Flowline is disconnected. WELLHEAD valves should be chained and locked, but are not. -At time of inspection, i could hear and smell gas at the wellhead. Upon further inspection, I found that the surface casing vent is leaking gas, but it was not coming out of the end of the SCV assembly, it was leaking out from the threaded portion of the 90 on the SCV. There looks to be a burst plate in the SCV assembly, that being why the gas is not leaking out of the end of vent, but rather through the threads. Please contact the OGC engineering group ASAP. Thank you						Central	00018442	00711	Facility, Pipeline, Well

11-Aug-2021	074107062-001	Black Swan Energy Ltd.	12-Aug-2021	14-Sep-2021	NTS: A 085-B/094-H-04	No	Truck	Deficiencies Corrected	17-Sep-2021	11-Aug-2021	Planned	Due to a mix up, or other issues, the wells on a-85-B/94-H-4 are all over the place. Apparently, Black Swan, decided to move the a-84-B/94-H-4 and b-84-B/94-H-4 wells all to the a-85-B/94-H-4 location. Now the information in IRIS and KERMIT are not clear, and apparently there has been some mix up on the OGC end to correctly key in the proper information. So I am putting this inspection in by using the location search for a-85-B/94-H-4 AND AD#100109240 in order to gather from a-84-B and b-84-B and put all on the a-85-B inspection. Confusing. All wells, a-85-B to a-185-B are physically located at the a-85-B location.						Central	00027291	39508, 39509, 39510, 39511, 39512, 39513, 39514, 39515, 39516, 39517	Facility, Pipeline, Well

12-Aug-2021	074125904-001	Ish Energy Ltd.	16-Aug-2021		NTS: D 025-E/094-P-07	No	Truck	Deficiencies Corrected	16-Aug-2021	12-Aug-2021	Planned	This inspection is for the active gas well located at d-25-E/94-P-7. No SCV. Signage is good. SCADA calibration dated March /2021. OGC inspector has mentioned in a previous inspection to Ish Energy that the road access on both the Ish road and the Legacy road may be hazardous to travel. Presently, both roads have severe rutting and washouts. This may warrant a deficiency in the near future if not corrected in a timely manner.						North	00019265	10214	Facility, Pipeline, Well
12-Aug-2021	074126255-001	Trans Mountain Pipeline ULC	16-Aug-2021			Yes	Walk	Passed Inspection (Complete)	16-Aug-2021	16-Aug-2021	Routine	Inspection with operator. POD 018, Raft River, active POD with water being pumped to 60 cubic meter tank located at the HDD. A meter has been installed in the 3" line from the pump to the tank and is reset daily. POD has a screened box and submersible pump, permit is on site, there is no indicator of open or closed status and no withdrawal records at the POD. This POD is supplying entrance and exit water. POD 011, North Thompson River, active POD submersible pump and 3" line. Permit was located on site, there were no withdrawal records on site, signage was on site, no indicator of open or closed status. When the pump was pulled from the water for inspection it was observed that there were holes in the mesh that would allow for fish to enter into the intake. The pump and screened enclosure were voluntarily removed from service by the operator. It was agreed that the POD would not be put back into service until the pump had proper and effective screening that meets the requirements of permit condition 25. This inspection has been issued with a conditional pass, pending review and follow-up by the BCOGC Compliance and Enforcement Manager.						South			Pipeline, Road

Talked with the on-site welding inspector and reviewed visual inspection reports. Looked at the installed section of pipe under Blind Creek KP 91+678. Pipe under the creek bed has good depth of cover and has concrete buoyancy. The pipe on either side of the creek crossing will be rock guarded due to course backfill material. Backfill material will be screened before being used <20mm. Trench bottoms looked good and will be padded before pipe is lowered in to the tie-in. No concerns at the time of inspection.						South			Pipeline, Road
12-Aug-2021	074637194-001	Coastal GasLink Pipeline Ltd.	7-Oct-2021		From: NTS: A 002-I/093-L-02 To: NTS: B 018-K/093-L-03	Yes		Passed Inspection (Complete)	7-Oct-2021	7-Oct-2021	Routine	Visited 9A Generator spill site, discussed clean up and reclamation Visited 9A DEF spill site. Requested follow up on incident, discussed clean up. - WC 595 (1740.00-WC, 584+149): dams and pumps in place. Stream at low flow. Backup pumps on site. No dissipator installed on hose, end covered in filter cloth held on with baling wire. No flume . pump dug into streambed to create sump. Streambed material placed in channel downstream of dam/sump. Log fill crossing downstream of upper dam. Overall high risk to stream during higher flows or rain event. Please provide a copy of typical that was provided to contractor. - discussed welding operations with CGL inspector - Excavator fire area (583+800): some cleanup completed but a few pieces remaining on ground. Stone material has been removed and area brought to grade. - Lake 1F Re-route: area felled, trees still on site. Processing at time of inspection. - 4201: crossing complete, re-instatement in progress. No evidence of spill. Dams have been removed, some CWD established, potential scour on side bank, stream material mixed. - POD 001 (PODBA): truck currently filling, checked box for fill records, discussed water use/fill with truck driver. No issues - pipe in trench: all pipe has been rock guarded. Discussed with techniques with CGL General Inspector. Spoke about operator dropping trench fill from height onto the pipe. _WC 137C and WC 138C: both outlets have no dissipators, small downstream dams. 137C has no pump in place (small pump beside channel, no hoses). 138C has pumps in and was currently pumping, but at low flow. No upstream fish isolation. Both WC have log fills downstream of bridges. - Signage at km 31/32 storage area shows it is a gravel pit. Active diesel spill noted on site. Crews responded and began cleanup immediately, while still on site. - Grease globs and spot spills noted in various locations during inspection						South			Pipeline, Road

KP 1030+150, Coquihalla River crossing / diversion. Preparing site to grade for crossing, stockpile of material on location, De-watering of of side channel on going at the time of the inspection, fish salvage was completed prior to de-watering activity. water quality monitoring is established with sons at 100m up-stream, 100m and 200m down stream. Manual readings taken every 2 hours at 100m up-stream, 100m, 200m, 300m, 400m, and 800m, down stream. There have been no anomalies to date. Electronic records are available on location. Main stream diversion to commence in the next few days with the installation of flumes. Pump in-stream boxes were inspected for compliance and several small issues discussed with the operator. Several screens require the spaces where they are attached to the box to be filled, and some boxes had holes in the bottom for draining water that are required to sealed up. Operator will use rubber matts to ensure the top of the boxes where intakes go through are sealed up. Grey water will be pumped to a well vegetated area in proximity to the site. Discussed the possible requirement to have water pumped into the trench area while fish salvage is ongoing. Discussed having redundancy pumps in place, with intakes in place, should they be needed.						South			Pipeline, Road

Yesterday's condensate total was 90.29 m3/day. Verified the turbine meter was being proved monthly. Could not verify if the temperature transmitter was being calibrated or verified at the time of the meter prove. The proportional sampler did not appear to be put in service. Noted the tag on the water cut analyser AIT- 5210 indicated it was overdue for a calibration (last calibration- June 2020). Noted the tag on the water meter FQIT- 5970 indicated it was overdue for the annual prove (last prove was June 28, 2020). Action Items: 1. Confirm with meter proving service provider that the condensate meter temperature transmitter TIT- 5212 is verified/calibrated at the time of each meter prove. Submit the next scheduled proving report to show this is being done. 2. Ensure the condensate meter pressure transmitter PIT- 5212 is in maintenance system and is calibrated/verified at least once per year. 3. Proportional sampler not in service - Does the live condensate flow computation for production accounting require a condensate analysis (Eg. a density analysis)? 4. Water cut Analyzer AIT- 5210 appears to be over due for annual calibration. Ensure it is in the maintenance system and is calibrated once per year. 5. Water meter FQIT- 5970 - appears to be overdue for annual prove. Ensure it is in the maintenance system and is proved once per year.						Central	00007800		Facility, Pipeline, Well

24-Aug-2021	074444963-001	Trans Mountain Pipeline ULC	14-Sep-2021			Yes	Truck	Passed Inspection (Complete)	14-Sep-2021	14-Sep-2021	Routine	Silver Creek Tributaries (bottom): found to be in good condition - Silver Creek Tributaries (top): Found to be in good condition. Invasive plant removed immediately while on site. - Eagle Creek (inlet): minor maintenance on inlet (ongoing) - ISRA: water low, but area is in good condition - Eagle Creek (outlet): lumber from construction to be cleaned up. All else found to be in good condition. - TCA outlet: very little flow, water being monitored. - monitor and ensure ditchlines on site are being kept free of debris Site was found to be in generally good condition. No deficiencies found, excellent housekeeping.						South			Pipeline, Road
24-Aug-2021	074638873-001	Trans Mountain Pipeline ULC	8-Oct-2021		From: NTS: D 077-H/092-G-02 To: NTS: A 025-D/092-G-07	Yes	Truck	Passed Inspection (Complete)	8-Oct-2021	8-Oct-2021	Routine	- Watercourse crossing BC-78DA3: cement box culvert has been installed, pipe to be installed on top. Water discharge location well set up using poly, hay bales, etc. No exceedances during works. - Austin Creek: no TMX activities at this time. Protest related debris on time, TMX will remove when able. - Holmes Creek: no activity since work shut down. Site is stable. Discussed water monitoring. - POD at Fraser River: not in place yet. Reviewed site plans. Viewed site at low tide. - HDD pipe exit: area well matted. Site clean and organized. Some welding occuring on site. AUGUST 26: - Sumas River crossing: visited site. Inlet has no impact to Sumas River. Section 11 was not utilized during crossing. Section 10 water withdrawl only utilized to create anchor point for siltation curtain.						South			CIAS, Pipeline
25-Aug-2021	074222837-001	Canadian Natural Resources Limited	25-Aug-2021		NTS: A 077-B/094-G-01	No	Truck	Deficiencies Corrected	27-Sep-2021	25-Aug-2021	Routine	COMMENTS: -during the inspection today, I found the surface casing vent leaking. The latex glove inflated and blew off the assembly in approximately 45 seconds and LEL was detected on personal monitor. I found no previous SCVF report in the OGC system, therefore, you have 30 days to test the SCVF and submit the results to OGC Engineering department.						Central		12402	Well
25-Aug-2021	074227008-001	Ovintiv Canada ULC	31-Aug-2021		DLS: 14-31-078-17	No	Truck	Passed Inspection (Complete)	31-Aug-2021	25-Aug-2021	Planned	Inspected equipment on site. No issues found at time of inspection.						South	00018062, 00019310	10677	Facility, Pipeline, Well
25-Aug-2021	074227840-001	PETRONAS Energy Canada Ltd.	26-Aug-2021	22-Sep-2021	NTS: B 008-I/094-B-16	Yes	Truck	Deficiencies Corrected	23-Sep-2021	25-Aug-2021	Planned	Pipelined Condensate and Truck-in Condensate Measurement Inspection Inspect the delivery point pipelined condensate meter FQIT-9111 installation. Noted from operations records that the condensate pipeline fill commenced on July 9, 2021 and from the tag (April 2020) on FQIT-9111 the meter prove was overdue. The BC Measurement Guideline section 2.7.3 Condensate at Flowline Conditions states "A new meter must be proved within the first calendar month of operation. The resultant meter factor must be applied to all volumes produced prior to the determination of the meter factor from the prove." Noted the FQIT-9111 meter installation did not meet the BC Measurement Guideline requirements in section 9.2.5 Temperature Measurement. " For pipelined delivery point measurements, two thermowells must be provided (i.e., one for measurement, one for verification). " Noted the continuous water cut analyzer AIT-9110 was removed for repair and the proportional sampler was not in service. Discuss the risk of condensate production accounting volumetric error with Petronas in running without a continuous water cut and the suggested considering installing a spare analyzer or performing a manual water cut. Truck-in Condensate Meter Inspect the truck-in meter. Found the "o" ring seal on the cover on the Coriolis Micro-Motion transmitter not engaged, and the threads on the cover damaged so it could not be put on tight, making the transmitter not explosion proof and a potential source of ignition should there be a gas leak in the meter building. Action Items 1. Repair AIT-9110 water cut analyzer. 2. The delivery point condensate meter run design is missing a test thermo-well to verify the temperature transmitter. The design is not in compliance with BC Measurement Guideline section 9.2.5 Temperature Measurement. Please address on other pipelined condensate delivery point installations (eg. d-59-I/94-B-16, d-32-I/94-B-16 and a-58-H/94-B-16). Please examine the non compliance and provide a response. 3. Confirm with meter proving service provider that the condensate meter temperature transmitter will be verified/calibrated at the time of each meter prove. 4. Ensure the pipelined condensate flow meter pressure transmitter PIT- 9110 is periodically maintained. 5. Proportional sampler was found not in service - Does the live condensate flow computation for production accounting require a condensate analysis (Eg. a density or compositional analysis)? 6. Submit all associated reports for the pipelined and trucked -in condensate meter proving. 7. Truck-in meter - Repair or replace the damaged Coriolis meter transmitter cover. Please reply to OGC concerning the above action items and to the attached deficiency through the KERMIT system.						Central	00018260		Facility, Pipeline, Well

1-Sep-2021	074377496-001	Canadian Natural Resources Limited	8-Sep-2021		NTS: A 080-E/094-B-16	No	ATV/Snow Machine	Deficiencies Corrected	27-Sep-2021	8-Sep-2021	Planned	In the fall of 2020 I found a panel gate barricade on Road #2073 which terminates at the a-80-E / 94-B-16 well pad. This is an extension of the Dark Road off km 8 of Cameron River Road. My inspection of the first bridge in 2020 found the structure only supported by wooden mats and they were being undermined by the stream. Research also found that no road closure notification had been received. Upon this notification CNRL completed a Temporary Road Closure Form. My 2021 inspection found the panel gate still in place and the bridges remain in bad shape. The last correspondence I have is that the bridges were going to be assessed in the spring of 2021. I am enquiring if these assessments have been done and what the results are. For the well pad, there is a bit of scentless chamomile that could be picked and removed as well as some minor garbage found around the lease.						Central		27958, 28698, 28699	Well

2-Sep-2021	074352173-001	Coastal GasLink Pipeline Ltd.	7-Sep-2021			Yes	Truck	Passed Inspection (Complete)	7-Sep-2021	7-Sep-2021	Routine	Inspection with operator, section 2. There is an area being used to store equipment at Km 19 on the Rocky FSR and the junction of RE 960.0, OGC Road 05744. Road RE 960.0 has not been fully developed, only the first 50 to 75 meters has been cleared for a storage area. Please provide the authorization to utilize this space, as the area being used exceeds the Road ROW. Due to the road being partially cleared and used as a storage location for equipment it is now classified as under construction. An IR will be submitted for additional information. This inspection has a conditional pass, pending review of all authorizations.						South			Pipeline, Road

2-Sep-2021	074405630-001	PETRONAS Energy Canada Ltd.	10-Sep-2021			No	Truck	Passed Inspection (Complete)	10-Sep-2021	10-Sep-2021	Routine	It was recently noted that the decked wood near the beginning of the road to well pad d-95-H / 94-B-16 has been mulched. The mulch is really deep and may not have the ability to be revegetated properly. Please assess. There is an option to spread the mulch out along the road right of way to assist in slowing the water velocity down where there is some erosion occurring. Just a reminder that any trees that are felled need to be bucked up so they lay flat on the ground. This will speed up decomposition and reduce fuel load in the forest. The rest of the road is well built. The inspection will show as a PASS but the decking site will be monitored for revegetation catch.						Central			Pipeline, Road

8-Sep-2021	074400912-001	Pacific Canbriam Energy Limited	10-Sep-2021		NTS: B 072-A/094-B-08	Yes	Truck	Deficiencies Corrected	27-Sep-2021	8-Sep-2021	Audit	Measurement and Production Accounting Practices Audit for b-24-H/94-B-8 (BCBT 0007834) delivering to the b-72-A/94-B-8 gas plant (BCGP 0017909) and the b-24-H/94-B-8 gas plant (BCGP 0007834). Meet with with PCEL Superintendent and PCEL Measurement Co-Ordinator. Review PCEL's response to measurement audit questions for KERMIT Inspection No: 072208427-001. PCEL will continue to test each well multiple times each month, which will exceed the BC Measurement Guideline requirements. Some of these tests will be for reservoir management. However it was disclosed that at the time of each test for production accounting a laboratory analysis (gas and condensate) was not being taken in conjunction with the test. Gas analysis were being updated once per year and were not downloaded into well site SCADA after each ECF test. PCEL has committed to performing the well ECF tests and obtaining laboratory analysis until the RD of the last three analysis are within +/- 1% as per section 8.4.4 of the BC Measurement Guideline. It was mentioned at the time that section 6.5.1 Effluent Testing Frequency offered other opportunities for reduced test gas and condensate sampling. Reviewed BC Measurement guideline section 6.3.4. Effluent Gas Well – LGR Classification > 0.280 m3/e3m3 and discussed the measurement system requirements for delivery point condensate measurement. PCEL disclosed that both b-72-A (phase 1+2) and b-24-H plant inlet condensate measurement didn't not meet the requirements in BC Measurement Guideline sections 6.3.4 (8), 9.2.5 Temperature, and 9.2.6 Pressure. Noted Petrinex volumetric error messages and high water proration factors. Action Items: 1. Submit revised measurement schematics. 2. Consider incorporating an automated process or system to determine well test analysis frequency in alignment with BC Measurement Guideline section 6.5.1 Frequency. 3. Consider automating the process (ProTrend dump) to download the new gas analysis into the well site SCADA . 4. Correct excel spread sheet that was submitted - it appeared the GEV calculation did not closely match the laboratory analysis. 5. Submit the last (2) gas and liquid analysis for the b-72-A and b-24-H gas plant inlets. 6. Submit the last (2) condensate meter proves for the b-72-A and b-24-H gas plant inlets. 7. Investigate and address Petrinex volumetric error message for July 2021 reporting and high produced water proration factors exceeding 1.1000.						Central	00007834, 00017909		Facility, Pipeline, Well

Review Q/C documentation for (1) process weld on line # 273-900-PW-1207, welds B&E. Noted there was no NDE log for the project/job to track NDE RT % to ensure that specified 10 % RT was met. It was noted that the visual examination was not in accordance ASME B31.3 341.4 - Extent of Required Examination, as only some of the project welds had record of visual examination. Noted PCEL " Owners Inspector" qualifications were not provided, and the inspector had not signed -off on the fabricator's inspection Test Plan (ITP). It was also noted that the on-site construction manager signed the Technical Safety BC piping registration form 1329 where the " Owners inspector " should have signed the the form to register the piping. Action items: 1. Provide the " Owner's Inspectors" qualifications. 2. Provide the "Owner's Inspector" fabrication shop inspection reports. 3. Provide completed signed-off Inspection Test Plan (ITP) missing the customer or " Owner's Inspector" signature. 4. Provide evidence that the specified 10 % RT was met for the project/job. 5. Amend the Technical Safety BC 1329- Construction Data Report to include the " Owner's Inspector" signature. 6. Submit the revised Q/C documentation. Thank you,						Central	00017909		Facility, Pipeline, Well

