been built up with layers of insulation and tank floor material. CS vapor barrier exposed at higher elevations. Suspended tank roof in place complete with penetrations for pumps, instrumentation, and relief systems. * Observed course 1 of the 9% Ni plates * Discussed requirement for NDE following removal of platform support brackets. Requested NDE reports for plate H19 on course 1. Markings around the bracket location indicated PT was completed in February 2022. * PT report submitted by JFJV noted to be dated October 14, 2022 * BCER requested copy of report for work completed in February 2022, consistent with markings on plate * JFJV provided updated NDE report indicating that a reports for the February 2022 inspection were not completed. Inspection was repeated and documented October 14, 2022. * BCER requested further information which detailed inspection requirements at the time of platform clip installation (e.g. procedures, specifications, work packs, drawings) and results for plate H19 Course 1 and H07 Course 1. * JFJV provided NDE Procedures and Procedure discussing temporary attachments. Procedure specifies VT and PT following installation of clips. Procedure does not discuss documentation of inspections. JFJV subsequently indicated that installation NDE inspections are expected to be performed, but results are not required to be retained. JFJV has updated the provided procedure to clarify expectations around documentation of inspection results. * JFJV provided installation VT reports and supporting rationale for report date (January 2023) * No additional concerns.										
29-Sep-22	2023-1289	LNG Canada Development Inc.		TRUCK	COASTAL	Completed	In Compliance	Major Project	* BCER requested further information which detailed inspection requirements at the time of platform clip removal (e.g. procedures, specifications, work packs, drawings) and results from plate H07 Course 1. * Procedure provided which indicates requirements for NDE following installation. Code requires removal inspection. Results expected to be retained. * Results from H07 Course 1 pending clip removal; noted for followup by JFJV when available. * Climbed scaffold staircase at ~180° position in tank to active working deck. * Evidence of weld repairs noted on horizontal and vertical plate welds * Requested welding and NDE records for welds C7-V-01 (in) and C7-V0-01 (out) * Information provided; no concerns * Requested welding and NDE records for horizontal plate weld * Records for CSC6-H-21 provided showing repair process; no concerns * Requested project-to-date weld repair data and trend for 9% Ni plates * Weld repair rate provided; no concerns * Descended stairs to tank floor * Requested demo of digital tank drawing PC * unit appeared to be out of service * Exited tank * Observed tank-roof modules prior to placement * No concerns * Observed pump column assemblies * No concerns * Walked around tank perimeter to gauge house keeping and garbage * Improved housekeeping compared to previous inspection Modules A1EJ and A1ED * Walked from parking lot to modules of interest and accessed same via staircase Condensate Coolers * PID note indicates cooling water outlet valve to be car sealed open for overpressure protection * Car seals have not been installed, no evidence of field tagging * Discussed that valves may be required to be operable during commissioning activities * Requested JFJV to seek statement from operations on process and timing of car seal installation * Statement provided. Car Seal register in development. Installation is a final commissioning activity, just prior to Ready For Start Up (RFSU) milestone * No concerns.										
20-Oct-22	2022-0031	Tourmaline Oil Corp.		TRUCK	CENTRAL	Completed	In Compliance	Risk & Data Informed	I originally entered this inspection previously (#078580717-001), but I keyed in wrong location. I mistakenly entered d-38-A instead of c-38-A with a comment in regards to finding a gauge on the surface casing vent. It was brought to my attention that there may have been a mistake. After looking back at my notes, I did an inspection at c-38-A/94-H-4 on October 20, 2022 and not at d-38-A/94-H-4. Sorry for the confusion. It was a keying error by myself.										
20-Oct-22	2022-0031	Tourmaline Oil Corp.	From NTS: D- 038-A/094-H-04 To NTS: C- 038-A/094-H-04	TRUCK	CENTRAL	Completed	In Compliance	Risk & Data Informed												
3-Nov-22	2022-0114	Canadian Natural Resources Limited	NTS: B- 017-I/094-H-01	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program		OGAA	DRPR	53(a)(ii)	(ii) each product stream used for reporting purposes at a facility, and	1. No fuel gas buy-back meter. The concern is when the facility is flat (de-pressurized) and has to take sales gas to repressurize the fuel system, and start up. Fuel gas buyback would affect the monthly gas volume reported in Petrinex (the disposition) for battery (BCBT 0004070).	364					
3-Nov-22	2022-0030	Canadian Natural Resources Limited		HELICOPTER	CENTRAL	Completed	In Compliance	Officer Selected	There was an aerial inspection conducted on November 3, 2022 and based on what was observed there are some questions the OGC would like to ask; * Was there a deactivation plan written for this road? * Who is the Qualified Person who supervised the work and what is their experience? * Who did the deactivation work? * What criteria was used to determine the type and extent of deactivation? * Were there any concerns or comments from local Indigenous nations, users of the road or the Peace Forest District Office? If so , what measures were taken to address any concerns or comments? * How does this deactivation meet section 24(f) of OGRR and/or section 19(1)(c) EPMR? * What is the plan for ongoing monitoring and final determination of restoration success? Could you please provide the answers to BCER by the end of the day on December 14th 2022. Thank you Due to system limitations this inspection will show as a PASS, however, this is an information request.										
3-Nov-22	2022-0030	Canadian Natural Resources Limited	From NTS: C- 014-L/094-G-02 To NTS: C- 033-L/094-G-02	HELICOPTER	CENTRAL	Completed	In Compliance	Officer Selected										98		
3-Nov-22	2022-0246	Canadian Natural Resources Limited	NTS: A- 057-H/094-G-03	HELICOPTER	CENTRAL	Completed	Non-Compliance(s) Found	Officer Selected	This well site was visited by helicopter on November 3 2022. The road was noticed to have been fully deactivated in Nov 2021. The OGC did not receive any notification or declaration of the road deactivation activity as a result the well site and road could not be visited prior to the removal of ground access.	OGAA		21(b)(ii)	(ii) a permit issued to the person, if any, and	This wellsite and a portion of the road are within the Upper Sikanni Management Plan Area (USMP). The USMP was assented in 1997 to become a legal document and includes oil and gas tenures that previously existed. From the flight on Nov 3rd 2022 it was noted there was no coarse woody debris nor slash piles over most of the well site. The woody debris was limited to the fill slope. The USMP states the wildlife habitat must be equal to or better than the habitat that existed prior to the oil and gas activity. While being viewed under snow conditions, it was difficult to see if the well site, associated disturbances and the portion of the road within the USMP were planted with trees and shrubs. It was noted in SNC Lavalin's plan that planting of trees would augment that of existing woody vegetation and that a layer of mulch/woody debris be of assistance in establishing vegetation. Could you please confirm if these step were taken? What is the rooting depth on the lease and will that impact the ability of this site to at least provide equal habitat values that existed prior to the disturbance?			838

19-Nov-22	2022-0035	Trans Mountain Pipeline ULC	From NTS: C- 050-L/092-I-01 To NTS: D- 073-I/092-I-02	TRUCK	LOWER MAINLAND & VACOUVER ISLAND	Completed	In Compliance	Major Project	Inspection of spread 5A, conducted on November 18 & 19, 2022, with the operator. KP 857+060, Wet Land Complex 47 + 47A, Matted travel lane with culvert, amphibian area with a snake fence to prevent amphibians from entering the work area. KP 899+830, BC 473, S5, Klup Creek, sheet piled downstream, matted and capped travel lane / crossing. In isolation sandbags upstream (discussed no poly with sandbags), 3" submersible pump to diffuser downstream, trench pump to filter bags in secondary containment. KP 898+000, WT 16A, travel lane with ESC and amphibian fencing. KP 900+850, BC 474, NCD, KP 901+700, WT 651.1, travel lane with ESC KP 912+800, S2, Clapperton Creek, active clearing / grade work to within ½ a meter of the stream. Discussed with the operator that the stream should be in isolation if doing instream work. Discussed with the operator the requirement to have ESC in place while working in close proximity to the stream. WQM in place 70m upstream and 100m downstream with grab samples at 50, 70, and 100 meters downstream. temporary installation of water-gate dam to check operational capabilities. A second site visit was completed on November 21, 2022, at the time of inspection 2 pumps were instream in fish bearing water. The pumps were not fish screened appropriately and were in 5-gallon plastic buckets with 1" hole drilled in them. The pumps were not active at the time of the inspection. Discussed with the operator the requirement to meet DFO end of Pipe intake requirements as required by the permit. Operator stated pumps were not going to be used until fish salvage was competed. KP 914+670, BC 485, S6, culvert with ESC KP 914+850, BC 485A, NCD, culvert with ESC 915+010, BC 486, S3, Shuta Creek, clear span bridge with ESC KP 966+230, BC 558, S3, cannel diverted to cross the ROW at 90 degrees, matted airbridge over line 1, discussed depth of cover over line 1 WC at this location with the operator.								167

21-Nov-22	2022-0235	Canadian Natural Resources Limited	NTS: C- 033-J/094-G-03	ATV	CENTRAL	Completed	Non-Compliance(s) Found	Officer Selected	This new CMIS inspection replaces KERMIT inspection 078866047. The re-issuance is due to the site being located in the Upper Sikanni Management Plan Area which has a higher standard of restoration and is a rework of a recently restored well site. An extension was also request by CNRL until Sept 30 2023 due to only winter access for heavy equipment and a helicopter or ATV access for tree planting, shrub establishment enhancement and assessment of germination success in the fall of 2023.	OGAA		21(b)(ii)	(ii) a permit issued to the person, if any, and	This one inspection replaces KERMIT inspections 078866047 (permit conditions in regard to restoration) and 78124899 (open mouse hole not permanently abandoned). Extension requests have been received from CNRL in KERMIT and will or have been approved and will have them submit the extension requests again to the new CMIS inspection. This well site has been reclaimed and revegetated, however, there is a shortfall in the revegetation that has taken place. One resource material that has not been referred to in the Sikanni Area Based Closure Program are the Habitat Impact Assessments and Mitigation Measures that were part of the application process for wells in the Upper Sikanni Valley / Muskwa-Kechika Management Area. This document is on file at the Oil and Gas Commission. There will be other well sites and roads within the Upper Sikanni Valley Management Plan that may also have these mitigation measures as noted above. The oversight is found in the Mitigation Measures Table 1 (page 21) under Section 5 that states " Reseed and reclaim well sites and roads with seed Mix #1 and local tree and shrub transplants. It is the local tree and shrub transplants that are missing on the revegetated leased will need to be planted on the road when the time comes for final restoration. The ability to provide "transplants" might impact the natural revegetation that has taken place on the road right of way and other tenured areas. There may be some options to consider such as planting of tree stock that meets the provincial tree seed transfer guidelines and this could be discussed. The shrub component would also need to be addressed. The lease surface is rather smooth and has resulted in movement of fine soil particles resulting in rills, exposing gravels and cobbles which reduced the available area for revegetation. While logs were distributed around the lease, brush piles as described in the Upper Sikanni Valley Management Plan are absent. It is recognized that native seed has been utilized in revegetating the lease and reflects the transition away from the traditional agronomic seed mix that was common when the Upper Sikanni Management Plan was initiated.			1537		
21-Nov-22	2022-0235	Canadian Natural Resources Limited	NTS: C- 033-J/094-G-03	ATV	CENTRAL	Completed	Non-Compliance(s) Found	Officer Selected		OGAA	DRPR	15(3)(a)	(a) that the well site is maintained in a condition so as to minimize hazards, including but not limited to hazards associated with pits, holes, storage of materials and equipment;	The entire lease fill slope was pulled back but the mouse hole was not deal with at that time when heavy equipment was on site. The mouse/rat hole was also not filled in as identified in my inspection in July 2022. It was discovered in the fall of 2022 on a follow up inspection that a steel plate was placed over top of the hole and a shallow amount of dirt placed on top. This is not an acceptable practice as it does not address the long term hazard risk especially when the well site is undergoing permanent restoration. Steel rusts and will fail, revealing the hazard once again. Upon pulling the casing or permanently filling in the hole, please take and submit a picture of the gravel, dirt etc. that completely fills the hole plus extra for settling. Upon receipt of the picture with a date stamp the deficiency status will be reviewed.					
22-Nov-22	2022-0018	Trans Mountain Pipeline ULC		TRUCK	MID	Completed	In Compliance	Major Project	Inspection with the operator of POD 15, located in the Mad River. The intake is located in the river and has adequate fish screening. The POD was not actively pumping water at the time of the inspection. The water level of the river is below the minimum requirement for this POD of 0.3 meters as is required by condition 9B of the permit. This was discussed with the operator and the intake was pulled from the river.										100115308

29-Nov-22	2022-0024	Coelacanth Energy Inc.	DLS: 10-08-083-16	TRUCK	CENTRAL	Completed	In Compliance	Complaint	Area noise complaint. I checked the drilling operation at b10-8. Normal and expected sound levels on lease.						25					
29-Nov-22	2022-0024	Coelacanth Energy Inc.		TRUCK	CENTRAL	Completed	In Compliance	Complaint												
29-Nov-22	2022-0023	Coelacanth Energy Inc.		TRUCK	CENTRAL	Completed	In Compliance	Complaint	New lease construction. Local area landowner complaint of noise. Several pieces of heavy equipment working on site. Reverse alarms have been disabled and the tree clearing is completed which was the loudest portion of the job. Completion will be about 10 days and then the rig will be on site. Talked to the area foreman and landowner.											
29-Nov-22	2022-0023	Coelacanth Energy Inc.	DLS: 13-18-083-16	TRUCK	CENTRAL	Completed	In Compliance	Complaint									73			
29-Nov-22	2022-0083	Trans Mountain Pipeline ULC		TRUCK	LMVI	Completed	In Compliance	Major Project	Routine inspection of the Trans Mountain expansion project on November 29, 2022. Fraser River drill exit location. HDD is complete, site is clean and orderly. Viewed Coquitlam creek BC 780-A1 sheet pile removal. Sheet piling that was installed to contain IFR has been removed. Also inspected Bore Bays for direct pipe under BC 780-A1 which was inactive and no pumping occurring at time of inspection. Inspected Cement box culvert crossing at BC 780-A3 and adjacent Bore Bay facilitating highway bore crossing. Bore bay currently being dewatered. Checked discharge area into BC 780-A3 and recommended minor scour protection around discharge location and noted that a dissipator is currently being used. Hydrocarbon sheen noted in and around discharge location as well as the cement box culvert crossing. Could not find any project related inputs during inspection. BCOGC would like to request: -Previous to November 29th water sampling lab results and next water sampling lab results post November 29th that are taken from the Bore Bay discharge activities into BC 780-A3. -Follow up on what clean up activities have taken place since the hydrocarbon sheen was noted. Dawes Creek BC 780-B sheet pile installed, excavations ongoing. Dewatering (wellpoint) discharging into adjacent intertidal culvert, no concerns noted. Holmes Creek BC 783-B construction and reclamation complete, coarse woody debris utilised in the crossing reclamation. Road access being monitored for the potential of surface run off entering the stream. No concerns noted. Austin Creek BC 784-A crossing complete and in-stream reclamation complete. Minor works still required on upper slopes, to be completed once construction commences in the area again. No concerns noted.											

29-Nov-22	2022-0083	Trans Mountain Pipeline ULC		TRUCK	LMVI	Completed	In Compliance	Major Project	WC 783-A7 S6 that flows into Holmes creek. Stream is isolated and dam and pump in place, very little flow at time of inspection. Active works on steep slopes above bore bay. Discharge into poly lined section of stream above Holmes creek. No concerns noted. Stoney Creek BC 785. No instream works occurring nor is there any impact on the watercourse. Storm drains in and around construction protected from any potential sediment leaving the site. Trench water treated and being discharged into storm drain as per approval from the City of Burnaby. Leoran Creek (Brook) Crossing and restoration complete. Braided channel left intact and not impacted by isolation. No concerns noted. Fraser HDD entry side. HDD complete, clean up and demobilization ongoing. Area clean and orderly, snowing at time of inspection. No concerns noted. Overall, no non compliance noted during inspection											100084453

1-Dec-22	2022-0197	Trans Mountain Pipeline ULC	From NTS: D- 012-K/092-H-04 To NTS: D- 077-H/092-G-02	TRUCK	LMVI	Completed	In Compliance	Major Project	Routine inspection of TMEP Section 6 on Dec. 1st, 2022. - Viewed Peach Creek inadvertent fluid release. Streambed has appeared to have collapsed and fluid release contained within the collapsed area. Area is currently being monitored for further environmental impacts but is considered stable at time of inspection. Discussed clean up options, fish, and aquatic considerations as well as potential cultural heritage values with onsite EI. * MSDS sheets for fluids used during the drill were provided to BCER as requested on site, prior to inspection filing. No further action required with this request. * Fluid release walk logs for late November 26th-29th provided to BCER as requested on site, prior to inspection filing. No further action required with this request. * Turbidity records for the incident provided to BCER as requested on site, prior to inspection filing. No further action required with this request. The BCER would like to request: * Provide the BCER with the clean-up plan, once developed, as well as notification when clean up works are to occur. - Brown Creek wetlands, direct pipe works were halted at the time of inspection due to mechanical issues. Drill has approximately 100m remaining until complete. A two-lane bridge crossing has been established across BC 719 to access to the entry pit. No impacts noted to stream BC 719 during installation of bridges. Discussed bridge safety and signage during inspection. - Street Creek BC-720 Bridge crossing established and stream reclamation complete, salmon noted in stream during inspection. Construction occurred within the stream but pipe installation was unsuccessful, and alternative crossing methods will need to occur. Discussed bridge safety and signage during inspection.											
1-Dec-22	2022-0197	Trans Mountain Pipeline ULC	UTM: 10N 588624.926E 5447835.691N	TRUCK	LMVI	Completed	In Compliance	Major Project	BC 712b Cranberry field, dewatering activities active at time of inspection. Sheet piles in place as well as upstream and downstream dams on the watercourse. Amphibian and fish isolation in place, stream dry and frozen at time of inspection. Pipe strung and welded and ready to install which will occur in approximately one week. - BC 705 Anderson Creek, pipe installed, and stream banks have been reclaimed, minor ESC touch-up requested prior to snowmelt onsite. Also requested that downstream signage be removed/replaced out of high-water mark prior to flows commencing in the stream as well as extra Geotech fabric noted under bridge crossing. It was mentioned that the stream, despite onsite indicators, does not flow often, even after significant rains. Discussed bridge safety and signage during inspection. - No non-compliances noted during inspections.

2-Dec-22	2022-0248	PETRONAS Energy Canada Ltd.		TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	In May 2022, I requested the annual and 3 year bridge inspections from oil and gas companies in my inspection area. Aside from the bridge going to the well site at d-97-I not being inspected on a regular basis as the asset was unknown to Petronas, the annual and 3 year bridge inspections are in compliance with the frequency as described in the Oil and Gas Regulations. Each bridge has comments from the engineer as to the maintenance requirements. In 2023, some of those bridges will be inspected by the BCER to ensure maintenance is being addressed.									7470			
2-Dec-22	2022-0076	Tourmaline Oil Corp.		TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	In May 2022, I had requested the annual and 3rd year bridge inspections from Tourmaline as part of a review for all companies in my inspection area. The main goal was to determine compliance with the Oil and Gas Road Regulation and the Environmental Protection Management Regulation. Upon review of your submissions and visiting the 3 bridges (13 road, km 8; km 1.5 and 2.5 Gundy trunk) I have determined that your bridge inspection plans are in compliance with the frequency of inspection and overall in good shape. The km 8 bridge on the 13 is generally only used by your company and contractors and as a result there is less attention to it for grading the approaches etc. There are some of the grouting that is recommended by the engineer to ensure the longevity of the support structures for this bridge. From my site visits and observations I would recommend that any erosion or dirt coming off any of your bridges be corrected and then you maintain compliance with the Environmental Protection Management Regulation.											
2-Dec-22	2022-0196	Vancouver Airport Fuel Facilities Corporation		TRUCK	LMVI	Completed	In Compliance	Major Project	Site visit to marine terminal. * Viewed site and discussed further works to occur. * Piping receiving touch up paint * Firewater system nearly complete * Some ground/final grade work to occur * Discussed security and site management. * Site was found to be in good condition. Good housekeeping. * No non-compliances noted.											
2-Dec-22	2022-0131	Ovintiv Canada ULC	From DLS: 16-27-079-16 To DLS: 14-29-079-16	TRUCK	SOUTH	Completed	In Compliance	Incident	This inspection is to correct errors in original inspection 2022-0081 Dispatched to Ovintiv 16-27 to 14-29-79-16 W6M pipeline to inspect methanol water release during pipeline pressure testing. At the time of the site visit it was unknown as to the root cause of the flex steel pipe failure. The pipeline release occurred when a PIG was being sent through the line and filled with the water/methanol mix. The line was pressured to 1050psi when the failure occurred. Follow up to be conducted once pipe excavation occurs. OGC was on-site to inspect clean-up operations.

The compressor starter gas discharge was not connected into the flare system.						
6-Dec-22	2022-0152	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	In Compliance	Major Project	Inspection with the operator on December 6 & 7, 2022, of Section 2 from KP 144+000 to KP 159+000. Bridge decks were generally found to be packed with snow and required cleaning. KP 144+000, crew pioneering access KP 144+375, WC 131C, S4, crew installing ESC on travel lane and preparing clear span bridge for installation. Piles for bridge are installed. KP 144+656, WL 1747, travel lane corduroy, geo fabric and rock cap. Crew installing ESC at the time of the inspection. KP 144+711, WC 131.1T, S4, clear span with ESC, the ESC requires maintenance as discussed with the operator. KP 145 to 146 approximately, drilling and blasting crew working KP 145+115, WC 132, S3, Claer span with ESC (permanent bridge) , Temporary bridge is still installed. Discussed removal of the temporary crossing with the operator. KP 145+200, NCD, no signage in place discussed with the operator, culvert in travel lane. KP 146+400, WC 134, NCD, culvert installed in the travel lane with ESC. KP 146 to 149 approximately, grade crew working. KP 146+466, WC J147.96, S6, culvert installed in travel lane. KP 146+504, WC J147.98, S4, clear span with ESC KP 146+600, WC 135.1F, S6, clear span with ESC. KP 147+530, WC J152.01, S4, clear span with ESC. KP 147+785, WC J153.03, S4, clear span with ESC. KP 147+885, WT 139T and 138T, S6, clear span with ESC KP 148+184, WC 140, temporary bridge still active with the permanent bridge partially installed. KP 148+380, WC 141, S4, clear span with ESC. Permanent bridge is installed, and the temporary bridge is still installed and actively being used. Discussed with the operator removal of temporary bridge.								14118			

6-Dec-22	2022-0152	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	In Compliance	Major Project	KP 149+250, active shoofly, OGC access number 00097705 KP 150, grade crew working KP 152, drilling and blasting crew working KP 153+400, WC J169.01, S6, culvert in the travel lane with ESC. KP 154+700, WC 143, Anzac River, initial bore deflected on exit and was pulled back. Bore bays are being modified for a deeper bore profile. Trench pumps are to filter bags in secondary containment. 6 active well points are to filter bags in well vegetated area. Trench has a ramp for wildlife egress if needed. Entrance is sheet piled with cross members and the exit is slide rails. Currently a rock drill and excavator are working the exit side making modifications. The 3 aqua dams are still in place with no issues to date. KP 157+300, At approximately kilometer 31.5 on the Crocker FSR, RE-430.1. Soils are being stockpiled from the ROW. An information request will be submitted for clarity on the authorization to use this area. KP 158+362, WC 152, S5, clear span bridge with ESC, a retaining wall has been constructed to prevent stockpiled soils from entering the S5. KP 158+418, WC 701, NCD, a no contact culvert has been installed on the ROW and under the travel lane. KP 158+518, WC 153.1C & J199.19, NCD, no contact culverts have been installed on the ROW and under the travel lanes. KP 158+556, WC J192.01 & 153.2E, NCD's, no contact culverts have been installed on the ROW and under the travel lanes. KP 158+763, WC J193.01, NCD, a no contact culvert has been installed on the ROW and under the travel lane. KP 158+953, WC 154, S6, clear span bridge with ESC KP 160+400. At approximately kilometer 28.5 on the Crocker FSR, RE-430.0, soils from the ROW are being stockpiled in a borrow pit. An information request will be submitted for clarity on the authorization to use this area and to determine if this is short- or long-term storage.							14823			
6-Dec-22	2022-0152	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	In Compliance	Major Project	POD 006 located on Crocker Creek was inspected for depth of water. A depth of 30.5 cm was observed at the time of the inspection. The permit requires a depth of 30 cm. Discussed with the operator the need for continuous monitoring of the depth and flow of this stream to ensure adequate depth as required by the permit.							13535

9-Dec-22	2022-0150	Bench Creek Resources Ltd.	NTS: A- 060-I/094-O-11	TRUCK	NORTH	Completed	In Compliance	Internal Request	1. Facility is a Reporting Facility in Petrinex. Petrinex shows a Volumetric Measurement Error of 10.6%. This was brought to the attention of the Company and awaiting a response. 2 Only the measurement building was inspected. A buy back line on the sales line was observed downstream of the custody transfer meter. A cross over is in place from the sales line to the inlet line in order to supply the Facility with fuel gas in a black start condition. An orifice meter was observed on the buy back line. No calibration was evident on the orifice meter; an inquiry has been sent to the Company and awaiting response.							460

16-Dec-22	2022-0214	Tourmaline Oil Corp.	NTS: B- 094-I/094-H-05	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program	Meet with operations staff. Inspect the mixed oil and gas battery. Questioned the joint venture partner (CNRL/Tourmaline) oil well d-A-76-I/94-H-5 measurement. The operator reported that the well was routed through the B-94-I/94-H-5 test separator and that the test separator SCADA was non-functional. Found that the facility black start fuel gas supply solenoid controlled ESD actuator was removed and the ESD valve was in the open position. The operator locked a globe valve closed at the inlet to the fuel gas building until the ESD valve can be repaired. Found there were some faults on the fire and gas safety system devices. The fire eye in the generator building had a rapidly blinking red light and the H2S detector behind the oil separator in compressor #1 had a negative drift fault. Found that the compressor starter gas discharge on all (3) compressors were not connected to the flare system. A high CO level was detected in compressor #3. Operations staff confirmed the CO reading and mentioned it may be coming from a leaking exhaust gasket. Request that Tourmaline have mechanics trace the CO source and repair the leak. Found that the battery Petrinex reporting meters were not being calibrated as per the BC Measurement Guideline.	OGAA	DRPR	53(b)(iii)	(iii) production accounting purposes, and	1. No proration factors are being reported in Petrinex for B-94-I/94-H-5 battery (BCBT 00004557- subtype 393). 2. The joint venture partner (Tourmaline/CNRL) well dA-76-I/94-H-5 oil well was found to have no measurement equipment and production was not being kept whole.	543

29-Dec-22	2022-0247	PETRONAS Energy Canada Ltd.		TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Officer Selected	Please note that KERMIT inspection # 075499245 has been satisfied due to the compliance management system changeover. This CMIS inspection will take its place.	OGAA		21(b)(ii)	(ii) a permit issued to the person, if any, and	This deficiency was initially issued in KERMIT inspection # 075499245. That inspection will be satisfied due to the system changeover and replaced by this CMIS inspection. "This sump is located at approximately km 1 on the 8.5 road off Mile 120/Gundy Road. The temporary use permit for this sump was issued on August 26, 2013 and expired on August 26, 2015. The sump needs to follow the process for closure with the end result being fully restored with the strippings and topsoil spread, the fence removed along with any culvert on the access. A sign is not necessary." Petronas had requested an extension on this deficiency until December 31, 2024. The extension time was reduced to September 30, 2022 partly due to a new inspection system being implemented. A continued extension request to December 31, 2024 was submitted on September 22 , 2022. Upon review of the history of Petronas' non-compliant sumps in my inspection area over the last 10 plus years the extension is reduced to July 4, 2023 to allow for works during the snow free season. Petronas restored a sump 1 km down the road from this one after a deficiency was given. This sump should have been restored at the same time. Unfortunately, due to delays this site will see more than 7 years of vegetation growth destroyed and a new disturbance will have been initiated. In order to have a smooth transition over to CMIS please respond with an extension request for July 4th 2023 and it will be approved, Thank you.		27001			
29-Dec-22	2022-0247	PETRONAS Energy Canada Ltd.		TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Officer Selected												
30-Dec-22	2023-0032	Tourmaline Oil Corp.		TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Officer Selected	This inspection is for the former Shell camp site and associated clearing located at approximately km 18 on the Gundy/Mile 120 road. This former camp site was seeded with grass and shows no trajectory towards providing wildlife habitat that existed prior to the development considering the approximate decade it has been revegetated.	OGAA	EPMR	19(1)(d)(i)	(i) promote the restoration of the wildlife habitat that existed on the area before the oil and gas activity was begun, and	This former campsite is heavily seeded with grass and there is no other plant species within the grassed area. The density of the grass as well and the thick mat is provides has resulted in the lack of native species growth. The evidence of any trajectory towards the establishment of wildlife habitat has been observed since the former camp site was first grass seeded.

23-Jan-23	2023-0235	Canadian Natural Resources Limited	NTS: B- 088-F/094-A-16	TRUCK	CENTRAL	Completed	In Compliance	Officer Selected			OGAA		21(b)(iii)	(ii) a permit issued to the person, if any, and	This one inspection replaces KERMIT inspections 078866047 (permit conditions in regard to restoration) and 78124899 (open mouse hole not permanently abandoned). Extension requests have been received from CNRL in KERMIT and will or have been approved and will have them submit the extension requests again to the new CMIS inspection. This well site has been reclaimed and revegetated, however, there is a shortfall in the revegetation that has taken place. One resource material that has not been referred to in the Sikanni Area Based Closure Program are the Habitat Impact Assessments and Mitigation Measures that were part of the application process for wells in the Upper Sikanni Valley / Muskwa-Kechika Management Area. This document is on file at the Oil and Gas Commission. There will be other well sites and roads within the Upper Sikanni Valley Management Plan that may also have these mitigation measures as noted above. The oversight is found in the Mitigation Measures Table 1 (page 21) under Section 5 that states " Reseed and reclaim well sites and roads with seed Mix #1 and local tree and shrub transplants. It is the local tree and shrub transplants that are missing on the revegetated leased will need to be planted on the road when the time comes for final restoration. The ability to provide "transplants" might impact the natural revegetation that has taken place on the road right of way and other tenured areas. There may be some options to consider such as planting of tree stock that meets the provincial tree seed transfer guidelines and this could be discussed. The shrub component would also need to be addressed. The lease surface is rather smooth and has resulted in movement of fine soil particles resulting in rills, exposing gravels and cobbles which reduced the available area for revegetation.	959				
23-Jan-23	2023-0235	Canadian Natural Resources Limited		TRUCK	CENTRAL	Completed	In Compliance	Officer Selected			OGAA+G991	DRPR	15(3)(a)	(a) that the well site is maintained in a condition so as to minimize hazards, including but not limited to hazards associated with pits, holes, storage of materials and equipment;	The entire lease fill slope was pulled back but the mouse hole was not deal with at that time when heavy equipment was on site. The mouse/rat hole was also not filled in as identified in my inspection in July 2022. It was discovered in the fall of 2022 on a follow up inspection that a steel plate was placed over top of the hole and a shallow amount of dirt placed on top. This is not an acceptable practice as it does not address the long term hazard risk especially when the well site is undergoing permanent restoration. Steel rusts and will fail, revealing the hazard once again. Upon pulling the casing or permanently filling in the hole, please take and submit a picture of the gravel, dirt etc. that completely fills the hole plus extra for settling. Upon receipt of the picture with a date stamp the deficiency status will be reviewed. Thank you

23-Jan-23	2023-0241	Ovintiv Canada ULC		TRUCK	MID	Completed	In Compliance	Drilling Rig	a couple open 110 plugins around the rig. Light tower near tank farm not properly grounded, items corrected during inspection. Sub and BOP area warm. High pressure line between pumphouse and sub requires restraints. Waiting on BC cert for boiler.												
23-Jan-23	2023-0241	Ovintiv Canada ULC	DLS: I06-01-081-18	TRUCK	MID	Completed	In Compliance	Drilling Rig									2560				
24-Jan-23	2023-0243	Canadian Natural Resources Limited	From NTS: C- 077-F/094-B-08 To NTS: A- 088-I/094-B-01	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program	Inspect fire and gas (H2S +LEL) safety systems. Found the red beacon at the production tank load area flashing. The operator thought it was odd, as there were no process alarms present. All fire and gas detection equipment indicated normal on the operator HMI display screens. Found the Pressure Alert Valve (PAV) and the safety chain missing on the sales pig sender. Noted that the facility station shutdown devices, such as the sales gas high pressure alarm and shutdown, and the sales gas low pressure shutdown switches were last calibrated on April 17, 2021. Noted the production accounting meters were coming due for calibration. Noted (2) compressors were removed. The OGC must be notified of the equipment change. Inspect the water hub header building, diesel generator, and filter building. Inspect the water hub (2) ponds- found the bird deterrent ribbons were in good condition. Action Items: 1. Production tank load area- Investigate why the red process alarm beacon is flashing. 2. Sales gas pig sender PAV and safety chain were found to be missing. 3. Ensure that all station shutdown devices are maintained in accordance with CNRL 's facility integrity plan and preventive maintenance schedule. 4. Submit a NOI for the removal of (2) compressor on the facility equipment list. 5. Reminder - production accounting/Petrinex reporting meters (including flare meters) are coming due for maintenance as per the BC Measurement Guideline. Ensure they are included in the facility PM schedule. 6. Please reply to the OGC concerning the above Action Items and to the attached deficiencies through the CMIS system, Thank you.

25-Jan-23	2023-0247	Canadian Natural Resources Limited	NTS: A- 038-I/094-A-15	TRUCK	CENTRAL	Completed	In Compliance	Officer Selected		OGAA		21(b)(ii)	(ii) a permit issued to the person, if any, and	This deficiency was initially issued in KERMIT inspection # 075499245. That inspection will be satisfied due to the system changeover and replaced by this CMIS inspection. "This sump is located at approximately km 1 on the 8.5 road off Mile 120/Gundy Road. The temporary use permit for this sump was issued on August 26, 2013 and expired on August 26, 2015. The sump needs to follow the process for closure with the end result being fully restored with the strippings and topsoil spread, the fence removed along with any culvert on the access. A sign is not necessary." Petronas had requested an extension on this deficiency until December 31, 2024. The extension time was reduced to September 30, 2022 partly due to a new inspection system being implemented. A continued extension request to December 31, 2024 was submitted on September 22 , 2022. Upon review of the history of Petronas' non-compliant sumps in my inspection area over the last 10 plus years the extension is reduced to July 4, 2023 to allow for works during the snow free season. Petronas restored a sump 1 km down the road from this one after a deficiency was given. This sump should have been restored at the same time. Unfortunately, due to delays this site will see more than 7 years of vegetation growth destroyed and a new disturbance will have been initiated. In order to have a smooth transition over to CMIS please respond with an extension request for July 4th 2023 and it will be approved, Thank you.				2572

The USMP was assented in 1997 to become a legal document and includes oil and gas tenures that previously existed. From the flight on Nov 3rd 2022 it was noted there was no coarse woody debris nor slash piles over most of the well site. The woody debris was limited to the fill slope. The USMP states the wildlife habitat must be equal to or better than the habitat that existed prior to the oil and gas activity. While being viewed under snow conditions, it was difficult to see if the well site, associated disturbances and the portion of the road within the USMP were planted with trees and shrubs. It was noted in SNC Lavalin's plan that planting of trees would augment that of existing woody vegetation and that a layer of mulch/woody debris be of assistance in establishing vegetation. Could you please confirm if these step were taken? What is the rooting depth on the lease and will that impact the ability of this site to at least provide equal habitat values that existed prior to the disturbance?

26-Jan-23	2023-0312	Canadian Natural Resources Limited	NTS: B- 088-I/094-B-01	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program	Action Items: 1. North Plant HP Flare: Noted the flame at the top of the flare stack at times was not visible. Request that plant operations ensure that the north plant HP flare header system has an adequate purge gas rate and is set as per calculated engineered design. 2. For the b-88-I/94-B-1 reporting meter maintenance requirement as per The Oil and Gas Processing Facility Regulation section 27 (3)(b) and the BC Measurement Guideline a response was not received from the operations team if the flare meters, the LPG Bullet Level TXs, and the Production Tank Level TXs were inspected, and or calibrated, and if maintenance reports were available for inspection. 3. confirm the above reporting meters were maintained and or calibrated for 2022. If so, submit the maintenance records for inspection. 4. ensure the above meters are maintained on an annual basis and are included in the plant annual PM schedule, Oil and Gas Processing Facility Regulation (3) A processing facility permit holder must ensure that measurement equipment used to determine quantities for the purposes of subsection (1) is (a)suitable for its purpose, (b)calibrated properly and maintained in good operating condition, and (c)safe from adverse weather and interference by unauthorized persons. BC Measurement Guideline 2.10.Automatic Tank Gauges 2.10.1. Inventory Measurement If automatic tank gauge devices are used to indicate fluid levels in tanks for monthly inventory measurement, they must be calibrated on site within the first month of operation and annually thereafter. The calibration procedures must be in accordance with the following, as available and applicable (presented in order of Commission preference from first to last): 1) The device manufacturer's procedures. 2) Procedures described in the American Petroleum Institute Manual of Petroleum Measurement Standards. 3) Other applicable industry-accepted procedures that utilize auditable methods (i.e., sound engineering practices, industry IRP manuals, etc.)								1024

26-Jan-23	2023-0309	Canlin Energy Corporation	NTS: B- 044-I/094-G-08	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Risk & Data Informed	I first detected LEL with personal monitor inside of the wellhead building, even with the holes in the building. I then checked the surface casing vent with a latex glove. The glove blew off of the SCV in 11 seconds. I then checked it again, and again the latex glove blew off vent in same amount of time. I think the LEL inside the wellhead cover may be from the SCV, which I think could pose a danger inside building with catadynes etc. -I spoke with OGC Engineer in charge of surface casing vent flows, and she has asked that another test be done on the surface casing vent asap. Please contact me in these regards to discuss if needed. I also noticed that the LEL gas detection inside of the Inlet Separator Building has readings on both. They are low levels, but should be addressed.									2770

27-Jan-23	2023-0440	ConocoPhillips Canada Resources Corp.	From DLS: 02-10-088-23 To DLS: 02-23-088-23	WALK	CENTRAL	Completed	In Compliance	Officer Selected	I received an e-mail from operator regard to the mitigation works on pipeline #24855 segment #2 and visited the site on January 27, 2023. One thing that has come to mind with this area being pasture land is there a method to deter cattle from being attracted to the grass that has been seeded over the coconut matting. The gabion basket will deter them from the north and just wondering about the south access. The works are robust and a spring inspection will be conducted with the OGC hydrologist to see how the spring freshet is handled by the mitigation efforts. It is recognized there is still the erosion issue upstream of these works involving other operators and our hydrologist will take a look at that issue. Due to system limitations this inspection will show as a PASS but this inspection is a means of communication and that we have looked at the site and another inspection with our hydrologist will take place in the spring.

1-Feb-23	2023-0459	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Routine inspection of the Clore River crossing on February 1st, 2023. * Sump area expanded to allow for up to 9 pumps operating at the same time * More pumps established onsite; diesel pumps now being used as well as electric (all 18") * Lots of ice flow due to melting conditions, potential for clogging up screens on the pumps. Maintenance crew on site. * Discussed storage of materials within high water mark * Discussed emergency plan in case of further warming this week * Checked fuel storage area, secondary containment. Also discussed physical barriers to prevent vehicle incidents with fuel storage containers. * No non-compliance noted with grey water discharge site, area has been utilized in the past. Continue to monitor as per EMP. * Some backwatering noted at discharge location, larger pump in place now to handle increased flows. * Block nets frozen in place, monitor for potential maintenance. * No non-compliance noted with discharge location. * Old equipment adjacent to river from WQM crew, please remove from high water mark and dispose of if necessary. * No non-compliances noted during inspection.

2-Feb-23	2023-0531	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Routine inspection of CGL Section 7 on February 2, 2023. Gosnell Creek WC 575B KP 590+941 and wetland 1257. * Access matted to site * Direct pipe installation preparations ongoing with entrance and exit pits. * No instream works nor disturbance noted within 10m of high water mark. * Site specific watercourse crossing plans onsite and provided when requested. * Plan is to sheet pile entrance pit utilizing well points for water management. * No non compliance noted onsite. Watercourse J152C1.01 KP 572+209 * Bridge, access crossing complete. * ESC measures in place where applicable. * Stream location undefined due to snow cover at time of inspection, difficult to tell exact location of the watercourse. * Crossing anticipated to commence late winter/early spring. * No non compliance noted onsite. Crystal Creek WC 565 KP 564+025 * Negative side mulched to watercourse, generally flat in nature, root mass remains intact Adjacent cabin unoccupied at time of inspection and small buffer in place between cabin and pipeline construction. * Positive side grading occurring, discussed dewatering locations and ESC measures (WEP) once grading complete. * Crossing anticipated to commence mid-February.* No non compliance noted onsite. Morice River Drill site: * Checked ESC measures and drainage below drill pad. * Discussed drill pressures and distance drilled. * Checked Frac walk log, completed every 2-3 hours, discussed document format. * No non compliance noted on site.										
2-Feb-23	2023-0531	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Mix Bury cover site BCOGC permit 100109299 * Volume approximately 8-10% above predicted volume by drill distance. * No new land anticipated and still within parameters. * Site clean and orderly, no non compliance noted onsite. Owen Creek WC 133C1 KP 521+706 * Positive side to grade and preparing area for open cut. * Block nets in place and fish salvage has commenced. Salvage permits provided upon request, discussed different salvage techniques for various species present in Owen Creek. * ESC measures in place and crossing anticipated to commence soon. * Natural deposition noted within the substrate of the stream. * Negative side drilling and blasting occurring. * ESC measures in place. * Lower bench cut but not grubbed, root mass still intact. No Non compliance noted during inspection

2-Feb-23	2023-0463	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	In Compliance	Major Project	Inspection with the operator FebZ, 2023, KP 173+600 to KP 179+170. General comments: Bridge decks require routine maintenance to remove excess snow. KP 173+600, bridge with ESC KP 175+100, WC 181, S6, bridge with ESC, in isolation upstream and downstream with sandbags and poly, equilibrium with 3-inch pump downstream to diffuser, trench pump to filter bag note hose was not inserted into the filter bag at the time of the inspection and was discharging to ground. Discussed with the operator. Secondary containment on the light plant requires Maintenace. Discussed with the operator. Tie in crew on location. KP 175+750, WC 182, S5, bridge with ESC, crew is setting up isolation, a sump has been dug instream for equilibrium pumps and upstream sandbags and poly. Discussed with the operator. KP 176+700, WC 185, S4, bridge with ESC, crew is prepping for isolation, block nets have been installed. KP 177+740, WC 187, S3, bridge with ESC. KP 177+776, WC 1872F, bridge with ESC. KP 179+170, WC 192, S6, bridge with ESC, in isolation sandbags and poly with earth dam, equilibrium to downstream. KP 179+450, WC 193, S4, bridge with ESC.										
2-Feb-23	2023-0463	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	In Compliance	Major Project	

2-Feb-23	2023-0367	VERMILION ENERGY INC.		TRUCK	SOUTH	Completed	In Compliance	Drilling Rig	An inspection on LEUCROTTA HZ MICA D16-28-0B1-14 WA # 44209 was conducted on February 2nd 2023. A Valve in maniford shack found to be leaking antifreeze through stem, rig is in process of upgrading safety slings on all high pressure lines. BOP and sub area are warm. Rig is running one boiler with BC certs. Rig manager to address the manifold valve issue.										
2-Feb-23		NorthRiver Midstream Operations GP Inc.		TRUCK	SOUTH	Draft		Officer Selected												
5-Feb-23	2023-0528	Trans Mountain Pipeline ULC		TRUCK	LMVI	Completed	In Compliance	Major Project	Inspection with the operator of spread 5B, Feb 4 & 5, 2023. KP 1071, access 171462, no concerns noted at the time of the inspection. BCVA-303, S6 and BCVA -304, NCD have culverts installed. KP 1070+040, BC 687, NFB, in isolation, upstream sandbags and poly, no downstream isolation, discussed with the operator. Equilibrium maintained by 4 - 4" pumps (1 active) to downstream diffuser, trench pumps to pig pens. Holes were found in the pig pen fabric and one hose was discharging to the ground, discussed with the operator, the EI will begin corrective actions. KP 1070+000, BC 686A, NFB, culvert installed in the travel lane, in isolation, upstream sandbags and poly, no downstream isolation, discussed with the operator. KP 1070+120, BC 688, NFB, culvert with ESC. KP 1067+350, BC 682, NFB, clear span with ESC. KP 1062+500, Mountain 2 tunnel site, no concerns noted at the time of the inspection. KP 1050+800, BC 660, NFB, clear span with ESC. KP 1050+650, BC 659, NFB, in isolation, upstream sandbags and poly, no downstream isolation discussed with the operator, equilibrium by 4 - 6" pumps and 1 - 10" pump, to diffuser downstream. Isolation equipment is on location but not installed. Matted crossing with ESC in place. KP1030+500, BC 645A, NFB, no activity at this watercourse at the time of the inspection. KP 1030+520, BC 645B, NFB, culvert installed in travel lane, channel is lined with poly and cobble.								48040

7-Feb-23	2023-0424	PETRONAS Energy Canada Ltd.		TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program	inspect the facility control panel fire and gas detection display screens. Discuss the facility LEL alarm and shutdown set points. Operations staff felt that the high LEL alarm was set at 20 % LEL, and the high LEL shutdown was set at 40 % LEL. Discussed Work Safe BC OHSR 5.31 (Flammable gas or vapour): The concentration of the flammable gas or vapour must not exceed 20% of the lower explosive limit (LEL). Action Items: 1. Recommend examining the facility high LEL shutdown setpoint in relation to OHSR 5.31. 2. Recommend checking inlet # 2 for gas leaks - found methane LEL @ 12 % LEL. 3. Recommend removing oil and oil soaker pads from underneath the decking in the compressor packages. 4. Recommend trouble shooting AIT- 2450 controller rapid blinking red light. Please reply to OGC concerning the above action items. Thank you,

7-Feb-23	2023-0402	Canadian Natural Resources Limited	From NTS: C- 099-C/094-B-16 To NTS: D- 100-C/094-B-16	TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	This inspection is for the first 14 kms of the Mile 132 Road. The road is well snow plowed, a new and improved bridge was noted to have been installed at km 4.5. The new bridge has a slight rise to the decking surface which should help reduce water and sediment flows onto the deck and into the fish bearing stream. It was noted the splash boards on the km 11 bridge are broken and need to be replaced before sediment is able to fall off the bridge and into the fish bearing stream.								12986

7-Feb-23	2023-0525	Trans Mountain Pipeline ULC		TRUCK	KTNY	Completed	In Compliance	Major Project	Inspection with the operator of spread 5A conducted on Feb 6 & 7, 2023. KP 977+650, BC 571, Juliet Creek, FB, clear span bridge with ESC, prepping for isolation / open cut crossing as trenchless crossing failed due to ground conditions. Equilibrium will be maintained by 2 - 10" pumps and 4 - 6" pumps adequately screened to downstream diffuser consisting of concrete blocks on skids and geofabric. WQM 30m upstream and 65 / 170 / and 250 downstream. Isolation wit upstream aqua dam and downstream sandbags and poly. Note: upstream isolation has a secondary to collect leakage. 3 wellpoints all active discharging to filter bags in secondary containment. Trench pumps to filter bags in secondary containment. Additional wellpoints in the bore pit discharging to filter bags in secondary containment. Attended the phased checklist meeting for instream work. There were no concerns noted at the time of the inspection. KP 976+850, Coldwater 3 site, 2 Aqua dams as upstream isolation, meter bags, sandbags and poly as downstream isolation, equilibrium maintained by 9 - 10" pumps adequately screened, to diffuser downstream consisting of skids, cement blocks and geofabric. Note: Identification of Coho Redd area, with flow being maintained by 4 - 6" pumps adequately screened. The Redd area has WQM by telemetry every 4 min for constant monitoring. WQM 150m upstream, 150 / 200 / 250 / and 340 downstream. Grab samples upstream on Juliet Creek upstream of the junction with Coldwater (1x/day) and on BC 578 (4 samples) 3x/day. Grey water to 4 flock tanks and discharged to gravel bar for filtration. Filter bags are used if required. KP 954+500, Coldwater 1, BC 548, in isolation, 4x120 aqua dam upstream and meter bags and poly downstream, equilibrium by 12 - 10" pumps (6 active) to diffuser downstream - matts and concrete blocks, discussed fish screens and small openings on the tops of the 10" pumps, EI will ensure daily checks of screens and have the small opening sealed up. 6 well points and 1 in-trench dewatering to filter bags in secondary containment. Trench pumps are dewatering to 4 locations consisting of multiple pig pens and filter bags. Holes were found in one pig pen and filter bags were not being used, sediment laden water was within 10m of the river and was discussed with the operator.							46030			
7-Feb-23	2023-0525	Trans Mountain Pipeline ULC		TRUCK	KTNY	Completed	In Compliance	Major Project	WQM 100m upstream and 100 / 400 downstream with grabs at 100 / 200 / 400 every 2 hours.AK 16.87, Coldwater DPI 2 site, North pad has been constructed and the South pad is under construction. Salem Creek CWIRW-28 an S3 runs through the South pad and was dry at the time of the inspection, matted crossing with ESC. AK 1.25, Coldwater DPI 1 site, pads are constructed with ESC in place. There were no concerns noted at the time of the inspection.							46101

9-Feb-23	2023-0427	ConocoPhillips Canada Resources Corp.	NTS: B- 013-B/094-B-16	WALK	CENTRAL	Completed	In Compliance	Officer Selected	I am taking this opportunity to provide some guidance to companies as to notice requirements for road deactivation under the Oil and Gas Road Regulations (OGRRs). This inspection is for the deactivated road to b-13-B / 94-B-16 on West Gundy Road. The road to the well site did not have a road permit, however, the OGRRs still apply to non-status roads. While this site was probably included in a dormant site work plan, the submission of required forms related to roads are separate notices from the Dormant Site Regulations (DSR). The relevant sections for roads are found under Section 23 and 27 of the OGRRs. These notices are important for a few reasons: the opportunity for inspectors to conduct site visits; provide input that a company may not be aware of such as designated ungulate winter ranges and the site specific deactivation requirements as well as enabling the Commission to track road deactivation so that an accurate data base can be established. This inspection notice will require the submission of a Notice to Deactivated form as per Section 23 of the OGRRs plus a "Signed Statement" of deactivation as per Section 27 of the same regulations. Those forms are found on the bcogc.ca website. Would you please have these notices sent to BCER and cc to Inspector by March 17th 2023. Also please review your dormant site plans and where any roads ,permitted or not, have been deactivated send the Notice to Deactivate and Signed Statement to those mentioned above. Thank you										3204			
9-Feb-23	2023-0425	Canadian Natural Resources Limited		TRUCK	CENTRAL	Completed	In Compliance	Facility Start-Up	Inspection for AMS Application reference number 100114453-0. Meet with the site construction manager. Inspect (5) new legacy well meter run enclosures and Fisher ROC EFM parameters with the Instrumentation and automation programmer. Review maintenance records for shutdown and measurement devices for the legacy wells with the field maintenance contractor. Review Conduit and Cable Seal Installation records for the (5) meter run enclosures, test and group separators, and LEL calibration/function testing reports for the test and group separators. Action Items: 1. Submit gas calibration reports, and conduit and cable seal installation reports for the new I, J, and K well sand separators, choke skids, and test separators. 2. Submit I, J, and K well flowline ESD calibration and function test reports. Please reply to the OGC concerning the above action items. Thank you,												100075741

13-Feb-23	2023-0453	Coastal GasLink Pipeline Ltd.	NTS: D- 052-D/093-P-15	TRUCK	SOUTH	Completed	In Compliance	Facility Start-Up	A satisfactory inspection was completed for the commissioning and start-up of MS-1, the CSPL, Utility Gas (UG) system, PPU power generation equipment, boiler (BHGE) and instrument air systems. Review breakout section of the Project Master Punch List for MS-1, CSPL, UG, systems. Noted some deficiencies were present at the time of inspection. The deficiencies were classified: A - Critical, B- Before gas is brought in, and as C- operational. The CGL project manager stated all A and B deficiencies and a Pre-Start-up Safety Review (PSSR) for the above systems will be completed prior to the admission of hydrocarbons. Perform a walkdown of the Shell MS-1 Sour Shut-in Valve (MS-1 Slam Shut Valve). Before operations commence: 1. Evaluate the D&PR 49 (2) requirement to car seal closed (1) manual valve on the loading line once operations commence, as not to bypass the MS-1 Sour Shut-in Valve. 2. Evaluate the D&PR 49 (2) requirement to seal open the power gas supply to the Gas Operated Valve (GOV) control, as not to bypass or disable MS-1 Sour Shut-in Valve.								1272

15-Feb-23	2023-0509	Canadian Natural Resources Limited		TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	I seen a road that was recently opened up, and I didn't remember having been in to this well in the past. So I drove in, and found a backhoe and two cats working. I spoke to the guy running the cat, and he told me that the well was abandoned and they were in there doing some reclamation work, a re-work apparently. I have no concerns, as work being done looked fine, and is covered by a different group within. No concerns.