15-Sep-2021	074480225-001	Tallahassee Exploration Inc.	20-Sep-2021		NTS: A 099-F/094-J-10	Yes	Helicopter	Passed Inspection (Complete)	20-Sep-2021	20-Sep-2021	Operator Requested	LTO Inspection of the Tallahassee Milo facility with Tallahassee and Techmation reps. (see Tallahassee response to the following points in the Attachments tab; insufficient characters to include the response here). Rep is following up on Waste Registration and/or Waste Discharge Permit application(s). Electrical/Instrumentation QA/QC package will be available from Techmation over the next week. Electrical QC; will go over what was done since original facility construction and provide Red Lined version. Gas analysis to be done when Facility fires up and all wells are online. Will use last known Facility gas analysis until then for EFM configuration. DEOS will be updated when new gas analysis is available and posted in the Dehy. Shut down key pretty much done. Ian from Techmation will provide a copy for the Commissioning documentation package. (to confirm if P.Eng. stamp is required). Lock/carseal list is in development and will be in Commissioning package. Safety device bypass checklist/log has been built and will be in Commissioning package.There will be handover documentation from Commissioning to Operations in the Commissioning package. Fire & Gas systems are up and running; bypass timer set in the HMI at 180 minutes. Witnessed and confirmed by OGC. Not changeable by Operations. Tallahassee has confirmed the cathodic system is working. Contractor will survey and provide QA/QC this winter. Tallahassee is building the callout/alarm for flame fail. Will be added to SCADA package in about 2 weeks time. Compressor commissioning and panel report are complete and will form part of Commissioning package. Corporate/Site Specific ERP from May 2019 will receive annual update. Startup Procedure has been built and will be in the Commissioning package.Venting/Flaring record has been built and will be in the Commissioning package (applies to wells and the facility). Rep to confirm ERP exercise schedule. Walkdown: Valves on high level switch in Group Inlet Sep to be locked open and entered on lock/carseal list Chain on pig receiver to be re-attached to pig barrel cap. Pig barrel containment to be grounded and cover installed or entire containment to be changed out. Witnessed inlet ESD closure from push button and confirmed alarms in HMI. Bypass around inlet ESD locked closed. •Accounting tags in b-33-I inlet to be changed to Non-accounting. Observed Accounting tags on water meters in Group Inlet and b-33-I inlet. •Directional arrows and contents labelling to be completed on all flowlines. Locks/clamshells to be installed on some instrumentation and blowdown valves in Sales building. Fuel gas is metered; currently a chart is used but changing out to EFM. Purge gas is calculated from plant balance; Inlet gas minus (Sales + Fuel gas). High and low level switches observed on pop tank. New burner installed in Dehy.Observed NorthRiver Midstream sample point tag at Sales gas meter.Orifice meter in a-90-F meter building has been rebuilt. Grounding ok. Observed spools removed and blinds installed or spec blinds on out-of-service buildings. Observed no incomplete piping. Observed valid fire extinguishers in place across the facility. Some additional questions from my marked-up copy of the Facility Startup Inspection list I left behind at the office: Has a Petrinex reporting code been generated for the facility? How is Compressor blowdown and Compressor start gas being accounted for in the PA records?						North	00008288, 00000976		Facility, Pipeline, Well

16-Sep-2021	074464003-001	Pacific Canbriam Energy Limited	16-Sep-2021		NTS: B 072-A/094-B-08	Yes	Truck	Passed Inspection (Complete)	16-Sep-2021	16-Sep-2021	Planned	Phase 3 Measurement Inspection Reviewed the phase 3 gas plant measurement schematic. Questioned some meter designations, " Accounting" Vs. "Non- accounting". " If the meter is "Accounting" the volume would be used to report into Petrinex. Meters in question are: phase 3 plant sales meter FE- 130015 , plant 1 & 2 sales meter FE-062, plant condensate stabilizer FE-43905, glycol flash 13703D, C3/C4 to phase 1&2 storage FE- 412003, and de-ethanizer bottoms FE- 41203. Noted a design issue on the V-1000 and V-1010 inlet separator condensate meter runs. PCEL engineering opted to use the inlet vessel pressure for continuous pressure compensation, rather than using a pressure tap off of the meter runs. Calculations were provided to show a minimal affect using the vessel pressure for the flow calculation. Noted the orifice manufacturer specification data sheet for the (2) inlet separator (V-1000 and V-1010) gas meter runs was not available to verify the meter run upstream diameter that was stamped on the meter run data plates. On FE-100007 the upstream diameter was stamped 15.003 inches, and on FE- 101013 the upstream diameter was stamped 15.005 inches. Both meters were configured using 15.000 inches as the upstream pipe diameter. Reviewed prepared documentation, specifications, and calibration documentation, and sat with the PLC programmer and verified meter parameters entered into the plant electronic flow measurement (EFM). Action Items: 1. Verify all phase 3 meter designations with PCEL production accounting and update the phase 3 metering schematic as required. 2. Confirm with PCEL production accounting that total monthly flared gas = main flare meter + pilot gas + all sweep gas. 3. Confirm with PCEL production accounting that the plant fuel gas will be corrected by subtracting the flare pilot, and total sweep gas, as these meters are downstream of the plant fuel gas meter. 4. Provide a low flow cut-off calculation and ensure the any sweep gas to the flare header is not metered by the main flare meter. 5. Provide a PDF of the flare meter configuration showing the low flow cut-off value. 6. Provide the manufacturer data sheets for the inlet orifice gas meters FE-100007 and FE-101013. Ensure the correct upstream diameter is entered into the EFM configurations. 7. Submit the phase 3 production accounting meter documentation.						Central	00017909		Facility, Pipeline, Well

17-Sep-2021	074475115-001	Tourmaline Oil Corp.	17-Sep-2021		DLS: G 13-07-080-17	Yes	Truck	Passed Inspection (Complete)	17-Sep-2021	17-Sep-2021	OGC Requested	Well facility Inspection. Meet with Tourmaline staff. Review the Well Facility Permit RE: Determination of Application Area Number 10010917, Date of Issuance: September 20, 2019. From the Completions Manager test data it was determined that the H2S-07-BD-17 well H2S content was 100 PPM, the G 13-07-BD-17 well H2S was 5 PPM, the J13-07-BD-17 well H2S was 30 PPM, and the k-13-07-BD-17 well H2S was 180 PPM. Found that Facilities Condition #6 "The permit holder must install the H2S detection if the H2S concentration of well exceeds 100 ppm" was not met as the K13-07-BD-17 well H2S concentration exceeded 100 PPM . Request Tourmaline clarify with OGC Pipeline and Facilities if H2S detection would be required in the test separator building. Inspect the well meter installations and EFM configurations. Inspect the test separator building and metering. Remind Tourmaline the test separator condensate meter must be proved in accordance with the BC Measurement Guideline section 2.73 Condensate at Flowline Condition. "A new meter must be proved within the first calendar month of operation. The resultant meter factor must be applied to all volumes produced prior to the determination of the meter factor from the prove. " Tourmaline staff informed at the time of inspection that a meter prove was scheduled. Action Items: 1. Install H2S detection if the H2S concentration of well exceeds 100 ppm. 2. Install H2S symbols on signage at lease entrances in accordance with Drilling and Production Regulation Signs for Facilities 771). 3. Prove the test separator condensate meter within the first month of operation and in accordance with the BC Measurement Guideline section 2.7.3 Condensate at Flow-line Conditions. 21-Sep-2021	074543559-001	PETRONAS Energy Canada Ltd.	27-Sep-2021		NTS: B 018-K/094-A-12	No	Truck	Passed Inspection (Complete)	27-Sep-2021	27-Sep-2021	Routine	The road to this well was closed for a few years due to a slide on the fill slope. There were cement barricades across the beginning of the road as well as a road closed sign. On Sept 21 2021 the barricades were noted to have been moved off to the side to allow for traffic, however, the road closed sign is still present. Would you please confirm that the road is safe to use and if any modifications need to be done for safety (delineators, widen road etc.,) please do so and adjust the road closed sign as required. Please send confirmation of the status of the road to JOGC Thank you. The aluminum cover on the line heater is beginning to corrode. The steel bands and attachment screws tare starting to fail causing some insulation to fall off the heater and onto the ground. Please secure or remove the covering and insulation so the situation doesn't deteriorate further. Thank you.						Central		02420	Well

22-Sep-2021	074536503-001	Crew Energy Inc.	24-Sep-2021		From: DLS: 13-21-080-20 To: DLS: 14-21-080-20	No	Walk	Passed Inspection (Complete)	24-Sep-2021	24-Sep-2021	Follow Up	This inspection is a follow up to potential concerns over erosion and slope stabilization on Crew pipeline ADB 100103573. After completing the inspection it was determined that there was no immediate concern. Two very minor top soil movement areas within the ROW were observed on the East side of the Pine river. These are very minor and Crew is aware of them and will continue to monitor with their regular inspections. Considering the degree of slope and opportunity for erosion and soil movement on both the West and East slopes of the Pine River I feel that the ROW is in excellent condition. There is very strong vegetation growth to help alleviate soil movement.						South			Pipeline, Well

22-Sep-2021	0745551591-001	PETRONAS Energy Canada Ltd.	27-Sep-2021		NTS: D 027-H/094-B-16	No	Truck	Passed Inspection (Complete)	27-Sep-2021	27-Sep-2021	Routine	This is a routine inspection of the new road segment from the 17 pad onward and lease construction. The road and lease are well constructed, however, there are some items that could be adjusted based on the following observations; Road -some of the cobble berms in the ditch line are not wide enough and the water is going around and starting to cause minor erosion. This is at the first corner of the new road but can be seen in a few places. The first cross drain culvert has too much rock in the take off ditch causing the water to exit the takeoff and flow down the ditch. -there is some grass germinating but may need to be supplemented due to the heat and dryness of this past summer. -from km 4.9 to the lease there is no cobble in the upslope ditch line except right at the culverts. This may start to erode if the vegetation catch is delayed. -the water intercept ditch just before the lease goes into a culvert and there are no sediment control fences, cobble etc. The same goes for the culvert under the road at the lease entrance. Lease -good construction techniques with a french drain that has been incorporated into the pad and is flowing water. -some movement in the cut slope but minor						Central		41282	Well

Inspect the 4 inch fuel gas orifice meter installation. Questioned if the EFM temperature probe thermo-well was threaded in adequately as the line was operating at 7000 Kpa. Review the Aug 25, 2021 calibration report. Request a snap shot of the SCADA trend at the time of the calibration. Verify the meter run upstream diameter @ 3.828 inches meter and that the meter station bypass valve was locked closed. Verify the SCADA Pack was 334 as per the Measurement Canada approval. Asked the E+I technician to investigate problem with SCADA Pack Firmware, that the PDF of the meter configuration appeared to be factory default. Action Items: 1. Submit the SCADA trend at the time of EFM calibration on August 25 2021. 2. Correct issue with SCADAPack firmware and provide a PDF version of the system parameters in the SCADA Pack. 3. Ensure the thermo-well for the temperature probe is adequately threaded into the meter run. Thank you,							South	00027341		Facility, Pipeline, Well

Confirm that all production accounting meter calibrations were up-to-date. and were being done on an annual basis. Confirm that Facility shutdown, compressor/generator panel, and ESD push button checks were last done in 2020, and will be coming due by the end of the 2021 calendar year. Confirmed that the ERP was up-to-date and the facility car seal/lock list was being regularly checked and maintained. Noted that there were some gauges on the 1-32 suspended well. These should be replaced with bull plugs. Inspected the inlet and outlet pipelines. Questioned if there were some cathodic insulator kits missing and when the last cathodic survey was done? Found (2) conduiet bull plugs were missing on EXP receptacles in Dehy 600 and (1) conduiet bull plug was missing on EXP receptacle in Dehy 300. Received confirmation on Oct 20 that an electrician installed missing bull plugs . Action Items: 1. Inlet and outlet pipelines - Inspect insulator kits and pipeline insulation from facility piling. Ensure a recent cathodic survey is completed in accordance with Tourmaline's facility or pipeline the Integrity Management Program. Submit the cathodic survey report. 2. Remove gauges on the suspended 1-32 well and bull plug.						South	00007681, 00007848	22869	Facility, Pipeline, Well
19-Oct-2021	075165792-001	Coastal GasLink Pipeline Ltd.	29-Nov-2021		From: NTS: A 054-H/093-L-01 To: NTS: C 008-I/093-L-02	Yes	Truck	Passed Inspection (Complete)	29-Nov-2021	29-Nov-2021	Routine	Inspection October 19, 2021 - Laydown 26: area to be monitored and traffic to be reduced. Some work on ESC still to occur at time of inspection. - ROW near laydown 26: pipe strung and welded, ESC functioning, Some risk around proximity of topsoil piles and ditches. Discussed recreation access controls. - MUS 10A: ESC to be improved, no non-compliances but some risk noted. Runoff currently all going to one corner. Discussed potential to reclaim unused areas of site. Minor housekeeping/garbage on site. Invasive plant controls discussed on site. - WC 11C2A: ESC in place and effective - WL 11378: fencing removed, no issues noted on site. Load ratings on bridge and radio signage discussed on site. - TD 16: ESC improvements needed (no issues, but risk). Features and road located below site. Timber decked on site clearly marked. Small spill noted on site (bucket of oil on site, <5L in bucket), unsure of who caused the spill as there is public access and dually tire tracks as well as dog paw prints were noted near the spill. Cleanup was started immediately and completed the next day. Area passed visual and olfactory tests. -						South			Pipeline, Road

20-Oct-2021	074766762-001	Tourmaline Oil Corp.	22-Oct-2021		DLS: 03-18-080-17	Yes	Truck	Deficiencies Corrected	5-Nov-2021	20-Oct-2021	Planned	Planned Inspection Confirm fire and gas detection recent calibration and testing - last done Sept 8, 2021, and that there were no faults on the plant HMI display. Confirm that all production accounting meter calibrations were up-to-date. and were being done on an annual basis. Confirm that ESD push button function testing, ESD Block and blowdown valve function testing were done on Aug 17 2021, and facility process shutdown, production tank high level switch function tests, compressor/generator panel checks were done during the plant turn-around on Aug 18 2021. Walk through the plant. The fuel gas dehy was removed. There were open holes where piles were cut -off below grade level. This would present a hazard for anyone walking in the area at night in low light condition or if the ground was covered in snow. Noted (3) egress security gates were open, spoke to operations staff about the security issue that this presented. Also It was noted that on some of the process building skid edge isolation valves on drop legs from the flare Header electrical heat trace was no longer in contact with the isolation valve. This may present opportunity for trapped liquids in the isolation valve to freeze blocking ESD blowdown valve and PSV the pathways to flare. This issue was raised with the plant operations staff. Action Items: 1. Examine the need to heat trace process building skid edge isolation valves on drop legs from the flare header. 2. Examine the need to maintain plant security - Plant security fencing is defeated having open egress gates.						South	00007819		Facility, Pipeline, Well