15-Feb-23	2023-0460	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	In Compliance	Major Project	Inspection Jan 31 and Feb 1, 2023 with the operator, KP 172+250 to KP 155+000. General comments as discussed with the operator: Bridge decks require routine maintenance to remove excess snow, woody debris (dunnage) and miscellaneous items have been pushed into snow piles in several locations, crews have not installed downstream isolations on several water courses. KP 155+000, Anzac Bore, sheet piled, trench has been excavated and bits were in the process of being changed to accommodate ground type and correction for deflection. Aqua dams are still set up. KP 155+700, WC 40C, sheet piling in installed. KP 156+000, WC 47C, S6, Bridge with ESC, sheet piling installed. KP 156+250, Sandblasting crew working. KP 156+450, WC 49C, S6, Bridge with ESC frozen to bottom. KP 156+700, WC J183.01, S6, bridge with ESC. KP 157+000, WC 51C, S5, bridge with ESC sheet piling installed. KP 158+250, WC 153, S5, bridge with ESC sheet piling being installed. KP 159+200, Bending crew completing machine set up, Inspector certified in AP1169 produced, procedures and methodology statement produced. KP 159+327, WC 156, S6, bridge with ESC. KP 159+515, WC 157, S6, bridge with ESC. KP 159+754, WC 157.2T, S6, bridge with ESC. Note: several no contact crossings in this area. KP 166+980, WC 56C, S3, bridge has been pulled and a matted / timber crossing installed on the travel lane to accommodate equipment for trenching and pipe installation (7m cut required could not be completed from bridge deck), sheet piles in place, in isolation upstream plate no downstream isolation - discussed with the operator, fish salvage completed, upstream and downstream block nets with the downstream block net observed to be fallen down into the WC - discussed with the operator. 3 - 6inch pumps (screened) to downstream diffuser. WQM in place upstream 50, downstream 50, with grabs at 100 and 300 downstream daily.											
15-Feb-23	2023-0460	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	In Compliance	Major Project	KP 168+000, Woody debris pushed into snow piles. Snow has been piled on the duff piles. Discussed with the operator. KP 169+180, WC 172, S3, bridge with ESC, in isolation upstream sandbags and ploy no downstream isolation - discussed with the operator. 2 - 3 inch pumps (screened) to downstream plywood diffuser. WQM in place at 10 upstream and 50 downstream. KP 169+300, WC J225.99, S4, bridge with ESC channel being restored. KP 169+400, WC 1C038, S4, Bridge with ESC channel being restored. KP 171+045, WC 174, S4, bridge with ESC, in isolation upstream sandbags and poly no downstream isolation - discussed with the operator, pump around to downstream, fish screened box is iced up, equipment is buried in snow, site requires maintenance as discussed with the operator. WQM in place but crew on site did not know the exact locations. KP 172+217, WC 63C, S6, bridge with ESC 2 channels in isolation, upstream sandbags and poly no downstream isolation - discussed with the operator. 3 - inch pump to downstream, equipment buried in snow, trench waiting to be backfilled. KP 172+250, Laydown 16, water flowing across the access to the laydown off the Crocker FSR, discussed with the operator to determine source and re-establish the flow through culverts.

16-Feb-23	2023-0597	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Routine inspection of CGL Section 8W in and around the municipality of Kitimat. WC S1073 KP 666+513 * Waste Discharge Approval area permit AE-111267 * Three hoses discharging into stream, all with dissipaters discharging onto geotextile apron. * Spill boom in place as a precaution due to sheen noted that was reported to the BC-ER during rubber mat installation. Told onsite that results from the testing of the sheen came back negative for hydrocarbons. * Additional sheen noted during inspection coming from boom and migrating downstream. * Foreman and crew notified immediately and commenced cleanup activities. * Source, nature and type of sheen unknown at time of inspection. * Water samples taken from below boom instream, C-Ring as well as Bore bays. * Samples tested from all locations came back negative post inspection. * Downstream check dam functioning well and good holding area for sediment to fall out of suspension. * Rig mat noted in flood debris, remove when environmentally safe to do so (in the dry). No immediate environmental concern. C-Ring KP 666+410 * Minor sheen noted in C-Ring. Unknown whether organic or hydrocarbon. Samples taken immediately upon discovery. Follow testing confirmed samples were negative for hydrocarbons. Pipeline installation occurring during inspection, open trench and welding. Groundwater being pumped to C-ring. No sheen noted in area of active welding. UN 22-20 666+071 * Recent exceedance reported. Compliance still to be confirmed. Very low flow at time of inspection, almost stagnant. * Minor inputs noted below bridge deck, discussed actions moving foreword. * Evidence of flooding, high water on underside of bridge deck. * ESC works ongoing at this crossing location at time of inspection.										
16-Feb-23	2023-0597	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	WC 741.1T KP 665+714 * Aqua dam in place, upstream side only. Culvert crossing acting as downstream dam. * Area has been salvaged with stickleback the only species relocated. * Pump around in place * No issues with the discharge location, water has significant iron content typical for watercourses in this area. * Bore ongoing, casing installation is approximately 75% complete at time of inspection. * Significant amount of water entering East bore bay , bore tracks under water at time of inspection. * West Bore bay sheen noted. Samples taken and unknown whether sheen was natural or due to hydrocarbons. Tests completed and all came back negative for hydrocarbons post inspection. No noncompliance noted during inspection.

22-Feb-23	2023-0567	Canlin Energy Corporation	From NTS: C- 014-J/094-G-08 To NTS: C- 034-J/094-G-08	TRUCK	CENTRAL	Completed	In Compliance	Risk & Data Informed	C-A14-J: I could smell faint H2S odours at the wellhead. C-14-J: a regulator was venting gas outside of building. I could smell H2S on lease, as well as at the building itself. -I called on the road radio for a Canlin Operator a few times, with no answer. I then tried calling operators, with no answer from either. I then left a voicemail with rep of the issue and asking for someone to get back to me asap. I then drove to the operators camp at km 26 ¾ on Laprise road. There I foundoperators. I let them know of what I found, and that because there is H2S involved, that I needed an operator to go to site and assess, then get back to me with findings and resolve. Rep called me back. I explained and asked that someone contact me with what was found and how it was resolved. Rep called me back and explained that the venting was from a regulator and that it was isolated. The odours at wellhead at c-A14-J was coming from the ESD box and assessed.										15497

27-Feb-23	2023-0569	Altagas Holdings Inc.	NTS: A- 033-J/094-B-09	TRUCK	CENTRAL	Completed	In Compliance	Planned Inspection Program	Townsend T1 Gas Plant Inspection Inspect the gas plant operator fire and gas detection safety system HMI display screens - No faults found. Verify that plant accounting meters were maintained as per the BC Measurement Guideline - currently in next semiannual maintenance period. Noted in some cases the most recent meter inspection maintenance record was not with the meter. Met with the Altagas Senior E+I Maintenance Technician and verified that the meter maintenance for the period in question was indeed completed. Perform a walkdown of Townsend T1 equipment- car seals were in place as per Townsend Carseal List. Action Item: 1. Review the plant gas detection high LEL shutdown setpoint vs. OHSR 5.31 - flammable gas or vapour. Please reply to OGC concerning the above action item. Thank you,								1357

28-Feb-23	2023-0658	Tourmaline Oil Corp.	From NTS: B- 048-A/094-B-16 To NTS: B- 048-A/094-B-16	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program	Thanks to operator for attending these joint inspections for the day. It was interesting to see the inspection app that Tourmaline is starting to use. The pipeline inspection was limited in scope to the on lease equipment. The wiring issue could have been a high rating if the wiring was in active use. I expect the entire line of wells on this side of the lease have the same deficiency. Please check your other well sites for the same issue.										17048

28-Feb-23	2023-0576	Tourmaline Oil Corp.	NTS: A-N078-A/094-B-16	TRUCK	CENTRAL	Completed	In Compliance	Planned Inspection Program	Thanks to Tourmaline Lead Operator for attending these joint inspections. The pipeline inspection is limited in scope to the on lease equipment/header. The following are observations from the inspections; -For the former Shell wells there was a question as to whether or not the PSHH shutdown isolation valve to the transmitter needed to be locked in the open position as the needle valve above was clam shelled. It appears this may be an old Shell redundancy as the ESD upstream of this isolation valve is the critical one. operator has since informed me that there were locks placed on these isolation valves to secure them in the open position. -the pipeline chemical injection point 23202-001 had a slight weep but no chemical on the aluminum insulation covering or on the ground. Operator has informed me today that the point was taped and tightened up and no more weeping. -there was low LEL in the test separator. Ensure there is enough air circulation and try to find what is leaking.									3574

1-Mar-23	2023-0599	Coastal GasLink Pipeline Ltd.		TRUCK	SOUTH	Completed	In Compliance	Major Project	Inspection with the operator of Sukunka multi-use and several storage areas, March 1 & 2. Km 55 on the Sukunka FSR, Camp has been shut in for the winter, there were no concerns noted at the time of the inspection. KP 127+500, Timber deck 9, active site being used for pipe and equipment storage, there were no concerns noted at the time of the inspection. KP 97+500, Road 14, consisting of BCER roads 05467, 04267 and 04268, discussed maintenance of bridges prior to spring melt. KM 16.5 on the Sukunka FSR, Sukunka Camp and multi-use areas, Fuel truck JVHV-001 requires a trip tray be placed to capture a small hydrocarbon drip from power train. Discussed the use of secondary containment and that placing pallets inside the containment reduced capacity, should a leak occur. Camp area discussed using the camp as storage for miscellaneous materials when the multi-use is in close proximity. KP 94+300, Laydown 9, access control is in place and reclamation has been completed including placement of topsoil. The laydown is snow covered and an inspection will be completed in the summer when the ground can be observed. KP 94+300, Aggregate borrow source, the borrow source has not been developed. KP 92+250, Laydown 8A, active site in use for pipe and equipment storage. sumps are capped, fencing around the sumps requires maintenance and the signage is faded and difficult to read, discussed with the operator on site. KP 91+900, Laydown 8, active site being used for pipe and equipment storage, no concerns noted at the time of the inspection. KP 91+400, stockpile 6, active site being used for pipe and equipment storage, no concerns noted at the time of the inspection. Bluff Creek Road, RE 840.0, BCER Road 04365, road is in winter condition with good driving surface, discussed keeping the wildlife crossings open.									51892

From NTS: D- 031-F/093-P-05 To NTS: C- 046-F/093-J-16	ATV	MID	Completed	In Compliance	Major Project	Inspection with the operator of section 2 pipeline from KP 127+500 to KP 133+300. Right of Way is snow covered and a travel lane has been plowed for access. Discussed maintaining the breaches for wildlife crossings. KP 133+300, WC 110, SS, clear-span bridge with ESC, in isolation with upstream plate and downstream sandbags and poly, equilibrium maintained by 2 - 6" pumps (1 active) to downstream diffuser consisting of plywood covered with rock guard, 4 wellpoints 4 to 5 meters deep, discharging to dewater area with filter bags, submersible trench pumps discharging to dewater area with filter bags. Tie in and coating crews on location. Welding procedures 2020-01-21 rev-0, CGL-SMJV-RP-02 and repair procedure 2020-01-06-rev-1 produced on site. Welders' certification and PQR's produced on site. Welding Inspector Level 2 produced on site. Welding test plan and procedure produced on site. 100% visuals and 100% UT. UT crew not on location at the time of the inspection. Coating crew on location. Coating inspector's cert produced on site. Coating procedures on site. Epoxy coating, ideal temp 80C - max temp 110C. Salt test, blast profile measure test, X cut test, hardness test plus visuals completed as required.										
2-Mar-23	2023-0598	Kelt Exploration (LNG) Ltd.	DLS: F06-35-086-18	TRUCK	MID	Completed	In Compliance	Drilling Rig	BOP and Sub area very warm rig running one boiler waiting on BC inspection certificate, rig manager to update when it arrives. Loose ground connection at flare tank, poorly fitting grommet on power cord from Gen building to Substructure. Issues observed corrected during inspection								3630

8-Mar-23	2023-0745	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	In Compliance	Major Project	Inspection with the operator of section 2 from KP 163+200 to KP 169+400. KP 163+200, Mainline UT, operator and 2 technicians, procedure being followed as specified by Z662. Individual records of all scans forwarded to QC. 100% UT for all welds. KP 163+300, mainline welding, 7 welders on location, 3 welders certifications produced with PQR's. Welding Inspector certified to AP 1169. Welding procedure 2020-01-10-R1 and repair procedure 2020-01-06-R1 produced. Repair log at office. 100% visuals. KP 164+200, WC 52C, S4, clear span with ESC, in isolation, upstream and downstream sandbags and poly, equilibrium maintained by 2 - 3" pumps with fish screens to downstream diffuser, block nets in place, WQM in place, fish salvage was completed. Active excavation of the trench with no dewatering at time of the inspection. KP 164+400, WC 53C, S4, clear span with ESC, no activity at the time of the inspection. KP 164+500, WC 54C, S3, clear span with ESC, sheet piled, in isolation, upstream plate, equilibrium maintained by 2 - 10' pumps (not active) and 2 - 4" pumps (active), all pump intakes in fish screened boxes, to downstream metal diffusers, downstream sandbags and poly, WQM in place. Note: slide rails are to be installed to meet sheet piles.							61032

8-Mar-23	2023-0741	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	Non-Compliance(s) Found	Major Project	Inspection with the operator of section 2 KP 154+25 to KP 169+400. KP 154+250, WC 445.0, Anzac River, S1, Entrance bore bay previously flooded when water encountered on exit side. Water was pumped down using 2 - 6" pumps and dewatering to an approved location. However, it was determined that the 6" pumps were not adequate and were replaced with 2 - 10" pumps. Entrance bore bay was flooded at the time of the inspection and the exit bore bay was holding water but not flooded. Pumps were not active at the time of inspection. 30 well points are to be installed and pumping will continue when well points can be used to assist in control of the excess water. There are 3 dewatering sites at this location with the plan showing the primary site consisting of 10" lines to a splitter and 4 - 6" lines coming of the splitter and dewatering in 4 separate areas. Note: Plan was not being implemented and after discussion with the operator, the operator will issue an internal non-compliance for corrective action. The plan stipulates that well point dewatering will be to filter bags if dirty and to the Anzac River if clean. WQM is in place to determine if spikes should occur. Once the bore bay is dewatered the casing will be removed and a new casing installed that contains a plug to help control water flow. Note: entrance bore bay is contained with slide rails and exit side is contained with sheet piles. KP 157+250, Sandblasting and Coating crews, sandblasting using Green Diamond 2050, Coating technicians (C46 & C150) cert produced on site, Coating Inspectors certification, NACE level 3, produced on site, coating procedure on site, SP2888 Epoxy, Pre-heat to 75-90C, Jeep at 2.3, with 8 holidays found.

9-Mar-23	2023-0723	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	In Compliance	Major Project	Inspection with the operator of the Mount Bracey stockpile area and the Mount Bracey block valve, inlet and outlet construction. KP 163+500, Future compressor site, active construction of above ground and below ground, inlet and outlet piping and block valves. 2 welders on site #20 and #23, welding certifications produced, PQR's produced for welding procedure and repair procedure. Welding procedure WPDS-CGL-SAE-03 produced, repair procedure 2020-01-06-rev 1 produced. Welding inspector certification AWS level 2, CWP level 2, and API 1169 produced. Coating will be completed post build following 2 parameters above and below ground. Hydrostatic testing is expected to be completed within 3 weeks. Active gravel crushing site, with several stockpiles of crushed materials present. Rock is being hauled from the ROW to be crushed and used within permitted areas. Observed non-compliance issues with the J45 crusher and these issues were discussed with the operator. An inspection with the CGL and SA safety staff was arranged and conducted on March 9, 2023. The following safety / environmental concerns were brought forward to safety staff for correction, 1. Lack of guarding on head pulleys. 2. Guard rails broken and / or missing on operator platforms. 3. housekeeping on operator platforms, rock and dirt piled up on platforms unsafe to stand on. 4. Conveyor requires signage "falling rock" and a fence to ensure a safe distance while crushing 5. Hydraulic hoses leaking no spill protection. It was recommended that all crushers on the pipeline be examined for similari ssues and corrected if necessary.

10-Mar-23	2023-0756	Trans Mountain Pipeline ULC	UTM: 11N 352613.072E 5835008.624N	TRUCK	MID	Completed	In Compliance	Officer Selected	Inspection with the operator of the Camp Creek integrity dig and section 11 isolation. KP 521+400. Camp Creek, FB, in isolation, 1/4" block nets are in place upstream and downstream, upstream of the isolation a sump has been dug in the creek to contain pumps for equilibrium. This sump appears to be outside the West ROW boundary and potentially in a non-permitted location. Sump appears to be approximately 1 meter deep and 6x6 meters in size. A dirt / cobble structure is being used to hold water back and meter bags and poly have been placed on the dirt dam. 4 - 10" pumps have been placed in the sump, At the time of the inspection 2 are active and 2 are not connected to flow lines. Operator states that an additional 2 - 10" pumps are to be placed in the sump. All pumps intakes are contained with adequately screened boxes. Equilibrium is to metal diffusers downstream. The downstream is isolated by meter bags and poly. The diffusers are causing water to flowback into the isolated working area through the meter bags. No scouring or turbidity was observed during the inspection. Excavation within the isolated area has not started. A fish salvage was conducted with Bull Trout, Rainbow Trout and Sticklebacks being successfully relocated. WQM is by grab sample only and only when active work is being completed in stream. The following items were discussed with the operator at the time of the inspection. 1. The sump appears to be off ROW. Operator states on private land with owner's permission. Explained that typically streams / rivers are owned by the crown from the high-water mark, unless the private landowner has a deed stating otherwise. The sump excavation potentially is a non-compliance, but additional investigation is required. 2. Diffusers are causing water to enter isolated area. Discussed moving the diffusers further downstream to prevent this. The downstream isolation should not be allowing water to flow into the work area. Should additional pumps be brought online the operator is to ensure no scouring of channel or sediment releases downstream. 3. Water Quality Monitoring. Discussed using sondes verses grab samples.

10-Mar-23	2023-0749	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	In Compliance	Major Project	Inspection with the operator of section 3 KP 177 to KP 180+700. KP 177+446, WC 187.2F, S4, clear span with ESC, channel has been restored, bank wraps and willow staking. KP 178+177, WC 189, S4, clear span with ESC, channel restored. KP 179+160, WC 193, S4, clear span with ESC, in isolation, upstream plate and downstream sandbags and ploy, equilibrium maintained by 2 -3" pumps (1 active) in screened boxes pumping to downstream plywood diffuser. WQM in place. Channel restoration has begun with one bank being wrapped at the time of the inspection. KP 180+700, WC 194, S2, channel restoration is completed, one bank has been left in natural vegetation and the other is wrapped with root wads inserted and some willow staking. POD 12A, Rock Soup Creek at approximately 6 km on the Crocker FSR. Signage present, permit on site, with drawl records on site, pump on site with an adequately screened intake. STWU 0006153, AD 100115349. Note: A water truck was stopped at approximately km 32 on the Crocker FSR. Permit produce was AD 100115452, the permit was for a different location on Rock Soup Creek off the ROW. Discussed with the operator and the truck will be supplied with the correct permit.									100115349

13-Mar-23	2023-0735	Altagas Holdings Inc.		TRUCK	CENTRAL	Completed	In Compliance	Planned Inspection Program	d-58-F/94-B-16 Gas Plant Inspection Met with the Lead and Plant operators. Operations indicated the last shutdown device inspection was done June 28, 2022, the last turn-around and PSV maintenance was done in 2017, and the next plant shutdown and turn-around is scheduled for May 2023. Inspect fire and gas detection HMI display screens - No faults were found. However, it was noted after a review of the Fire and Gas Inspection Report for Nov 8, 2022, that LEL sensors were not being replaced as per the Net Safety Manufacturers recommendation on page 20 in the Operations Manual January 2017 FGD-MAN-0047- "the sensor near end-of-life Indicates the sensor will reach end of life before the next calibration can be completed. Replace sensor as soon as possible." Inspect production accounting meter calibrations. Verified that orifice meters were being maintained on a semi-annual frequency. Verified the flare meter was recently calibrated. It was noted that the Inlet separator water and condensate meters last proved 01-26-2022 were overdue for the annual proving. Operations staff reported the condensate meter FE-1 002 output was frozen. The meter run was blocked in until it could be put back in service. Request confirmation from operations when FE-1002 is back in service. Found no maintenance records to indicate annual maintenance was being conducted for the production tanks (S-900, S-910, S-920, S-930) and NGL bullets (V-940, V-950, V-960) level transmitters as per the BC Measurement Guideline. Review the Blair Creek 2 Carseal List. The plant operator indicated a recent carseal inspection (walkdown) was conducted. It was noted that critical overpressure control (OPC) devices - transmitters for the compressors (Q-210, Q-220, Q-230, Q240) 2nd stage high discharge pressure shutdowns were not on the Blair Creek 2 Carseal List. Operations staff agreed the pressure sensing isolation valves on the 2nd stage pressure transmitters must be carsealed open and to add the transmitter isolation valves to the Blair Creek Carseal list. Perform a walkdown of production equipment with operations staff. Encountered a reading of 10 LEL on 4-way personal monitor in the Q-210 compressor. Noted the LEL controller AIT- 2100 was reading 4 LEL.											
14-Mar-23	2023-1422	Tallahassee Exploration Inc.	From NTS: B- 081-E/094-J-10 To NTS: A- 099-F/094-J-10	TRUCK	NORTH	Completed	Non-Compliance(s) Found	Officer Selected	This inspection was completed March 14 2023 and entered into CMIS on May 23 2023 due to a Developments Sites system repair. Facility was Active at time of inspection. Inspection was completed with Tallahassee Lead Operator Shane Winters. All calibrations for meters and instrumentation are either near expiry or expired. (i.e. Main and Crash Dump water turbine meters, Inlet Sep Daniels Sr, fire and gas sensors, transmitters, ESD function test). Techmation is scheduled for end of March 2023. At time of inspection, the ERP binder in the office building was observed to be from May 2019. During the inspection, the updated ERP (March 1 2023) was emailed to Shane. The expired Facility ERP will be updated with the new one, and a copy will be placed on the facility computer. All fire eyes and gas detection are active and online in the PLC (180 minute bypass timer available). Wall mounted Catadyne heater in a-90 inlet building is temporary and will be moved. If it remains in place, the fuel gas regulator is to be vented to outside the building.									18468

15-Mar-23	2023-0768	PETRONAS Energy Canada Ltd.		TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program	Met with operations staff. Inspect fire and gas detection HMI display screens-fault found. AIT 4603-Condensate Stabilizer Tower/VRU Building methane gas detection was in fault and reading -12.48 % LEL. A methane leak was detected on Jan 9, 2023 on the VRU 2nd stage mechanical seal. The VRU was in operation and a strong methane odor could be smelled by the VRU. (3) windows inside the building were wide open. There was a strong cross flow of cold air through the building which may be affecting the sensor. Found fire and gas detection tags indicating quarterly calibration. Operations staff checked with the maintenance planner who indicated a semi-annual calibration frequency. Tags should indicate the calibration frequency. Confirmed the facility main fuel gas and sales meters were calibrated annually as per the BC Measurement Guideline (BCMG). Confirmed the delivery point condensate meter was being proved monthly as per the BCMG. Found that a sample point was installed on the main fuel gas meter transmitter tubing which was not in accordance with the BCMG. Found FIT-8020 and FIT-8030 - meter bypass valves not sealed closed in accordance BCMG. The meter bypass valves were sealed closed at the time of inspection. Perform a walkdown of facility equipment. Action Items: 1. Facility main fuel gas meter- remove the sample point "tee" and "valve" from the meter run transmitter tubing and relocate the sample point as not to interfere with the fuel gas measurement. 2. Fire and gas calibration tags - ensure the tags indicate the correct calibration frequency. 3. Remove hidden hazard - a ladder is lying flat underneath the snow by flare stack auto-ignitor panel. Please reply to the BCER concerning the above Action Items. Thank you,

17-Mar-23	2023-0819	Canadian Natural Resources Limited	NTS: B- 064-E/094-A-14	TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	Oakridge Enviromental was onsite at time of inspection. They were there backfilling in something. I asked the Enviro guy onsite, what are you backfilling, and his answer was...I dont actually know, maybe an old flarepit. I found it odd that the Enviro guy onsite does not know what they are backfilling?							4685			
17-Mar-23	2023-0818	PETRONAS Energy Canada Ltd.	NTS: D-C075-J/094-B-16	TRUCK	CENTRAL	Completed	In Compliance	Planned Inspection Program	I met Petronas Operator on location. Thanks for our conversations. Just one comment and that is the PSV for the air compressor in the genset seacan should be tagged and on your maintenance list.							4675

22-Mar-23	2023-0884	PETRONAS Energy Canada Ltd.		TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	This spring inspection is for the bridge and stream crossing on Blair Road and to determine if there were any water or sediment management issues. The only concern at the time of inspection was a broken splashboard on the bridge where sediment could flow off the decking and into the stream. This should be repaired.											
22-Mar-23	2023-0884	PETRONAS Energy Canada Ltd.	From NTS: A- 058-J/094-B-09 To NTS: C- 058-J/094-B-09	TRUCK	CENTRAL	Completed	In Compliance	Officer Selected											18643	
22-Mar-23	2023-0875	Canadian Natural Resources Limited	From NTS: C- 099-C/094-B-16 To NTS: D- 100-C/094-B-16	TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	An inspection on the Mile 132 road in Feb 2023 made a comment regarding broken splashboards on the km 11 bridge, These were replaced in an expedient manner and will be helpful in reducing the amount of sediment that may flow into to the stream. It was anticipated that the comment would initiate a review of all bridges on the road and conduct the appropriate maintenance. The new bridge at km 4.5 does not have any splashboards or other means to prevent mud, rock and road debris from entering the stream from the bridge deck. There is a pile of dirt on the wingwall that is prone to falling into the stream and this should be removed. It also appears the ditches may have been cleaned out and it appears there was no sediment fences or other water/sediment structures installed to manage any sediment from entering the stream. Due to system limitations this inspection will show as a PASS, however, there are concerns over the possibility of sediment entering this fish bearing stream.									18638

22-Mar-23	2023-1424	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Routine inspection in and around the Kitimat area with Haisla liaison on March 22, 2023. Wathl and WC 6E crossing KP 659+150 * Splash guards along FSR require maintenance, old, project related material instream should be removed. No activity on the adjacent ROW during inspection. Non BC-ER road and non enforceable recommendations, if problems at this location persist then will forward onto appropriate agency. WC UN 22-5 KP 660+325 * Tributary to Pine Creek across Alcan access road. Water leaving ROW clear at this location. ESC measures may require maintenance once snow melts but at the discretion of CGL EI's. WC UN 22-10 KP 660+761 just South of Haisla village road. * Pumps instream in case of sedimentation issues into Pine creek from surface runoff. Pump active at time of inspection, ESC maintenance recommended on wing walls alongside stream and access. WC UN 22-13 KP 660+968 * Sump established with Big "O" pipe removing surface road run off and leading to vegetation. Potential maintenance required once area is snow free, at the discretion of CGL EI's. WC 3E-1 KP 662+351 * Pipe recently installed, backfilling activities ongoing and no concerns at this time. WC UN 22-15 KP 662+351 * Noted drip tray on an angle with visible hydrocarbon sheen, clean up occurred immediately once noted. * Minor garbage noted onsite (water bottle) cleaned up immediately and housekeeping to be brought up to all field staff. * Fish salvage ongoing during inspection, Stickleback and Salamanders main species being salvaged in this area.										
22-Mar-23	2023-1424	Coastal GasLink Pipeline Ltd.	From NTS: A- 077-A/103-I-02 To NTS: D- 025-B/103-I-02	TRUCK	COASTAL	Completed	In Compliance	Major Project	* Bridge has been removed to facilitate pipeline installation. * Pipe installation occurring up to crossing. * Installed on top of parent material as per plans. * Pipe almost level with native ground. All as per engineered design provided to the BC-ER for this area. S1073 KP 666+513 * Waste discharge location, water clear at discharge and iron staining noted throughout the watercourse. * Additional discharge location noted approximately 20m downstream, placed on gravel bar on top of plywood. Dissipater in place but no discharge occurring from this location during inspection. * Discussed the backwatering of the stream and potential aqua dam installation. * Additional block nets noted in stream. * Check dam #1 functioning well, no concerns. Iron staining noted throughout stream at this location as well. WC 3002 (WDA site T4) * Juvenile salmonids noted. * Turbid water readings within guidelines during inspection. * Iron staining noted. * Sandy substrate, tidal influence, small channel with decent flow. * Discussed DO fluctuations at site ranging from 3-12. WC 3002 (WDA Site T3) * Sandy substrate, iron staining, tidal influenced. * No concerns with DO and discussed levels of turbidity and potential causes. * Wide, slow moving channel, low flow. * No evidence of algal blooms throughout watercourse. WC 741.1T KP 665+614 * Trenchless pipe crossing complete. * Sinkhole repaired with bentonite and adjacent soils. * Site still isolated (aqua dam) and pump around ongoing. * Site will be isolated until tie in is complete. * Iron staining naturally evident throughout system, noted in the isolation and upstream. * Algal blooms noted in the isolated areas. No Non-Compliance noted during inspection

From NTS: B- 022-J/094-B-16 To NTS: A- 018-J/094-B-16	TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	This inspection is for the 2 bridges on the b-22-J road and is an early spring inspection to see if there are any concerns regarding water and sediment management. There were no concerns noted at the time of inspection.										18642	
23-Mar-23	2023-0900	Coastal GasLink Pipeline Ltd.		WALK	MID	Completed	In Compliance	Major Project	Inspection with the operator of WC 143, KP 154+800, trenchless crossing of the Anzac River. Water management issues from the bore casing flooded the bore bay. 17 well points were installed to try and reduce the flow, but the well points failed to produce any significant flow and have been shut down. The well points are sand bedded 5 inch plastic casings with 3 inch submersible pumps inserted discharging through 2 inch lines. The bore casing had been pulled back approximately 7 meters when the water issues started. 2 holes were drilled on Center line of the bore path and 17 cubic meters of 5 MPa fillcrete was pumped into the void created by the pulled casing. significantly reducing the water flow. The entrance bore bay has been pumped down at which time sloughing underneath the slide rails into the bore bay was observed. The sloughing has caused voids to be created on the outside aspect of the slide rails walls. The operator is reviewing the site to determine best options for going forward. An artesian flow has developed on the exit side within the sheet piled trench. Flow is estimated at 2.5 cubic meters per minute and is being pumped to a dewatering location. An access and pad have been constructed on the exit side to facilitate additional equipment if required. At the time of the inspection the operators' corrective measures have controlled the immediate environmental concerns.								66264

24-Mar-23	2023-0994	ConocoPhillips Canada Resources Corp.		TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	This inspection is a summary for the non-tenured road that has been used by ConocoPhillips to access well site c-12-G /94-B-16, WA 04140. This well is located approximately off km 1.2 on the Gundy/Mile 120 km 13 road. In the past I had issued a deficiency to ConocoPhillips for using and repairing this non-tenured road and upon receipt of a road use agreement with Petronas rescinded the deficiency. Upon review of the Road Use Agreement, maps, survey documents, BC-ER Permits in BC, iMapBC, it was determined that Petronas does not have a permit for the road that ConocoPhillips has been using and conducting repairs on. Since ConocoPhillips was under the impression that Petronas had tenure on the road and signed a Road Use Agreement, there won't be any deficiency or other compliance measures for use or repairs conducted on the non-permitted road. Instead, ConocoPhillips will be required to apply for a road permit. Due to system limitations, this inspection will show as a PASS, however, there is a requirement to apply for a road permit. Please inform me when you have applied for the permit or require any other information. Thank you

28-Mar-23	2023-0935	PETRONAS Energy Canada Ltd.	NTS: D- 032-J/094-B-16	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program	Met operations staff. Inspect fire and gas detection display screens - no faults found. However, operations reported the facility alarm horn was not functional. Inspect that a facility carseal list was available. Perform a walkdown of the facility. Inspect production accounting meter calibration records. Operations reported no maintenance records were available for the production tank level transmitters (TXS), used in the determination of battery monthly opening and closing inventory levels. Operations reported that the maintenance was not completed on water tank T-555, condy tank T-505, cascade tanks 570 & 575 because they are requiring repair and possible new still wells causing glitching on the TXS. Operations reported they are waiting on parts to fix the remaining level issues. Operations confirmed there is a Pm for the level TX calibrations in Maximo for all tanks once the repairs are completed. Action items: 1. Repair production tank level transmitters as required and conduct annual maintenance as outlined in the BC Measurement Guideline. 2. VRU-720- tighten loose bull plug on LPB-75 receptacle. 3. VRU -710- tighten loose bull plug LPB-67 -EF-710. 4. Dehy 420- tighten loose bull plug on LPA-74 Switch. Please reply to the BCER concerning the above action items. Thank you,						1827

29-Mar-23	2023-1297	Trans Mountain Pipeline ULC	UTM: 10N 569056.701E 5436496.365N	TRUCK	COASTAL	Completed	In Compliance	Major Project	* Stewart Slough: viewed watercourse and discussed upcoming crossing. Discussed previous concerns with watercourse. * Sumas Canal: viewed discharge area. Witness short duration turbidity event. Requested water quality data (received). * BC-725C isolated, currently low flow but running clear. Discussed fish mitigations. Pipe is in, but repair needed on tie in before restoration. Discussed amphibian mitigations. * BC-725D: currently doing fish salvage at time of inspection. Discussed fish mitigations (block nets had large holes and were not keyed in). No water quality monitoring in place at time of salvage. Small amount of sediment laden water noted migrating downstream of salvage. Film/algae (natural/historical/non-project related) noted upstream of salvage. * BC-744A: ESC in place and functioning. Historical (non-project) modifications to watercourse. Smps are being pumped to adjacent vegetation. * BC-745: Viewed IFR locations (x7). Noted no geotechnical data provided to contractor, no records of shutdowns or drill/mud pressure monitoring were able to be produced. No IFR walk log was completed (unable to confirm that IFR walks being done). No water quality monitoring in place at time of events or during inspection (unable to confirm water quality/turbidity data due to this). No evidence left of sediment deposition in channel. It was noted that there was a large rain event the day of the most recent incident, this watercourse is a tributary to Nathan Creek, and there is evidence of some natural/historical soil movement on slope. As well, the channel appears to have a high clay content in the substrate (naturally occurring). * Davidson Creek: Viewed IFR walk log (excellent log. Rig manager quickly supplied to records, log is well filled out, neat, legible, etc.). Provided drill sheet and chemical sheets quickly upon request. Site is extremely clean and well organized. Reviewed drill plan. Crew was very helpful in answering any and all questions. Viewed watercourse from a distance (unable to cross CN line) and discussed crossing. Water quality monitoring in place (sondes) both up and downstream. * Requested IFR Plan for all sites viewed including chemical additive MSDS sheets

30-Mar-23	2023-0983	PETRONAS Energy Canada Ltd.	NTS: A- 058-H/094-B-16	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program	Met with operations staff. Inspect fire and gas detection screens on the facility PLC display. Found that the Generator # 2 package LEL detector AIT 3850 was reading -9 LEL. Confirmed that production accounting meters calibrations were up-to-date. Confirmed that operations were maintaining a master carseal list. Noted work in progress for facility piping and equipment upgrades, which included larger inlet piping, a condensate pipeline and condensate pump building, an inlet separator, a generator package, flare stack and flare system upgrades. Operations staff also commented that each of the (5) compressors were getting auto blowdown valves and the facility was getting a control system upgrade for remote start operations. Perform a walkdown of the facility and water hub equipment. Noted that the produced water pond bird deterrent ribboning was starting to deteriorate and looked a little thin. During the inspection there was a condensate tank TK-400 low low alarm which triggered the red alarm beacon strobe, but not the alarm horn. Operations said the horn was not working and should have sounded, as the plant was in un-attend. Noted that the A-30-I sales pig sender pressure alert (PAV) safety chain was broken. Noted faded ESD sign on inlet #2, and exposed wiring on the low JW level switch in C-100 compressor. Action Items: 1. A-30-I sales pig sender- recommend repair pressure alert valve (PAV) safety chain. 2. c-100 compressor- recommend repair exposed wiring on engine JW low level switch. 3. Inlet #2- recommend replacing faded ESD push button sign. 4. Produced water pond- recommend assessing the condition of the bird deterrent and replacing as required. Please reply to the BCER concerning the above action items. Thank you,						1956

30-Mar-23	2023-1298	Trans Mountain Pipeline ULC		TRUCK	LMVI	Completed	In Compliance	Major Project	* Salmon River (exit): currently abandoned in place (not active). ESC in place and mostly self-sufficient. Pump around in place for wetland. No concerns. * Salmon River (entrance): currently not active. Reviewed IFR walk logs (documentation is clear and well organized). Excellent housekeeping on site. Viewed site water discharge locations. * West Munday Creek (entrance): viewed watercourse, creek is running clear with water quality monitoring in place (sondes). * West Munday Creek (exit): rigging up currently. Reviewed IFR walk logs (clear and fully filled out). Viewed drill plan and geotech summary. * South Fraser Perimeter HDD (BC-774): viewed watercourse upstream of IFR. Unable to access IFR location due to wet ground. Sani-line (City) noted as being leaking near the watercourse. Non-project related debris noted in watercourse. Reviewed IFR walk logs (using drone with FLIR, 24 hour a day IFR walk coverage with drone due to access constraints). * BC-776A DPI: Reviewed IFR walk logs, no concerns. Viewed watercourses and IFR locations.No evidence remaining of IFR (clean up completed), no sediment deposition, etc. Watercourse running clear and water quality monitoring in place. Non-project related debris noted in creek. Requested mud content at time of IFRs and WQM data from 24 hours before until 24 hours post incident cleanup (data has been provided already). Vac truck support available for any future releases.

4-Apr-23	2023-1033	PETRONAS Energy Canada Ltd.	NTS: D- 097-G/094-B-08	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program	Met with operations and Field Assurance Lead. Inspect the fire and gas detection display screens- no faults found. Mentioned to operations that inlet separator #2 LEL display was reading 6.10 % LEL and that a gas leak check will be conducted. Verify that production accounting meter and fire and gas detection calibrations were up-to-date. Perform a walkdown of the production equipment. Noted that there was no automated blowdown valve electrically connected to the facility PLC safety system to blowdown the (2) inlet separators and the compressor suction header in the event of an emergency shutdown. The Dehy #2 pump was remotely shutdown to test the facility alarm horn and beacon lights. The red beacon strobe at the office activated, but the alarm horn did not. Action Items: 1. c-7-J/94-B-8 inlet pig receiver pressure alert valve (PAV) safety chain- found too long - recommend shortening. 2. Recommend incorporating monthly testing of monitoring and alarm system (horns and beacons) as per OHS 6.128 (3). Please reply to the BCER concerning the above action items. Thank you,							1979

5-Apr-23	2023-1095	Canadian Natural Resources Limited	NTS: D- 068-B/094-G-01	TRUCK	CENTRAL	Completed	In Compliance	Risk & Data Informed	COMMENT: -The surface casing vent could be heard gurgling at time of inspection. I put a latex glove over the SCV assembly and the glove blew off in less than 10 seconds. Looking at the database, the last time a surface casing vent test was submitted was in 2012, and it could be heard gurgling at that time as per submission. -Because the latex glove blew off almost immediately (only LEL present as per personal monitor), a new surface casing vent flow test needs to be done and submitted to BCER within 30 days of this inspection submission. Thank you,									5874

6-Apr-23	2023-1102	ConocoPhillips Canada Resources Corp.	NTS: C- 011-K/094-A-12	TRUCK	CENTRAL	Completed	In Compliance	Facility Start-Up	Phase 2 Fuel Gas System- Witness ESD and ESDD Function Testing Meet with EPFC Commissioning and Start-up Manager, Instrumentation Lead and Automation Integrator. Inspect the fuel gas system scrubber, associated control, ESD block, and blowdown valves, Witness ESD function tests of valves (2-XV-6500, 2-XV- 6501, 2-XV-6513, 2-XV-6516, 2-XV-6531, 2-PV-6510, 2-PV-6514, 2 XV-6533) initiated by ESD push buttons (HS-3030 & HS-3031) and LEL gas detection (AIT -3015-A, & AIT 3016-A) on BU-3000 - De-ethanizer & Refridge Process Building. All valves swung to the correct position, however XV-6501 - Fuel Gas to HP Flare open limit travel timed out. EPFC will trouble shoot and will provide an update. A 50% LEL methane sample was applied to AIT-3015-A and AIT 3016-A. Noted the gas detection LEL alarm warning was set @ 20 % LEL and the high shutdown was set @ 40% LEL. Action Item: 1. Recommend CPC examine the gas plant methane LEL % alarm and high shutdown settings Vs. OHSR 5.31. OHSR- 5.31 Flammable gas or vapour If it is not practicable to maintain the airborne concentration of a flammable gas or vapour below the applicable exposure limit, for example, in a temporary situation or an emergency, (a) only the minimum number of workers necessary for the work may be exposed, (b) every worker exposed must be adequately trained and equipped to safely perform the required duties, (c) the concentration of the flammable gas or vapour must not exceed 20% of the lower explosive limit (LEL), and (d) in a life-threatening emergency only, exposure of emergency response workers is permitted above 20% of the LEL, provided that only those qualified and properly trained and equipped workers necessary to correct the unsafe condition are exposed to the hazard and every possible effort is made to control the hazard while this is being done. Please reply to the BCER concerning the above action item.							2120

13-Apr-23	2023-1134	ConocoPhillips Canada Resources Corp.	NTS: C- 011-K/094-A-12	TRUCK	CENTRAL	Completed	In Compliance	Facility Start-Up	A satisfactory inspection has been completed for the gas plant phase 2 expansion partial fuel gas LTO for commissioning and start-up. Met with EPFC Commissioning Manager, the Commissioning Start-up E+I Lead, and plant field commissioning staff. Review signed off fire and gas detection calibration sheets. Verify that electrical seals in hazardous areas have been inspected that they are packed and poured. Verify that electrical and process systems related to the partial fuel gas LTO have Ready For Start-up Certificates (RFSU's) with zero (0) "A" deficiencies. Verify that carseals for critical safety devices are in place and a carseal list is being maintained. Verify that an amended BCER Waste Discharge Permit (WDP) to include phase 2 emission sources has been authorized. Discuss WDP condition #2.9.5 for the operation of the low-pressure flare stack that a flare gas heating value of not less than 20 MJ/m3 shall be maintained during routine and non-routine operating conditions. Recommend the implementation of dilution gas controls similar to what is in place for the operation of the phase 1 incinerator. Perform a walkdown of the fuel gas system from the phase 1 and 2 buyback gas tie-in point to the BU-3000 Dethanizer & Refridge Process Building fuel gas scrubber, noting major blind points to isolate areas not ready for fuel gas. Noted that fire extinguishers had not been hung on equipment modules. Give ok to use the buyback meter to determine phase 2 fuel, vent, and flared volumes to allow commissioning to continue until 2-FE-6511 – Fuel Gas Scrubber, FE-6036 Phase 2 LP Flare, and 2-FE-6006 Phase 2 HP Flare meters are commissioned. Action Items: 1. Ensure fire extinguishers are hung on equipment modules. 2. Recommend dilution gas controls for the operation of the low- pressure flare to ensure the Waste Discharge Permit condition 2.9.5 is met. 3. Submit commissioning documentation for 2-FE-6511 – Fuel Gas Scrubber, 2-FE-6036 Phase 2 LP Flare, and 2-FE-6006 Phase 2 HP Flare meters. Include a low flow cut-off calculation for 2-FE-6036 and 2-FE-6006 as discussed. 4. GT-8100 and GT-8200 fuel gas ESDV- provide commissioning documentation.						2250

13-Apr-23	2023-2162	LNG Canada Development Inc.	NTS: A- 005-B/103-I-02	TRUCK	COASTAL	Completed	In Compliance	Major Project	LNG Tank (Internal) - no concerns noted. * Tank accessed at ground level * Pump columns viewed installation & fabrication approach discussed * Welding and NDE records for circumferential weld on column M5 requested. * Records shared; response sufficient. * Pressure test records for pump column W5 requested. * Record shared; response sufficient * Walked around perimeter of tank opposite pump columns * Exited tank LNG Tank (Roof Modules) - no concerns noted. * Accessed tank roof modules via scaffold stairs * Viewed various decks including relief valve module, main modules, fire-fighting modules * For LNG Tank Inlet Pressure Control Valve 034PCV-5501B * Requested torquing records * Responses indicate mod yard records currently being reviewed and are in the process of being uploaded to databases. Site ITR will require verification of the bolted connection through prior documentation or work at site. Completion timing of site ITR is uncertain. BCER and JFJV discussed reviewing torque records at a later date. * Requested construction verification and commissioning activities * Information provided to demonstrate valves are captured in commissioning database. Generic ITRs for valves provided as ITRs for this valve have not been generated yet. BCER and JFJV discussed following up through a subsequent inspection if required. * Team noted that separate areas have been established to segregate materials						3628				
13-Apr-23	2023-2162	LNG Canada Development Inc.		TRUCK	COASTAL	Completed	In Compliance	Major Project	* Team descended from tank roof, walked around the eastern side of tank and viewed main riser structure from ground level. Flare Area - no concerns noted. * Accessed liquid flare structure; viewed risers and associated tubing * Accessed connected pipe rack modules * Vapor flare structure modules being installed; viewed at a distance. Discussed construction approach and QA/QC process for bolted connections. * Requested records for bolted connections on vapor flare. * QA/QC reports for vapor flare connections not completed; JFJV indicated they will be developed as a single ITR for the entire structure (not connection by connection). Liquid flare records (including evidence of bolt tightening and ironworker certifications) provided in lieu. Response sufficient. * Viewed vapor flare tips staged at ground level. Non-Process Building (Control Room) - no concerns noted. * Toured administration building including server/comms rooms, lab, and control room (note: tour was for awareness only, as buildings are not within BCER jurisdiction) * Control room overview, including control desks and critical action panels,turrets, provided. Documentation Request - no concerns noted. The following documentation was reviewed as part of the inspection: * For closure welds 1777, 2730, 4271, and 4272 the following was provided: * Evidence of Welder Qualification (including qualification for weld procedure used) * Visual and NDE Reports and Inspector Qualification(s) * Details of repairs required * Test records for pneumatic tests JFJV-PNEU-0023 (Test Specific) and JFJV-PNEU-0053 (Standard) were requested. * JFJV has indicated that the tests are not yet complete. JFJV to re-estimate plan dates in tracking register and provide to BCER.

14-Apr-23	2023-1146	Coastal GasLink Pipeline Ltd.		TRUCK	SOUTH	Completed	In Compliance	Facility Start-Up	inspection for MS-2, MS-4, MS-5, and associated assets. Review Dry Commissioning Completion Memo's for Wilde Meter Stations # 2 and 4. Review Wilde Meter Station 2, 4, & 5 punchlists and accept that remaining open punches are being appropriately managed. TC Energy email indicated the remining Dry Commissioning Memo for MS 5 and the Pre-Startup Safety reviews (PSSR) for all three meter stations will be forwarded as soon as that documentation is compete. Perform a walkdown of the A1, A2, and A3 Utility Fuel Gas Skids. Noted the Fuel Gas skids were pressurized and in operation. The stop valves underneath A1/A2/A3-P5V-3108 were open, but not carsealed. Requested the P5V stop valves be carsealed open in accordance with the Drilling and Production Regulation 49 (2). This was done at the time of inspection. A warning was issued as the Fuel Gas Skids were deemed to be in operation. Walkdown MS-2, MS-4, MS-5, and associated assets. Note temporary electrical and open electrical wiring for the preservation heaters inside hazardous classified areas (asset buildings). Request that temporary heater wiring be disconnected, and electrical boxes be made to be explosion proof prior to the admission of hydrocarbons. Action Items: 1. Prior to the admission of hydrocarbons into MS-2, MS-4, and MS-5 assets remove preservation heaters in hazardous areas and close up open electrical wiring. 2. Submit TransCanada Calibration Certifications for MS-2, MS-4, MS-5 forward runs and sour return meters. 3. Submit the remining Dry Commissioning Memo for MS 5 and the Pre-Startup Safety reviews (PSSR) for MS-2, MS-4, MS-5 and associated assets. Please reply to the BCEDR concerning the above action items. Thank you,										
14-Apr-23	2023-1146	Coastal GasLink Pipeline Ltd.	NTS: D- 052-D/093-P-15	TRUCK	SOUTH	Completed	In Compliance	Facility Start-Up									2283				
17-Apr-23	2023-1174	PETRONAS Energy Canada Ltd.	NTS: B- 089-I/094-B-16	TRUCK	CENTRAL	Completed	In Compliance	Facility Start-Up	A satisfactory inspection was completed for Phase 2.5 - Unit #2 - 8210 GTG Waste Heat Recovery Unit, associated piping, and BU-6700 Hot Oil Building extension for hot oil pumps P-6765 & P-6770. Reviewed the Interlock Test Check Sheet - Phase 2.5 - FCN-010. Verified that a Declaration of Completion and Turnover was completed and signed off. Inspected the gas plant operator HMI display new BU-6700 fire and gas detection and ESD push button graphics - no faults found. Perform a walkdown of the equipment with Petronas Construction Manager and Operations Technical Advisor.									2363				
17-Apr-23	2023-1164	Ovintiv Canada ULC	DLS: K04-23-080-17	TRUCK	SOUTH	Completed	In Compliance	Drilling Rig	Rig is clean and organized. there are several sound dampening panels installed around rig. Found several loose ground rods. Broken fitting and missing gauge on gas line going to boiler, rig waiting on BC boiler permit. Gas line going from scrubber to the rig could use another barricade. Issues observed corrected during inspection and as soon as possible.									6567			

18-Apr-23	2023-1206	Canadian Natural Resources Limited	NTS: B- 014-F/094-B-16	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program	Thanks to CNRL Operator for our discussions. There are some action items he was going to initiate. They mentioned a removal plan for the wooden mats and pallets. We discussed my concerns regarding the lease water not being tested prior to flowing off the lease as it has been constructed as being self draining. I had noted a slight sheen and one small area of the large melt puddle had a bit of a greasy feel to the water. He was going to get his field test kit and conduct a proper assessment. I also showed operator the 3 new buildings and chemical tank set up where I noted the ground wire attached to the pilings but no wires were tied into it. An example of this is the solar panels on the new buildings where the internal bond wire was attached to the external bond wire and lug but laid unattached to the ground wire underneath the steps of the building. Please assess the 3 new building and new chemical tank and pump set up for bonding and grounding. The pipeline inspection was limited in scope to the on lease equipment. The cellars on the b-f-14, b-g-14 and b-k-14 wells need to be filled in more as it represents a tripping/fall hazard.							6729

19-Apr-23	2023-1196	PETRONAS Energy Canada Ltd.	NTS: A- 079-F/094-G-01	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program	Meet with Petronas Field Assurance Lead. Inspect fire and gas detection display- no faults found. Perform a walkdown of the production equipment. Noted a fair amount of oil underneath the decking in the compressor. Inspect the sales meter calibration- recent calibration April 5, 2023. The FG meter was recently calibrated - Feb 19, 2023. The fuel gas Orifice Plate Record indicated the meter was a junior and was not inspected. Noted the b-53-E well pig receiver pressure alert valve safety chain was too long and required shortening. Action Items: 1. Fuel gas meter - Inspect the orifice plate as per the BC Measurement Guideline. Recommend upgrading the meter to a senior fitting to facilitate orifice plate inspection without having to shut-in the fuel gas to the site. 2. Compressor Building- recommend cleaning up the oil (combustible material) underneath the decking of the compressor. 3. B-53-E pig receiver PAV safety chain - recommend shortening the safety chain. Please reply to the BCER concerning the above action items. Thank you,						2397

19-Apr-23	2023-1267	Trans Mountain Pipeline ULC		TRUCK	KTNY	Completed	In Compliance	Major Project	inspection with the operator of spread 5A, April 18 and 19, 2023. KP 972+100, Road 04618, segment 219, there were no concerns noted at the time of the inspection. KP 972+100, Road 04618, segment 119, existing trail from ROW being used for foot traffic and some small equipment storage, KP 977+020, pump off location to filter bags. Discussed leaking inlet. KP 977+650, BC 571A, culvert and cobble lined channel, there were no concerns noted at the time of the inspection. KP 977+650, BC 571, Juliet Creek, clear span with ESC, bridge ESC requires maintenance. Soil pile and soil berm within the high-water area, pump off location has a layer of sediment that will require assessment and cleanup. These items were discussed with the operator at the time of the inspection. KP 972+690, BC 565, culvert installed, channel was dry at the time of the inspection. KP 971+200, BC 564C, mat crossing with ESC, there were no concerns noted at the time of the inspection. KP 971+180, BC 564B, there were no concerns noted at the time of the inspection. KP 971+170, WT 673, mat travel lane with ESC, there were no concerns noted at the time of the inspection. KP 971+000, BC 564A, culvert installed with a poly lined channel, there were no concerns noted at the time of the inspection. KP 971+000, WT-17C, mat travel lane with ESC through wetland, there were no concerns noted at the time of the inspection. KP 968+720, BC 562, mat crossing, there were no concerns noted at the time of the inspection. KP 967+850, BC 850, poly lined channel, there were no concerns noted at the time of the inspection.							89744