21-Oct-2021	074769972-001	Coastal GasLink Pipeline Ltd.	25-Oct-2021		From: NTS: A 077-A/103-I-02 To: NTS: D 025-B/103-I-02	No	Helicopter	Deficiencies Corrected	18-Nov-2021	25-Oct-2021	Routine	Widespread ESC issues between KP 596+250 and 610+000. Sedimentation in numerous watercourses. As well, sediment plumes were noted in Lake 1F (approximately 586+750) and unnamed lake at approximately KP 587+300; caused by road or ROW runoff. This in in non-compliance with section 12 of the Environmental Protection and Management Regulation (EPMR), which states that, "A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake." As well, this is in non-compliance with condition 77 of Coastal GasLink's pipeline permit, which states, "In all locations where run-off from the area of the pipeline right of way or work space may flow into a watercourse, the permit holder must contour and stabilize banks and approach slopes and install berms, silt fences, cross ditches, or implement other alternative effective measures as appropriate to minimize erosion and avoid sediment deposit into the watercourse." This non-compliance with the permit condition therefore means that Coastal GasLink is also in non-compliance with section 21(b)(2) of the Oil and Gas Activities Act (OGAA) which states that, "Subject to section 23, a person must not carry out an oil and gas activity unless (b)the person carries out the oil and gas activity in compliance with (ii)a permit issued to the person, if any." Coastal GasLink has 14 days to resolve these non-compliances. Please respond both in kermit, and notify OGC when these have been resolved. As well, please send aerial footage/imagery post completion, as well as an explanation of root cause and corrective actions. A follow up inspection may be conducted at the inspectors discretion. 22-Oct-2021	074769244-001	Tourmaline Oil Corp.	25-Oct-2021		NTS: B 024-H/094-G-08	Yes	Truck	Passed Inspection (Complete)	25-Oct-2021	22-Oct-2021	Incident	Incident # 74641575-001 Follow-up Inspection Tourmaline reported that the level control (LIT 601) and high level alarm on the HP flare knock out (KO) tank failed which resulted in approx. 2m3 of produced water being carried over up the HP flare stack. This occurred after start-up after the plant turn-around (Oct 4- Oct 10). Tourmaline is currently doing an incident investigation into the cause. A temporary level control transmitter was installed on the HP flare KO bridal and sight glass. Tourmaline has implemented regular operator checks to ensure the temporary level control is working. Tourmaline is in the process of modifying the compressor drain system and installing piping to take the compressor scrubber drains to a new produced water tank rather than the HP flare KO. Inspect the plant fire and gas safety systems on the plant HMI. Note that fire detector BT-920A - Amine 920, LEL detector AIT -700 BK-700 Sweet Dehy Building, and LEL AIT - 780 in BK 780 Sweet Dehy building were in fault. Inspect the HP flare stack and area around the flare stack. Tourmaline has done a good job cleaning up the flare stack, scrapping and cleaning up the ground. Verified that no material went off lease. Noted a small area around the base of the HP flare stack and underneath the flare piping that still needed some remediation. It could not be verified at the time of inspection if the HP flare KO high level shutdown (LSHH- 600) was functional at the time of incident. Operation staff did not know if LSHH-600 initiated a plant block and hold. Action Items: 1. Determine if LSHH-600 on the HP flare KO is functional. If not, repair or replace. 2. Determine if flange mounted LIT-601 on top of the HP flare KO is to be replaced. 3. Repair fault on fire detector BT-920A - Amine 920. 4. Repair fault on LEL detector AIT -700 BK-700 Sweet Dehy Building. 5. Repair fault on LEL AIT - 780 in BK 780 Sweet Dehy Building. 6. Complete remediation of the ground around the base of the HP flare stack and under HP flare pipe rack by flare stack. Remove wood and debris by the base of the flare stack. 22-Oct-2021	075168335-001	Coastal GasLink Pipeline Ltd.	29-Nov-2021		From: NTS: B 018-K/093-L-03 To: NTS: A 021-L/093-L-03	No	Helicopter	Passed Inspection (Complete)	29-Nov-2021	29-Nov-2021	Routine	Section 7 heli/aerial inspection - possible sediment fence in stream at KP 518+500 - Morice Drill site currently occupied by non-CGL persons - sediment leaving ROW at approximately KP 561+000 - dirty water below culvert at approximately KP 575+750 - general ROW appeared to be in good condition. Some grading activities occurring at time of inspection.						South			Pipeline, Road
25-Oct-2021	074773016-001	Veresen Midstream General Partner Inc.	26-Oct-2021		DLS: 09-15-077-15	Yes	Truck	Deficiencies Corrected	9-Nov-2021	25-Oct-2021	Planned	Planned Inspection Inspect that there were no faults on the fire, H2S and LEL gas detection. Perform a walkdown of production equipment. Noted a small H2S leak inside the NorthRiver Buyback meter enclosure. The operator said they would leak check piping and tubing fittings. Found in some buildings such as Inlet #2 , and the Dehy buildings that sour gas Pressure Safety Valves (PSV) pilots vented to a common vent header in the building which vented to atmosphere outside the buildings. Discussed the safety concern if a PSV pilot failed and continuously vented sour gas with a high H2S content. Mentioned to the operator that an Engineering Assessment should be conducted to determine if the PSV pilots can be tied into the HP flare system. Action Items 1. Perform an Engineering Assessment to examine if sour PSV pilots that vent to a common header then outside process buildings such as in inlet # 2 and Dehy buildings should vent outside the building given the high H2S content or be tied into the HP flare system. 2. Leak check piping and fittings in the NorthRiver Buyback meter enclosure. 3. Fisher 912 regulators on Cata-dyne heaters - Install black caps where missing on regulator spring casing in Dehy #3, and in Compressor # 3.						South	00007665, 00008639		Facility, Pipeline, Well
26-Oct-2021	074780600-001	Veresen Midstream General Partner Inc.	26-Oct-2021		NTS: A 029-H/093-P-09	Yes	Truck	Deficiencies Corrected	9-Nov-2021	26-Oct-2021	Planned	Planned Inspection Perform a walkdown of production equipment and facility piping. Fire, LEL and H2S gas detection is being maintained - no faults- last calibrated Oct 12/2021. Accounting meters were being maintained- last calibrated June 8, 2021. Noted that there was a fair amount of oil under the decking of compressor #2 and # 3. This should be cleaned up, as it is combustible material. Found the condensate ESDV actuator in S-300 Inlet leaking a lot of instrument air. It should be serviced. Found PIT- 900 on the flare header reading negative saturation - the tag indicated it was last calibrated in 2017. On vessel V-700, found the vapor return spill catcher was not grounded, and some of the ground wires were disconnected under the truck load out spill catcher. Recommend an electrician look at this. Found a conduilet bull plug missing underneath an explosion proof receptacle in the fuel gas building. The operator called an electrician at the time of inspection who came and installed the missing bull plug. Found spill catchers on 839-H pig receiver, and on the a-28-A sales pig sender not grounded. Found a small H2S leak in the MVT-1100 (flow splitter) meter enclosure. Action Items: 1. Recommend clean up oil where large amounts are accumulating underneath the decking of the compressors. 2. Recommend looking at PIT -900 on the HP flare header. The transmitter display was reading negative saturation. 3. Recommend repair of actuator on condensate ESDV in Inlet S-300. Found leaking a fair amount of air. 4. Recommend that an electrician look at the grounding around the sour produced water V-700 truck out and vapor return Enviro boxes. It looked like some grounding was disconnected. 5. Ground B-39-H pig receiver, and the a-28-A sales pig sender spill catchers. 6. Leak check fittings inside MVT- 1100 flow splitter meter enclosure.						South	00007452		Facility, Pipeline, Well
26-Oct-2021	074784076-001	Crew Energy Inc.	27-Oct-2021		DLS: 13-19-082-19	No	Truck	Passed Inspection (Complete)	27-Oct-2021	27-Oct-2021	Routine	Site inspection was on two active C-rings on location. C-rings #1 and #7 are in good condition with no visible leaks. Lease berms are in good condition as well. Bird deterrent flagging will require some maintenance which can be done in the spring. There is some matting debris piled at the lease entrance, Crew operations has indicated that this would be addressed this fall. No concerns were observed on day of inspection.						South	00026378		Facility, Pipeline, Well
26-Oct-2021	074785034-001	Crew Energy Inc.	27-Oct-2021		DLS: 07-30-082-19	No	Truck	Passed Inspection (Complete)	27-Oct-2021	27-Oct-2021	Routine	Inspection was on four active C-rings on location. C-rings #6, 16, 17, 20 are in good condition with no visible leaks. All rings have sufficient freeboard above fluid levels. Site berms are in good condition. Bird deterrent flagging on some of the rings requires maintenance, this can be addressed in the spring. No concerns were observed on day of inspection.						South	00018357		Facility, Pipeline, Well
26-Oct-2021	074785809-001	Crew Energy Inc.	27-Oct-2021		DLS: 15-20-082-19	No	Truck	Passed Inspection (Complete)	27-Oct-2021	27-Oct-2021	Routine	Inspection was completed on four C-rings on location. C-rings #10, 12, 18, 21 are all in good condition with sufficient freeboard above fluid levels. No visible leaks were observed. Some of the bird deterrent flagging on these rings require maintenance. This could be completed in the spring prior to waterfowl migration. Site berms are in good condition. There is a pile of matting debris at the site entrance, Crew operations plans to address this issue in the fall prior to freeze up. No concerns were observed on the day of inspection. 26-Oct-2021	074789106-001	Veresen Midstream General Partner Inc.	27-Oct-2021		NTS: D 019-H/093-P-09	Yes	Truck	Deficiencies Corrected	9-Nov-2021	26-Oct-2021	Planned	Planned Inspection Perform a walkdown of production equipment and facility piping. Fire, LEL and H2S gas detection is being maintained- no faults- last calibrated Oct 12, 2021. Found that production accounting meters may be overdue as the tag on the fuel gas meter indicated the last calibration was on Aug 7, 2020. Noted that there was a fair amount of oil under the decking of compressor #1, # 3, and # 4. This should be cleaned up, as it is combustible material. In the Heat Medium Building found (2) isolation valves on the main burner fuel gas PSV to HP flare were not locked or sealed open. The operator installed (2) car seals at the time of inspection. Found the high/low discharge pressure pilot (PSHL- 1100) on the discharge ESDV for gas going to d-33-I was continuously venting instrument air with the ESDV still open which could be indicating a problem with the pilot. It should be checked. Action Items: 1. Check PSHL -1100 on discharge ESDV for gas to d-33-I, venting instrument air with ESDV open. 2. Ensure production accounting meter calibrations are up-to-date for 2021. 3. Recommend clean up oil where large amounts are accumulating underneath the decking of the compressors. 2-Nov-2021	074876100-001	Keyera Energy Ltd.	2-Nov-2021		NTS: A-A 030-G/094-G-07	Yes	Truck	Passed Inspection (Complete)	2-Nov-2021	2-Nov-2021	Planned	Suspended Disposal Well Inspection ORDER 98-16-001 AMENDMENT #2 Meet the Permit Holder on site. Review the Order conditions. Inquire if there was a subsurface safety valve on the well. If so, request the manufacturer data sheet for record and request the most recent leak test done in Q3 of this year. Question if there was a subsurface valve and if it is shown on the Dec 11, 2015 Well Suspension Report attached Down Hole Well Profile. If not, request the Down Hole Well Profile be updated to show the subsurface safety valve and submitted. The Permit Holder mentioned that Condition 2(e) Complete quarter-annual site inspection visits, recording pressure measurements of the tubing and the casing annulus would be conducted by the Instrumentation Service Provider at the same time as the calibration and testing of the H2S gas detection and emergency call-out system. Found that part of the wellhead enclosure was removed exposing the wellhead and recently installed H2S sensor to the weather. It was recommended that the wellhead enclosure be repaired and the wellhead enclosed. Noted that the surface casing vent piping was not vented outside of the enclosure. This should be done for safety. It was recommended that the removed sections of the wellhead enclosure be put back together to offer some protection from the wind and weather. Noted there was propane on site and Cata-dyne heaters inside the enclosure could be lit. Witness a successful function test of the H2S detection and alarm call-out when a sample of 25 PPM H2S was applied to the H2S sensor by the wellhead as per condition 2(c) of the Order. The ERP Service Contractor responded and the Permit holder received a text message indicating high high H2S. However, the H2S alarm beacon and horn were not functional. Noted there was a torn wind sock. Recommend Keyera Energy assess these as safety items. Noted that an electrical seal on the H2S sensor was not packed and poured and a conduilet bull plug was missing on an EXP conduilet box. It was noted that there was unused equipment on site such as a methanol tank and partially filled propane tanks. The Permit Holder should evaluate what unused equipment could be removed from site.							Central		10585	Pipeline, Well

3-Nov-2021	074918725-001	Veresen Midstream General Partner Inc.	4-Nov-2021		NTS: A 005-G/093-P-09	Yes	Truck	Deficiencies Corrected	17-Nov-2021	3-Nov-2021	Planned	Planned Inspection Verified that fire and gas (LEL and H2S) detection had no faults on the facility HMI. Perform a walkdown of production equipment and facility piping. In the inlet area the spill catcher on the SCLH 16 inch line was not grounded. Noted that production accounting meters were recently calibrated on Sept 18, 2021. Found on Inlet Separators # 1 and #2 that the level switch low low (LSLL) level switches were no longer installed in the separators. Questioned if there was a separator low level shutdown still in service. Action items; 1. Perform an engineering assesment - inlet separator #1 and # 2 LSLL if they should be re-installed in the separators for low level shutdown, as these were part of the original design. 2. Perform an engineering assesment on compressors that have the 1st and 2nd stage discharge PSV pilots vented outside the compressor building, if those PSV pilot vents can be tied into the HP flare system. The concern is continuous venting if the PSV pilot fails and the high H2S content (approx. 5000 PPM). 3. Ground the spill catcher on the SCLH 16 inch inlet pig receiver. 4. Compressor # 9- Recommend cleaning up oil and water under the decking.							South	00007690	Facility, Pipeline, Well

3-Nov-2021	075347047-001	Coastal GasLink Pipeline Ltd.	21-Dec-2021		From: NTS: C 006-J/093-L-04 To: NTS: A 077-A/103-I-02	Yes	Truck	Passed Inspection (Complete)	21-Dec-2021	3-Nov-2021	Routine	Routine inspection of Section B West pipeline works in and around the North Hirsch on November 3rd with Hasila Liaison. WC 713 at KP 639+670 55 stream bridge installation active at time of inspection. WC 713 had recently seen high water and remaining material on bush side of crossing still highly erodible, monitor after any high water events but otherwise no issues with this installation. UN 11-69 at KP 638+617, UN 11-63.05 at seeing minor sedimentation inputs through blast rock road grade due to increased rock truck traffic in the area. Areas addressed immediately while onsite. Wetland 2320 at KP 638+225 no sedimentation noted, and significant amount of ESC work has been completed in this area. UN 11-97 at 640+429 on the other side of the Hirsch creek tributary crossing location no sedimentation noted and felling occurring on the far side of the crossing location, no concerns noted in this area. WC 715.2T at 641+946, 716 at 642+101 noted minor sediment inputs through road grade due to recent activity, discussed minor maintenance of ESC measures with staff onsite and actions were to be initiated the next day. Viewed completed 53 crossings 720 and 721 and restoration works holding up well and water running clear. WC 725 650+669 ongoing works on the Hirsch creek side channel. Fish salvage works occurring at time of inspection, block nets and deterrents in place. Town side bridge abutments under construction and excavators still on island as they had utilized the "one time" crossing. Fish salvage permit onsite and provided upon request. Noted bridge crossing at WC 723F at KP 650+472 has rig mats placed on the running surface to protect the bridge deck. These mats have increased the height of the deck so the rails are not minimum height as per WorkSafeBC guidelines. Please refer to WorkSafeBC section 26.81 Bull rails for minimum rail heights. No non compliance noted during this inspection.							South			CIAS, Pipeline

15-Nov-2021	075003219-001	Ovintiv Canada ULC	16-Nov-2021		NTS: C 041-G/093-P-09	Yes	Truck	Deficiencies Corrected	24-Nov-2021	15-Nov-2021	Planned	Planned Inspection Inspect the facility HMI fire and gas detection displays and reports, found no faults. The last calibrations were done on Oct 4, 2021. Inspect that the flare was lit and there were no alarms present on the pilot flame status. Perform a walkdown of the production and utility equipment, and the process piping. Noted that the recent spill on T-733 was cleaned up, and the cause, a blocked cascade line between tanks was cleared. A positive comment was given on the overall condition of the facility as being very well maintained and winterized. Noted recent fuel gas accounting meter calibrations, last done May 17, 2021. It was noted that the PSVs on V-174 Emulsion De-Sand Slurry and on the Produced Water De-Sand Tower vented to atmosphere and were not tied into the HP flare system. Raised the concern of worker safety and the possibility of off-lease odours should there be a release of sour gas @ 7000 PPM. Action Item: 1. De- Sand sour PSVs venting to atmosphere - Perform an engineering assessment if these PSVs should be tied into the HP flare system. Consider the safety risks of discharging sour gas @ 7000 PPM to atmosphere, and the possibility of creating off- lease odours.							South	00018346		Facility, Pipeline, Well

OGC Road 05467. Road is in winter condition. Located at approximately 1km is NCD IS220.04. This NCD has an active flow going through a closed bottom culvert. This flow is a result of a previous log jam on the Rocky Creek that has diverted the flow overland and into the NCD. Previously fish were found and salvaged by CGL in a pool within 1 meter of this NCD. At that time I requested that a study be completed to determine if this flow is now fish bearing. I was informed on site that it was determined to be fish bearing. An Information Request was submitted to CGL on November 22, 2021 to provide the current classification of this flow. 18-Nov-2021	0750332849-001	Zargon Oil & Gas Ltd.	22-Nov-2021	20-Dec-2021	DLS: 11-13-083-21	No	Truck	Deficiencies Corrected	14-Feb-2022	19-Nov-2021	Routine	Site inspection identified the following action items: 1)Signage at site entrance gate has site identified as CNRL with the CNRL Emergency contact number. Signage inside the fenced area identifies the site as TAQA North with TAQA Emergency contact number. Updated signage ID required as per D&PR 77(1) 2)Inspection identified several risers, piping from underground tanks , drain lines and fuel gas lines protruding from the ground. Some of this piping represents a potential hazard as per D&PR 15(3)(a). Possible solutions to this but not limited to are markers, flagging, barriers, removal of hazardous piping or controlling site access by closing of the facility site gates. On initial inspection it appears that lines and piping have been properly blinded, plugged or capped. Sales line has been blinded, chained and locked. Please email OGC with any questions regarding this inspection.	Site recently changed ownership from TAQA North to Zargon Oil & Gas. There is no equipment on site except for a sales meter building and 2 empty propane tanks.					South	00000573		Facility, Pipeline, Well

23-Nov-2021	0750935587-001	Plateau Pipe Line Ltd.	25-Nov-2021		DLS: 13-13-078-14	Yes	Truck	Passed Inspection (Complete)	25-Nov-2021	23-Nov-2021	Planned	Planned Inspection Inspect equipment in the booster pump building, the oil sales meter, the sump tank 300, the main pumps, and process piping. Verify that fire and gas defection and critical safety devices were recently calibrated and tested on November 4, 2021. Found that facility location signs were mounted on the side of the buildings. In the strictest sense this didn't meet the intent of the Drilling and Production Regulation 77(1) that being the signs were not conspicuous signs, as they did not stand out and be noticeable from a distance. The lease gate is normally locked. A person would have to go onto the lease and up to a building to read the information on the facility sign. This would not be desirable in an emergency situation. Action Item: 1. Install a conspicuous facility sign.						South	00026421		Facility, Pipeline, Well

25-Nov-2021	075166149-001	Secure Energy Services Inc.	29-Nov-2021		NTS: C 088-J/094-A-12	No	Walk	Passed Inspection (Complete)	29-Nov-2021	25-Nov-2021	Planned	COMMENTS: -at time of inspection, the ESD at the well was in 'latched' mode, but I could hear product moving in the lines. I drove to the main facility at mile 99 Alaska Highway and spoke to rep. He told me that the communication system was down, so he was unaware of this. I asked why the system was down and he said maybe due to trees or wind. There was no wind of notice. If these are truly reasons for the communication system to go down and not be available, maybe a review of the system is necessary? -we drove to the wellsite, and the operator reset the ESD. Then he told me that the ESD was not actually 'latched', it was a soft latched. I checked the latch when I was at the site the first time, and i dont think it was 'soft latched'. -So there is a bit of confusion on my part as to what was actually going on and why... 26-Nov-2021	075100452-001	Black Swan Energy Ltd.	26-Nov-2021		NTS: C 046-C/094-H-04	Yes	Truck	Passed Inspection (Complete)	26-Nov-2021	26-Nov-2021	Planned	Inspection for Amendment to Application Determination Number 100103539 Phase 2 C- Dehy - 311, Turbo Expander Package, De-ethanizer, De-butanizer, Mercury Absorber, Dry Gas Particulate Filter, Mole Sieve, and Re-gen Gas Heater addition. Please note there is a permit holder name change in progress to Tourmaline Oil. The gas plant was shutdown, isolated, and blown down for new piping tie into the existing pipe rack. Pipe spools were being installed to connect to the HP and LP flare header. Perform a walk down of the new process equipment and piping with Tourmaline construction and operations staff. Found some car seals on PSV isolation valves to flare were not installed due to work being done. Verified that production equipment blowdown isolation valves and skid edge isolation valves were open and car seals were in place. Operations had a partial car seal list completed, as work was still in progress. Request a complete car seal list prior to plant start-up. Found that some electrical seals that were not packed and poured waiting completion of vendor commissioning. This was discussed with the electrical contractor, they were aware. The electrical seals were tagged " Not Poured". Inspect the HP flare header sweep gas meter installation. Confirmed that the post HAZOP IFC PIDs were submitted, as per amendment condition 5. Witness a satisfactory Emergency Shutdown (ESD) test for the new safety critical devices when an ESD push button was pressed on the Turbo Expander Building. Received the signed shutdown key, as per amendment Facilities condition 6. Received calibration and configuration records to for the new HP flare header sweep gas meter, as per amendment condition 5. Noted compressor Package K-630 was not installed. The expected installation date is Dec 21st. Request Tourmaline notify the OGC for inspection prior to start-up. Vendor commissioning is planned for the Turbo Expander on Dec 18th. Request the vendor commissioning report, and a verification of remote shutdown from the plant PLC. Action Items: 1. Prior to plant start-up, submit complete car seal list. 2. Prior to start-up of new production equipment submit complete electrical seal inspection report. 3. Submit the Turbo Expander vendor commisioning report prior to start-up. Physically test the remote shutdown from the plant PLC to the Turbo Expander control panel. 4. Submit I/O Commissioning Report prior to the start-up of the inspected equipment. 5. Arrange and complete an inspection for new compressor K-630 (phase 2B) prior to start-up. Active pile driving for installation of block valve. No concerns noted at the time of the inspection.						South			Pipeline, Road
30-Nov-2021	075274499-001	Coastal GasLink Pipeline Ltd.	10-Dec-2021			Yes	Helicopter	Passed Inspection (Complete)	10-Dec-2021	10-Dec-2021	Routine	Inspection with operator of Laydown 22. Area has been cleared and there is a communications tower set up. There were no concerns noted at the time of the inspection.						South			Pipeline, Road
30-Nov-2021	075372419-001	Coastal GasLink Pipeline Ltd.	22-Dec-2021		From: NTS: C 006-J/093-L-04 To: NTS: A 077-A/103-I-02	Yes	Truck	Passed Inspection (Complete)	22-Dec-2021	30-Nov-2021	Routine	Routine inspection of CGL Section BW on November 30th, 2021 in the Kitimat and North Hirsch areas. WC 740 and 740.1T flume in place and looked at the inadvertent loss of surface water into auger bore site, discussed depth of cover over pipe, fish screen on pumps and potential for establishing bentonite plug and covering with organics. No concerns with the site and plans moving forward. Also noted a very small spill onsite to ground which was actioned immediately as well as discussed the discharge of well point water to an alternate location. WC 811 (KP 662+351) exceedance follow up. Stream is heavily vegetated, and no evidence of sediment remained, cause likely from over splash on bridge from recent use, no concerns with this area. WC 725 Hirsch creek side channel dam in place and most of the flow is focused on the side channel. The flow is significant, but channel is holding the volume. Inspected the dam which consists of meter bags and cobble with some flow still coming through the dam. Pump installation at this location occurring at time of inspection, no sedimentation noted during installation. Prepping occurring for pipeline installation on the island and no concerns noted in the area. Lots of flow at this time of year and would be difficult to isolate this location at this time. WC 57C2A (KP 637+434) flume established with meter and sandbag dam. Significant flow during inspection and dam is being slightly overtopped with high water flow on bush side of isolation. No turbidity noted with the isolation, only high flow. CGL actively managing high flows at time of inspection. Discussed flume set up and design and potential issues if left in place over a long duration of time. No noncompliance noted during inspection.						South			CIAS, Pipeline, Road

WC4701 stream running clear at time of inspection but is potentially still in exceedance, some minor depositions noted in and around high water mark which may still be adding to the exceedance during rain events. Water quality monitors onsite at WC 4701 at time of inspection. WC UN 13-73 and 67617 both running clean at time of inspection. Crossings of UN 13-72 and the Kitimat River discussed during inspection to inform inspector of methods and potential construction timing. WC UN 13-1 inspected and running clean at time of inspection. 8452 AN has had a temporary woodbox culvert installed to access felled wood, no impact to the stream but crossing should be pulled or changed out if further access to this area is required. WC 678 was affected from debris slide from failed culvert upstream, access and sumps established and are effective in removing sediment prior to entering the Kitimat River. UN 13-89 adjacent to TD 37A running clean and rock currently being added for access and more work planned for this area. No noncompliance noted.						South			CIAS, Pipeline

13-Dec-2021	07534458D-001	Trans Mountain Pipeline ULC	20-Dec-2021			Yes	Truck	Passed Inspection (Complete)	20-Dec-2021	20-Dec-2021	Routine	On December 13th and 15th,2021 an inspection was completed with the operator, of the emergency instream works, which resulted from the recent severe weather events. Please note this inspection has been assigned to AO 1000846B1 which covers the pipeline permit for that area. An interim authorization, dated November 18, 2021 , was issued by the BCOGC to cover the emergency instream works based on the urgent nature of the work required. The BCOGC is awaiting formal documentation from Trans Mountain Pipeline ULC, to complete the permitting process for these sites. KP 928 to KP 930, initial emergency works have been completed. Site is being cleared of debris and accumulated soils, active work in the flood plane continues to protect the area from future high water events. Fish salvage is ongoing with positive results. WQM is in place. KP 933, initial emergency work has been completed for this location. Armoring of the bank is near completion with the addition of two spur walls to deflect water into the main channel from the outside bend. WQM in place. KP 940, Initial emergency works have been completed at this location, access off Hwy 5 has been established. Rebuilding of the bank is near completion to prevent undermining of the pipe. River is still diverted to the side channel and will put put back into the main channel once repair work is completed. Please contact the undersigned Inspector 5 days prior to returning the river to its main channel. KP 947, Clear span bridge installation has been completed and is now being used for construction traffic on HWY 5. KP 949, initial emergency work has been completed. Repair work on the creek channel continues with armoring and fill. KP 955, initial emergency work has been completed. The bank failure has been filled and armored on a temporary basis and will be completed in January 2022. A 5.5 km access road has been establish utilizing the ROW and previously existing shoofly's. The temporary creek crossings on this access were discussed with operator. A borrow source was created at 5.7 km.						South			CIAS, Pipeline

10-Jan-2022	075453784-001	PETRONAS Energy Canada Ltd.	12-Jan-2022		NTS: D 039-C/094-G-10	Yes	Truck	Deficiencies Corrected	3-Feb-2022	10-Jan-2022	Planned	Planned Inspection Meet with Petronas Integrated Operations Field Lead and field staff. Inspect the SCADA panel fire and gas detection screens. Noted that compressor 2200 was blinded off and the H2S and LEL gas detection was reading -25. Noted compressor 2400 was removed and H2S and LEL was reading -25 and Dehy #2 H2S and LEL was reading -25. This was discussed with the Petronas Operations Field Lead and it was suggested not to graphically represent decommissioned fire and gas detection equipment where buildings have been removed. Action Items: 1. Review Aug 14 and Nov 29, 2021 Fire and Gas Inspection Reports. Noted comment from Service Provider Note #2: " Beacons don't trigger in bypass mode. Due to programming (similar to D-32-C, B-38-J)" Raised the safety concern of not routinely function testing beacons. Inquire with the Operations Field Lead if a maintenance request (work order) had been generated to correct the issue. Request this be confirmed. 2. Found the bypass valve on the fuel gas meter not locked or sealed closed as per the BC Measurement Guideline 4.4.2 General Installation Figure 4.4-3 (B) " Meter bypass (optional) with block valve The bypass valve when closed must effectively block all flow through the bypass and be locked or car sealed in the closed position when the meter is operating normally." 3. Found that compressor 300 was not equipped with an automatic blowdown valve. Perform an engineering assessment and evaluate against CSA Z662 4.14.2.4 Compressor stations shall have emergency shutdown systems that meet the following requirements: a) Such systems shall provide a means to isolate the station and blow down the station piping, except that gas supplies to essential station auxiliaries may be maintained. 4. Sales building - Found methanol pump PSVs were missing tags with PSV information such as set pressure and date. 5. Inlet ESD bypass valve- Found car seal stretched and showing signs of distress- request the car seal be replaced. 6. Dehy Building #1 found a Fisher 912 regulator on a cata-dyne heater missing the black spring casing cap.						Central	00007913, 00026816		Facility, Pipeline, Well
10-Jan-2022	075460811-001	PETRONAS Energy Canada Ltd.	12-Jan-2022		NTS: B 019-H/094-G-07	Yes	Truck	Deficiencies Corrected	3-Feb-2022	10-Jan-2022	Planned	Planned Inspection Meet with Petronas staff. Inspect the compressor/dehy facility and the water hub. It was noted that some of the car seals in the inlet separator #1 were loosely put in place and could allow the emergency shutdown device sensing isolation valve to be repositioned without breaking the car seal. This was addressed at the time of the inspection, and the loose car seals were tightened.						Central	00007972, 00026813		Facility, Pipeline, Well

13-Jan-2022	075473987-001	PETRONAS Energy Canada Ltd.	14-Jan-2022		NTS: D 032-C/094-G-07	Yes	Truck	Deficiencies Corrected	3-Feb-2022	13-Jan-2022	Planned	Meet with Petronas Field Assurance Lead. Perform an inspection of the compressor/dehy facility, the water hub, and the sales meter. Action Items: 1. Repair required. The facility alarm horn and strobe were on upon arrival. After consulting with Petronas Lead and checking SCADA alarm page it was found that T-405 and T-450 level transmitters were in malfunction. Expressed the concern of operator/worker safety as no new process alarms would sound as the alarm horn and beacon were on continuously. 2. Discussed the requirement to report theft and vandalism through the OGC Incident reporting. The Petronas Lead said he would inform appropriate personnel of the requirement, and any questions or concerns could go to the Director of Security and Emergency Management. 3. Repair required. Review Fire and Gas Inspection Reports. Found comment from the Service Provider - Beacons don't trigger while in bypass mode. Raised the concern that fire and gas detection beacons and alarms were not being checked routinely at the time of the fire and gas detection inspection, calibration, and testing. 18-Jan-2022	0755504270-001	PETRONAS Energy Canada Ltd.	19-Jan-2022		NTS: B 066-A/094-G-02	Yes	Truck	Deficiencies Corrected	3-Feb-2022	18-Jan-2022	Planned	Meet with Petronas Assurance Lead. Inspect the facility piping, equipment, and sales meter. Found C-300 fire detection AIT-1020 in fault. Noted a significant bit of engine coolant underneath decking of the compressor c-300. Inspected the inlet riser area. Found some pigging barrel safety chains to be too long with hay wire extending the chain length. Discuss with the Assurance Lead setting the safety chains to the proper length and installing a chain link. Found that one bull plug on a pigging barrel was not threaded in adequately (finger tight) to the valve on top of the barrel. Action Items 1. C-300 - fire detector AIT 1020 trouble shoot fault and repair. 2. C-300 - clean up coolant underneath decking inside the compressor building. 3. Inlet riser- ensure all pigging barrel safety chains are of correct length and replace hay wire chain extension with a chain link. 4. Inlet riser- tighten bull plug on pigging barrel receiver. 5. Water Header Building # 1 - Cata-a-dyne electrical box cover - tighten cover.						Central	00008611, 00007583		Facility, Pipeline, Well

This should be assessed to prevent a slide into the stream which at this stage is preventable. The attempts to stabilize the slope in the past only addressed the problem on a temporary basis and a more permanent solution should be considered. This inspection is focused on how the road is being maintained during the winter season. The road is well plowed with numerous pull outs made with the junction of inactive roads. No concerns were noted. All signage appeared to be in place to allow for safe use of the road. Road traffic were calling their kms and paying attention to speed.						Central			Pipeline, Road

20-Jan-2022	075727385-001	Coastal GasLink Pipeline Ltd.	8-Feb-2022		From: NTS: A 077-A/103-I-02 To: NTS: D 025-B/103-I-02	Yes	Truck	Passed Inspection (Complete)	8-Feb-2022	20-Jan-2022	Routine	Routine inspection of CGL Section BW in the Kitimat and South Hirsch areas with Haisla liaison on January 20,2022. S1073 52 crossing currently dry, sheet pile installed, and pit excavated. Currently pumping groundwater to vegetation and no crew onsite during inspection, no concerns. Approach to WC 741 sheet pile installed and excavations underway preparing for the crossing. WC 740 active site, casing is in through the stream and pipe being installed at time of inspection. Flume and meter bags still in place and will be removed once crossing is complete, new pig pens in place to handle groundwater pump off to vegetation. WC 727 52 crossing that has seen recent ice jam/debris torrent from upstream of pipeline activities. Clean up and salvage activities in progress at time of inspection, all pumps had been removed from ditch. Four pumps still active and managing flows. Crossing will be re-attempted once flows subside and pipe needs to be re-examined for any potential damage. WC 182C mainstem isolated and side channel utilized for flow. During site visit call came in from upstream noted ice jam had released. Evacuation occurred immediately and was very calm and orderly, I was only able to see the site from high ground. No noncompliance noted during inspection.						South			Pipeline, Road

21-Jan-2022	0757051845-001	ConocoPhillips Canada Resources Corp.	31-Jan-2022		From: NTS: A 028-J/094-A-12 To: NTS: D 012-K/094-A-12	Yes	Truck	Passed Inspection (Complete)	31-Jan-2022	21-Jan-2022	Routine	Jan 20 - During HHD of the 12" line under the 53 (Beaver Dam), fluid losses occurred. OGC EO was notified and cleanup operations began. During site visit cleanup was underway and progressing well. Ground crews were using vac trucks and water to clean drilling fluid (bentonite water mix) from vegetation. The impacted area had been identified and marked out. There was no additional fluid lost since the fluid loss was identified. Ditching and lower in activities were observed, ground material looks good (no rocks in backfill or ditch bottoms. Looked at remote sump site d-16-J/94-A-12 (Sump #3612). There are 2 pits on site: fencing is good, >1m free board in pits. A copy of the Drilling Execution Plan (CSA Z662-19 4.22, 6.2.11) was requested from the onsite supervisor. This was received over the weekend and forwarded on to OGC for incident inspection. No concerns at time of inspection.						Central			Pipeline, Road

Inspect existing facility, water hub and new facility equipment. New equipment included (1) new compressor (c-400), (1) VRU package (V-640 and V-641), (1) new dehy, (1) new inlet separator, (1) new sales station, (1) new air compressor, (1) new generator, (1) new flare stack, (1) new HP KO. The new compressor c-400, Dehy # 3, and the new generator were not running. The operator mentioned that Petronas was waiting on the approval of the new Waste Discharge permit. Action Items: 1. Recommend retargeting fire-eyes in new VRU (C-1317) to have a wider field of view. 2. Recommend locking the instrument air dryer bypass line from instrument air compressor tank to dry air receiver closed. This line was found open bypassing some of the instrument air from going to the air dryer. 3. Dehy # 1 and Dehy # 2 fire-eyes - self-test LEL blinking red. Recommend trouble shooting and repairing the problem.						Central	00018235, 00026806		Facility, Pipeline, Well

2-Feb-2022	075822053-001	Canadian Natural Resources Limited	11-Feb-2022		NTS: D 009-G/094-B-16	No	Truck	Deficiencies Corrected	16-Feb-2022	11-Feb-2022	Planned	The pipeline inspection is limited in scope to the on lease riser. These wells have had a long history of leaking produced water as evident by the salt build up. The wellhead components appear to require more maintenance than your other sites. The a-b-9 well has a minor weep and still needs maintenance. Also inside the header/separator building the site glass apparatus needs the fittings tightened as they are starting to weep produced water.						Central		32616, 33293, 33294, 33295	Well

Inspect the compressor/dehy, and water hub equipment and piping. Found an exhaust leak in compressor C-200, with a reading of 8 on 4-way CO gas monitor with the doors open in the compressor building. Petronas said there was a work order to repair the exhaust leak. Verified the delivery point condensate meter proving was being conducted as per the BC Measurement Guideline, on a monthly basis. Noted that sections of ribbon were missing for the bird deterrent on the water hub pond. Petronas agreed to follow-up and repair by spring before bird migrations start. Action Items: 1. Meter bypass valves - main fuel gas meter bypass - blanket gas meter bypass - valve handles without lock - ensure the car seal or lock is secure and prevents the valve handle from being manipulated. 2. C-200 - recommend repairing exhaust leak. 3. Generator E drain tank - recommend repairing ground/bond . 4. Line heater main burner HPSD switch - recommend car sealing or locking open pressure isolation valve.						Central	00007971, 00026803		Facility, Pipeline, Well

10-Feb-2022	075942229-001	Coastal GasLink Pipeline Ltd.	28-Feb-2022		From: NTS: C 006-J/093-L-04 To: NTS: A 077-A/103-I-02	Yes	Truck	Passed Inspection (Complete)	28-Feb-2022	10-Feb-2022	Routine	Routine inspection in the Upper Kitimat River area on February 10, 2022. "No trespassing" sign noted at the beginning of BCOGC road permit 100102234. If road closure is required, please refer to Oil and Gas Road Regulation Section 16 and 20. Under Section 20 of the OGRR a road permit holder may temporarily close or restrict access if the action is necessary to address an existing or imminent threat that may cause damage to the road or to the environment or endanger human life or property. The link to the notification form and way to submit to the BCOGC can be found in the Oil and Gas Activity Operations Manual Section 6.3.2. Also, direction has been previously provided to CGL regarding restricting access on Oil and Gas roads compared to the permitted pipeline ROW. WC crossing 677 Kitimat River KP 623+416 inspected restoration works after high water event, no issues noted at site. With recent snowmelt minor housekeeping requested and was followed up immediately while onsite. Kitimat River bridge crossing cleaned off while onsite and minor tilting/listing of secondary containment on generators re-established immediately upon request. UN 13-1 KP 623+416 fish salvage has been completed and stream is isolated with pump around bypass in place, no issues noted at this site. Woodbox crossing removed from NCD upstream of UN 13-1 as requested from previous inspection. Pipeline KP 623+560 tie in occurring, welders onsite but no welding occurring at time of inspection. Pipe line up clamps not in place as yet. Trench water pumped to adjacent vegetation and constructed sumps. No issues noted at this site. WC 678 KP 623+587 stream running clean, sumps in adjacent area functioning for grey water discharge. Noted snow pile immediately adjacent to stream, still frozen with no impacts to stream at this time. UN 13-36 KP 623+363 Stream has been salvaged and is isolated at entrance to the Kitimat River, block nets at confluence and adjacent to bell hole with bypass in place. No issues noted at this location. UN 13-40 KP 662+938 is an NCD that runs through a newly constructed temp workspace. Stream running clean at time of inspection but has potential for inputs at times of increased flow. Recommended increased ESC measures in this area as well as potential relocation of soil pile adjacent to NCD. No noncompliance noted during inspection.						South			Pipeline, Road