20-Apr-23	2023-1200	PETRONAS Energy Canada Ltd.	NTS: B-A079-G/094-G-01	TRUCK	CENTRAL	Completed	In Compliance	Planned Inspection Program	Meet with Petronas Field Assurance Lead. Inspect the well production equipment. Noted that both well ESD valves were closed, and the well separators were pressurized to maintain fuel gas for separator building heat. Found the site sales gas ESD valve forced open by locking an Amot 4057 latch toggle in the upright position. It was suspected that an ESD valve pneumatic pilot switch (either the high or low pilot) output was not satisfied. Inquired if the wellhead tubing and casing pressure transmitters had a high pressure setpoint programmed into the site SCADA, as the transmitter isolation valves were not locked or carsealed open. Noted on both separator buildings that the fuel gas scrubber PSV piping was missing a protective weather cap to prevent water or debris from plugging off the PSV discharge. Found that the B-A79-G/94-G-1 Separator Building water and condensate meters were shut-in and the water meter display was blank. Found the B-b79-G/94-G-1 Separator Building water and condensate meter displays were flashing. Action Items: 1. Recommend conducting a Pre-Activity Start-up Review for both wells prior to re-starting well flow after shut-in. 2. B-A79-G/94-G-1 and B-B79-G/94-G-1 wellhead pressure pilots- recommend calibration and function testing. Check the site SCADA shutdown key. Lock or carseal wellhead pressure transmitter isolation valves open if a high shutdown setpoints is programmed into the site SCADA. 3. Sales ESD valve - High/low pressure pilots- recommend calibrating and function testing prior to commencing sales. 4. B-A79-G/94-G-1 Separator Building- ensure both the water and condensate meters are functioning properly. 5. B-b79-G/94-G-1 Separator Building - ensure both the water and condensate meters are functioning properly.							6719		
20-Apr-23	2023-1200	PETRONAS Energy Canada Ltd.	NTS: B-B079-G/094-G-01	TRUCK	CENTRAL	Completed	In Compliance	Planned Inspection Program								6720		
20-Apr-23	2023-1317	Trans Mountain Pipeline ULC		TRUCK	COASTAL	Completed	In Compliance	Major Project	Inspection with the operator of spread 5B. KP 1056+880, WT 812A, open trench, slide rails installed, trench pump to flock tank to filter bag KP 1050+800, BC 660, clear-span bridge with ESC, in isolation upstream meter bags and poly, downstream sandbags and poly, equilibrium 4 - 6" pumps and 1 - 10" pump to downstream diffuser, trench pump to filter bag, KP 1050+650, BC 659, in isolation, upstream and downstream sandbags and poly, equilibrium by 4 - 6" pumps to downstream diffuser, trench pump to filter bag KP1049+110, BC 658, FB, restored channel with early vegetation starting to grow. KP 1016+ 910, BC 627A, culvert with ESC KP 1016+820, BC 627, restored channel with travel lane and culvert installed. KP 1012+490, BC 617, 5S, clear-span bridge with ESC and mat travel / work lane. In isolation, upstream and downstream meter bags and poly, equilibrium by 2 - 4" pumps to downstream plywood diffuser. Discussed diffuser being inadequate for heavy flow. Discussed most of the upstream flow going sub surface prior to reaching the upstream isolation. Discussed sub surface flow entering the trench from the upper bank. Discussed spawling gravel / sand on the trench walls being potentially unsafe. Discussed spare generator on rig mats being undermined by spawling gravel / sand and being a potential hazard. There are several hose lays and pump locations, noted as a confusing water management system and was discussed with the operator. Trench pump to flock tanks and is being vac trucked for disposal and / or being pumped from flock tank to pig pen. Discussed one of the pig pens has collapsed on one corner and requires repair before use, there are holes in the pig pen and holes in the filter bag inside the pig pen. There is a secondary dewater location on BC 616A, hose line to filter bag. The operator is to provide guidance to the crew onsite to ensure safety and effective water management. KP 1012+570, BC 617A, NCD, geo and poly lined channel with cobble KP 1013+230, BC 602B, NCD, clear-span bridge with ESC KP 1013+290, BC 621, NCD, clear-span bridge with ESC, cobble channel KP 1013+500, BC 621A, NCD, culvert installed							99046

24-Apr-23	2023-1214	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	Non-Compliance(s) Found	Major Project	Inspection with the operator of 2 water Courses in WEP areas of section 3 that have been reported as being in exceedance. ROW KP 177+762 to KP 178+177. KP 178+177, WC 189, S4, in isolation, channel was undergoing restoration. upstream and downstream sandbags and poly, equilibrium by 2 - 3" pumps contained in a fish screened box. Block nets in place. Downstream isolation has been overrun due to excess turbid water entering the water course from an in-ground water flow along the ditch line in proximity to the pipe. Water is turbid and entering the clean flowing stream. NTU values were not produced at the time of inspection. WQM is in place at this water course. A vac truck is exposing the pipe to determine the source of the turbid water. Additional inspection will be conducted by helicopter to determine the full delineation of the turbid water flow. There is an active trench pump off from the downstream isolation to filter bags on the ROW. This was discussed with the operator as run off from the filter bags is causing turbid water to enter the Crocker FSR Road ditch and be carried to associated NCD's. Discussed with the operator on how far the turbid water is flowing in the NCD and to what receptors. To be delineated by helicopter inspection. Please see the non-compliance report associated with this water course. KP 177+762, WC 187.2F, S4, channel restored, sediment laden water is entering the water course from in-ground water flow along ditch line in proximity to the pipe. Turbid water is flowing downstream. NTU values were not produced at the time of the inspection. WQM is in place on this water course. A helicopter inspection will be conducted to delineate the full extent of the turbid water flow. Please see the non-compliance report associated with this water course.

25-Apr-23	2023-1628	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Routine inspection on Section 8E on April 25, 2023. Clore crossing: * Works have been completed on bank revetments. * Coarse rip rap place where sump and hose lays melted bank and minor sloughing occurred. * Trench and disturbed banks put back and ready for freshet. * Hose was still within high water mark and is frozen in place, these were removed and confirmed on follow-up inspection on 02/06/2023. * Housekeeping requested as minor debris noted as snow melts, these have been removed and confirmed on follow-up inspection on 02/06/2023. * Monitor post freshet for any further settlement of banks for potential follow-up works. * Inspected POD on Clore, signage in place and accurate, permit onsite and available as well as fish screen QA/QC filled out and onsite. Noted WDA permit provided to CGL by BC-ER for burning (AA-111237). WC 643 * Stream is in ongoing exceedance since March 18th. * ESC crews active and onsite during inspection. * Heavy equipment being utilized (3 backhoes, 2 rock trucks) * Two backhoes completing snow removal on lower end of ROW and transferring to rock trucks for removal from site. * Backhoes are exposing and completing maintenance on earthen burm at lower end of ROW. * NCD 643.1F channel poly lined but still receiving minor inputs from snow on high side of ROW. * Currently NCD being pumped off to adjacent vegetation. * Minor inputs noted from bridge crossing as bridge was damaged the previous night, temporary repairs had been completed just prior to inspection, longer term repairs required. * Background NTU increasing in upper wetland prior to entering site due to recent snow melt (non project related).														100084230
25-Apr-23	2023-1628	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	KP 606 hill * Steep slope pipe install occurring during inspection, one more weld remains. * Welding procedures provided upon request, no concerns noted from inspector. * Viewed both sides of installation. No Non Compliance noted during inspection.										100084695

25-Apr-23	2023-1295	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	* Cable Crane Hill: follow up on ESC incident. ESC work ongoing at time of inspection. Cleaning sediment ponds (pumping stopped for hydrocarbon sheen). Secondary containment beside sediment ponds to be propped up/maintained. Berms on slope being cleared of debris daily. Extra sondes added in WC UN 13-1, UN 13-2, and WC 678). Silt fence around riparian soil needs maintenance. Sime minor garbage/debris on riverbank (being cleaned up while on site). * Steep slope 6B trespass: investigation ongoing. Area is to be delineated and further use/access prevented. Please send pictures of delineation to the BCER. * WC 671: viewed reclamation. Minor garbage/debris to be cleaned up. Gravel/sand deposited in riparian area from snow ramp. WC S1074: spawning deterrents being removed. Active pumping ongoing in isolated channel (ESC measure). Secondary containment beside watercourse needs repair/maintenance. * UN 13-42: some sediment deposition noted in channel (from previous road related sediment). Currently water is running clear. ESC boxes in places. * No deficiencies issued.												
25-Apr-23	2023-1295	Coastal GasLink Pipeline Ltd.	From NTS: A- 077-A/103-I-02 To NTS: D- 025-B/103-I-02	TRUCK	COASTAL	Completed	In Compliance	Major Project											
25-Apr-23	2023-1227	Coastal GasLink Pipeline Ltd.	UTM: 10N 533648E 6072298N	HELICOPTER	MID	Completed	Non-Compliance(s) Found	Major Project	Aerial inspection with the operator of section 3, KP 190+000 to KP 172+250. KP 189+000 minor riling observed on slope. KP 186+200, Wet Land 11609, sediment and sediment laden water from lower slope has overrun ESC measures and entered into the wetland. Discussed with the operator, see Non-compliance report. The ROW through the wetland requires additional housekeeping to clean up pieces of plastic, geo fabric, rig mats etc. The amphibian fence requires maintenance if additional work is required on the ROW. KP 186+000, soil slumping observed on mid and lower slope, discussed with the operator. Retaining wall being constructed at the toe of the slope as a precautionary measure. KP 185+946, Road 15, ESC on the clear span bridge at BR 218 requires maintenance. KP 177+521, WC 187, S3, Clear span bridge in place, the approaches have been removed. KP 177+500, slope erosion issues, the rock lined drainages have failed, and soil has eroded from mid to lower slope. The dirt berm at the toe of the slope was breached and sediment and or sediment laden water has entered WC 187. This was discussed with the operator at the time of the inspection, see non-compliance report.

25-Apr-23	2023-1226	Coastal GasLink Pipeline Ltd.		HELICOPTER	MID	Completed	Non-Compliance(s) Found	Major Project	Aerial inspection with the operator of section 2 KP 172+250 to KP 140+000. KP 147+200, the Mini Anzac River has a sediment plume approximately 75 meters in length. Plume is caused by sediment laden water flow associated to pipeline construction. Discussed with the operator at the time of inspection, see Non-compliance.										
25-Apr-23	2023-1291	Murphy Oil Company Ltd.	From NTS: C- 056-A/093-P-09 To NTS: D- 055-A/093-P-09	TRUCK	SOUTH	Completed	In Compliance	Officer Selected	d-55-A/93-P-09 Riser Site. ESD okay, site fenced and locked. No staining and spills. No concerns at time of inspection.										
25-Apr-23	2023-1291	Murphy Oil Company Ltd.	From NTS: D- 055-A/093-P-09 To NTS: C- 056-A/093-P-09	TRUCK	SOUTH	Completed	In Compliance	Officer Selected											
26-Apr-23	2023-1232	ARC Resources Ltd.	DLS: 04-20-084-24	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program	Review the 4-20-84-24 measurement schematic with operations staff for correctness. Inspect operator fire and gas detection display screens- no faults found. Verify by calibration tags that the last calibration and testing on the fire and gas detection was done on Feb 13, 2023. Request the maintenance records for the water and condensate tank level transmitters to verify that the maintenance is being conducted on an annual basis as per the BC Measurement Guideline. The operator was unable to find records of maintenance. Perform a walkdown of the well and facility equipment with operation staff. Action Items: 1. 04-20-84-24 well tubing pressure transmitter electrical - recommend that the transmitter installation be in compliance with the CEC for hazardous areas. Found the Tech cable outer sheathing damaged - recommend the Tech cable be repaired. 2. K-200- recommend installing a sealed or locked clam shell on the 1st and 2nd stage discharge pressure sensing isolation valves on the tubing that goes back to the transmitters on the compressor panel for the associated high discharge pressure shutdowns. 3. Water tank containment - recommend removing piping laying down inside the containment that may damage the containment liner. 4. Water and condensate tank containment- recommend water testing and pump off to ensure the containment area has the required containment capacity. 5. Water and condensate production tanks level transmitters are deemed to be production accounting meters. Monthly opening and closing inventories are reported in Petrinex - Submit annual maintenance records as per the BC Measurement Guideline. If there are no annual maintenance records, please add a production accounting measurement PM for record of annual inspection. 6. 04-20-84-24 Metering Schematic - Submit a current and up-to-date metering schematic. Please reply to the BCER concerning the above action items.							2466				
26-Apr-23	2023-1232	ARC Resources Ltd.	DLS: 04-20-084-24	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program								2465

26-Apr-23	2023-1250	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	Non-Compliance(s) Found	Major Project	Routine inspection of Section 7 and IFR on the Morice River Drill on April 26th, 2023. Inspected POD 26 on West Morice FSR at approximately 28km. Signage in place and all information on sign correct. Permit also onsite as well as blank forms for water withdrawal, POD inactive. Noted Pallet in the River adjacent to the water withdrawal location, did not appear to be project related but should remove if safe to do so. No non compliance noted at POD location. Complaint follow up into exceedance report on A7012 from S6 J440.01. S6 currently isolated upstream of A7012 as active pipeline work ongoing in the area and pump around in place. Sediment entered stream from soil stockpile melt on edge of ROW which entered road bar ditch which connects back to stream J440.01. Hydrovac onsite cleaning up migrated soils during inspection. Stream J440.01 running clean at time of inspection. Minor additional ESC measures recommended in bar ditch. Approximately 50m East of J440.01 at KP 575+420 sediment laden water noted leaving ROW, no stream identified in the area. ESC measures adjacent to road have been overwhelmed by ROW run off. Sediment laden water travelled through culvert on the Shae FSR to S4 stream A7012 and noted entering stream below current WQM. Inspector discovered and deficiency with EPMR Section 12. Continued to the Morice River exit pad and documented clean up activities at IFR locations one and two. Notes and photos to be forwarded to enforcement staff for further review.											100084551

28-Apr-23	2023-1252	PETRONAS Energy Canada Ltd.	NTS: D-E003-K/094-G-02	TRUCK	CENTRAL	Completed	In Compliance	Risk & Data Informed	The pipeline inspection is limited in scope to the on lease equipment. it was noted the older wells are not flowing right now. Has the surface casing vent leaking fluids from the d-e-3-k and c-e-2-K wells been reported to Engineering?, If not, please do so. Please check the meter skid sign for the meter skid on well d-e-3-K. The well is "d" is marked by paint but the meter skid says "c". Correct as required. In the test separator skid the PSHH 2205 on top of the separator should probably have one of the blow down valves-gate or ball locked in the closed position so that any high pressure sensing is able to be done. Please review the need for this to be locked closed and respond back to me.									6977

28-Apr-23	2023-1262	2354890 Alberta Ltd.		TRUCK	SOUTH	Completed	In Compliance	Planned Inspection Program	1-36-82-18 - 2354890 Alberta Ltd - Younger Extraction Plant Meet with the Younger plant Foreman and an engineering staff member. The plant ESDD minutes prior to the meeting due to a PLC that was not on an uninterrupted power supply (UPS). The Foreman spoke with operations staff and mentioned the PLC was powered from a lighting panel that was shut off to do some electrical work. Plant operations staff confirmed the plant isolated and blew down as designed. Discuss the need to move the PLC power over to the UPS. Review the metering schematic Vs. Petrinex Mar 2023 Facility Activity to determine which meters were reporting. Could not verify at the time of inspection that the plant fuel gas, flare, and product inventory level meter calibrations were in compliance with the BC Measurement Guideline by reviewing available maintenance records. Receive a copy of the metering schematic for file. From the meeting room, remote into the plant operations main fire and gas detection display screen. Inspect the fire and gas detection display screen - no faults found, Determine the plant major block and blowdown valves for the inspection with the engineering staff. Receive a copy of the plant critical carseal list. Discuss how the carseals were added, removed, and verified to be in place on a quarterly basis. Perform a walkdown of major plant block and blowdown valves and walk through the residual compressor building. Noted that some of the major block and blowdown valve tags were faded, missing, or did not match the plant schematic (PID) that was reviewed. The engineer found one critical carseal missing on the Train C blowdown valve upstream isolation valve PY-9301 (may be PY-9300 because of a tagging issue). Action Items: 1. The PLC that caused the plant ESDD- Recommend moving the PLC power supply to the plant UPS.

2-May-23	2023-1383	Altagas Holdings Inc.	From DLS: 02-35-088-24 To DLS: ---	WALK	CENTRAL	Completed	In Compliance	Officer Selected	This inspection is for the last 1.6 kms of the pipeline from the Town facility to your truck terminal at 15-26-88-24 on the Mile 95 road. The inspection was to check the vegetation and ground restoration on the ROW since the line was acquired from KELT and had numerous issues. The restoration work was well done, vegetation catch is very good. There are some sediment fences, steel T posts that could be removed when the vegetation is fully established at the stream crossings. This pipeline ROW is used to demonstrate to our staff how 2 pipeline projects were constructed in different fashions. The original and first pipeline constructed by AltaGas utilized quite a few best management practices (BMP'S) around streams, especially the leaving of riparian vegetation, boring under the stream, and utilizing a narrow mechanical crossing of the stream. The former KELT ROW had a different approach and the repairs were completed by AltaGas upon acquisition.

2-May-23	2023-1300	Coastal GasLink Pipeline Ltd.	From NTS: C- 046-F/093-J-16 To NTS: C- 090-G/093-J-10	HELICOPTER	MID	Completed	Non-Compliance(s) Found	Major Project	Aerial inspection of sections 2 and 3 from KP 140 to KP 190. KP 140 to KP 149, crews working on ESC. KP 161, some erosion / sloughing observed on slope. KP 178+000 - KP 179+500, ground inspection of ROW, crew working on ESC and water management, turbid water observed leaving the ROW at several locations. KP 184+500, surface water from ROW entering the watercourse leaving a small plume. Contacted the operator on May 5th to discuss. Operator will dispatch a crew to the location to begin corrective action. KP 186 slope, previous Inspection dated April 25th, there was a comment on some sloughing of soils that had been observed on this slope. Additional soil movement was observed on this overflight. The operator was contacted on May 5th and additional information was provided. Based on the findings of the continued deterioration of this slope a non-compliance has been issued with this inspection. KP 190 Parsnip camp, Bailey Helicopter helipad, It was observed that considerable loose debris was flying up in the rotor wash during landing and takeoff at this pad. Please ensure that housekeeping in this area is maintained at a high standard to prevent issues from occurring.

4-May-23	2023-1884	Kitimat LNG Inc.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Routine inspection of the KMLNG site with Haisla Liaison on May 4, 2023. Rehabilitated areas have held up well through the winter snow and rains. No new erosion concerns noted during inspection. Area is greening up well and anticipate this trend to continue. Minor housekeeping items noted with maintenance of snow fencing post winter snow load. Otherwise, sites are clean and orderly and do have a significant amount of public use in one area. No noncompliance noted during inspection.											
4-May-23	2023-1405	Erikson National Energy Inc.		HELICOPTER	NORTH	Completed	In Compliance	External Request	The following observations were made of the flowback pond (d-24-G wells and facility were not inspected): * no ice on the pond * easily 1m freeboard * about 2/3 surface covered with the black plastic balls * one live bird observed on the pond surface upon arrival. No other birds observed on the pond for the duration of our inspection * estimated to be about 20 historical groundwater monitoring wells around the pond. Their distribution appears somewhat random and uneven (i.e. observed that there are just three groundwater wells on the east side of the pond) * fence surrounding the pond and access gates are in good condition. Engineering commented on the small breach in the fence where the 14" poly water line for the disposal well goes under the fence, creating a small opening * decoys are placed on many fence posts * noise cannon in the northwest corner is active. Predator Bird Guard system on the southeast corner is inactive * Erikson is undertaking daily withdrawal of between 110 m3 and 130 m3 per day via a surface poly line from the pond to the adjacent d-24-G well facility, where it makes its way through a below ground pipeline to the Erikson Wildboy facility, then ultimately to a disposal well * a 20 L pail of oil was observed at the genset near the pond access gate. The d-24-G well facility operator was present during part of our inspection, and committed to removing the pail * PLEASE NOTE: Erikson is required to ensure 10,000m3 is removed from the flowback pond by June 30, 2023 to an approved facility. Other conditions apply; see Order 2021-0054-003 in the Notebook tab of this inspection.									96080

5-May-23	2023-1296	Canadian Natural Resources Limited	NTS: C- 072-D/094-P-10	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	C-72-D / 94P010 Welhead + facilty - status suspended at time of inspection. Wellhead chained/locked - flow lines still connected positive flow. Signage is in place but weathered - flammable symbol not clearly visible (consider replacing/updating). Clean site location. Last production report: May - 2020 Surface Casing Vent - ok Chemical Tank ok - (1x). Gas leak/flow detected (noise) from flare line. Gas lines not blinded / positive isolation not maintained.								7188			
5-May-23	2023-1322	Coastal GasLink Pipeline Ltd.	NTS: D- 052-D/093-P-15	TRUCK	SOUTH	Completed	In Compliance	Facility Start-Up	Meet with CGL Commissioning and Operations Lead. Baker Hughes, a GE company and General Electric BHGE on site doing pre-function checks for on & off skids, such as the mineral lube oil cooler, and unit control. CGL plans to dry crank unit A1 and do a blowdown test the week of May 15th. to revise the dispersion model and ERP- Confirmed that community notification and a NOTAM will be implemented. Review and accept the Dry Commissioning Memorandum for A0 Suction and Discharge Header, A1 High Pressure Gas piping, and associated equipment. Fire/Gas/ESD Control Systems, 24 VDC Power Systems with "Listed of Exceptions" for remaining "B" punches. Noted PL-04624 - A1-FXV-2721 was found to have cracking. A replacement check valve was on route and temporary spools are currently installed as per project direction (this activity does not affect gas-in activities). Review and accept the Pre-Start-up Safety Review (PSSR) Hazardous Energy Introduction Summary and Approval Form. Review CGL WLCS DCC HPG PMPL - confirmed all items closed, accepted, and exceptions were noted in Dry Commissioning Memorandum Exceptions. Inspect the station fire detection, the A1 compressor & PPU, A2 compressor & PPU, the A3 compressor & PPU, and the station PPU gas detection display screens in the control room - No faults found. Confirm with the Commissioning Lead that Compressor Plant A1 remote shutdown key was completed March 25/23. Perform a walkdown of the compressor unit A1 and associated piping. Verified that the compressor unit A1 fire-eye targeting was completed for optimal coverage. Confirmed that the Dynamysk electrical Certificate of Conformance (a line item in the PSSR) for the compressor unit A1 was complete. Noted that the car seals for unit A1 fuel gas PSV stop valves were not installed. Assurance was given that the PSV stop valves would be car sealed open prior to the admission of hydrocarbons into the associated piping. Inspected that the unit A1 load valve was locked out. Inspected that the unit A1 primary fuel gas isolation valve downstream of the unit A1 suction and upstream of the fuel gas filter was locked closed. Inspect that the (3) compressor plant suction and (3) compressor plant discharge GOVs were locked out and body bleeds were open. Verify.						2561

9-May-23	2023-1346	Canadian Natural Resources Limited	DLS: 14-34-085-20	TRUCK	CENTRAL	Completed	In Compliance	Complaint	This is a follow up to an odor complaint received April 26, 2023. On May 9, 2023 an AreaRae air monitor was temporarily set up on the East access near the 254 Road. Air monitoring started at approximately 2:15PM and ended at approximately 3:00PM. Wind was from the southwest. During the monitoring a truck started unloading sour emulsion. There were VOCs detected before, during and after truck unloading. The data from the air monitoring once downloaded and analyzed will be forwarded to CNRL. There were noticeable odors in the area where the air monitoring was taking place. During the air monitoring I walked through the facility and did not notice any odors from any other areas. It is a possibility the odors may be originating from the production tanks. These should be inspected for leakage.						2594

11-May-23	2023-1357	Coastal GasLink Pipeline Ltd.		WALK	MID	Completed	Non-Compliance(s) Found	Major Project	Ground inspection with the operator of two areas KP 179+800 to KP 177+500 in section 3 and KP 171+300 to KP 173+100 in sections 2 and 3. KP 171+676, WC 59C, S3, clear span with ESC, ESC requires maintenance. Channel has been restored, water has undermined the wrapped banks and some slumping has occurred. Additional work is required. Discussed with the operator. KP 171+860, WC 60C, NCD, mat crossing, erosion issues under the mats on both sides of the channel, it appears the channel may have moved off course. Discussed with the operator. 172+075, WC 63C and 238.03 combine to form one channel on ROW, clear span bridge with ESC, sidewall requires repair on bridge, Channel has been restored but soil over pipe has slumped, Discussed with the operator. General comment for KP 171+300 to KP173+100, soil over center ditch line and pipe has slumped, this has caused issues with water courses and ESC. ESC requires maintenance, Housekeeping in this area requires attention, discussed with the operator. KP 179+800, soil movement across and downslope on ROW, impacting tree line and road ditch off ROW at approximately 16.5 km on the Crocker FSR. A Vac-truck is working in the road ditch to pull up sediment and sediment laden water. Sediment and sediment laden water have gone down the road ditch approximately 100 meters to culvert 3033A on the Crocker FSR and deposited sediment on the downstream side of the road. See non-compliance. 179+800, workspace 000100164, snirt has been pushed into the tree line, the workspace appears to have been reclaimed over snowpack and is possibly the source of water for the above non-compliance. When reclaimed the workspace contour did not match the ground contour. Discussed with the operator. KP 179+550 to 177+500, several areas of soil movement were observed.										
11-May-23	2023-1357	Coastal GasLink Pipeline Ltd.		WALK	MID	Completed	Non-Compliance(s) Found	Major Project	Including WC 189 both banks have slumped into the water course, the ditch line from WC 189 to WC 189.1T (KP 178+100 to KP 178+300) has slumped excessively and includes both banks of 189.1T that have slumped into the water course. NOTE where the pipe has been daylighted there is slumping on all aspects of the dig. KP 178+400 has a significant slump that has stayed on ROW and there are several smaller areas of soil movement along this portion of ROW. See non-compliance. The French drain located in proximity to WC 189 is active. The pump off in this area is active. The dewater site requires maintenance, discussed with the operator. KP 188+680, soil movement from a soil pile at the top of this slope has occurred. The soil / sediment has stayed on ROW with a small amount of slightly turbid water going off ROR. Discussed with the operator to monitor the site for further soil movement.									100082299

12-May-23	2023-1371	Coastal GasLink Pipeline Ltd.		WALK	MID	Completed	Non-Compliance(s) Found	Major Project	Inspection with the operator of section 2, KP 171+000 to KP 169+000, reclaimed ROW with roll back in place. It was noted that soils put back to the high side bank along the ROW did not blend to the bank contour. This resulted in sub surface flows in several restored water courses, where the channel did not match and effectively connect to the off ROW portion of the original water course. See non-compliance. KP 171+230, WC i234.99, S4, restored channel, sediment entering from the bank wrap. Slumping over ditch line. KP 171+050, WC 174, S4, restored channel, no concerns KP 170+950, small sink hole on ROW KP 170+850, water diversion berm, erosion blanket that is slumping in several locations. Discussed with the operator. KP 170+750, WC i234.01, NCD, restored channel does not match the original channel where it comes onto the ROW. There is scouring and sloughing with some sediment off ROW. Discussed with the operator to be assessed for cleanup. KP 170+660, WC 173A, S6, restored channel, no concerns. KP 170+590, WC 1C041, erosion blanket on channel, sub surface low with slumped areas, restored channel does not match the original channel where it comes onto the ROW. Discussed with the operator, EI to assess. KP 170+490, WC 1C040, has eroded its own channel across the ROW, discussed with the operator, EI to assess. KP 170+280, WC i230.99, NCD, restored channel does not match the original channel where it comes onto the ROW. sub surface flow, sinkhole and soil slumping. Discussed wit the operator, EI to assess. KP 170+200, WC i230.98, NCD, sub surface flow under erosion blanket, slumping at ditch line, discussed with the operator, EI to assess. KP 170+100, WC 172.3T, S4, restored channel, no concerns.									
12-May-23	2023-1371	Coastal GasLink Pipeline Ltd.		WALK	MID	Completed	Non-Compliance(s) Found	Major Project	KP 169+900, WC i229.99, NCD, erosion blanket channel in wrong location. Restored channel does not match the original channel where it comes onto the ROW, off by approximately 10 meters. KP 169+825, 172.2T, NCD, erosion blanket in wrong location off by 20 - 30m. Restored channel does not match the original channel where it comes onto the ROW. Erosion channel formed by NCD. KP 169+560, WC i227.99, NCD, poly lining on upstream end of restored channel to prevent sub surface flow, slumping on channel. Restored channel does not match the original channel where it comes onto the ROW. KP 169+450, WC 1C038, restored channel, no concerns. KP 169+380, WC 225.99, restored channel has a small sediment plume coming from sub surface in the wetted channel. KP 169+290, WC 172.1F, NCD, restored channel, erosion blanket with gravel, restored channel does not match the original channel where it comes onto the ROW. KP 169+270, WC i224.99, S6, restored channel, no concerns. KP 169+190, WC 172, S4, restored channel, slumping on ditch line bothe banks, sub surface sediment laden water flow entering downstream off ROW, 225 NTU at FF1.									100082292