12-Feb-2022	075910430-001	Trans Mountain Pipeline ULC	24-Feb-2022			Yes	Truck	Passed Inspection (Complete)	24-Feb-2022	24-Feb-2022	Routine	Inspection with the operator of emergency in stream work sites, inspection was conducted over two days February 11 & 12, 2022 KP 928, Now in phase 2, pipe has been covered, braided channel created by the event have been removed and removal of the emergency dyke is underway. WQM is being completed by grab samples with no spikes recorded and fish salvage is ongoing at the site. Discussed with operator to what extent the river banks will be armored and was provided conflicting information. Follow up required. KP 930, work completed and additional work is now under MOTI; KP 933, work completed, follow up required in the spring. KP 939, Brody access, bank washed out endangering the pipe, the FLNRCD bridge located at the washout is off its foundation and a potential risk to the workers. Woody debris is being removed from the area and stockpiled within the high water mark, WQM is in place located at 50m upstream and 75m, 125m, and 200m downstream. Fish salvage is underway and meter bags will be used as a spur to deflect waterflow away from the site. Replacement of bank armor will be in the wet. KP 940, work completed. KP 949, Juliet Creek, temporary clear-span is in place, ESC is required and was discussed with the operator. Building a berm with meter bags to create a dry work area, fish barrier nets are in place upstream and downstream. The upstream net will allow fish to pass and was discussed with operator. Pumps were placed (not running)in a location that had connectivity to fish bearing water, pumps did not have fish screens. This was discussed with the operator and the pumps were removed immediately. Ground water and trench water is being pumped to a Pig Pen, walls of the pen had collapsed and water was running over the geo fabric and into a vegetated area. This was discussed with the operator. The operator will review the overall site plans and options for daylighting the pipe and pipe repairs. KP 951, clear-span bridge installation discussed the removal of a soils pile within the high water mark, otherwise no concerns noted at the time of the inspection. KP 955, The 5.5 km access has completed installing the appropriate structures for crossing the water courses along the route. Snow and dirt has been pushed into the tree line in numerous locations along the access. This was discussed with the operator to ensure that after snow melt an assessment would be completed to determine impact to vegetation in these areas and any corrective action, if required. The KP 955 site repairs have been completed and final cleanup and reclamation will be required. KP 954.36, Log jam accessed through the KP 955 site, Logs and stumps have been removed and are stored at a work space created at 4kilometer on the access road. The clear-span bridge was being removed at the time of the inspection and final armoring was being placed at the site. Site is 90% complete. KP 962, Active isolation for replacement of rock around the pipe and rebuilding of the in water ford crossing. Pump around to diffuser, trench pump to pig pen, fish barrier fences in place and WQM by grab sample. Discussed the ford with operator. KP 990, Completing armoring of the outside bend in proximity to the pipeline. There were no concerns noted at the time of the inspection. KP 949, Juliet Creek, (return visit to site), Met with operator and consultants on site to discuss the work plan. Three well points will be installed to assist with dewater the pipe area, isolation has been fortified, Fish barrier nets have been re-strung to prevent fish from entering the work zone, fabric on the pig pen is upright so discharge water is being filtered, 4 tanks are being brought in to assist with filtering the discharge water and clean ground water will be discharged to the WC and monitored to meet WQ objectives. 14-Feb-2022	075880115-001	Coastal GasLink Pipeline Ltd.	18-Feb-2022		From: NTS: D 031-F/093-P-05 To: NTS: C 046-F/093-J-16	Yes	Helicopter	Passed Inspection (Complete)	18-Feb-2022	18-Feb-2022	Routine	Aerial (helicopter) inspection of section 2 from KP 140 to KP 172 with the operator. Geotech crews working from KP 153 to KP 164 Several bridge installations are being completed for access along the ROW Access crews are located at approximately KP 145 working towards the headwall area. There were no concerns noted at the time of the inspection.						South			Pipeline Project
14-Feb-2022	075902066-001	Coastal GasLink Pipeline Ltd.	23-Feb-2022		From: NTS: C 002-F/093-J-06 To: NTS: C 080-G/093-K-01	Yes	Helicopter	Passed Inspection (Complete)	23-Feb-2022	23-Feb-2022	Routine	Inspection with operator over 2 days. Feb 14, 2022 helicopter overflight of section 4 (KP 263 to KP 298) while hydrostatic testing was in progress and a ground inspection on Feb 17, 2022.There were no concerns noted during the flight and the observations from the ground inspection are as listed below. KP 271+050, ROW travel lane pump off to a snow covered portion of the ROW . Discussed with operator it would be preferred to pump of to well vegetated area off ROW. KP 272+156, WC 291, S3, WC is froze in, clear-span bridge installed maintenance required . Discussed with operator. Well points have been removed, sheet piling is being removed at the time of the inspection. There are U/S and D/S plates install as a contingency only, U/S pump to to D/S diffuser and filter bag in place as contingency only, fish barrier fences in place U/S and D/S, 3" trench pump to filter bag. KP 278 (app) Hydrostatic test dewatering point is located approximately 500 meters off the ROW in a logging cut block, approximately 21,000 cubic meters of water was released gradually through a pig pen and diffuser. The pig pen had double fabric and water was tested prior to release. The path of the water was walked with no erosion channels evident. KP 278+359, WC 132C, S3, Clear-span bridge is being removed at the time of the inspection. WQM in place with U/S at 40m and D/S at 75m and 600m (for hydrostatic test dewatering), fish barrier nets are in place. KP 298+000, Stewart River Bridge has been removed.						South			CIAS, Pipeline Project
14-Feb-2022	076010488-001	Coastal GasLink Pipeline Ltd.	2-Mar-2022		From: NTS: C 090-G/093-J-10 To: NTS: D 072-F/093-J-10	Yes	Helicopter	Deficiencies Corrected	8-Mar-2022	2-Mar-2022	Routine	This inspection replaces inspection number 075865653-001 which had an error in the deficiency. Helicopter fly-over inspection with operator of section 3, KP 172+200 to KP 263+250. KP 182+250, active shootfly access, no concerns noted at the time of the inspection. KP 190+000, track bore operation. KP 191+500, ground inspection of WC 207, S2, and WL 212B, W2, in isolation, with U/S plate, D/S sandbags and poly wrap, There is a hole on the upstream plate that is approximately 25cm above the current water line. Discussed with operator and the hole will be sealed and / or welded. Fish barrier nets are present upstream and downstream of the isolation. Pump around is active with the pumps enclosed in a poly wrapped frame and heated. 4 - 10 inch pumps, with fish screens, 2 are active, pumping to diffuser downstream. Trench pumps are active, pumping to 2 secondary containments, with filter bags on the hose outlets. The trench walls are being contained by slide rails and cross members, with active trenching at the time of the inspection. Sheet piling has been installed along the outside of the trench. WQM is in place located at 50m and 200m upstream, and 50m, 100m, and 300m downstream. KP 215 through KP 224 machine cleanup. KP 227+500, WC 110C, Backfilling trench. KP 229+900, Ground inspection, WC 118C, S2, Peculiar Creek, in isolation with plates installed upstream and downstream and sheet piling. Fish barrier nets are installed, with the upstream net being partially under water. Discussed with operator. Pump around using 4 - 6 inch pumps and 2 - 8 inch pumps (spares). 2 of the fish screens on the active 4 inch pumps have holes that will allow fish. (Discussed with operator see deficiency.) pumping to diffuser downstream. Trench pumps are active pumping to filter bags. WQM is in place located at 50m upstream and 50m downstream. KP 232 to KP 236, completed to roll back KP 245 to 249, final cleanup						South			CIAS, Pipeline Project

KP 238+500, WC 269, S3, clear-span bridge, WC in isolation with upstream plate and downstream plate and sandbags. Pump around using two 3" submersibles with boxed fish screens (one active, one spare), to diffuser downstream. Fish barrier nets are in place upstream and downstream. trench pump to filter bag in vegetated area. WQM 50m upstream and 50m downstream. KP 239+200, WC 127C, S4, Clear-span bridge requires maintenance as discussed with operator. WC is in isolation with upstream plate and downstream sandbags and poly. Pump around using 3" submersible inside a milk crate wrapped in screen material, to downstream diffuser. **The fish screen opening size appears to be large, it is to be measured and the size confirmed with the undersigned Inspector. Fish barrier nets are in place upstream and downstream. Trench pumps are pumping to filter bags . WQM is located 50m upstream and 50m downstream KP 240+820, WC270, S4, and Wetland WL11537, W2, corduroy and clear-span bridge crossing, sheet piling in place, WC in isolation with upstream and downstream plates. Pump around using 3" submersible (one active, one spare) to downstream diffuser. Fish barrier fences are in place upstream and downstream. WQM located at 50m upstream and 75m downstream. Ground water trench pump (clean water) to downstream diffuser. KP244+520, WC 272, S3, clear-span bridge. WC is not in isolation but does have pumps and equipment on site. Fish barrier fences are in place upstream and downstream and a fish salvage is underway at the time of this inspection. WQM is located at 50m upstream and downstream. KP 244+608, WC 127C, S4, clear-span bridge. WC is not in isolation as it froze to the bottom. Pump around equipment is in place and plates have been installed upstream and downstream for contingency . 2 banks of well points are active, with one bank pumping to a tank then discharging to filter bags and the 2nd bank pumping and discharging direct to filter bags. Note: this site is using perforated pipe inserts in the filter bags to diffuse water.						South			CIAS, Pipeline Project

Four full bins of potential contaminated soils onsite and waiting to be sampled. Two carbon filter tanks are also onsite and arrived in the morning and are to be set up as soon as possible to deal with the water. Walked perimeter of the standing water remaining. Water is partially frozen, no sheen and only minor odor detected. Noted diversion dam damage due to trees breaching dam during significant rainfall event. Also some debris still instream (meter bags) from storm event. Meter bags cleaned up and removed and noted on follow up inspection on February 22nd. Third party contractor onsite during inspection monitoring the clean up activities. Also inspected WC 2001.02 at KP 647+249, stream isolated and bypass in place. No trench water discharge occurring at time of inspection, trench is dry. ESC measures discussed around soil pile West of stream. ESC measures implemented on follow up inspection that occurred February 22nd. Also inspected WC 2001.32 at KP 647+310, channel dry at time of inspection. No concerns noted on these crossings. Travelled to 9km on South Hirsch and inspected town side of the Hirsch Creek crossing. Steep slopes and limited work area, active pumping in place managing site run off being pumped. No inputs noted into WC 182C. No non compliance noted during inspection.						South			CIAS, Pipeline Project

22-Feb-2022	075904176-001	Black Swan Energy Ltd.	23-Feb-2022		NTS: C 007-H/094-G-01	Yes	Truck	Deficiencies Corrected	8-Mar-2022	22-Feb-2022	Planned	Meet operations staff on site. Inspect the facility equipment and piping. The facility signage is updated with the new permit holder Tourmaline and emergency contact information. Noted a small amount of flow was registering on the LP flare meter. Question if the LP flare header purge flow was above the meter low flow cut-off or if the meter needed maintenance. Request the last maintenance report for the HP and LP flare meters to confirm if maintenance is in accordance with the BC Measurement Guideline. Action Items: 1. c-7-H pad inlet pig receiver PAV safety chain- recommend replacing haywire connection to the PAV with a chain link. 2. VRU- LP flare - skid edge isolation - recommend locking or car sealing valve open. 3. Compressor # 1- Fire-eye Northeast corner pointed downwards and self test LED is blinking red. Recommend trouble shooting and repair if required. 4. Recycle Building - LEL gas detection reading -25 on HMI display. Recommend trouble shooting and repair. 5. HP and LP flare meters - submit the most recent maintenance reports. Ensure the maintenance frequency is in accordance with the BC Measurement Guideline Table 2.5-1. Please reply to OGC concerning the above action items and to the attached deficiency through the KERMIT system.							Central	00007960		Facility, Pipeline, Well
22-Feb-2022	076244029-001	Coastal GasLink Pipeline Ltd.	28-Mar-2022		From: NTS: A 077-A/103-I-02 To: NTS: D 025-B/103-I-02	Yes	Truck	Passed Inspection (Complete)	28-Mar-2022	22-Feb-2022	Routine	Routine follow up on the Hirsch Creek spill response and other active construction locations on the North Hirsch, Wathl and Kitimat municipality with Hasita liaison on Feb. 22 2022. Hirsch Creek side channel WC 724 KP 650+669 is isolated with block nets and is ready for pipe installation. Bridge will need to be removed to facilitate pipeline installation. Diversion dam has been removed at the confluence and all meter bag debris cleaned up. I was also told that no further debris remains downstream. Spill site has been tested and is mostly contaminant free. One small section remains (4m x 5m) pending results. Area is flagged off with HAZMAT flagging tape. UN 11-117 KP 647+279 crews on days off during inspection. Pipe in crossing and back filled with stream still isolated. WC S10-19 KP 647+310 pipe in crossing and back filled with stream still isolated. No issues noted at these locations, streams had low flow due to cold temperatures. WC B113.0.5km Wathl FSR KP 658+929. ESC works in progress, one crew onsite. Stream frozen at time of inspection and difficult to see any turbid water instream. Will revisit during warmer weather and see established ESC measures and effectiveness. UN 22-17 KP 663+715 water appeared turbid from road but upon further inspection the stream was running clean and was just noticing some road dust on top of an ice layer. No concerns in this area. WC 739.1T KP 663+992. New sheet pile installed and ramp through sheet pile. Pump around in place at time of inspection and flows remain intact. Sheet pile is for vehicle crossings and pipeline crossing piling still to be completed. Please ensure watercourse crossing table reflects this type of vehicle crossing method. Remediation is paused until results from soil sampling are completed at the lab.							South		21909	Pipeline, Well
24-Feb-2022	075941033-001	Crew Energy Inc.	25-Feb-2022		DLS: 09-28-081-17	Yes	Truck	Deficiencies Corrected	2-Mar-2022	24-Feb-2022	Planned	Meet operations staff on site. Inspect fire and gas detection function status. Found that the tank farm H2S detector AIT- 3502 was in fault and reading - 25 PPM. Calibration tags on facility meters indicated that calibrations were last done Aug 27, 2020. Found many critical locks or car seals missing or incorrectly installed (see deficiency comments). At the time of inspection the discharge ESDV closed. The operator trouble shot and found an instrument air regulator partially froze off. An inspection of the instrument air building found the bypass valve on the instrument air dryer partially open. Action Items: 1. Facility meters - recommend to identify as either " reporting" or "non-reporting" for future inspections. 2. All facility meters - recommend calibration and orifice plate inspection. 3. Tank Farm H2S detection (AIT-3502) - recommend trouble shooting fault and repair. 4. Instrument Air Dryer - recommend locking the bypass valve closed. 5. Slug Catcher HP Flare Isolation Valve- recommend re-attaching the heat tracing. Please reply to OGC concerning the above Action Items and to the attached deficiency through the KERMIT system. Thank you,							South	00007661		Facility, Pipeline, Well
24-Feb-2022	075952666-001	PETRONAS Energy Canada Ltd.	28-Feb-2022		NTS: D 028-D/094-A-13	No	Truck	Deficiencies Corrected	7-Mar-2022	28-Feb-2022	Planned	The d-28 well flowline/pipeline support upstream of the sand filter skid should be assessed for its ability to support the piping. IT is not laying flat on the piling support. Overall, this site is in good shape, just one minor deficiency. It is good to see the failed lease slope that faces the Mile 109 is repaired. The treated drilling camp sewage outlet was placed on this slope which probably hastened the slope failure. Unable to access shack at wellhead due to ice buildup. No issues found at time of inspection.						South	00007331	11426	Facility, Pipeline, Well
28-Feb-2022	076002425-001	Canadian Natural Resources Limited	1-Mar-2022	16-Mar-2022	NTS: B 038-K/094-A-16	Yes	Truck	Deficiencies Corrected	30-Mar-2022	28-Feb-2022	Planned	Meet operations staff on site. Found the flare system being operated with no positive purge, the flare stack not lit, and no continuous pilot. Operations staff explained that the flared gas from compressor starts, compressor auto-blowdown, and facility ESD is ignited solely by the auto-igntior on the flare stack. Safety concern- Air ingress into the flare header- possibility of explosion in the flare header. Found high probability of spillage (vented gas) due the flare stack auto-ignitor not igniting gas discharged to flare system. Contacted CNRL area foreman who agreed to look into the matter. Action Items: 1. Provide evidence that facility emergency shutdown (ESD) valves have been recently function tested. 2. Submit the most recent Station Shutdown Inspection Report. 3. Recommend cleaning up oil underneath decking of compressor - combustible material - possible of leakage through compressor building pan. Please reply to OGC concerning the above action items and to the attached deficiencies through the KERMIT system. Thank you,						Central	00001882		Facility, Pipeline, Well
1-Mar-2022	076004489-001	Kelt Exploration (LNG) Ltd.	2-Mar-2022		DLS: 06-35-086-18	Yes	Truck	Deficiencies Corrected	17-Mar-2022	1-Mar-2022	Complaint	Meet with operations staff. Discuss operational issues. Sand accumulation on the Inlet Separator V-1000 LSLL-1000 has been causing unnecessary compressor shutdowns and flaring. Operations submitted a MOC Request to change the action of LSLL-1000 to only close ESDV 1007 and ESDV 1008, and not to close the inlet separator ESDV 102, which would allow the compressors to keep running reducing downtime and flaring. Discuss Drilling and Production Regulation 52.02 - Hydrocarbon gas conservation equipment (1) A facility permit holder who operates a facility that uses hydrocarbon gas conservation equipment must ensure that: (a) the equipment is operated continuously, except during a turnaround for the facility or while being maintained, cleaned, inspected or repaired, (b the equipment recovers at least 95% of the natural gas routed through the equipment, and (c) the natural gas recovered by the equipment is used for a purpose other than to dispose of that gas as waste. Perform a FLIR inspection. No leaks were found. On Feb 26th. operational activity took place where a sandy, waxy, very odorous hydrocarbon compound was removed when cleaning the oil pump and recycle pump "y" strainers and placed directly in the HAZCO disposal bin. The recycle pump 'y" strainer was cleaned (3) times and the oil pump "y" strainer was cleaned (2) times on Feb 26th. and quite a bit of material was removed. Hydrocarbon odors may have emanated from the material in the HAZCO bin as the lighter hydrocarbon ends flashed off. Action Items: 1. Recommend performing an engineering assessment on the function of LSLL - 1000. 2. Recommend developing a means to calculate the VRU operating efficiency. 3. Submit monthly VRU operating efficiency reports to OGC.Pipelines.Facilities@bcogc.ca until further directed. 4. Recommend that Kelt operations place waxy, odorous material in a plastic garbage bag and seal the bag before placing in the HAZCO bin. Please reply to OGC concerning the above action items and to the attached deficiency through the KERMIT system. Thank you,						Central	00027318		Facility, Pipeline, Well

2-Mar-2022	076023697-001	Coastal GasLink Pipeline Ltd.	3-Mar-2022		From: NTS: A 077-A/103-I-02 To: NTS: D 025-B/103-I-02	Yes	Truck	Deficiencies Corrected	18-Mar-2022	3-Mar-2022	Routine	Laydown at km 13 on Shea (before 9A): potential trespass. Mat storage greater than 37.5m and snow storage past 37.5 m. - Camp 9A: fuel storage/generator and previous spill location, secondary containment needs maintenance. Sidewalls collapsed/pushed down. - Clore River crossing: not working at time of inspection. checked workspace in RRZ and found to be compliant. Discussed flood risk and berm height. Sandbags noted in stream (CGL is aware and waiting for lower water levels to retrieve safely). Discussed NCD near crossing. - SOC2A and S1C2A: works currently occurring outside of instream work window. Please provide proof of submission to OGC (as per condition 60). Sediment build up noted under bridge (on frozen stream bed, from bridge and failed sediment guards). To be cleaned up (began while on site). Please confirm clean up with photos once completed. Active discharge above upstream dam. Sediment/tubidity noted in sump. Traced sedimentation to trench water pump off location (location not approved by CGL Environment). This is in non-compliance with section 12 of the EPMR. To be remedied immediately, and CGL to provide images and description of remedies completed. As well, CGL to provide turbidity data for location from before, during, and after the incident. Secondary containments (under pumps) in RMA have collapsed sidewals or sidewalls pushed down by equipment. Hydrocarbons noted in multiple of these secondary containments. Various small hydrocarbons spills noted on ground in work area around SOC2A and S1C2A. Noted by OGC Inspector while on site, not noticed by numerous workers (active pipeline construction) in area. Spills appear to be tracked through area by equipment. Actioned immediately while on site. Spills did not appear to enter any watercourses. - Pipeline: noted hanging pipe, areas of trench not bedded (using parent material, several large rocks in bottom of trench and falling out of sidewalls noted). Ditch block installation method unusual (bentonite bags in disarray, then squished/moved by pipe, more bags added on top(excavator took large scoop of bentonite bags, then dropped bags on top from height, breaking some of the bags during the process)). Please provide documentation showing CGL tolerance for hanging pipe, criteria for bedding, and ditch block typical that is provided to contractor. - General maintenance needed on bridges (ESC and splash guards, signage, delineators, etc.) - General ESC upgrades and maintenance needed on running track prior to freshet. KP 103+702, 56, clear-span bridge requires maintenance as discussed with operator. Active trenching through WC. WC is frozen through to bottom and has sandbags and poly as upstream and downstream isolation precautions should flow start. Pumps and hoses are at the site but not in place. KP 103+857, 56, clear-span bridge has low side walls please ensure sidewalls meet your typical drawing specifications. Bridge requires maintenance as discussed with operator. KP 104+159, J18-01, 56, clear-span bridge requires maintenance as discussed with the operator. KP 104+651, J18-08, clear-span bridge requires maintenance as discussed with operator. KP 105+000, J18-98 KP 105+801, WL 1705, clear-span bridge has low sidewalls please ensure sidewalls meet the requirements of your typical drawing specifications. Bridge requires maintenance as discussed with operator. Signage for NCD's J18-05, J18-06, and WC 22C are located in proximity to each other at this location. It was observed at the time of the inspection that several NCD drainages may have been altered to facilitate ROW construction. Please ensure that these drainages are put back prior to spring break-up to allow water management during this period. It was observed that at the time of the inspection there was intermittent ESC along the inspected portion of the ROW. Discussed with the operator lack of ESC and was informed that additional ESC crews would be starting next week. Please ensure that the appropriate ESC is in place along the entire ROW prior to spring freshet.						South			Pipeline
3-Mar-2022	0760555342-001	Sukunka Natural Resources Inc.	8-Mar-2022			No	Truck	Passed Inspection (Complete)	8-Mar-2022	8-Mar-2022	Routine	Inspection was completed on Westcoast road #2746, ADR10079120. This road accesses the SNRI Pine River gas plant. Road is well maintained and in good condition. There are two bridges at km 11 of the road. The first bridge traveling up is in need of some maintenance as the right hand side rail appears damaged at the midway point of the span. As well the delineator on the right hand side approach is missing. Rob Oliver with CNRL has scheduled Great Northern Bridgeworks to complete an inspection of this bridge and any safety or maintenance items will be addressed. SNRI supervisor Murray Bennett will update any action required/taken. Please email actions taken to the OGC No other concerns were identified on day of inspection.						South			Pipeline, Road
3-Mar-2022	0760556320-001	Crew Energy Inc.	8-Mar-2022			No	Truck	Passed Inspection (Complete)	8-Mar-2022	8-Mar-2022	Routine	Logging of ROW and location are complete. Timber has been hauled but log debris/limbs piles remain at decking areas. In conversation with Crew construction supervisor it appears construction is paused for now. ROW was snow covered on day of inspection. No concerns were observed.						South			Pipeline, Well

Discussions prior to site inspection regarding condition 60 of the pipeline permit, talked with QP and was directed to section 3.2.2 titled Instream Work Outside Qualified Environmental Professional Timing Windows. No further questions regarding Section 60 compliance required. WC 725 650+669 side channel to Hirsch creek isolated and pump around in place. Salvage occurring downstream of crossing in isolated pools. Bridge has been removed and trench work and dewatering occurring. Clean water discharge location viewed and no issues with this crossing. WC 182C 650+800 and spill site location has been cleaned up and no further works required. Crews actively working on tie in at time of inspection. UN 11-117 647+279 crossing complete but further reclamation required. Will revisit site once completed. 51019 647+710 stream re-established and no flow at time of inspection. WC 741 KP 665+614 meter bag and steel plate dam in place, sheet piling active at time of inspection. Wide flood channel with significantly defined organic streambed. Pump around with large diffusers in place. Final salvage taking place at time of inspection. Inspected grey water discharge area and containment holding, minimal grey water coming off site at this time. BCOGC staff as well as CGL staff met with complainant in Strawberry meadows area of Kitimat and discussed landowner concerns with the construction in the area. No noncompliance noted during inspection.							South			CIAS, Pipeline, Road

16-Mar-2022	076184155-001	Canadian Natural Resources Limited	17-Mar-2022	17-Apr-2022	NTS: B 038-K/094-A-16	Yes	Truck	Deficiencies Corrected	6-Jul-2022	16-Mar-2022	Planned	Found HP flare stack not lit. Meet operations staff on site. The operator had to open a needle valve fully on a 3/8 tubing line to supply purge gas to the flare header, the flare lit briefly, and then went out. The operator had to open a manual valve blowdown valve (BDV) in the dehy to light the flare stack. The manual BDV was closed and the flare stayed lit. The operator reported that the 3/8 tubing line and needle valve supplying the purge gas to the flare header should be increased to a 1/2 valve and 1/2 line to supply sufficient purge gas to keep the flare stack from going out. 16-Mar-2022	076344489-001	Canadian Natural Resources Limited	11-Apr-2022		NTS: A 086-E/094-B-15	No	Truck	Passed Inspection (Complete)	11-Apr-2022	31-Mar-2022	Planned	The site was very clean-no left over materials or stains were noted. A crew was just finishing up setting a bridge plug when I stopped by. I noticed the decommissioning was done and just the wellhead remaining. The main concern over the removal of the disposal well facility is the fencing around the earthen berm. This fencing was to keep out livestock and big game animals due to the contamination found inside the berm. There was an old underground tank inside the facility that had overflowed and went into the containment. An inspection conducted years ago and contamination sampling resulted in the fencing being put in place. Fencing needs to be in place or the contamination removed before the animals are attracted to it.							Central	00001223	00827		Facility, Pipeline, Well

There is a camp water well located on the north side of the road within 2-3 kms of the beginning of the road. I marked it with orange flagging tape as during the summer it is obscured by willow bushes. There are also 2 piles of old discarded culverts at 2 streams on this road that will eventually need to be removed when deactivated or when equipment is available with work being done on the lease. The road has been snow plowed open but no work has been done on the date of inspection. The road has some water issues including some beaver activity during the snow free season. It is anticipated the pipeline will be deactivated or KERMIT updated at some point in time. CNRL has an exemption until 2029 for this work to be completed. 22-Mar-2022	076444966-001	Coastal GasLink Pipeline Ltd.	4-Apr-2022			Yes	Helicopter	Passed Inspection (Complete)	4-Apr-2022	4-Apr-2022	Routine	Aerial inspection with operator of OGC Road 04368. A short connector road to the ROW at the Clear Creek storage area. There were no concerns noted at the time of the inspection.						South			AOGA
22-Mar-2022	076445524-001	Coastal GasLink Pipeline Ltd.	4-Apr-2022			Yes	Helicopter	Passed Inspection (Complete)	4-Apr-2022	4-Apr-2022	Routine	Aerial Inspection with operator of OGC Road 04367 a short connector road to the ROW, located at KP 332+250. Road is snow covered. There were no concerns noted at the time of the inspection.						South			Road
23-Mar-2022	076243274-001	Coastal GasLink Pipeline Ltd.	25-Mar-2022			Yes	Truck	Passed Inspection (Complete)	25-Mar-2022	25-Mar-2022	Routine	Inspection of the Raccoon Lake storage site with the operator. Active construction of the block valves and the inlet and outlet lines. The newly constructed lines are had not been tested at the time of the inspection and tie in to the main pipeline has not been completed. Welding crew on location. Welding & repair procedures, PQR's, welder certifications, welding inspector certification were all produced on site. The repair log is kept in the main office and is accessible there. 100% visuals, and 100% UT. UT was not on site at the time of the inspection. Coating was not on site at the time of the inspection. There are 2 active pump offs of surface water, one to filter bags and secondary containment the other to a filter bag. There is a drainage ditch running through the site and the existing ESC measures require maintenance as discussed with the operator. One location is close to a wetland and the operator will move to a more suitable location. Housekeeping on the site is poor with wood debris and miscellaneous debris pushed up into the snow/ dirt piles. This was discussed with the operator and will be cleaned up post freshet. There is a matted access to the site through a wetland that requires maintenance on the ESC and snow / dirt piles removed prior to freshet as discussed with the operator. Trench pump on site was not active at the tine of inspection but was set up to pump to a secondary containment and filter bag on location.						South			CIAS, Pipeline, Road
23-Mar-2022	076244850-001	Coastal GasLink Pipeline Ltd.	25-Mar-2022		From: NTS: C 090-G/093-J-10 To: NTS: D 072-F/093-J-10	Yes	Truck	Passed Inspection (Complete)	25-Mar-2022	25-Mar-2022	Routine	Inspection with operator of WC 127C, WC 272 and associated ROW, approximately KP 243+500 to KP 245+000. WC 272, S3, Clear-span bridge in place, requires maintenance as discussed with the operator, in isolation with upstream and downstream plates, fish barrier nets in place, 1-6" pump and 1-3" pump are active with spares set up, open top pump box with screens in place. NOTE: Water level was approximately 10 to 15 cm from the top of the pump box. Workers had to be prompted to pump the level down to ensure safe operating levels to prevent fish from potentially entering the pump intake. Discussed with the operator the need for 24 hour monitoring of pumps due to fluctuating water levels. Pump around to downstream diffusers. Note: Diffusers were placed in a manner that may cause turbidity. Discussed with the operator. Trench pump to filter bag. NOTE: Filter bag had a hole in and workers had to be prompted to replace the bag. WQM in place. WC 127C, S4, Clear-span bridge requires maintenance as discussed with operator. In isolation with upstream plate supported by sandbags, pump around is 2-3" inch pumps in screened fish box, to downstream diffuser. WQM in place. North slope leading to the watercourses was active at the time of the inspection with backfilling of the trench and slope work. 2 water bars in place one at the top and one approximately mid slope. please ensure these are put back if compromised by machine work on a daily basis. South slope, travel lane used by rock trucks for hauling material to the north slope. water bars top and upper mid slope. At the top of the slope ,surface water was flowing from the FSR access road to the ROW with no control measures in place. This was brought to the attention of the onsite EI's for action. Upper water bar was full of water and had sediment laden water flowing into the tree-line. Sediment control on this water bar was being bypassed. This was brought to the attention of the onsite EI's for action. Mid slope water bar was blown out by rock trucks and not capturing water. A sump had been dug downhill of this water bar and sediment laden water was flowing out of the sump and going into the trench and down the travel lane towards water course 127C. There was no corrective action to fix this problem. The undersigned inspector watched two on site EI's walk past this sump without any effort to correct the issue. This water management problem was discussed with on site foreman and I was told that the pump was not able to pump this stuff. During an on site discussion with a General Inspector II was stated, nothing can be done about this water. This matter was brought to the attention of the on site EI's and for action. It is apparent that there is a failure to follow and implement best management practices and routine maintenance with respect to erosion and sediment control measures. Please have the area within the tree-line on the south slope, (upper water bar) inspected for off ROW sediment and report findings. Please provide a water management plan for the slopes on WC 272 , and pictures showing that the above noted ESC issues for this location have been corrected, by Monday 8:00 pm, March 28, 2022. 28-Mar-2022	076318330-001	AQT Water Management Inc.	29-Mar-2022		DLS: 11-12-084-19	No	Truck	Passed Inspection (Complete)	29-Mar-2022	29-Mar-2022	Planned	For Information Only: High pressure shut downs for disposal pumps and pressure meters at wellhead were last calibrated April 2021, as indicated on calibration tags. When I arrived on site, only pump 2 was active and pumping to 6-24 well. shut down for that pump is at 10850kpa and last cal'd April 2021. Operator was changing filter for pump 1 and then started it up. s/d is at 10850kpa and last cal'd April 2021. Needle valves for isolation valves at sensing points had clamshells on them. H2S detection last cal'd Feb 2022. 11-12 wellhead Unable to see tubing pressure due to meter is too high. Casing pressure was 4kpa. Flow meter was reading 152 m3/hr total 8918.7 m3 Pressure gauges on pipeline must have been closed as reading no pressure. Rest of site looked good and clean. Some small equipment stored on site.						Central	00000287	03010	Pipeline Project

29-Mar-2022	076483862-001	Coastal GasLink Pipeline Ltd.	8-Apr-2022		From: NTS: A 077-A/103-I-02 To: NTS: D 025-B/103-I-02	Yes	Truck	Passed Inspection (Complete)	8-Apr-2022	29-Mar-2022	Routine	Routine inspection of CGL construction activities in the municipality of Kitimat and the Wathl FSR on March 29, 2022. WC 51073 at KP 666+513 trenchless crossing ongoing, pump off discharge checked and traced back to ROW and discharge terminates in trench, no connectivity to adjacent watercourses noted. WC UN 22-20 666+513 Bridge deck cleaned at time of inspection, no concerns with this trenchless crossing. WC 741 665+191 Sheet piles being moved during inspection, isolation still in place and pump around in place. Root wads onsite for bank restoration. Three-inch pump pumping directly into creek from isolation, water clean at time of inspection. WC 739.17 No current construction activity at this time. Sheet pile vehicle crossing still in place. No pumping occurring, no flow. Discussed QP assessment of stream class as well as for crossing type and adjust the water course crossing table as required based on the QP assessment. KP 664+470 CGL crossing at the junction of Haisla village road PNG station. Sediment ponds very low and almost dry at time of inspection. No sediment laden water leaving ROW. WC UN 22-5 NCD 660+325 pumping occurring and very little runoff coming from the ROW. Across Alcan private road at the culvert outlet a perched snow pile was noted that was depositing sediment into the NCD. Please remove snow pile to stop sediment entering stream. Also noted recent construction of a sandbag barrier to minimize potential road run off. UN 22-1 KP 659+886 PNG access crossing pine creek area. Little flow into sediment ponds, area relatively dry at this time of year. Sand filter being set up in anticipation of increase in flow during freshet. No sediment laden water noted leaving ROW. WC 66 KP 659+382 grading activities active at time of inspection. Westside of stream prepped for isolation and fish salvage to be occurring tomorrow. Discussed grey water discharge location. Bridge has significant layer of mud on deck, told it was cleaned twice daily. High splash guards on bridge and no over splash noted below bridge crossing. No non compliance noted during inspection.						South			CIAS, Pipeline, Road

1-Apr-2022	0764489515-001	Trans Mountain Pipeline ULC	8-Apr-2022			Yes	Truck	Passed Inspection (Complete)	8-Apr-2022	8-Apr-2022	Routine	Inspection of Line 1 emergency work wit the operator March 31 and April 1, 2022. KP 928, site was not active at the time of the inspection. KP 933, work completed KP 939, work completed KP 949.36, Active in stream works, ground water pumps clean water to the river downstream with diffusers, WQM in place, 4 times daily, with no spikes to date, trench pump is not active but has a hose line to sediment bag and filtered containment. Discussed with the operator a secondary containment made of poly and wood frame is not suitable as built. KP 951, Clear-span bridge is in place with the ramps blocked off to prevent access. The access road is currently in wet condition and not suitable for vehicle traffic. the access road on both sides of the bridge has had snow and dirt pushed into the tree line throughout its entire length. Discussed with the operator the requirement to have this delineated after snow melt to see if there is enough sediment deposited to impair or prevent vegetation from growing, if so, it will require removal. KP 989, Diversion channel is in with water flowing, fish salvage has started in the original channel, BC 630 will be put to diversion on completion of the fish salvage, work will begin on armoring the bank once fish salvage is completed. WQM is in place with grab samples being taken as required by nature of the instream work. Discussed with the operator electronic monitoring of the water quality. KP 990.3, The FSR bridge is on blocks, authorization for this instream and bridge work was not produced on site. the undersigned Inspector will contact the issuing authority to ensure work is permitted. A temporary 70 foot clear-span has been installed, discussed with the operator that wing walls are to be installed. WQM by grab samples as required by the nature of the work. Discussed with the operator electronic monitoring of the water quality. KP 997, accessed by TMEP permitted access, river bank and road repair at kilometer 3.5 on the road. Channel has been isolated from its original path and allowed to flow in a side channel created by pervious weather events. Upstream isolation by dirt berm and downstream by poly and meter bags. Trench pump off to well vegetated area and diffusers. Discussed using alternate method with operator to prevent ground disturbance. Ground water pump off to river using diffusers. WQM in place by grab samples 3 times per day. Clean water at time of inspection was 2.44 NTU and background being from 4 to 18 NTU.						South			CIAS, Pipeline, Road

14-Apr-2022	076746374-001	Cedar LNG Partners (GP) Ltd.	18-May-2022			Yes	Truck	Passed Inspection (Complete)	18-May-2022	14-Apr-2022	Routine	Routine inspection of the Cedar LNG site Investigative works permit #100115528 on April 14, 2022. Works just commencing on site. Driller onsite and qualifications provided upon request, discussed mud use and type as well as water use and where it was being sourced. Mats being utilized for stream crossings. Streams have been impacted by historical activity on the site (approximately 40 years ago) and do not always follow a natural channel. Minor gaps noted in mats where sediment could potentially fall through and into the stream, this was addressed immediately once pointed out. Historical, non project related, garbage onsite being collected and disposed of by the permit holder. Small site location with a significant amount of activity but was very clean, orderly, and safe. No noncompliance noted during inspection.						South			Pipeline, Well

26-Apr-2022	076582338-001	Tourmaline Oil Corp.	27-Apr-2022		NTS: B 024-H/094-G-08	Yes	Truck	Passed Inspection (Complete)	27-Apr-2022	26-Apr-2022	Planned	Commissioning and Start-up Inspection - AMS Amendment Application 100114088, dated April 11, 2022. Addition of Equipment: 1. Condensate Stabilizer Package. 2. Hot Oil Heater. 3. Overheads Compressor K- 5200. 4. Fuel Gas Exchanger. 5. Condensate Pre-heater. 6. Storage Tank and Generator Package. 7. Replacement Flare Stack - blower assisted. Tourmaline is waiting for the Waste Discharge (WD)) permit to start-up the equipment. The plan is to purge and pressurize new process piping and equipment and leave in a safe state (no oxygen) until the WD permit is approved. The plant master car seal list was revised to include critical safety devices for the new equipment, but at the time of inspection locks or car seals were not installed on all new critical safety devices. Reviewed commissioning and QC documentation provided. Inspected that fire and gas detection equipment for the new equipment had no faults back to the plant PLC. Inspected plant process graphic on the operator HMI screen. Noted that PCV-2601 on the condensate stabilizer (SK-100) was a fail closed valve. It appeared there was no blowdown valve on the HMI graphic and there may be the possibility for trapped gas downstream of PCV-2601 on the condensate stabilizer common line up to the overheads compressors K-5200, K-5000, and K-5100. Action Items: 1. Assess possibility of trapped gas between the condensate stabilizers PCVs and the overheads compressors (K-5000, K-5100, K-5200). 2. Submit Tourmaline Pre-Start-up Safety Review (PSSR) and construction to operations final handover. 3. Submit PLC programming Site Acceptance Test (SAT) once all final Vendor commissioning is completed. 4. New generator package - lube oil day tank - install a sight glass guard. 5. Overheads compressor- K5200 - repair sight glass guard - missing (2) rods. 6. Overheads compressor- K5200 - BDV - up and downstream isolation valves to flare - require to be locked or car sealed in the open position. 7. Condensate pump building- identify all meters- as either " reporting' or "non- reporting". Please reply to OGC concerning the above action items.							Central	00017858		Facility, Pipeline, Well
26-Apr-2022	076582956-001	Canadian Natural Resources Limited	28-Apr-2022	9-Jun-2022	DLS: 14-34-085-20	Yes	Truck	Deficiencies Corrected	9-Jun-2022	28-Apr-2022	Routine	There are a number of deactivated pipelines to this facility that need "active" statuses changed by NOI submissions to Oil and Gas Commission. Please submit to Oil and Gas Commission record drawings as per D&P Reg 78(4) of facility. Operator present Compressor on North side of lease signed "Out of Service" hydro still to buildling. 2nd Compressor on North side of lease signed "Out of Service" fuel gas is measured and goes through separator in this building. Chart reads VRU tank fuel gas Cal'd 04/31/2021 Sour produced H2O pipeline signage 14-34-85-20 to A6-27-85-20 water plant building -active - drains off scrubbers directed to floor drain to underground tank. Flo meter on discharge cal'd 01/31/22 Inhibit fresh water line with pig barrel from 2-1-85-19 to 14-34, p/l vents in vertical culvert Plateau and PNG pipeline risers onsite. Multiple chemical tanks onsite. Dehy still column to underground tank, vent off underground tank tied in to portable gas sweetener (valve on line to sweetener was closed - operator opened). Compressor start gas is air. Group and test separator meters cal'd 04/12/21. It appears that the orifice plate in test sep meter run is changed to different sizes for different wells. Treater building - glycol heat medium and lineheater okay Plateau pump building. Air compressor building.							Central	00000133, 00026786		Facility, Pipeline, Well