14-May-23	2023-1415	Trans Mountain Pipeline ULC		TRUCK	KTNY	Completed	In Compliance	Major Project	Inspection with the operator of spread 5A May 13 & 14, 2023. KP 816+920, POD 019, Jameison Creek, signage in place, permit on location, daily log book on location, submerged intake in an adequately screened box. Truck on site at time of inspection, outdated permit in the truck, discussed with the operator and a current permit will be supplied immediately. KP 819+440, BC 372, NFB, channel restored with good riparian growth slopes are being restored with woody debris and hydro-seeding to follow. KP 821+550, BC 376, FB, Lanes Creek, channel restored with good riparian growth, slopes are being restored. KP 824+370, BC 381, FB, Dairy Creek, channel restored with good riparian growth, one slope seeded with vegetation starting and the other slope is being restored. KP 823+730, BC 379A, NFB, restored channel with good riparian growth, slopes being restored. Restoration of the channel will be completed when conditions allow. KP 966+230, BC 558, S3, high water has caused erosion channels and braided the stream. KP 983+360, BC 579, Mine Creek, no concerns noted at the time of the inspection. KP 983+650, BC 537, Jim Kelly Gulch, slope erosion has overrun ESC, discussed with the operator. KP 976+600, BC 570, Coldwater 3, high water has caused flooding on ROW, flood mitigation to be installed when ground conditions allow. KP 977+650, BC 571, Juliet Creek, clear span with ESC, soil berm located under bridge, discussed with the operator. KP 986+350, BC 581, mat crossing with ESC, no concerns noted at the time of the inspection. KP 986+630, C-Ring containing 4500 cubic meters of fresh water from POD 001, 9" freeboard.									100101507

15-May-23	2023-1385	PETRONAS Energy Canada Ltd.		TRUCK	CENTRAL	Completed	In Compliance	Facility Start-Up	Meet with Petronas operations staff, technical advisor, construction manager, and PLC programmers. Review the Technical Facility Permissions. Inquire if Petronas had a means to record the VRU operating level to assess if the 95% annual operating level is met. Review the measurement schematic, and prepared configuration and calibration documentation for reporting meters. Verify that the sales meter FE-9000 was calibrated by TransCanada Calibrations. Found the black start (fuel gas buyback meter) FE- 7180 upstream pipe diameter that was programmed into the Fisher ROC did not match the meter run ID tag upstream diameter. Verified that operations had an updated ERP in the Control Room. Inspect the facility fire and gas detection operator HMI display screens - no faults found. Inspect the HMI process display screens. Found produced water tank TK-5110 level transmitter was reading -3.41 % when the other produced water tanks level transmitters were reading positive 1.2/1.5/1.3 % levels. Recommend trouble shooting prior to start-up. Review the facility car seal list. Verify with operations that all carseals as per the engineering design and the facility PIDs were installed. Review Watts ITP and Certificate of Substantial Completion - verify that process piping was complete. Review EPSCAN commissioning documentation which included Electrical Pre-loop Commissioning checks - completed April 11, 2023. Verify that fire and gas detection was recently calibrated April 11/23. Verified that all electrical seals in hazardous areas were inspected that they were packed and poured. Confirmed facility electrical grounding was complete. Verified that all ESD valves (block and blowdown) valves were function tested. Witnessed a facility ESD function test when a manual ESD push button on the inlet separator was pressed - all block and blowdown valves functioned as per the facility Shutdown Key. Confirmed that the flare burner management control/flame fail function was tested. Verify with operations that a facility purge and start-up procedure was available and would be followed.									100112559

15-May-23	2023-1385	PETRONAS Energy Canada Ltd.	NTS: B- 032-C/094-G-01	TRUCK	CENTRAL	Completed	In Compliance	Facility Start-Up	Inform Petronas staff that a satisfactory inspection was completed to allow to nitrogen, and the introduction of hydrocarbons into process piping and equipment for purge and pressurization to begin the wet commissioning of production equipment. Action Items: 1. Provide evidence for Approval Facility Condition #24 that a calculation is in place to determine the VRU annual operating level and a written record is maintained. 2. Black Start meter FE-718D- ensure the Fisher ROC system parameter "pipe diameter" matches the upstream diameter as stamped on the meter run 1.944 in = 49.3776 mm. Submit the Canalta meter run technical data sheet. 3. All meters using b-89-j/94-b-16 fuel gas such as (FE-7120, FE-7130, FE-7140) - ensure gas compositions are updated to the most recent b-89-j/94-B-16 gas plant sales gas analysis (March 2023). 4. TK-5110- Level transmitter reading negative- recommend trouble shooting prior to start-up and the admission of produced water in the tank. Please reply to OGC concerning the above action items.						2634				
15-May-23	2023-1409	PETRONAS Energy Canada Ltd.	NTS: D-B060-F/094-G-07	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	No issues noted. All 3 wells inspected. WA # 29071 (suspended - status) 29708 (abandoned zone - status) and 29709 (abandoned zone - status) in KERMIT. All are wellheads only. Chained and locked. Surface casing vents checked - glove test.							7554

16-May-23	2023-1390	Pacific Canbriam Energy Limited	NTS: D- 086-A/094-B-09	TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	This inspection is for the d-86-A / 94-B-09 lease and road. All equipment has been removed, the well cut and capped and the pipeline abandoned. A snow free cleanup for debris that was not seen under snow conditions needs to be done. It is understood that another oil and gas company will be using part of this road for their new construction project. Just an FYI for your eventual road deactivation activity is that the road to the lease was originally applied for as a winter road with snow and ice as the construction method in or about 1998. As such there was no archeology assessment conducted due to the lack of ground disturbance. The road has been slowly improved over time and has gravel, a road prism, cross drain culverts and a main stream crossing. There is concern that when the road is deactivated there is the potential for archeological findings. Please abide by the following standard condition found in permits which states; If an artifact, feature, material or thing protected under the Heritage Conservation Act is identified within the activity area, the permit holder must, unless the permit holder holds a permit under Section 12.4 of the Heritage Conservation Act issued by the BC Energy Regulator in respect of that artifact, feature, material or thing: 1. Immediately cease all work in the vicinity of the artifacts, features, materials or things; 2. Immediately notify the BC Energy Regulator; and 3. Resume work in the vicinity of the artifacts, features, materials or things in accordance with direction from the BC Energy Regulator.							7501

17-May-23	2023-1413	Coastal GasLink Pipeline Ltd.		WALK	MID	Completed	Non-Compliance(s) Found	Major Project	Inspection with the operator of section 3, KP 177 area. KP 177+611, WC 187.1F, NCD, sediment laden water observed flowing off ROW from 187.1F. WC was walked across the ROW and source of sediment was located where the water flowed off the ROW channel and went sub surface and coming to surface again before leaving the ROW. See non-compliance. KP 177+760, WC 187.2F, S4, In isolation, turbid flow observed leaving the ROW. Discussion with the foreman on site determined that the generator had shut down causing pump failure and the downstream isolation to be overrun. Generator and pump were operational again during the inspection. A paper bag containing food was found on ROW in proximity to the upstream isolation. The CGL rep started a discussion with the foreman that this would be considered a bear attractant and that they would receive a non-compliance from any of the regulators if not stored properly. The CGL rep provided several options for storage including using a cooler or closed backpack. The SA foreman stated his crew worked hard all day long and that he didn't want to make his crew carry extra stuff onto the ROW. This discussion went on for several minutes and included the SA rep on the inspection the SA foreman and the CGL rep on the inspection with no resolve. See non-compliance.

18-May-23	2023-1402	Coastal GasLink Pipeline Ltd.	NTS: D- 052-D/093-P-15	TRUCK	CENTRAL	Completed	In Compliance	Facility Start-Up	Meet with Coastal GasLink Commissioning Manager, Operations Lead, and Compliance Specialist. Review a draft Dry Commissioning Memorandum with listed exceptions. Confirmed there were no A2 Unit remaining "A" deficiencies, and reviewed A2 PMPL and accepted remaining "B" punch items. Noted Unit A2 suction strainer will be pulled, checked, and cleaned during the wet commissioning process. Noted the unit (A1, A2, A3) discharge check valves are removed, with pipe spools in place, awaiting new check valves as a crack was discovered on the flange face of one check valve after bolt-up. All (3) discharge check valves will be replaced, taking an abundance of caution after CGL's inspection. The LTO submission requirement was discussed with CGL regulatory and agreed to be taken as the commencement of compression of gas for transportation down the pipeline. Receive A2 High Pressure CO2 System Concentration Test that was conducted May 5, 2023. CGL will receive the final report once CO2 bottles are installed, as a temporary CO2 supply was used to conduct the test. CGL indicated that Dry Commissioning was complete enough to bring high pressure gas up to the unit side valves. Operations indicated that unit A2 LOTO was not complete at the time of inspection and assured LOTO would be complete prior to the admission of gas to begin unit A2 wet commissioning. CGL operations confirmed that unit A2 fire-eye targeting for optimal building coverage was completed. CGL operations confirmed that a PSSR walkdown of the unit A2 and associated piping was completed on May 1st. Received Plant A2 PSSR Findings, and reviewed - Confirmed with operations and the commissioning staff that there were no major items that would prevent the energization of the unit A2 piping. - give ok to proceed and indicate a satisfactory inspection would be submitted.						2645				
18-May-23	2023-1416	Coastal GasLink Pipeline Ltd.		WALK	MID	Completed	Non-Compliance(s) Found	Major Project	Inspection with the operator May 17 and 18, 2023 of section 2. KP 146+400, soil pile observed to be outside the permitted boundary of the workspace. KP 146+466, WC J147.96, S6, culvert with ESC KP 146+506, S4, clear span bridge with ESC, ESC requires maintenance KP 146+725, WC 135, S6, clear span bridge with ESC, channel diverted to WC135.1F KP 146+774, WC J149.95, NCD, culvert with geo lined channel ESC required on travel lane. KP 146+860, soil pile observed to be outside the permitted boundary of the workspace. KP 146+970, soil pile observed to be outside the permitted boundary of the workspace. KP 147+020, soil pile observed to be outside the permitted boundary of the workspace. KP 147+035, WC J150.02, NCD, culvert, ESC required on the travel lane. The high side bank on the ROW was observed to have some slumping. KP 147+145, WC J150.06, NCD, culvert with rock lined channel, ESC required on the travel lane. Rock trucked (parked) has a small hydraulic leak, operator placed spill pad and will advise mechanical. KP 147+214, WC J150.09, NCD, culvert with geo lined channel, ESC required on the travel lane. KP 147+267, WC 137, S4, clear span with ESC, wood construction debris observed in channel, operator removed debris at time of the inspection. KP 147+402, WC J151.03, NCD, culvert with poly lined channel, straw bails with geo catch basin. KP 147+505, WC 138, S4, clear span with ESC, sediment was observed in the riparian area, discussed with the operator. KP 147+530, WC J152.01, S4, clear span with ESC, turbid flow off ROW, discussed with the operator.							110787		

18-May-23	2023-1416	Coastal GasLink Pipeline Ltd.		WALK	MID	Completed	Non-Compliance(s) Found	Major Project	KP 147+550, turbid water pump off to flock tank and then dewater location with sediment filter bag, hole in filter bag discussed with the operator. KP 147+585, WC 1152.02, S6, mat crossing and culvert KP 147+460, WC 139, S6, culvert with ESC, wood construction debris in channel, removed by the operator during the inspection. KP 148+184, WC 140, S4, clear span bridge with ESC, ESC requires repair, discussed with the operator, geo and rock lined channel. KP 148+300, WL 0733, ESC requires repair, discussed with the operator, small amout of sediment in the wet land. KP 148+900, soil pile observed to be outside the permitted boundary of the workspace. KP 149+000, Off road water truck observed doing dust control on the travel lane. Operator queried for location of water source, operator was reluctant to answer and differed to foreman. Operator was instructed to answer the question or would be considered to be obstructing inspection. Operator confirmed source of water is flock tank. Foreman, SA representative and CGL representative were contacted and informed that this is a potential violation of the Water Sustainability Act which will be referred to BCER Manager of Enforcement for follow up. KP 149+333, sump located in the workspace has turbid water entering it from the travel lane. This water is flowing through sump ESC and reaching WC 141 leaving a plume in the watercourse. Discussed with the area EI and was informed that he had discussed this with an ESC crew working in the area the day before and was told they would start corrective action immediately. There was no crew working at the time of inspection, see non-compliance. KP 149+350, WC 141, S4, clear span bridge with ESC, in exceedance with WQM in place. Soil piles at KP 146+400, KP 146+860, KP 146+970, KP 147+020, and KP 148+900, were observed to be outside of the permitted areas of the workspaces. Please have these soil piles surveyed and mapped to show delineation in relation to the permitted workspace areas. Please provide a plan for remediation that includes a timeline. Please provide the requested documentation to the BCER on or before June 5, 2023.							111782

There are no main issues at the Mile 132, km 4.5 or km 11 bridges. There are some observations that you should be aware of and are are as follows; Km 4.4 bridge; -the upslope culvert at approximately km 2.9 is plugged. -most takeoffs have lost their function as the grader has blocked them with a berm. -the new waddles in the ditch line are not anchored properly as just a rebar steak was used but they do not press the waddle to the ground and water flows underneath them. -there are at least 2 pieces of steel in stream that should be removed in the proper fish window. -old sediment fences in proximity of the stream that no longer function should be maintain or removed. -good job of raising the approach to the bridge. -splashboards are doing their job. Km 11 bridge; -west side of the bridge beside the downstream wing wall still has sediment moving to it and flowing towards the stream. No direct sediment into the stream at this time but it is making its way to the stream.								28271

30-May-23	2023-1505	Canadian Natural Resources Limited	NTS: C- 041-I/094-G-03	ATV	CENTRAL	Completed	In Compliance	Officer Selected	As an FYI, the Mile 156 road is not passable from approximately km 15-16 due to beaver activity as well as other wet areas due to the ditch being higher than the road. The culvert at km 18.9 is partially washed out. Access is by ATV from km 11 until repairs are made. A separate inspection was completed and will initiate the repairs, Only the deactivated road and the pipeline ROW were looked at for c-41-I / 94-G-03. There is concern over the aggressive rough and loose deactivation confirmed by our biologist and hydrologist. A question we have is ; is this the final deactivation to decompact and restore hydrological function or is there another phase to reduce the height and depth of the mounds and holes? I would highly recommend that CNRL visit this road to c-41-I / 94-G-03 and c-33-L / 94-G-03 roads to view the work that has been done. Our concerns are over the hazards to wildlife that have been created thru the height and depth of the mounds and holes as well as little to no hydrological function improvement and the overall revegetation of the road. The well site has only been visited by helicopter and udner snow conditions. We would like to attend the deactivation works with CNRL in early July. This inspection will show as a PASS due to system limitations, however, there are concerns associated with the work that has been done. Thank you									7783

The road needs to be graded when the time is conducive to operations. As a heads up there is an active beaver at approximately km 15/16 that has constructed a dam and is impacting the road and this is where travel by truck is not possible. This has always been a problem area as the ditch has a higher elevation than the road. There is also one section further closer to km 16 where the road is deeply rutted and water sits in the ruts.										28401

30-May-23	2023-1623	Coastal GasLink Pipeline Ltd.		HELICOPTER	COASTAL	Completed	Non-Compliance(s) Found	Major Project	Routine Helicopter inspection starting from the end of Section 7 and covering to Section 6 KP 459+000 on May 30th 2023. KP 574+150 Adjacent to WC 578B * Sedimentation off ROW * Staff onsite noted that this area has been reported to the BC-ER. Area has been surveyed, request resubmission to C&E inspection officer. * BC-ER will require CGL recommendations for clean up once all assessment are completed. KP 572+900 * Off ROW sedimentation. * Area has been surveyed. Please forward survey map to the BC-ER inspector and was told by CGL staff that clean up of the area has begun. Gosnell Creek * Fish salvage ongoing at time of inspection. * Waters have receded significantly since the flood event. * No evidence of any hydrocarbon sheen in the remaining standing water onsite. CGL let me know that all equipment containing hydrocarbons were removed prior to the flood. Flood mitigation plan enacted approximately two days prior to the flood. * Ongoing water management on the site, pumping commenced during inspection. * Clean up ongoing, noted individual contractor staff completing housekeeping onsite. * BC-ER is requesting the WQM data for the site two days prior to the flooding to the time of this inspection. It is understood that the data may take some time to collect due to safety concerns with the high water.												100110133
30-May-23	2023-1623	Coastal GasLink Pipeline Ltd.		HELICOPTER	COASTAL	Completed	Non-Compliance(s) Found	Major Project	* BC-ER would also like to request notification once dewatering, fish and amphibian salvage is complete. * Flew from Gosnell to the Morice, noted a few natural raveling slopes on Gosnell mainstem downstream of project footprint adding minor sedimentation to the stream. (non project related). * Noted significant sedimentation coming from the confluence of the Gosnell and the Thautil a few hundred meters from the confluence of the Morice. Sedimentation from the Thautil non project related. KP 566+300 * Noted sediment has left construction footprint, no impacts noted to adjacent stream. * BC-ER requests survey map of the area and a report on the impact as well as what is the plan to address this issue. KP 563+300 Wetland 563.5 * ESC measures have failed in this area. Deficiency with EPMR Section 12 issued. KP 559+750 * Minor sedimentation off ROW noted, no stream impact and very minor in nature. Morice River entrance pit Mixed bury cover site. * No current activity, site appears to be stable from the air and appears to not have been completely utilized. No concerns. KP 549+233 WC J417.99 * Pipe installation complete, stream banks overwhelmed from freshet. Area is very saturated. Once conditions allow, banks require re-establishment and adjacent area may require further works. Provide photos to the BC-ER once complete. KP 544+015 WC 28C2 * Slump noted sliding towards S6 but does not enter the stream. ESC maintenance required on all S6 streams from 543+681 to 544+015. * Provide aerial photos to BC-ER once complete. KP 542+384 * ROW erosion noted leaving ROW and covering old road. * Several more locations noted at KP 541+800. * 542+384 to 539+250 the entire ROW needs ESC maintenance and reporting to the BC-ER on soils off ROW events. Survey, report on impacts and corrective actions to be provided to the BC-ER. * Areal photos of are requested once complete.

31-May-23	2023-1677	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Routine inspection of section 6. WC 464 KP 454+911 Low flow. Sandbag removed from channel. Noted natural slumps into steam occurring outside of ROW. WC 262 KP 457+100 Bridge in place. Delineators and safety rails are broken. Root wad bank stabilization looks good. WL 2228 KP 456+120 Amphibian fence should be assessed, active pumping ongoing. WC 461 KP 455+586 Root wad bank stabilization looks good. WET455.8 KP 455+758 ESC silt fence should be maintained, no other concerns. WL 11140 KP 454+700 Standing water on site. Running track appears to be impeding flow. To be addressed as required. WC 459 KP 453+100 Low flow. Noted slight bank subsidence over trench. Stream flowing under culvert, could be redirected into culvert, ESC to be repaired if area not reclaimed this season. Ensure stream connectivity upon reclamation. WC 458 KP 452+231 Low flow. Noted slight bank subsidence over trench. Ensure stream connectivity and bank re-establishment upon reclamation. Unidentified NVC KP 452+100 Slight but active flow across ROW in a water bar. Historic sediment off ROW, not impacting receptors. Channel connectivity should be re-established during reclamation. WC 457.1T KP 451+530 Noted slight bank subsidence over trench. NCD cut new channel into ROW, flowing along berm. QP to assess and ensure channel connectivity at reclamation. WC J291.01 KP 450+650 Ditch plugs actively pushing water into ROW. ESC needs maintenance, minor housekeeping in area. WC 762 KP 450+400 Bridge in place, approach has ESC to be repaired, some evidence of sedimentation. Hose lay removed from stream banks at time of inspection. Pumping ongoing, try to avoid hose lays damaging ESC measures. Noted that generators need adequate secondary containment with RMAs. ESC measures close to maximized on slopes, could be cleaned out.										100082422
31-May-23	2023-1677	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	NCD J288.08 KP 448+933 Culvert inlet slightly elevated, stream could be directed into culvert. Sediment bag removed at time of inspection, minor housekeeping. WL 2208 KP 448+430 Standing water in ROW, active pumping ongoing, tadpoles observed. QP to assess and advise. WL 905 KP 444+200 Follow up on previous revoked NC report. No evidence of sedimentation off ROW. No non-compliances found during inspection.

1-Jun-23	2023-1678	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Routine inspection of Section 7. Morice River Drill - Reviewed proposed pipe recovery plan with staff on site, noted expected cut to be 9m, roughly 10,500m3 overburden to be removed and stockpiled in new, recently cleared workspace. Several wet areas in workspace should have amphibian sweep and ESC measures in place prior to stockpiling material. IFR#1 - Cleanup complete. Meter bags, sand bags, pumps and supplies remain on site, will be slung out within flight windows. Snow fence placed around slumps should be repaired. IFR#2 - Seasonal water influx, channel area flooded. Bucked lengths of log are now floating, should be removed. Small volume of bentonite noted in stream near upper dam location. Bentonite is compact and not migrating. QP should evaluate impact and recommend action and inform BCER on actions to be taken.. Downstream dam location should have floating walking bridge and bucked pieces removed from channel when safe to do so. Lamprey Creek - East slope, arch site has minor soil movement onto site from adjacent stockpile, QP to assess for impact and recommend action. Slope ESC measures continuing as per order. Number of ditch plugs on slope increased to 7, surface of cut crowned towards edges, herring bone pattern berms to be constructed, edge ditches to be rock lines and drain into sumps, sloped toward meter bag filter cloth wall before draining into vegetated area. Pumps to be placed if needed. No evidence remaining of sediment into stream due to recent high water. Aqua dam on toe of slope is planned to be drained if no longer required, south area beside aqua dam should have ESC repaired. T-posts in stream channel should be removed if no longer serving a purpose. Owen Hill - Root wad bank stabilization in place, willow stakes established and showing flush. Minor subsidence noted, discussed potential top up/additional bank wrap after tie in of pipe. Revisit in lower water level once tie in complete.

1-Jun-23	2023-1632	Erikson National Energy Inc.	NTS: B- 071-G/094-P-10	TRUCK	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	b-071-G / 94-P-10 Note: Flammable safety symbol missing from posted signage at main entrance building (see attached photos). Compressor building: Gas detection meter - last calibration - April 27th, 2023. Note: At the compressor station, a bull plug is missing on the fuel gas filter (see attached photo). Fuel gas regulators are properly vented in the compressor building - (Good). April 2023 fire extinguisher servicing record, located outside door of compressor building. Main compressor building has been detached and blinded from the flow lines (see attached photo). Note: An open hole (safety concern) was observed at the side of the main compressor building (possible hazard) (see attached photo). Sweetener building valves are closed and blinded - okay. D-Hive building gas LEL detection is good, cata-dyne regulator vents lines are all in place. Orifice plate service date is September 3rd 2021. ERIKSON Representative: to provide BCER Inspector (by July 3, 2023) with operational status of flare stack. It was observed that the flare stack does not seem to be lit (no flame was observed on the flare stack at the time of the inspection) and electric ignitor is possibly not operational (no electric ignitor sound noted) (possible pilot flame). Note: Combustible materials (dead vegetations) were observed at the base of the flare stack (see attached photos).							2740				
1-Jun-23	2023-1617	Canadian Natural Resources Limited		TRUCK	SOUTH	Completed	In Compliance	Officer Selected	A follow-up inspection was completed at this location. Initial inspection on Aug 8, 2022 identified hydrocarbon staining in several areas on the site. (KERMIT #077682602). These stains were addressed and a satisfactory response was issued. A follow-up inspection was completed on June 1, 2023 and additional staining was observed on location. In a follow-up communication with a CNRL remediation planner it was determined that CNRL has plans conduct a PII ESA (drilling bore holes and installing water monitor wells) in Nov/Dec of 2023. Results of the PII ESA report will determine initial remedial action plan, outline the contaminants and areas of concern and determine a schedule for completion of work. CNRL will provide BCER with this information. During the inspection it was noted that there were no signs of hydrocarbon or contamination migration off site and no signs of stressed vegetation on or around the location. Once this information for the remedial action plan and schedule of work is available please email to the BCER

2-Jun-23	2023-1679	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Routine inspection of section 8. KP 585+600 ROW re-instatement. Uphill grade matches original grade, running track to remain for access. Topsoil rollback, diversion berms lined with coconut matting, coarse woody debris placed. Minor concern with coarse woody debris remaining in place, might need walk in/pound in place. Noted topsoil placed to edge of running track on downslope even though edge will be remove to achieve 3% side slope across running track in +/- 2 years (topsoil loss?). No water courses adjacent to works, no non-compliances noted. Clore crossing- Past high water, levels dropped significantly from week previous. Hose lay noted at previous inspection removed as requested. ESC measures may be needed on positive side bridge approach slope. Rock and material melted from snow deposited in unstripped area beside bridge approach should be cleaned out. Monitor efficacy of grass seed and re-apply as needed. Noted surface instability on positive side slope, does not leave ROW. POD not in use at time of inspection. Notable improvement in housekeeping on site. WC 148C- Sign noted in stream channel, should be removed when safe to do so. WL 2297- Silt curtain in place, enhanced ESC measures in place on top of older installations, no inputs noted. Wetland looked clean. WL 2296- ESC in place, no inputs noted. Noted old sediment deposits, wetland looked clean, no follow up action recommended. 8.5km NCD 631.1T- Stream running clean at time of inspection, no concerns noted. 9km NCD UN23-61- Sudden influx from NCD cut channel into trench, subsurface movement under running track into adjacent soil pile. Oversaturation caused lower slope of soil pile to move into channel off ROW. Cleanup of sediment in channel should occur prior to flow re-established. WC 643- No longer in exceedance, big "O" established, new pump off location established, new inlet discovered under ROW fill captured and pumping off. Stream running clear, no non-compliances noted.											100084230

6-Jun-23	2023-1574	Crew Energy Inc.	NTS: A- 043-H/094-A-13	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Internal Request	In conjunction with the BCER Stewardship Group and First Nations, it was noted that approximately 300 meters from the mile 98 road (on access road to CREW ENERGY a-43-H/94-A-13 Facility and wellsite) there is a stream with two stacked pieces of piping used as culverts. Each piece of piping being used is approximately 30" diameter by 50' in length. As per the Stewardship Group and First Nations, these culverts are impeding fish passage connected to a fish bearing stream. -Also, there is no road permit on this section of road for access to the a-43-H/94-A-13 wellsite and facility.									7951

6-Jun-23	2023-1598	Coastal GasLink Pipeline Ltd.	From NTS: C- 046-F/093-J-16 To NTS: C- 090-G/093-J-10	HELICOPTER	MID	Completed	Non-Compliance(s) Found	Major Project	Overflight of sections 3 and 4 with the operator, KP 191+000 to KP 325+500. KP 191+690, slope failure in 2021 caused by water being directed by construction activity which resulted in saturating the top of the slope. Slumping occurred approximately 1 to 2 meters from the crest of the slope in area approximately 25 meters across by 40 meters long by 3/4 to 1 meter deep. Woody debris has been piled at the toe of the slope to slow / filter sediment and sediment laden water from entering watercourse 207. The slumped area was covered with bio-degradable geotextile in 2021 with little or no addition remediation completed to date. The bio-degradable geotextile is starting to degrade. See non-compliance. KP 199+400, sloughing / slide possibly off ROW. Discussed with the operator and the area is to be delineated for off ROW sediment and a map is to be provided showing the BCER. KP 204+500, sloughing confined to the ROW **KP 205+000, sloughing confined to the ROW KP 213+800, sloughing on ROW entering wetland 11575. Discussed with the operator. See non-compliance. KP 213+900, wetland 11575 requires cleanup from debris missed during final cleanup. rig mats, pipe rock guard, and geofabric. KP 214+600, crew installing mat travel lane through wetland and bridge installation on WC 237. Travel lane is to access WC 239 KP 214+797, WC 239, slide has blocked the watercourse, equilibrium is being maintained by pump around, crews are building a mat travel lane to the site. Site is under an EAO order. KP 224+500, work space ancillary number 00147081, AD 100084583, has been reclaimed. KP 227+250, Road 04499, has been reclaimed. A ground inspection will be conducted at a later time. KP 320+000, slide has impacted a watercourse on ROW. Site is under an EAO order. KP 330+500 Clear Creek stockpile site, no concerns noted at the time of the inspection.

6-Jun-23	2023-1516	Canadian Natural Resources Limited	NTS: A- 071-G/094-P-10	TRUCK	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	PEGO building last meter calibration date is January 15th, 2023. Appropriate pipelines were observed to be blinded and disconnected. All pig barrel launcher receiver doors were chained. Flare Stack: No flame was observed on the flare stack and the flare stack pilot gas valve was shut closed, and the electric igniter was in the down position (see attached photos). Flare stack carryover fluid was observed on the flare stack and at the base of the flare stack (on the ground). Carry over fluid was also observed on the scarified ground / soil surrounding of the flare stack and on vegetation found along the boundary of the flare stack clearing (see attached photos). The operator for CNRL mentioned that the c500 compressor is inactive (field confirmed). ESD: The ESD service tag was dated 2016 March. The ESD bypass valve inlet should be locked and closed, The ESD bypass valve observed to be a spring valve in the closed position (not locked). Cata-dynes are missing regulator vent flows in the dehydrator (not active) /separator (active) building. It was determined that since the gas dehydrator/separator building was not suspended and still being used for fuel gas by CNRL (active as gas flow was running through the fuel separator flow lines) the cata-dyne vent lines (2x) need to be in place. Main compressor building: This building has several garage doors on the north side of the building which provide access to the compressors/building utilities. Some of the sliding garage doors (3x) when fully opened block three fire eyes suppression units in the main compressor building. At the time of the inspection, one fire eyes suppression unit was blocked as the garage door was fully open. Fire extinguisher outside the door of the compressor station has a monthly service tag date of May 2023 and annual service tag dated March 2023 (compliant).							2754					

6-Jun-23	2023-1526	Coastal GasLink Pipeline Ltd.		TRUCK	SOUTH	Completed	In Compliance	Facility Start-Up	Meet with Coastal Gas Link representatives at 4-33-78-19 Wilde Lake facility. Discussed draft A3 Dry Commissioning Memorandum and A3 PMPL as well as "B" punch items. No concerns were noted. Documents to be sent later are: * A3 Signed PSSR * A3 LOTO (A3 LOTO not completed at time of inspection) * A3 Dry Commissioning Memorandum (signed) * A3 CO Dump Test (Being completed on June 8th) * A3 Blowdown test results As noted on inspections on Unit A1 and A2, discharge check valves has been replaced with a spool piece. A crack was observed in a flange face of one of the check valves during bolt-up so all 3 (A1, A2, A3) discharge check valves will be replaced. As identified in the previous inspection on Unit A2, the concern regarding the LSHH on the inlet scrubbers on Units A1, A2, and A3 still is unresolved. Scrubber LSHH level column isolation valves are not locked or car sealed open. Coastal Gas Link representatives indicated that a response to the concern is forthcoming by next week. Please submit the following items for review: 1. A3 PSSR (Signed) 2. Photo of A3 LOTO (in place prior to energization of gas up to unit) 3. A3 Dry Commissioning Memorandum (Signed) 4. A3 CO dump test record 5. A3 Blowdown Test Results Please reply to the BCER

7-Jun-23	2023-1625	Coastal GasLink Pipeline Ltd.	UTM: 10N 537287E 6076437N	TRUCK	MID	Completed	In Compliance	Major Project	Please note this inspection is a conditional pass pending the BCER Manager of Enforcement follow up as stated in the comments of the inspection. Inspection with the operator June 7 & 8, 2023 of active POD's. POD 007, CGL POD 4A, STWU 0006173, AD 100115452, east Anzac River, POD is active, no signage on site, no withdrawal records on site, No permit on site, Screened intake in the water, when pulled, a tear in the screen was observed. Discussed with the operator does not meet permit requirements. STWU condition number 9, End of pipe intakes must be screened with maximum mesh sizes in accordance with the Fisheries and Oceans Canada "Freshwater Intake End-of-Pipe Fish Screen Guideline". Referred to the BCER Manger of Enforcement for follow up under the Water Sustainability Act. POD 006,CGL POD 3-4A, AD 100115453, STWU 0006222, Crocker Creek, Truck on site has permit and withdrawal sheets, Permit on site, Withdrawal records on site, signage in place, screened intake in the water, water depth measured at 11 inches (permit requires 12 inches minimum discussed with the operator, intake will be moved to find adequate depth as required by permit, inspection of screened intake and observed 3 small holes in the screen, discussed with the operator intake pulled from use and screen will be replaced before using this POD again. First truck in (daily) to use site will measure depth to ensure adequate depth. POD 005, AD100115453, STWU 0006222, Parsnip River, screened intake in the water (not pulled for safety reasons), Signage in place, permit on site, withdrawal records on site, POD 002, CGL POD 12-8, AD 100115349, STWU 0006153, Rock Soup Creek (WC194), screened intake in the water meets requirements, signage in place, permit on site, withdrawal records on site.										

7-Jun-23	2023-1625	Coastal GasLink Pipeline Ltd.	UTM: 10N 554035E 6097294N	TRUCK	MID	Completed	In Compliance	Major Project	POD 008, CGL POD 5A, AD 100115452, Anzac River, STWU 0006173, signage in place, permit on site, withdrawal records on site, screened intake in the water, operator to measure depth of water at intake to confirm adequate depth. POD 006, AD 100115452, STWU 0006173, WC 129, signage in place, no permit on site, no withdrawal records on site, intake in screened round metal cage, screen is not attached at the bottom openings are large enough for fish to enter. Discussed with the operator does not meet permit requirements. STWU condition number 9, End of pipe intakes must be screened with maximum mesh sizes in accordance with the Fisheries and Oceans Canada "Freshwater Intake End-of-Pipe Fish Screen Guideline". Referred to the BCER Manger of Enforcement for follow up under the Water Sustainability Act. Inspection with the operator of section 2, various areas, June 7 & 8, 2023. KP 157+114 to KP 158+250, 5 ESC crews working in this WEP area, each crew completing a 700-meter section, rock lined drainages, no contact water crossings, erosion blankets on soil piles, travel lane matted over water bars, and Hydro mulch applied KP 158+100 to KP 157+900. Discussed no contact water crossing draining directly into wetland. Discussed "rain event" and plan in place to pumps and sumps working effectively. WC 51C, S5, has a temp diversion installed to have the WC cross the ROW at 90 degrees. KP 142+800, WC 126, S6, ESC requires maintenance, discussed with the operator. KP 143+000, sediment has bypassed the crib wall and gone into the tree line. Please have this delineated and provide a plan for clean up with a map detailing location and size. Please include a time line for completion. KP 149+383, WC 141, S4, ESC measures have been modified, Big O to filter bag resulting in clean water entering the water course. Pump off from sump to dewatering location. Hose has been torn and is leaking, hose has been disconnected for equipment to travel through, turbid water from pump off entering the travel lane ditch line, discussed with the operator.

7-Jun-23	2023-1556	NTE Energy Canada Ltd.	NTS: B- 074-K/094-I-11	TRUCK	NORTH	Completed	In Compliance	Officer Selected	June 7,2023 - 11:15 am, Well head: b-A74-K / 94-I-11, signage is compliant (good), well head okay, surface casing vent valve open, vent flow okay, no LEL , pipeline valve open - ACTIVE status, orifice plate service tag April 20, 2021, December 3, 2022. Well head: b-74-K / 94-I-11, signage is compliant (good), surface casing valve open, vent flow okay, no issues with well head, Active status, pipeline flow lines opened. Well cabinet meter calibration service dated December 3rd, 2022 (same orifice service date as previous well cabinet). Chemical storage tanks, two of them, MSD labels present, grounded, chemical storage tanks - compliant, no issues noted with storage containment system. Note: Scrap piece snake wrap liner found on the ground needs to be removed which located at pipeline riser location of the well pad (see attached photos).								7910		
7-Jun-23	2023-1556	NTE Energy Canada Ltd.	NTS: B-A074-K/094-I-11	TRUCK	NORTH	Completed	In Compliance	Officer Selected										7909		
7-Jun-23	2023-1549	NTE Energy Canada Ltd.	NTS: D-B076-K/094-I-11	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	June 7, 2023 - 10:58 am: Signage at location is compliant. Well head: d-a76-k / 94-I-11 - well head active, low LEL reading, low flow (no latext glove test), open surface casing valve, good status for pipeline, open flow lines, May 20 2023 orifice plate inspection, gas meter calibration March 2022, chemical storage tanks are okay, containment present /functioning and grounded, no issues with the two chemical storage tanks. Well head: d-b76-k / 94-I-11 - -well surface casing vent valve open, no LEL reading, pipeline flow lines open/active status, no issues with well location, well cabinet okay, no issues noted, same service tags dates as previous well cabinet. Well head: d-c76-k / 94-I-11 - surface casing vent- no LEL, surface casing vent valve open, well head no other issues, noted active status for well, well head cabinet same dates for servicing meter and orifice plate, no issues noted with well cabinet at this site. Chemical storage tanks okay, no issues noted. MSD labels posted, containment not leaking (very good). A total three well heads on site, well pad clean no debris or garbage, herbaceous vegetation(regen). Note: Only well head "d-a76-K " had a low LEL reading (Altair-5x), all others have no LEL reading. Last CSV flow test completed by company was 2014.								7888

7-Jun-23	2023-1543	NTE Energy Canada Ltd.	NTS: A- 038-I/094-I-12	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	June 7th 2023 at 12:40 a.m. p.m. wellhead okay, surface casing vent valve open, surface casing vent flow line no LEL, compliant status, flow lines open, well building: orifice service plate: May 23, 2023 , two chemical tanks on site, MSD labels in place, containment units in place and grounded, calibration fuel meter test/service date May 23, 2023. Location Signage - compliant status as it contains all required posted information.								7882		
7-Jun-23	2023-1542	PETRONAS Energy Canada Ltd.		TRUCK	NORTH	Completed	In Compliance	Drilling Rig	Rig is clean and well organized, location well set up for operations. all good during inspection											
7-Jun-23	2023-1542	PETRONAS Energy Canada Ltd.	NTS: A-A037-H/094-B-16	TRUCK	NORTH	Completed	In Compliance	Drilling Rig										7873		
7-Jun-23	2023-1528	Pieridae Alberta Production Ltd.	NTS: B- 098-K/094-I-11	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	Well Head: b-98-k/94-I-11 Wellhead: SCV valve open, SCV flow over range on LEL, vent flow (latex glove test) moderate. well head okay flow lines open. Recommend client consider conduction a gas flow monitoring test on the SCV. Signage - compliant, all required information is provided. Well head valves are chained and locked. Active well site, open ESD, ESD valve was chain and locked. Chemical tanks compliant, MSD present labels present, tank grounded, containment system is dry at the time of inspection (not holding rain water); there may be a possible leak/crack in containment. No issues noted with well building instruments/utilities. Note: power line to site is down, fallen trees have knocked down powerline (require servicing). Brush mats stored on site stored on site and along access road (see attached photos).								7841		

7-Jun-23	2023-1527	Pieridae Alberta Production Ltd.	NTS: D- 088-K/094-I-11	TRUCK	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	Well Head: d-088-K / 94-I-11 - Inactive - Well head building signage is compliant with standards - great! Well head valves are chained and locked. SCV open valve, SCV vent LEL is over range, and vent is classed as a low flow (latex glove test). Company may consider performing a vent flow test on the SCV. Facility: d-088-K / 94-I-11 - 001 - Inactive Facility signage location is posted at the road entrance off of the SYD Road, signage is compliant to standards as it has all informational requirements posted. Non Compliance: Pig barrel cap at a-41-I - pipeline location is not chained (not attached to valve) and a bull plug is installed in place of PAV (see attached photos). Inlet separator building has two live birds (swallows) trapped inside and a dead crow was found on the floor of the building (see attached photos). Slug catcher building has 26 dead swallows, carcasses are scattered on floor of building (see attached photos). Non-Compliance: Inlet water separator has an oil spill on the floor at the main pump (see attached photos). Non-Compliance: Compressor building barrel deck containment section has an oil spill. The whole steel deck is not level but tilted towards the backside/building (possible frost heave) of which the oil/fluids in the containment is collecting/spilling on the back side of the barrel deck onto the ground (see attached photos).							7840

8-Jun-23	2023-1599	Tourmaline Oil Corp.	NTS: A- 008-A/094-B-16	TRUCK	CENTRAL	Completed	In Compliance	Facility Start-Up	BCER Technical Advisor met with Tourmaline Process Optimization Foreman and Lead Operator to complete a start-up inspection at A-94-A/94-B-16 well pad. Wells 0,A,B,C had been flowing through test equipment prior to inspection day. Wells 0,E,F are still awaiting fracking which was scheduled to start on June 11th. All fracking and testing equipment is still on location. All critical SD's were in place and locked. All calibrations were verified and current (Mar 2023). Power source on location is a Solaris 3000 solar with backup generator. Items of concern identified during inspection: * Well signage was on site and will be installed once temporary piping was replaced. * Combustible gas noted inside one of the meter cabinets. On site E&I resolved concern immediately. * Hydrocarbon staining observed on the ground in several places. Clean-up will be addressed during completion of final grade. BCER requests the following documentation as part of the well pad start-up: * Transfer of Custody & Control (Well Commissioning Handover Document) * Site Car Seal/Lock List * Tourmaline Sand Management Plan No concerns were observed on day of inspection that would deter the well pad start up. All the above listed documents were received June 9th, 2023.							8065

14-Jun-23	2023-1629	Coastal GasLink Pipeline Ltd.		TRUCK	SOUTH	Completed	Non-Compliance(s) Found	Major Project	KP 98+000, Inspection with the operator of the Burnt Mountain slope. Observed slumping mid slope on ROW. Water flow has been diverted off the original channel while flowing down the slope and is directed back to the original channel off slope in the lower portion. Operator states a permanent diversion has been applied for and is currently being reviewed by the BCER. Note: there was a black bear on the slope at the time of the inspection and the slope will be reinspected at a later time. KP 127+500, Mount Merrick camp, AD 100084517, active, moving in additional trailers at the time of the inspection, security on site, wildlife monitor on site. KP 129+000, Slope 24, discussed ESC maintenance requirements from the trench to the travel lane. KP 131+250, Sump in workspace, discussed maintenance of sump before rain event. KP 134+500, discussed ESC on slope. KP138+600, Backfill crew, slope 30, crushing, sifting, and backfilling trench. one of the engineered sites in this area. KP 138+800, welding crew, Inspector and 2 welders (#45 and #64), inspector CWB level 1 and API 1169 certified, welders in trench and certification not produced at site, requested certifications be emailed, not received at the time of writing the inspection. Welder PQR's produced on site, welding procedure 2020-01-21 R-0, repair procedure 2020-01-06 R-1, 100% UT, 100% visuals, bevels keyed by welding inspector. KP 137+800, Cut out welding crew, cut out weld #PB S2 1188 CO, Inspector and 2 welders (#69 and #70), inspector API 1169 certified, CWB certification in progress, welders certifications not produced on site requested by email, not received at the time of writing inspection, welders PQR's produced, 100% UT, 100% visuals, bevels keyed by welding inspector.										100116455

20-Jun-23	2023-1656	PETRONAS Energy Canada Ltd.	DLS: 13-22-085-18	TRUCK	CENTRAL	Completed	In Compliance	Complaint	This inspection is in regards to complaint of weeds on the lease and concerns of erosion. Weeds on site and on berm are to be controlled. On the north side of lease is a deep gully that runs from West to East outside of berm and alongside field. The concern is the erosion is starting to erode into the field side. Please assess this and mitigate.								8312			
20-Jun-23	2023-1655	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	Non-Compliance(s) Found	Major Project	Inspection with the operator. KP 188+500, Road 4500, CGL Road 16, AD 100101113, short connector from the 800 FSR to the ROW, no concerns. KP 188+500, matted access under construction on ROW to the slope issues at KP 185+500. KP 186+000, Road 5264, CGL Road 15, AD 100105445, workspace is being used as a staging / storage area for helicopter to sling in meter bags to the slope issues at KP186+500. There were no concerns noted on Road 15. KP 186+500, west side slope on wet land 11609 / WC 199 has slumping issues. Material on the slope is unstable. See non-compliance. KP 186+500, West side slope on wet land 11609 / WC 199 sediment from unstable slope has entered wet land 11609 and sediment laden water has entered WC 199. See non-compliance. KP 177+ 200, WC 187.2F dewater site, 2 pig pens and filter bags, ground in the dewater location is saturated and water is flowing from the dewater site to an NCD and then WC 187.2F. An update from CGL Regulatory dated June 16 stated turbid water entering from pump off entering WC 187.2F causing NTU values above guideline. Discussed with the operator that turbid water from dewatering should not be entering a water course. Operator will relocate the dewater site.																		100105445

21-Jun-23	2023-1676	Secure Energy Services Inc.		TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Risk & Data Informed	I did not do a physical inspection of this facility, as the gate was locked and nobody was around. -But I did take notice of the facility signage on the gate/fencing. The BCER database shows that the facility location is at D-51-K/94-A-12 and NOT C-60-J/94-A-12 as the signage reads. These two locations would physically be side by side in the mapping system, So I can see the close relationship to the location. But C-60-J/94-A-12 is not located in the BCER database, as this facility is listed as d-51-K/94-A-12 in the BCER database. Please do some background research, and may need to contact BCER to sort this out. Thank you,

23-Jun-23	2023-1709	NTE Energy Canada Ltd.	NTS: A- 032-K/094-I-06	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA # 13727 - June 23rd 10:50 a.m. inspection. Well Head: NC: Shanghai signage for A-32-k/9-I-6 (non-compliant: company listed should be NTE info), signage non-compliance (see attached photo). NC: surface casing vent valve was observed as closed (see attached photo). No gas migration observed, all plugs in place, no other issues with the well head noted - otherwise overall good site. KERMIT Last Production Date: 200303 - Completed Status.								8424		
23-Jun-23	2023-1708	Pieridae Alberta Production Ltd.	NTS: B- 001-E/094-I-09	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA # 14701 - June 23rd at 12:30 a.m. inspection. Well head site is compliant but there is gas migration through the well head casing (see attached video), no other issues noted. SCV valve open and SCV vent flow no LEL. Well building site is shut down, signage compliant, last meter calibration date Feb. 23, 2023. Chemical tanks: compliant - grounded and SDS labels present.								8423		
23-Jun-23	2023-1707	Pieridae Alberta Production Ltd.	NTS: D- 036-H/094-I-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA # 15968 - June 23rd 2023 11:50 a.m. inspection. Well Head: surface casing valve open, over range LEL (Altair 5x), latex gloves test = slow flow. Flow lines: some hanging snake wrap around the pipeline. Well Facility: February 20th, 2023 - last meter calibration date, chemical pump in place in the well building, one chemical pump removed in well building. Kermit last production date: 202305, "Active" status. Chemical storage tanks in compliance with grounding, labels, and plugs in containment tank. No other issues noted with the well building, catadyne venting in place.						3004				
23-Jun-23	2023-1707	Pieridae Alberta Production Ltd.	NTS: D- 036-H/094-I-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed									8422		
23-Jun-23	2023-1706	Bench Creek Resources Ltd.	NTS: A- 025-E/094-I-10	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	20471 - June 23rd 11:30 a.m. inspection. Well Head: CSV Valve open, no SCV LEL, slow SCV flow (latex glove test). Flow lines: NC: garbage on site from pipeline insulation/snake wrap on the ground (adjacent to flow /pipelines)(see attached photos), NC: note bull plug missing on pipeline (see attached photo). Flow lines valves observed as closed (KERMIT last production date: 202208 - 10 months inactive). Signage on site is compliant. Chemical Tanks: Comment: note MSD label on second chem tank double wall is missing label (chem. tank with Valve open) (see attached photos), grounded chemical tanks (double walls). Well facility: no issues with well building, last meter calibration/orifice service date is March 10th 2023. No other issues noted with the well site.								8421		
23-Jun-23	2023-1706	Bench Creek Resources Ltd.	NTS: A- 025-E/094-I-10	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed									3003		
23-Jun-23	2023-1702	Pieridae Alberta Production Ltd.	NTS: A- 055-H/094-I-10	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA # 9610 - June 23rd 2023 at 12:55 a.m.: NC: Well Head did not have a SCV pipe attached to well head casing, a detached SCV pipe was located/stored in the well building (see attached photos). Well Facility: January 2021 last meter calibration reading, February 2021 orifice plate service date, note that one chemical pump has been disconnected. Exhaust vent pipe for catadyne heater is missing (see attached photo), as Well Facility site is not "Active": therefore, in catadyane heater is in compliance status. Signage meets regulator standards. Note: Flow lines snake wrapping on the pipeline is hanging (a comment only), company should monitor snake wrapping condition as to not allow / result in garbage scattered on the well site. Chemical tanks have labels, grounded, and containment bull plug in place. Comment: Inactive (suspended) status for well head / facility / flow lines have been closed off at valves. Pig barrel valve in place with chain attached - compliant. KERMIT last well production 202203 (+14 months) (Sec. 25(5) DPR may apply). Company action required to update well/facility status.						2999

27-Jun-23	2023-2544	Vancouver Airport Fuel Facilities Corporation		TRUCK	LMVI	Completed	In Compliance	Facility Start-Up	BCER Engineering and BCER C&E, met with VAFD representative and representatives from construction and engineering contractors: Ram, CCI, Argus. * Walked through facility tank farm, inspected pipeline risers to/from the marine terminal and Vancouver airport. Noted that majority of tank farm is under other jurisdictions. * Noted external cavity relief on all applicable DIB-1 valves. Issued a question on the DIB-1 cavity reliefs to VAFD. Argus engineer responded to question on August 16 2023. After review, no non-compliances identified. * Inspected equipment at the marine terminal: * Pipeline risers and equipment pad * Fire water foam injection system * Fire water pumps * Generator and MCC * Unloading dock, gangway, marine loading arms, fire monitors (suppression) * Drainage pumps and oil / water separation * Expansion piping / hoses * Stripping pumps for loading arms * Control room, fire alarm panel, sample lab * No non-compliances identified. Noted that fire alarm panel testing was ongoing at the time of the inspection, to be completed prior to start-up. * Reviewed available inspection documentation and requested follow-up documentation during inspection debrief: * Sample QAQC records * Meter calibration (leak detection) records * Car seal list * Sample deficiency / punch list tracking and closure * PSSR documentation * Fire detection / suppression systems inspection and test records * All documentation received - no non-compliances identified during inspection or follow-up documentation review. Inspection complete as per permit condition #39.								100100195

27-Jun-23	2023-2544	Vancouver Airport Fuel Facilities Corporation		TRUCK	LMVI	Completed	In Compliance	Facility Start-Up											
27-Jun-23	2023-2544	Vancouver Airport Fuel Facilities Corporation	From NTS: D- 065-H/092-G-03 To NTS: A- 043-J/092-G-03	TRUCK	LMVI	Completed	In Compliance	Facility Start-Up											
27-Jun-23	2023-1722	PETRONAS Energy Canada Ltd.	NTS: C-021-J/094-B-16	TRUCK	NORTH	Completed	In Compliance	Drilling Rig	Rig and location clean and well organized. observed a couple loose ground rods and cables missing cap on flare tank degasser. all issues corrected during inspection.							8458			
27-Jun-23	2023-1713	Saba Oil & Gas Ltd.	NTS: A- 081-H/094-G-08	TRUCK	NORTH	Completed	In Compliance	Incident	* Site inspection was a follow-up site visit in response to LEVEL 1 Incident # 079599323-001 at a81H/94G8. * A valve was hissing and gas odour present. * Notified C&E.							8427			
27-Jun-23	2023-1713	Saba Oil & Gas Ltd.	NTS: A- 081-H/094-G-08	TRUCK	NORTH	Completed	In Compliance	Incident							3008				
27-Jun-23	2023-1705	Pieridae Alberta Production Ltd.	NTS: D- 046-G/094-I-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 23431 - June 23rd 2023 - 1335 hours inspection of site. Well Head: surface casing vent valve open, moderate SCV LEL, SCV vent flow = slow fill (latex glove test). Chemical Tanks: compliant with MSD Labels and grounding. Flow lines: pipeline flow valve closed (company temp. closures as precautionary measure due to adjacent wildfires) (Note: KERMIT Last production date: 202303). Well Facility: no observed issues with well facility cabinet, calibration date March 2023 both calibration meter and orifice plate service dates.						3002				
27-Jun-23	2023-1705	Pieridae Alberta Production Ltd.	NTS: D- 046-G/094-I-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed								8420			
27-Jun-23	2023-1704	Pieridae Alberta Production Ltd.	NTS: A- 056-G/094-I-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA # 23432. June 23rd 2023 - 1340 hours inspection: Well Head: surface casing vent valve open, no LEL, compliant well head. Chemical Tanks: no issues noted, grounded, labeled, double walled tanks. Flowlines: pipeline flow valves closed (company temp. action as a wildfire precaution) (KERMIT last production date: 202305). Well Facility: March 21st, 2023 - last calibration meter service date and the orifice plate (same date). No issues on site - compliant.						3001				
27-Jun-23	2023-1704	Pieridae Alberta Production Ltd.	NTS: A- 056-G/094-I-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed								8419			