All buildings on the locations were locked. Fence at the condensate loop was locked. No concerns at the time of inspection.							Central			Pipeline, Well
26-Apr-2022	076801914-001	Coastal GasLink Pipeline Ltd.	24-May-2022		From: NTS: C 006-J/093-I-04 To: NTS: A 077-A/103-I-02	Yes	Truck	Passed Inspection (Complete)	24-May-2022	26-Apr-2022	Routine	Routine inspection of CGL Section BW in the Upper (North) Klimat area on April 26, 2022. WC UN 13-36 KP 623+363 stream running clear at time of inspection, streambank restoration generally complete with some further works required upstream of crossing location. WC 676.1T KP 623+150 crossing is complete and stream running clean at time of inspection. WC J470.1 KP 623+095 NCD crossing complete (stream turns onto an S4 downslope). Minor hose within stream and was removed immediately upon request. WC 470.1 KP 623+072 crossing has been completed and streambanks have been re-established, and stream running clean at time of inspection. WC 675 KP 622+704 same minor hose within the high water mark of the stream, hose removed immediately once noted. WC 13-1 KP 623+496 crossing has been completed and streambanks re-established, water running clean at time of inspection. WC 678 KP 623+644 crossing has been completed and streambanks re-established, water running clean at time of inspection. WC UN 13-2 KP 623+657 stream running clear at time of inspection, discussed ESC measures around soil piles as well as drainage on ROW, minor issues and no noncompliance noted at this time. Overall sites were clean and in good order, no noncompliance noted during inspection.							South			CIAS, Pipeline, Road
27-Apr-2022	076581611-001	Pacific Canbriam Energy Limited	27-Apr-2022			No	Truck	Passed Inspection (Complete)	27-Apr-2022	27-Apr-2022	Audit	This is a request for the submission of your bridge inspections located on Road 01891 segment 1 which is the access to well pad c-29-G / 94-B-09. What is requested are the last annual and 3 year inspections. Please refer to the Oil and Gas Road Regulations under Section 14. This inspection will show as a PASS however, there is a legislative information request to be fulfilled. Please forward your inspection records to OGC by the end of the day on May 23, 2022. Thank you							Central			Road
28-Apr-2022	077081587-001	LNG Canada Development Inc.	20-Jun-2022		NTS: A 005-B/103-I-02	Yes	Truck	Passed Inspection (Complete)	20-Jun-2022	17-Jun-2022	Routine	Closure welds: Closure welds observed in condensate piperacks. Pictures records for further verification. Welder performance qualification records (WPQ), associated welding procedure specification (WPS), and weld completion records were requested for review. Verifications later completed of WPQ and WPS. No non-compliances. Reviewed visual test records and visual inspector qualifications. -CSA Z276-18 clause 9.6.4.2 specifies qualifications for visual inspection of piping. Weld# 3CC150-OP369001-02-01 was inspected by(CWB Certified Welding Inspector #4377) and it was confirmed that they are Certified to CSA W178.2 Level: 2, with code endorsements for CSA W47.1/W59: Welded Steel Construction. CWB Certified Welding Inspector #4377 does not have documentation showing a code endorsement for ASME B31.3. Please provide evidence that the visual inspections were conducted by a company qualified to CSA W178.1. -Weld# 3CC150CBR-OA479121-02-01 Visual test record states "Note: Examinations completed on April 1, 2022. This form is a reprint. AG". The record was signed on May 3, 2022. -Original records should be provided when requested and should be completed by the person conducting the examination. -Weld# 3CC150CBR-OW640059-02-01 Visual test record has the signoff of the acceptance of the root pass, internal root pass and fill passes on May 3, 2022 (after the request for this report on May 2, 2022) when the weld was completed on April 26, 2022. This record is initialed and is incomplete (no document sign off). Inlet Gas Module: Each level of the inlet gas module was observed. No non-compliances noted. Area was found to be clean and well maintained. AGRU Solvent Storage Tank (0T-1102) and AGRU Wash Water Tank (0T-1103): -0T-1102 and 0T-1103 were observed. 0T-1102 was noted for further verification of the Manufacturing Data Book. Quality records were verified. -Competency requirements were requested for coating inspectors: "NACE CIP Level 2 Inspector shall be signed off document accordance with this work procedure and project requirement." Still require confirmation that the person who signed off on coating is qualified in accordance with this requirement.No issues or concerns. -Area found to be well maintained LNG Tank: -Inner tank welds were observed. Pictures recorded of Weld#C1B-V-1 (Welder SM-1 / TC-1), noted for further verification. -Weld completion records, WPQ and WPS were requested for review. -Verifications later completed. No issues or concerns. -Area found to be well maintained.							South	00018315		Facility, Pipeline, Well

3-May-2022	076668261-001	Coastal GasLink Pipeline Ltd.	6-May-2022		From: NTS: C 090-G/093-J-10 To: NTS: D 072-F/093-J-10	Yes	Helicopter	Deficiencies Corrected	9-May-2022	6-May-2022	Routine	Aerial inspection of section 3 with the operator, KP 172+250 to KP 263+250. KP 174+000, NCD, temporary bridge, minor leaching through ESC, matted crossing requires maintenance, discussed with operator KP 182, soil slumping on slope, currently on ROW, discussed with the operator, to be monitored and appropriate measures to be taken if additional soil movement occurs. KP 191+500, RI 320, pump off area is saturated with sediment laden water which poses a significant risk of migration to the S2 watercourse. Discussed with the operator due to risk of migration pump off should be relocated. KP 204+700, erosion channels on ROW there is potential for sediment laden water to go off ROW. Discussed with operator. KP 209+050, Sediment laden water has leached through ESC into the wet land and was being actioned by workers at the time of the inspection. KP 209+800, sediment movement down slope on the ROW, operator is aware and will be actioning. KP 229+910, WC 118C, S2, sediment laden water observed running into the water course from the ROW, with a visible sediment plume going down stream. The Plume is approximately 400 meters + in length at the time of the inspection. WQM in place from previous exceedance Dated March 31, 2022. See deficiency. KP 250+500, Matted road running beside the ROW has sediment laden water leaching through the ESC measures and into the adjacent wet land. Discussed with the operator that additional ESC measures are required. KP 273+030, WC 292, S3, Slight discoloration was observed in this watercourse, operator will investigate to determine source.							South			CIAS, Pipeline, Road

Had him place clam shells on high/low needle valves in pump building. Minor staining under the ESD pump building. Please monitor and ensure it does not get worse. No other concerns at time of inspection.						Central			Pipeline, Road
11-May-2022	0767388041-001	NorthRiver Midstream Operations GP Inc.	16-May-2022		From: DLS: 07-31-082-17 To: DLS: 01-36-082-18	No	Truck	Passed Inspection (Complete)	16-May-2022	11-May-2022	Routine	12" Peace River Rec 20" South Peace Connector Sending 07-31-82-17 W6M Flare stack ok. Site looks good, gate and fence locked. No visible staining/spills No concerns at time of inspection.						Central			Pipeline, Well
11-May-2022	0768450001-001	Trans Mountain Pipeline ULC	30-May-2022		From: NTS: D 077-H/092-G-02 To: NTS: A 025-D/092-G-07	Yes	Truck	Passed Inspection (Complete)	30-May-2022	27-May-2022	Routine	- WC 755A1: Ramped over on East side. Tree clearing/brushing work on West side, no work on East. - Chance find NCD (SP7A-CR1-0126-F1): temporary crossing in place. Vehicle crossing established. Vegetation cleared through NCD. Please ensure chance find is added to watercourse crossing table. - Wetland access (and ditch at 758D2): wetlands have been ramped/matted over. Area around DPI exit has been matter. Excellent ESC measure in place, site was extremely clean and well set up. Site water was cleaner leaving site than when it entered. - BC-768A (54 behind movie studio): tree clearing and brushing has occurred. No debris in stream. Some minor (non-project related/historical) debris/garbage on site. Stream appears previously altered. - 770C1: planned for open cut. Ramp installed over twin culverts. Culvert has been installed inside of existing cement culvert (historical). Ensure inlets/outlets are free of poly/debris so flow remains unrestricted. Requested poly to be cut/removed from inlet and channel. - 770C: Ensure inlets/outlets clear of poly/blockages. - Leoran Brook (7700): discussing crossing. Cleared to top of bank and East side. Felled on West side, but brush/understory left. Non-project related debris/garbage on site and in stream due to highway and public presence. - Adjacent NCDs: cleared. Existing disturbance in area. Rock lined. Mostly artificial ditches. No non-compliances found during inspection.						South			Pipeline, Road

12-May-2022	076735627-001	NorthRiver Midstream Inc.	16-May-2022		NTS: B 019-A/094-G-08	Yes	Truck	Passed Inspection (Complete)	16-May-2022	12-May-2022	Planned	The Commission has the following recommendations concerning the operations of the disposal well: 1. Add a SCADA (local) shutdown for max wellhead injection pressure (MWHP) set at an appropriate value. The approval MWHP = 9600 Kpa. If adding local shutdown, clamshell and seal open the tubing pressure isolation needle valve at the wellhead. 2. Repair of the wellhead ESDV position status data point on SCADA and HMI system. The pressure switch that indicates the ESD loop pressure to the wellhead ESDV is not being transmitted through the SCADA system to the HMI display at the plant. 3. Install displays on the tubing and pressure transmitters and include a verification of tubing and casing pressure readings on the monthly Pipeline Check sheet. 4. Examine how the maintenance flare stack is lit, consider adding an auto-ignitor. 5. Replace the flare stack pilot regulator at the base of the flare stack. 6. Repair fencing were it has fallen over for security purpose. 7. Install insulation on the wellhead and flowline. 8. Replace the torn wind sock. Please reply to OGC concerning the above recommendations. Thank you,						Central		00464	Pipeline, Well
12-May-2022	076738312-001	NorthRiver Midstream Inc.	16-May-2022		NTS: A 079-J/094-G-01	Yes	Truck	Passed Inspection (Complete)	16-May-2022	12-May-2022	Planned	The Commission has the following recommendations for the disposal operations: 1. Determine whether a continuous flare is required to be maintained. 2. Determine if the selector switch on the subsurface valve panel should be clam shelled and sealed in the pilot position to prevent accidentally being left in the ESD position. 3. Replace torn wind sock. Please reply to OGCconcerning the above recommendations. Thank you,						Central	00027303	09637	Facility, Pipeline, Well
12-May-2022	076947447-001	Trans Mountain Pipeline ULC	3-Jun-2022		From: NTS: D 012-K/092-H-04 To: NTS: D 077-H/092-G-02	Yes	Truck	Passed Inspection (Complete)	3-Jun-2022	3-Jun-2022	Routine	Sumas River DPI exit: No residual evidence of flooding. Matted areas intact. Fencing and infrastructure intact. No adverse effect noted. - WC726A: Minor surface erosion noted on ROW. Channel reconstruction has occurred. Fabric and gravel established with sump to manage flow. Minor upgrades discussed. No issues found. Site currently inactive d'ue to red tailed hawk buffer zone. - Sumas River DPI entrance: DPI is complete. Site is inactive. Further works will occur at later time. Access remaining in place for potential future use. No project related debris noted around Sumas River. - Nicolas Creek (WC BC730C): NCD with matted access. Site visited for investigation purposes. - 53 bridge install (BC 730): clearspan bridge installed with wood abutments. Install is above high water mark. Recent slope instability noted at stream crossing due to November flooding and is non-project related. Non-project related debris/garbage in stream (ie. car parts, plastic, etc.). Bridge is matted and wrapped (including splash guards). Approaches have geo, rock, and matting on top. Drainage is established. Various ESC on slopes. No issues with crossing. Discussed conditions 4 and 5 (regarding water quality management). Please provide a copy of the site specific water quality management plan for this crossing. -McKee Rd East (NCD, BC728I (1, 2, and 3))(Pacific water shrew area): low flow. Partial grubbing has occurred. Exclusion fencing in place (salvaged). Sumps established and one pump-off to adjacent vegetation noted. ESC established on high side of NCD to protect from exposed soils. Very low risk. Overall no major concerns or issues noted during inspection. No deficiencies.						South			Pipeline, Road
13-May-2022	076727319-001	Canadian Natural Resources Limited	13-May-2022			No	Truck	Passed Inspection (Complete)	13-May-2022	13-May-2022	Audit	This is an information request for the last annual and 3 year inspections for the bridge located at approximately km 6 on the Cameron River Road (road #169, segment 1). Pease submit the inspections by the end of the day on June 6th 2022. Thank you. This inspection will show as a PASS, however, there is a legislative information request that needs to be fulfilled.						Central			Road
13-May-2022	076846321-001	NorthRiver Midstream Operations GP Inc.	27-May-2022		From: DLS: 07-04-082-17 To: DLS: 07-31-082-17	No	Truck	Passed Inspection (Complete)	27-May-2022	13-May-2022	Routine	11-29-82-17 W6M ESD #3 05-32-82-17 W6M ESD #4 MP 5.48 High/low valves were open but no locks/car seals were present to prevent them being accidentally closed. No other concerns at the time of inspection.						Central			Pipeline, Well
13-May-2022	076948422-001	FortisBC Energy Inc.	3-Jun-2022		From: NTS: A 018-D/092-G-07 To: NTS: A 075-L/092-G-02	Yes	Truck	Passed Inspection (Complete)	3-Jun-2022	13-May-2022	Routine	Routine inspection of FortisBC's Pattullo Gas Replacement Project on May 13, 2022. Inspection began at the Winston Triangle area where the Still Creek HDD has been completed. Pipe is exposed onsite, and fencing has been established. Pipeline work in the area will recommence once timing windows open for Spartan Creek crossing. Still potential clean up in the area but that is to be determined by the city, as there may be a contractor handover once pipeline activities are completed. Spartan Creek has had one side grubbed and ESC measures are in place and holding. No sediment noted entering the stream. Non project related garbage noted onsite, will be cleaned once crossing commences. Sperling to Glencarin HDD exit location. Active pipeline construction during inspection, trench boxes being utilized, and dewatering is required. Water treatment onsite with real-time monitoring of NTU and discharge is to adjacent vegetation. No concerns noted in the area then travelled towards Glencarin where sheet piling, and ongoing pipeline construction is occurring. Sheet piling being vibrated into place, little noise noted. Area is very wet/boggy with peat on both sides of the construction area. ESC in place on either side of construction area (access road) and is in good shape, frequent maintenance is required due to high, fluctuating water table. Multilayer trench bedding required due to water table as well as cement block capping due to depth of cover over public road. Welding checks completed, welders qualified to FortisBC approved procedures and visuals being completed and documented, no inspector concerns with welding. Glencarin to Freeway trail also had water treatment systems up and down the line, discharging to vegetation towards adjacent highway away from Burnaby Lake. ESC measures in place on either side of construction corridor, access road and backside of soil storage piles. These ESC measures require frequent maintenance due to high water table and public access road. Deer Lake Brook, Raeside and Lubbock's ramp over/under creek prescribed for crossing method. Culverts have been tested for soundness. Soil piles covered and well stored. Direct bore entrance excavated and prepped for crossing, shallow entrance and only short pipe lengths can be used. Entire area neat and orderly, no housekeeping issues noted. Direct pipe exit prepped with trench boxes, exit trench fairly deep (+/- 6m) and no issues noted onsite. Travelled towards Lakefield (east) and most pipework complete only +/- 400m remain, small stretch of trench boxes and pipework occurring at time of inspection. Areas along this stretch still being used for storage and repaving required and is weather dependant. Attempted to meet with archeologists but excavations had been completed for the day once we arrived. No non-compliance noted during inspection.						South			Pipeline Project

18-May-2022	076773090-001	Coastal GasLink Pipeline Ltd.	20-May-2022		From: DLS: 02-24-077-21 To: DLS: 03-23-077-21	Yes	Walk	Passed Inspection (Complete)	20-May-2022	20-May-2022	Routine	Inspection with the operator May 17 & 18, 2022. KP 1+000, Reclamation completed KP 5+600, WC 3, S3, reclamation completed KP 14+500, sediment deposited off ROW, ESC measures failed to control sediment laden water, surface erosion channel on ROW KP 15+784, Coldstream crossing, slumping on the S/E aspect of the ROW, no impact to the water course at the time of the inspection KP 21+087, WC 781, S4, 781 was in exceedance from May 7 through to May 17, inspection of the site shows that all drainage from the east slope leads to the watercourse. ESC measures at the water course are inadequate and sediment laden water has accumulated behind two sediment fences. These sediment fences are in close proximity to the watercourse and have been leaching sediment laden water into the watercourse and along side the water course for approximately 100 meters. KP 21+200, sediment laden water flow off ROW has deposited a layer of sediment into the tree line. Depth ranges from 2cm to 15cm. KP 21+357, NCD, B81, restored channel KP 21+550, Sediment laden water flow off ROW has deposited a layer of sediment. KP 24+700, Drainage from the Murray slope through the Murray HDD pad site has caused sediment to be deposited approximately 100 meters into the tree line on the S/W corner and the N/W corner. A pump off location along the west aspect of the ROW has caused a sediment deposit with in the tree-line for approximately 50 meters. depth varies from 2cm to 15cm. Please note, this a conditional pass as the repeated sediment off ROW occurrences and the extended exceedance duration for WC 781 have been referred to BCOGC Enforcement .						South			Pipeline, Road

24-May-2022	0768171181-001	Tourmaline Oil Corp.	25-May-2022		NTS: B 024-H/094-G-08	Yes	Truck	Passed Inspection (Complete)	25-May-2022	24-May-2022	Incident	A washout occurred on the a-14-I/94-G-8 inlet pig barrel at the flange connecting the inlet liquids control. A similar washout occurred on April 21, 2022. New wells on the a-14-I/94-G-8 pad were recently brought on. It is suspected that when pigging the inlet liquids can become like a sand slurry. This when combined with abrupt piping direction changes and high velocities become highly erosional. Action Item: 1. Recommend examining velocities and plant inlet piping design, considering the possibility of entrained sand in multi-phase fluids, for all inlet piping (pigging liquids control and mainmiet gas lines) to limit the possibility of piping erosion. Please reply to OGC concerning the above action item.						Central	00017858		Facility, Pipeline, Well

25-May-2022	076830405-001	Coastal GasLink Pipeline Ltd.	26-May-2022		From: NTS: C 006-J/093-L-O4 To: NTS: A 077-A/103-I-02	Yes	Truck	Deficiencies Corrected	13-Jun-2022	25-May-2022	Routine	Routine inspection on Section BW in and around the North Hirsch FSR on May 25, 2022. WC 713 KP 639+662 tie in being prepped, grey water being pumped into large sediment container then into a pig pen which drains into a flat, basin like area. Light turbid discharge noted adjacent to sediment container that could potentially flow into non-classified wetland, requested that the curlex block sediment container be cleaned out. Significant flow into ditch adjacent to stream, bentonite plug does not appear to be sealed at time of inspection. WC 713 banks have been re-established; some coarse woody debris has been placed in the stream that has not been anchored. Due to the significant flow of the stream, it is requested that this woody debris either be anchored or removed from stream as it will mobilize at high flows. Also, downstream of the bridge crossing curlex blocks were noted in an overflow channel, if these ESC measures are part of the ESC plan for this crossing, then they are acceptable but if not part of the plan they should be removed before high water to prevent mobilization downstream. WC UN 11-94 at 640+218 bridge installed and area cleared, no concerns with the bridge install and there was no debris noted in the S3 stream. There were, however, temp crossing structures established downstream of the bridge that have not been removed. Please refer to permit condition 68 of Section 8 pipeline permit and remove these structures as soon as is practicable. WC UN 11-79 NCD was noted containing turbid water originating from snow/dirt piles that were melting on the ROW. WC UN 11-79 then flows into WC UN 11-63.01 and S6 stream that flows directly into Hirsch creek. Area actively being worked at time of inspection, deficiency issued with EPMR Section 12 No deleterious materials into streams, wetlands or lakes. BCOGC road permit 100106728 accessed at approximately 18km on the North Hirsch FSR had a no trespassing sign at the start of the road permit and not on the edge of the ROW. CGL has not received permission to restrict access as per the Oil and Gas Road Regulations and this permission must be received or the signage removed. Travelled ROW from approximate KP 642+500 to KP 647+250, ROW was clean and in good order, no concerns noted in this area. WC UN 11-117 KP 647+321 has seen no changes since last inspection. Previously it was noted that the stream banks appeared to be too low in this alluvial fan area. Water levels have increased significantly, and the water is very close to overtopping the left bank. There is currently only about four inches of freeboard remaining and water levels are anticipated to rise in a very short period of time with more rain and warmer temperatures predicted (freshet). WC 28D KP 647+946 bridge approach being pulled and amphibian salvage occurring, no concerns noted. The access road is a BCOGC RP road and had signage indicating No access/No trespassing at the start of the road. This was removed immediately and placed at the junction of the road and the pipeline ROW. KP 650+309 area of significant sediment loading from the Hirsch Creek crossing discharge activities. Area has been cleaned and no concerns noted, will revisit in summer when dry. Clean up activities went beyond the contractor footprint but stayed well within the BCOGC permitted corridor. WC 723F 650+172 Bridge approach being re-established, bridge deck lined, and sidewalls established with wooden deck still to be installed. Pipeline crossing is in but bypass still in place. Stream banks re-established with rip rap left bank and soil wrap right bank with two separate levels. No concerns noted with this crossing. WC 725 Hirsch Creek side channel crossing is established and is flowing naturally.							South			CIAS, Pipeline, Road