27-Jun-23	2023-1703	Pieridae Alberta Production Ltd.	NTS: A- 045-G/094-I-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 11284 - June 23rd 2023 at 1315 p.m. at site: Well head surface casing valve open, no LEL noted. Compliant chemical tanks, compliance MSD labels and container plug in place, and grounded. Well facility building inspection date for meter calibration is February 21st 2023, orifice plate calibration is February 21st 2023, catadyne vent in place, both pumps are in place, and no leaks found within well building. Well flow / pipeline valves are closed (precautions due to threat of potential wildfire damage in area)(Kermit Last Production Date: 202305), minor hanging insulation + snake wrap-comment. No other issues noted.						3000

Chemical tank: compliant, bull plug, grounded, SDS labels in place. No other issues, flow line active, good site, compliant signage.								8516		
29-Jun-23	2023-1734	NTE Energy Canada Ltd.	NTS: B- 089-C/094-I-14	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Planned Inspection Program	WA # 11783 - June 29th 2023 11:10 a.m. on site. Well Head: surface casing vent valve open, surface casing vent flow = no LEL (Altair-5x). Flow line: suspended site (disconnected), pipeline disconnected (see attached photos). Chemical tanks: NC: containment is missing bull plug (only valve), labels present, containment grounded, only NC issue is missing plug on containment tank (see attached photos). No other issues with the site.								8515		

30-Jun-23	2023-1738	ConocoPhillips Canada Resources Corp.		TRUCK	CENTRAL	Completed	In Compliance	Facility Start-Up	BCER Technical Advisor completed a satisfactory Leave to Open inspection on a newly installed Refridge package at ConocoPhillips 2-10-83-23. BCER met with Conoco representatives to review the PSSR and complete a final walk through. Some of the items reviewed and verified were the completion of: -N2 leak test completed (satisfactory) -ESD & safety systems are all operational -All car seals are in place with the exception of those at the Hi and Lo pressure flare and the condensate dump line to treater. These are currently locked but car seals will be verified with pictures prior to start up. -A Mode 1 shut down (Fire eye) was witnessed by BCER Technical Advisor on a prior site visit (June 19) -All applicable instrumentation has been calibrated and tagged. There are no accounting meters in package and all are identified as non-accounting. -"C" Punch list items to be completed and verification sent to BCER Technical Advisor. Action items: 1. Send photo verification of installation of car seals on HI and LO pressure flare header. 2. Send photo verification of car seal on condensate dump line to treater. 3. Copy of signed PSSR. Once the above action items have been completed please email them to the BCER Thank you for inviting me to the PSSR and for involving me in the unit walk through											
3-Jul-23	2023-1855	PETRONAS Energy Canada Ltd.	From NTS: A- 061-L/094-A-12 To NTS: C- 060-K/094-A-12	TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	On the road to a-b-61-L / 94-A-12, located about km 3 on the Mile 103 road, there is an area of 0.09 ha that was originally a Suncor communications tower. This is OGC file 8010661. There is a small dilapidated shack with the exterior metal siding all ripped open and is a hazard , the metal tower base (tower was removed) and cement barricades. There is an Out of Service sticker on the shack. Although there is a 30 year land tenure on this location, consideration should be given to removing this dilapidated equipment. Thank you

6-Jul-23	2023-1883	ConocoPhillips Canada Resources Corp.	DLS: 07-05-088-22	WALK	CENTRAL	Completed	In Compliance	Officer Selected	This inspection was a quick stop to view and assess the road and lease decompaction and the end results. The work appears to be quite well done, appropriate for the soils and other site conditions. Is this site going to be planted with trees? The only other comment would be is there is some old garbage scattered around that should be cleaned up. A walk around the lease and the road would be all that is required. Thank you.										8978

6-Jul-23		Canadian Natural Resources Limited	NTS: A- 032-I/094-G-03	TRUCK	CENTRAL	Draft		Officer Selected	This site was first visited on July 6 2023. A pile of of wooden lathe, flagging, a seed bag needs to be removed along with the flagging tape attached to trees on the perimeter of the lease. Good to see the seed mix was that of wheatgrass and annual rye. There are some comments about the compacted area between the mounds and size of mounds that are found in the Notebook portion of this inspection, Also too are some comments and questions regarding the placement of coarse woody debris.								9073		
6-Jul-23	2023-3698	LNG Canada Development Inc.	NTS: A- 005-B/103-I-02	TRUCK	COASTAL	Completed	In Compliance	Major Project	BCER Engineering in conjunction with C&E performed a routine inspection of the LNG Canada facility on July 6, 2023. Post-inspection documentation requests reviewed during a meeting on July 25 2023. Submissions provided for review on July 26, 2023. CONDENSATE AREA (TANK & RAIL LOADING). Viewed: * Vapor Chiller Package incl, blower and pressure relief valves * Railcar condensate Coriolis meters, grounding straps, loading arms * Drainage system underneath rail car loading area * Fire water monitor deluge valve skid * Condensate tank incl. pipe welding on tank roof, pressure vacuum valves, foundations, and general tank arrangement. **No follow-ups noted. WATER SUPPLY AND TREATMENT BUILDING & HOLDING TANK. Viewed: * Building arrangement & equipment layout * Chemical storage tanks * Filter banks * External overview of 0T-4301A; discussed internal coating products and reviews by other agencies ** No follow-ups noted. DRAIN AND EFFLUENT TREATMENT BUILDING & BUFFER TANKS Viewed: * Building arrangement & equipment layout * Chemical storage tanks * External overview (incl foundations) of 0T-6403A & B; discussed internal coating products FOLLOW-UP 1: Provide the completed records (Inspection and Test Records and TTM-PAINT-001) for the interior shell and underside of bottom plates for 0T-6403A No non-compliances noted during inspection or in submissions related to inspection. FOLLOW-UPS FROM APRIL 13, 2023 INSPECTION (Inspection No. 2023-2162) Provide test records for pneumatic tests: * JFJV-PNEU-0023 - Received Aug 28 2023. Reviewed. No further information required.* JFJV-PNEU-0035 - Per JFJV test not yet complete. Anticipated completion in December 2023.						4113				
6-Jul-23	2023-1784	STRATHCONA RESOURCES LTD.	DLS: B13-25-080-21	TRUCK	MID	Completed	In Compliance	Drilling Rig	Rig circulating at TD preparing to trip out and run casing. Rig and location clean and well organized. Everything looking good at the time of the inspection.								8667		
6-Jul-23	2023-1798	Erikson National Energy Inc.	NTS: D- 075-A/094-P-11	TRUCK	NORTH	Completed	In Compliance	Internal Request	This inspection was conducted to verify the state of affairs with Eriksons assets in the Fort Nelson area, specifically the d-75-A Wildboy Gas Processing facility. * The facility is inactive. * Two Erikson Employees are staying at the Operators Camp adjacent to the Facility, for security purposes, and to keep an eye on the active genset. All other Employees and Contractors have been sent home. * The HP and LP Flares are lit and remain in-service. * Two salt bath heaters are running to avoid a future operational issue with re-starting cold salt bath heaters containing solid salts. * Inlet and Sales ESD valves are closed. * One natural gas fired Genset is running to provide cathodic protection and maintain the air compressor. There are 3 other in-service natural gas fired Gensets and one diesel powered Genset available to be used if required. * Erikson is using natural gas from their sales pipeline to run the Genet, flares and salt bath heaters. Its estimated there is 2 or 3 months of natural gas available in the Tidewater sales line (on the Erikson side of the custody transfer meter) and if more is needed they will fill the sales line with gas from a well and gain another 2 or 3 months supply. * The HMI system is in-service and correctly displaying fire, gas and H2S detection and condensate/water tank levels. All level alarms and sensors are active. * Tank Farm: i) 4 x 1000 bbl Crash tanks up to 40% full, some of which is Condensate. ii) 4 X 1000 bbl Produced water tanks between 35 and 85% full, some of which is Condensate. iii) 3 X 750 bbl Condensate tanks up to 87% full. * They are considering delivery of some of their Condensate to ISH Energy just down the road. This will free up tank space and provide some cash. * Prior to shutdown, approximately 100 active wells were pigged to the Facility. Valves at Active wellheads were closed. This occurred between June 1 and 7 mostly by Helicopter.						3157				
6-Jul-23	2023-1798	Erikson National Energy Inc.	NTS: D- 075-A/094-P-11	TRUCK	NORTH	Completed	In Compliance	Internal Request	A detailed list of these is available if required. * On June 13 the road accessible July Lakes multiwell pad and facility were pigged and shut in. Genset there remains active. * The remote West Thetlaandoa facility is shut in. The genset there remains active. * Once a week they complete an inspection of the West Thetlaandoa facility. Access is by Bailey Helicopters. (CNRL is using Bailey Helicopters in the Wildboy/July Lakes area on an on-going basis, so its staged nearby). * From an operational perspective they are hoping to be fully back in servicr by September in order to prepare and plan for winter operations (firing up Catadyne heaters at wellsites, planning winter road opening, chemical delivery. Etc) * all of Erikson's assets are shut in, not just Wildboy (i.e wells in Central Zone). * The Erikson E&I employe is coming in on Wednesday next week to go through instrumentation. Our walkthrough of the facility showed dates on meter calibrations and transmitters between August 2022 and April 2023 so they are current. * 8 Compressors inservice, currently inactive. 4 Compressors * small oil leak on building below Silica Dust Filter vessel in Silica Gel Building #1. On-site Operator advised. * carseal missing on valve body for July Lake inlet ESD pressure switch. Operator advised.						3158

6-Jul-23	2023-1922	Coastal GasLink Pipeline Ltd.	UTM: 10N 532209E 6069121N	TRUCK	SOUTH	Completed	In Compliance	Major Project	Routine inspection with operator of sections 2 and 3. POD 7 (4a) Little Anzac - adequate depth and repair. KP 145+000 - DEF stored on site should be in secondary containment. KP 144+600 WC 134 1T - Clear span bridge, ESC in place, in good repair. KP 144+590 WL 1747 - Pioneer crossing still in place, should be removed. Storage of saturated/ snow infused material above WL bermed. Some turbid water escaping and being directed to sump for pump off. KP 144+325 J140.99 - Clear span bridge, ESC in place, in good repair. KP 144+300 WC 130 - Clear span bridge, ESC in decent repair. KP 144+100, 050, 000 The Three 56 ramp, pioneer crossing still in place, crib walls and ESC should be checked for maintenance. Workspace 018 scalping from sediment cleanup, should assess for vegetative regrowth. KP 143+870 - Filter bag off ROW, minor housekeeping required. KP 143+750 J138.91 - Clear span bridge, ESC in place, in good repair, WC signage needs to be refreshed. KP 143+590 WC 138.88 - Clear span bridge, ESC in place, in good repair. KP 143+450 WC 129 - Clear span bridge, ESC in place, in good repair. POD 6 (3a) Water from POD pumped up to water truck, actively pumping downslope for stream cleanup. POD pump requires a flow meter, or alternatively fill water truck and cease flow when pumping from truck for cleanup. This is to aid in accurate measurement of volume of water extracted from POD. 143+350 Stream cleanup of sediment. Fish salvage completed, upstream and downstream isolation dams in place, pumps active. Lower isolation dam overwhelmed at time of inspection, turbid water entered main stream channel. Addressed on site by crew. Multiple locations along right of way had active soil drying in progress.

7-Jul-23	2023-1841	Canadian Natural Resources Limited	NTS: A-A043-J/094-A-13	TRUCK	CENTRAL	Completed	In Compliance	Risk & Data Informed	-the a-43-J well has a faded flammable symbol on the location signage on the pumpjack. Also, the location signage at the lease entrance has both a faded flammable and sour symbol. -the location signage for the a-A43-J well has an incorrect location on it (Ca-52-H/94-A-13). I have mentioned this in a previous inspection. I see someone has used a felt pen and written the correct location on the signage, but it is faded. A proper/correct sign should be used, instead of a temporary hand written felt pen inscribed one.							8859

11-Jul-23	2023-1901	Trans Mountain Pipeline ULC	UTM: 11N 308444E 5717624N	TRUCK	MID	Completed	In Compliance	Major Project	Inspection with the operator of spread 48 July 11, 2023. POD 001, STWU 6519, North Thompson River, signage meets requirements, permit on site, withdrawal records on site, Intake instream in a screened basket. There are holes in the screen larger than 2.54mm, the top of the screen is not sealed to the metal frame and has an opening larger than 2.54mm. The basket is leaned to the upstream flow and has approximately 5 to 7cm of freeboard before water can flow through the top opening in the basket screen. Discussed with the operator and the POD was closed until screen is repaired and suitable for use. Operator is to provide a picture of the screen when the POD is in open. Referred to the BCER Manager of Enforcement for follow up under the Water Sustainability Act. Conditional pass pending follow up. KP 699+870, BC 300, Clear span bridge with ESC. Channel is dry. Bridge is scheduled to be removed in approximately 2 weeks. POD 002, STWU 6130, Clearwater River, permit on site, signage meets requirements, withdrawal records on site. Truck at POD at the time of the inspection. Driver could not produce permit when asked. Driver could not provide volumes of water being withdraw. Quote "best guess" based on visual observation into tank and time taken to fill tank. Truck has 22 cubic meter tank and estimates he is hauling 15 cubic meters per load. Driver states tank gauge is not accurate or working properly. Last withdrawal record for this truck was for 10 cubic meters, not 15. Discussed with the operator that volume measurements should be more accurate. Referred to the BCER Manager of Enforcement for follow up under the Water Sustainability Act. Conditional pass pending follow up.

12-Jul-23	2023-1923	Aitken Creek Gas Storage ULC	NTS: D- 035-L/094-A-13	TRUCK	CENTRAL	Completed	In Compliance	Risk & Data Informed	As the flowline is disconnected from the wellhead, the wellhead valves should also be chained and locked or removed to prevent interference. This well is showing as "ACTIVE" in the IRIS database, but the flowline is disconnected. -also, there is a small bucket under the surface casing vent, with a ground cable attached. Also, there is a latex glove taped to the surface casing vent assembly, the latex glove has a small hole in one of the fingers, and there are some drips into the bucket. What is dripping? Is this rain water, or something else? There is a SCV submission in the IRIS database from April 2022, stating a passed bubble test. If there is no concern, is the bucket there for a reason? Is a follow up test required?								9051

12-Jul-23	2023-1902	Trans Mountain Pipeline ULC		TRUCK	KTNY	Completed	In Compliance	Major Project	Inspection with the operator of Spread 5A, July 12 & 14, 2023. POD 004, STWU 06245, Inks Lake, Signage meets requirements, permit on site, withdrawal records on site. Truck on site during the inspection, 11 cubic meters per load, flow meter on truck, driver produced permit when requested, screened intake in water not observed as requires picker truck to pull. No concerns noted at the time of the inspection. POD 022, STWU 6245, Coldwater River, signage meets requirements, permit on site, no withdrawal records on site. Truck on site at time of inspection, driver produced permit when requested, driver produced withdrawal records for his truck. Discussed with operator that withdrawal records should be at site. Screened intake in water observed to be shallow, measured at 28 to 20 cm. Discussed with the operator and intake was moved to adequate depth. NOTE: a second truck pulled into the site and was carrying withdrawal records for both trucks but not current. Discussed with operator that withdrawal records should be at site. KP 958+550, BC 554, steep slopes with some slumping and minimal sediment riparian area. ESC in place. Channel restored with good riparian cover. KP 957+150, BC 551, pipe installed with backfill and poly lined diversion maintaining flow over backfill awaiting tie in. Isolation equipment in place and water course will be put back into isolation for completion of channel restoration. KP 971+170, WT -673, travel lane with ESC. KP 971+200, BC 564C, Culvert with ESC KP 973+380, BC 567, culvert with ESC. KP 976+160, BC 569B, culvert with ESC, cobble lined channel. KP 976+400, Coldwater 3 flood mitigation, Coldwater River, bank has been armored and raided in height. Active ground water dewatering to Coldwater River with pig pens in place should NTU values increase. WQM 3 times daily by grab, 2 samples taken today are 1.57 NTU and 1.83 NTU. POD 003, STWU, 0641, Thompson River, signage in place, permit on site, withdrawal records on site. 2 Intakes with adequate screen in water. Water is pumped to a holding tank that trucks can load from. There were no concerns noted at the time of the inspection. Several accesses and roads were inspected (as listed in the inventory), there were no concerns noted at the time of the inspection.									100116047

13-Jul-23	2023-1893	Trans Mountain Pipeline ULC		TRUCK	LMVI	Completed	In Compliance	Major Project	Inspection with the operator of spread 5B July 13 & 15, 2023. POD 009, STWU 6294, Wahleach Creek, permit on site, signage meets requirements,withdrawal records on site, screened intake no concerns, pumping direct to tanks from the Creek, intake is metered, trucks are filling from the tanks. KP 1059+400, BC 668, Wahleach Creek, restored channel with armored banks. Channel was restored to width as found prior to crossing. Previous restoration completed by MOTI after flood event. KP 1053+180, BC 662, Hunter Creek, preparing for isolation, no work instream at the time of the inspection, inspected pumps and screens, dewatering location, flock tank and pig pens, there were no concerns noted at the time of the inspection. KP 1027+900, well pointing the trench and dewatering through filtration system to the Coquihalla River. Trench to flock tank, to 3 weir tanks to holding tank to sand filtration to water course. 60 min cycle, with NTU values at 1.72 for discharge. KP 1022+680, BC 634f, Boston bar Creek, clear span bridge with ESC, ESC requires maintenance, Channel has been restored, benched and bank wrap with armor and cobble. KP 1008+090, BC 596, amphib stream, in isolation meter bags and poly upstream and downstream, equilibrium by 6 - 10" pumps to diffusers, trench pump to water filtration system on a 90-minute cycle. KP 1001+900, BC 592.3, Culvert with ESC, no concerns noted at the time of the inspection. KP 1001+850, BC 592.2, Culvert with ESC, no concerns noted at the time of the inspection. KP 1001+800, BC 592.1, by-pass over trench, plastic pipe connected to upstream channel with spray foam to hold pipe in place. KP 1001+640, BC 592, Channel is was being restored at the time of the inspection, water course is in isolation, amphib stream that was salvaged, upstream meter bags and poly downstream sandbags and ploy, Equilibrium maintained by pump around to diffuser, pumps in screened cages, Block nets in place. Discussed downstream isolation being small should flow increase.							142596			
13-Jul-23	2023-1893	Trans Mountain Pipeline ULC		TRUCK	LMVI	Completed	In Compliance	Major Project	BY pass/ water filtration system in place for grey water. Trench pump to 3 weir tanks,to sand traps, to 10-micron filter and discharged to water course if acceptable NTU values. if the NTU values are high water is recycled through the filtration system. KP 944+250, BC 588, Falls Lake Creek, clear span bridge with ESC, ESC requires maintenance, channel has been partially restored at the time of the inspection. Several Roads and accesses were inspected (listed in the inventory), there no concerns noted at the time of the inspection.							142594

13-Jul-23	2023-1915	Ish Energy Ltd.	NTS: A- 099-K/094-P-02	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	WA # 15254 and 1525S, inspection July 13th, 2023: 1300 hours. Parent well head a-99-k/94-P-002: surface casing vent valve is open, surface casing vent flow measured no LEL (Altair-5x), SCV no flow observed. No issues noted with parent well head and flowline leading to well building valve is open - "Active" status. Signage is compliant. Meter calibration date: March 16, 2023. Well building chemical pump lids left open in well building. It appears that chemical pump within the facility building is being repaired/maintained as it is missing a cover plate (See Attached Photos). Please note that chemical pumps manufacturer standard operating instructions require covers to be in place (DPR Sec. 16(1) - requirement would be applicable if pumps were in operation at time of inspection). No other issues noted with the well building. Chemical storage tank: SDS labels present, grounded double, and double walled tank = no issues noted with chemical storage. Well head a-A99-k / 94-P-002: surface casing vent valve open, SCV no LEL measured (Altair-5x), SCV no vent flow issues noted. Flowline valve is open, "Active" status regarding flows/production. Well site is "Active" - well head signage in compliance - no further concerns/issues noted. KERMIT last gas production date: 2023-05.							9035			
13-Jul-23	2023-1915	Ish Energy Ltd.	NTS: A-A099-K/094-P-02	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed								9036			
13-Jul-23	2023-1912	Ish Energy Ltd.	NTS: C- 001-D/094-P-07	TRUCK	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA # 15404, 15405, and 16095 inspection, July 13th, 2023: 13:30 hrs. Parent Well Head: c-1-d - surface casing valve open, surface casing vent no LEL measured (Altair-5x), SCV no vent flow observed. NC: Spillage - gas leak noted from Well Head - Wing Valve Packer: Altair-5x meter over range LEL recorded (noted gas leak is a non-compliance). Flowline valve open, no other issues noted with parent well head. Well Head: c-B1-d site, surface casing valve open, no LEL measured (Altair-5x), no vent flow observed, flowline open- no issues with "B" well head. Flowline: NC: Spillage - fluid, observed a patch of dead grass at base of well head "B", spillage to be confirmed with client. Request client to respond to spillage/dead grass concerns. Well Head: c-A1-d site, the surface casing valve is open, SCV vent flow recorded a high LEL (Altair-5x), SCV no flow was noted (latex glove test performed). No other concerns noted with C-A1-d well head. Well building of parent well and "A" well head: NC: measured high LEL (Altair-5x) from door of well building, Alleged Non-Compliance: gas spillage non-compliance from c-1-d building, inspector did not enter building. Chemical storage tank: SD labels in place and grounded. NC: Chemical containment = non-compliance as containment drain plug missing (rusted away) or ineffective (See Attached Photos).							9032			
13-Jul-23	2023-1912	Ish Energy Ltd.	NTS: C-A001-D/094-P-07	TRUCK	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed								9033

13-Jul-23	2023-1911	Ish Energy Ltd.	NTS: D- 003-D/094-P-07	TRUCK	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 15406/20288, inspection July 13th, 2023: 1306 p.m. on site with BCER: Well Head d-3-d: signage is compliant to standards, SCV valve was open, surface casing vent no LEL measured (Altair-5x), no vent flow observed. Flowline from well head too well building flowline valves was open - "Active". Well head d-c3-d: status is suspended, signage compliant to standards, chained and locked, surface casing valve open, SCV vent no LEL measured (Altair-5x), no vent flow observed. No issues/concerns noted with wellhead d-c3-d. Well building: NC: gas leak detected/measured as an over range/high LEL (Altair-5x) at entrance/door (no entry). Non-compliance gas spillage was noted, since presence of gas leak no further inspection of the well building was completed. Chemical storage tank was grounded, containment plug in place, no fluid leaks observed, SDS labels posted (labels damaged requires replacing) (See Attached Photos). Flowline valve out of well building to pipeline was observed to be closed (Kermit most recent gas production date: 2023-05.)							9024			
13-Jul-23	2023-1911	Ish Energy Ltd.	NTS: D-C003-D/094-P-07	TRUCK	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed								9023			

13-Jul-23	2023-1905	Ish Energy Ltd.	NTS: D-B005-D/094-P-07	TRUCK	NORTH	Completed	Non-Compliance(s) Found	Officer Selected	Well Head: location d-5-d/94-P-7, July 13, 2023: 12:06 hrs. on site. Well Head: Signage for all well head locations were compliant to standards. Well Head "a" and "b" located on site - parent well was on adjacent area / located off site to Well "a" and "b". (parent well head is water injection well). Parent well/water injector site: compliant with working within parameters. NUFLO meter calibrated/serviced: Nov. 22, 2021. Well Head: "a" - surface casing vent valve open, surface casing vent no LEL measured (Altair-5x), SCV vent - no flow observed. Well Head: "b" - surface casing vent valve open, SCV vent flow no LEL measured (Altair-5x), SCV vent no flow observed. No concerns were noted with the function/status of the well heads on site. Flowlines: observed all flowlines valves to be open: "Active" site. NC: One flowline valve was observed to be open and connecting to a pig barrel cover with the chain missing (See Attached Photo). NC: Well building: one catadyne vent line missing (See Attached Photo). Chemical pumps (2x) in the facility building are being repaired/maintained as they were missing cover plates (See Attached Photos). Please note that chemical pumps manufacturer standard operating instructions require covers to be in place (DPR Sec. 16(1) - requirement would be applicable if pumps were in operation at time of inspection). No other issues noted with the well building. Meter calibration service date is March 16th, 2023. No record/documentation of orifice service plate date was found in well building. Chemical storage on site: SDS labels present, grounded, and tanks double walled (no containment required). No chemical storage concerns noted.								8993

13-Jul-23	2023-1890	Ish Energy Ltd.	NTS: D- 006-D/094-P-07	TRUCK	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	Well Authority # 6053, inspection July 13th, 2023: 1049 hrs. Well Head: Surface casing vent valve was open, SCV vent flow recorded no LEL (Altair-5x) and no SCV vent flow was recorded/observed. Well site is not currently active; valve flowlines are closed - possibly due to maintenance. NC: ESD low pressure valve open, not chained or locked. ESD high pressure valve locked (See Attached Photos). Pressure sensor on the well head tubing pressure valve was also not locked (See Attached Photos). Flowline valves were observed to be closed at the time of inspection (maintenance). Kermit last production date: 2023-05. Well Facility: Fire extinguisher present at entrance to Well Facility building (June 2023 last service date). Last meter calibration service date is March 24, 2023 (See Attached Photos). No spillage: either gas or fluid leaks were noted in the Well Facility building. Catadyne regulator vent line in place. Chemical Storage: double walled tank (1) present on site, compliant with no issues noted as SDS labels were in place and no spillage/fluid leaks were observed. Invasive plants: Observed incidence of Scentless Chamomile scattered throughout the ground disturbance areas of the well clearing pad (See Attached Photo).								8990

14-Jul-23	2023-1899	Trans Mountain Pipeline ULC		TRUCK	LMVI	Completed	In Compliance	Major Project	Inspection with the operator of a closed bottom culvert installation at KP 973+300. Watercourse is in isolation with the culvert partially installed at the time of the inspection. Packing in the culvert with layered fill. Isolation is by sandbags and poly upstream and downstream. Equilibrium is maintained by one 4" pump and one 4" redundancy pump, to a downstream diffuser. All pump intakes meet requirements for Fresh Water End of Pump screening requirements. Grey water is managed by one 3" and two 4" pumps utilized as required to a pig pen. WQM by grab samples every 30 minutes, base samples every two hours. Minimal turbidity spikes with downstream remaining well within acceptable NTU values. Discussed full channel width for upstream and downstream isolations, and reviewed requirements for intake screening in response to questions. Backfilling and packing culvert ongoing and discussed downstream culvert end will need to be bedded.										100117744