26-May-2022	076842315-001	PETRONAS Energy Canada Ltd.	30-May-2022		NTS: C 072-A/094-B-16	Yes	Truck	Passed Inspection (Complete)	30-May-2022	26-May-2022	Planned	Inspect fire and gas detection equipment status on the plant PLC HMI. No faults were found, all detectors reading normal. Perform a walkdown of the process piping and equipment. Inspect that locks or car seals were installed on critical safety equipment as per regulation. Noted (3) conduilet bull plugs were loose on (3) EXP electrical boxes near doorway on refrigeration building BU-3000. Noted the meter calibration tag on the condensate meter in the Condensate Truck Out Building BU 7270 was dated Mar 12, 2021 which did not agree with the proving report dated Mar 12 2022. Noted the calibration tag for the gas detection calibration indicated a quarterly calibration frequency but didn't show a calibration for 2022. Found the plant operations printed copy of the site ERP did not have an updated revision page. The printed ERP copy should be updated to include the 2022 revision page and include all recent revisions if any are to be added. Action items : 1. BU- 3000- tighten (3) conduilet bull plugs underneath EXP electrical boxes by main doorway. 2. Generator Building - ensure gas detection calibrations are conducted as per maintenance frequency and tagging reflects the most recent calibration date. 3. Condensate Truck-out Meter Building BU- 7270 - Correct the condensate meter proving tag date to match the meter proving report. 4. Plant printed ERP - control room copy- update the ERP revision page and ERP main body if required. Please reply to OGC concerning the above action items. 1-Jun-2022	077301576-001	Tourmaline Oil Corp.	12-Jul-2022			No	Truck	Deficiencies Corrected	2-Aug-2022	12-Jul-2022	Routine	COMMENTS: -During an attempt to inspect wellsite a-81-A/94-G-8 Zargon Oil and Gas, I found that there is a washout on the access to this wellsite. I was unable to inspect said wellsite due to the washout. I originally submitted an inspection to Zargon Oil and Gas for the road washout, but after further investigation, I found that this portion of road is in the name of Tourmaline. Therefore, I have retracted the inspection deficiency to Zargon, and am now applying it to the permit holder of this section of road 222 (section 4), Tourmaline. As there are now only Zargon wells past this location, Tourmaline may want to transfer this section of road over to Zargon Oil and Gas, after discussions with them.							Central			Pipeline, Well

At time of inspection isolation valve for ESD was open but not locked. Maintenance was being carried out. ESD on tubing line, casing line is connected, no ESD on this line gas detection at wellhead Pig barrels blow down to vent stack. Technnation onsite - said operators are dealing with a hydrate in line.						Central	00025242	27528	Facility, Pipeline, Well
6-Jun-2022	0769972886-001	Tourmaline Oil Corp.	7-Jun-2022		NTS: C 038-C/094-H-04	Yes	Truck	Passed Inspection (Complete)	7-Jun-2022	6-Jun-2022	Planned	Meet with operations staff. Inspect fire and gas safety systems on the plant HMI displays. No faults were indicated, however upon field inspection, some faults were noted on LEL controllers. Also some warnings were present on UV IR flame detectors which had a 2 Hz red blinking LED indicating a warning in the Built in Test (BIT) mode. The detector's BIT checks the following: • Electronic circuitry • Sensors • Window cleanliness. Inspect accounting meter calibrations. Noted the LPG Bullet levels did not all agree even though the bullets were physically mounted on pilings at the same height and were common and equalized. Recommend a level transmitter calibration and a level offset adjustment. The Level Calibration and Level Offset function can be utilized to make the indicated level on the AT transmitter match the indicated level of another transmitter. Operations commented they are expecting to install a new LPG bullet in the next few weeks, and had cranes standing by. Suggest once the new LPG bullet is installed all LPG bullet level transmitters should be calibrated and level indications examined with all bullets common and equalized. The meter punch card calibration tagging system worked well and facilitated a quick confirmation of meter calibration, although the Alliance Buyback meter transmitters did not have the updated calibration tags. Action items: 1. Facility signage - west gate - recommend installing flammable and poisonous gas symbols. 2. PIT- 10021- isolation valves are required to be locked/car sealed open if connected (S/D Key) to Inlet ESDV- 12. 3. V-100 building - electrical seal on metering pump - recommend packing and pouring seal in a hazardous area. 4. Sharplye 40/40 UV/IR Flame Detection- various locations throughout the plant - recommend trouble shooting 2 Hz blinking red warning LEL in Built-in Test mode. 5. TCPL Buyback meter- ensure annual calibration is completed. 6. PIT- 11524 - isolation valves are required to be locked or car sealed if connected (S/D Key) to Alliance Sales ESDV. 7. Enbridge Sales pig sender- recommend shortening the PAV safety chain. 8. Alliance 10 inch pipeline pig sender PAV - recommend installing PAV in end closure as a safety item. 9. Enbridge Sales/Fuel Gas Building- recommend venting the fuel gas scrubber PSV pilot outdoors. 10. AIT - 90703 - recommend clearing the fault on LEL controller. 11. AIT 90801- recommend clearing the fault on LEL controller. 12. K616/K617 Building - recommend clearing the fault on LEL controller. Please reply to OGC the above action items. 7-Jun-2022	0770216649-001	Coastal GasLink Pipeline Ltd.	10-Jun-2022		From: NTS: D 031-F/093-P-05 To: NTS: C 046-F/093-J-16	Yes	Walk	Deficiencies Corrected	12-Oct-2022	10-Jun-2022	Routine	Inspection with operator of section 2, KP 101+000 to KP 99+953, area of water management issues and slope issues. Excess surface and ground water has caused ditch plugs to fail and soil saturation which resulted in sediment movement. There are locations along the slope where sediment laden water has flowed off ROW and deposited sediment off ROW. Soil on the ROW has become unstable at approximately KP 100+850 and moved from the ROW onto a work space. See deficiency. Crews are daylighting the pipe and pumping off water to help with the noted issues. ESC is required in several locations and was discussed with the operator. Discussed pump off locations with the operator.						South			Pipeline, Road
7-Jun-2022	0770422068-001	Coastal GasLink Pipeline Ltd.	14-Jun-2022		From: NTS: C 080-G/093-K-01 To: NTS: B 003-E/093-K-03	Yes	Truck	Deficiencies Corrected	29-Jun-2022	7-Jun-2022	Routine	Routine inspection on Section 5 WP 3E on June 7th 2022 with CSTC liaisons. RW 1330.1 2 KP 337+900 open cut road crossing completed, bell holes open and area signed "open excavation" and delineated with rope barrier and flagging tape, no concerns noted. Laydown 10A welding qualifications occurring during inspection. Welding procedures provided upon request and discussed, also viewed process and practice of Macro inspectors and welders. No concerns noted during welding viewing. RW1370.1 KP 343+000 open cut crossing completed, bell holes still open and appropriate signage and barrier installed. Barricade established at exit of ROW restricting access to BCOGC Road Permit Road number 5665-002 AD # 100110312. Section 20 OGRR requires approval from the commission to restrict access or temporarily close a road, or, if the RP holder temporarily closes or restricts access promptly give notice of the temporary closures to the commission. The BCOGC has no record of any closure requests or notification of road closures from CGL in this area. Roads were frequently noted as having no access signs as well as rope "gates" throughout Section 5E. Deficiency noted with OGRR Section 20. Guidance was provided by the BCOGC regarding access controls on ROW May 5, 2021 for future reference. WC 15C1 pipeline crossing established, banks re-established and some works still remain within the RMA. No BCOGC concerns with this crossing. WL11178 KP 352+370 wetland crossing complete as well as road crossing. Bell holes open on either side of road, minor safety issues discussed but otherwise no concerns with this crossing. WL 11378 greening up well considering the crossing was just recently completed. WC 24C1 and 25C1 crossings complete and banks re-established. Requested removal of amphibian fencing as it has collapsed in and around the stream. WC 24C1 water quality monitoring no longer in place and no sediment noted in the stream. Sump and pump off in place and checked discharge area and sediment bag and pig pen in place in high/dry area that is handling the water well. Crossings looked well done and no other concerns from the BCOGC noted in the area. POD #5 checked, and permit and map onsite as required. Volume records blank and told that the records are being kept in the individual trucks. BCOGC requests that records also be kept at the withdrawal location when multiple trucks hauling from the same location, this is to avoid daily overages that can occur from multiple trucks withdrawing from the same location. Secondary containment within RRZ of the stream needs to be adjusted and emptied as on a slight incline and full of water, no sheen noted in secondary containment. Fish screens in place on intake and stream had adequate depth and flow for withdrawal purposes. WC crossing 21C2A 361+639 Tatsutnai creek previewed prior to crossing activities. Requested maintenance on Ge5d-61 (signage and fencing re-establishment) ahead of construction on 21C2A to avoid any accidental disturbance of this site. RW 1330.3.1 one of multiple locations off Barlow FSR (approximately 26.4km) that have been roped and signed "No Entry" that directly access BCOGC roads and added to the deficiency. Also noted RW 1340.4.4 at 370+900 AD 100111046 on day two of inspections also had rope and No Entry signage.						South			Pipeline, Road
8-Jun-2022	0770004350-001	Shell Canada Limited	9-Jun-2022		DLS: C 02-22-080-19	Yes	Truck	Passed Inspection (Complete)	9-Jun-2022	8-Jun-2022	Planned	Passed						South		33699	Pipeline, Well
8-Jun-2022	0770007456-001	Shell Canada Limited	9-Jun-2022		DLS: 05-03-081-18	Yes	Truck	Passed Inspection (Complete)	9-Jun-2022	8-Jun-2022	Planned	Meet with operations staff. Noted a H2S poisonous gas symbol on the facility sign at the main gate. As this is a sweet gas plant, comment the H2S symbol must not be displayed as no hazard is present. Inspect fire and gas detection plant HMI display screen, no faults were found. Operations indicated the methane gas detection calibration frequency was 6 months. If so, this would not be in accordance with the manufacturer's recommendation. General Monitors S4000C Manual - 4.6 Calibration - General Monitors recommends that the Model S4000C Intelligent Sensor be calibrated one hour after start-up, and that the calibration be checked at least every ninety (90) days to ensure system integrity. Frequent calibration checks ensure the integrity of the life protecting equipment. Performed an inspection of critical valve lock/car seal installations. Operations indicated that the compressors (K-220 and K-100) did not have a a remote shutdown in the event the Enbridge Sales ESDV closed. If this is the case the compression would continue to run until the 2nd Stg high discharge pressure shutdown was reached. It was recommended that the pressure sensing isolation valves for the compressor 2nd Stage discharge pressure transmitters be locked or car sealed open if they serve as the over pressure control (OPC). It was found that some car seals installed on safety critical valves didn't prevent the valve from being incorrectly positioned as the diameter of the car seal was not great enough compared to the diameter of a lock to prevent the locking valve handle from being moved. A recommendation was to use a scissor clamp on the critical safety valve locking handle and then to install a car seal on the scissor clamp to prevent the valve from being improperly positioned. Action Items: 1. General Monitors S4000C gas detection- recommend examining whether the calibration and maintenance frequency is in accordance with the manufacturer's recommendations. 2. 2-6-81-18 pig receiver PAV - recommend removing cable (too long)- recommend repairing the safety chain and re-attaching to the PAV. 3. All plant meters - recommend identifying the meter as either "reporting" or "non reporting" to assist in identification for compliance with the BC Measurement Guideline. 4. Critical safety valves - ensure an adequate means is used to prevent valve movement. 5. Glycol Regeneration Building - Glycol Regenerator- recommend adding two additional rods to the sight glass guard. 6. Flare KO - Fisher 912 regulator on Cata-a-dyne heater - spring casing cap was missing- recommend installing a spring casing cap. 7. Compressor K220 and K100 OPC - recommend examining whether the 2nd Stg Discharge pressure transmitter isolation valves should be locked or car sealed open. 8. Instrument Air Building - low instrument air pressure switch- recommend examining whether the isolation valve should be locked or car sealed open. 9. H2S poisonous gas symbols / signage throughout the gas plant - recommend removing symbol and or signage in accordance with The Oil and Gas Processing Facility Regulation section 18(5). Followed-up with a site visit at RW 1350.1 Ed road after discussions with FLNRORD and CGL over the winter. Non BCOGC regulated road and area is still inactive, no concerns noted during site visit. Offsite sedimentation follow up at KP 371+600. Spring melt from adjacent clearcut inundated ROW and sediment from ROW has travelled off construction footprint. Once identified it was immediately reported to the BCOGC. Sedimentation travelled through a young clearcut (5-7 years old) and settled in an area that has been previously burned. Continue to monitor site for vegetation regrowth as well as for any potential impacts to this existing stand of trees. No sensitive receptors impacted. BCOGC would also like to request the root cause analysis/incident report with corrective actions to prevent this from occurring again as well as a report stating what is to occur with this site moving foreword. Offsite sedimentation follow up at KP 364+185. Sediment from ROW has travelled offsite during snowmelt earlier this year. Once identified it was immediately reported to the BCOGC. Sedimentation travelled approximately 100m offsite, sediment is only a thin veneer and vegetation already noted emerging through this area. Site is an older clearcut with approximately 20-25 year old pine plantation. Continue to monitor site for vegetation regrowth as well as for any potential impacts to this existing stand of trees. No sensitive receptors impacted. BCOGC would like to request the root cause analysis/incident report with corrective actions to prevent this from occurring again as well as a report stating what is to occur with this site moving foreword. WC SBC1 KP 371+675 documented site conditions with respect to the exceedance reported April 1, 2022. No sediment noted in the stream post incident, discussed when the event occurred area was snow covered. Endako River crossing 391+000 Grading occurring while onsite. Direct bore highway crossing exit pit has been partially excavated, pump off occurring to vegetation in private property. Discussed the adjacent wetland and discharge location. ESC measures in place around wetland 0687 and no sedimentation noted in wetland. No non compliance noted in area.						South				Pipeline, Road

9-Jun-2022	0771523S1-001	Coastal GasLink Pipeline Ltd.	27-Jun-2022		From: NTS: C 006-J/093-L-04 To: NTS: A 077-A/103-I-02	Yes	Truck	Passed Inspection (Complete)	27-Jun-2022	9-Jun-2022	Routine	Routine inspection of CGL Section 8E on June 9, 2022. Stopped at 23.5km on the Shae road to look at the vehicle incident that occurred on May 31, 2022. Area has been cleaned up and still awaiting results from sampling. CGL in discussions with MOE and unless requested BCOGC will leave the follow up to MOE. Lake 1F no sediment noted in Lake with precipitation occurring all day during inspection. Rock trucks shut down partway though the day due to precipitation. No concerns with works in and around Lake 1F. POD 5922-1 on BR 189 inspected. Signage, permit and withdrawal records onsite and correct. Upon return sedimentation noted in ditches due to rainfall during the day. No sediment noted in streams and MSJV was contacted immediately to establish perimeter controls. Stopped approximately 4km on the BR 300 road and had a cross valley viewing of the ongoing works in Burnie Gorge. Good view spot to understand the works in the area. No concerns noted. Clore Bridge crossing noted mats on bridge deck had broken down due to winter traffic and splashguards required re-establishment. Site visit to the slides at KP 599+500 and KP 599+550. KP 599+500 excavator onsite during inspection creating machine pad for longstick to follow with clean-up. Excavator pioneered along edge of CGL construction footprint. Area has been partially cleaned-up already with this pioneering activity. Noted that no sensitive receptors have been impacted. KP 599+550 still to be pioneered and will do the same as at KP 599+500, also noted no sensitive receptors impacted. Please keep the BCOGC updated on progress of clean-up activities at both locations. WC 2297 KP 600+400 location of previous fil slope failure. Area has been cleaned; additional ESC measures have been established. Sediment is settling out, but water is still slightly turbid, most from original event. Silt curtain in place and discussed adjusting it slightly to improve effectiveness. Site is still being monitored by CGL staff. WC SF141 bridge crossing to P2 camp. Additional ESC measures have been put in place, rock lined sumps functioning well with precipitation throughout the day. Cattleguard crossdrain also functioning well and extra-large splash guards have been placed on the bridge. No non-compliance noted during inspection.						South				Pipeline, Road

14-Jun-2022	0770538Z6-001	Tourmaline Oil Corp.	15-Jun-2022		NTS: A-O 040-H/094-B-16	Yes	Truck	Passed Inspection (Complete)	15-Jun-2022	14-Jun-2022	Planned	rig clean and well maintained a few small issues noted during inspection that were repaired during inspection. Manual drill pipe pressure gauge in manifold being repaired, side kick operational. Found garbage in cuttings catch tank below shakers. Pop valve lines ending in mud tank end with 90 degree elbow and not a T will check on requirements. High pressure discharge block on mud pump has been heated and struck with a hammer to remove stuck internal components. Rig manager to discuss with field superintendent on these two items						North		37863		Pipeline, Well
14-Jun-2022	0770544I6-001	NorthRiver Midstream Inc.	15-Jun-2022		NTS: A 005-I/094-B-16	Yes	Truck	Deficiencies Corrected	12-Jul-2022	14-Jun-2022	Planned	Meet with operations staff. Inspect the facility equipment and piping. Inquire if the inlet c3+ meter FE-261110, which was identified as a production accounting meter, had been proved? Found no tag indicating a meter prove. Inquire if the generator fuel gas meter had been recently calibrated? Found no indication of calibration. Noted the C3+ bullet levels were not all in agreement - PV02102 level of 39 % was noticeably different from the other bullet levels (45 %, 45 %, and 43%) indicating level transmitter calibration may be required. Inspect the truck loading terminal. It was noted at the time of inspection a tanker and pup was loading with the Ground Permissive cable clamp connected to the fender of the truck when there was a ground pin on both the tanker and pup. Recommend the permit holder notify the trucking company, and request truck loading procedures and proper grounding be reviewed. As part of the discussion it was recommend that a socket style connection on the end of the ground cable be installed. This would ensure proper hook-up and a good solid ground connection to the frame of the tanker and pup. This would help reduce the risk of a static discharge and product ignition during the C3+ loading operation. Action items: 1. Ensure all production accounting meters for reporting into PETRINEX are routinely calibrated or proved as per the BC Measurement Guideline. 2. Ensure calibration tags and calibration/proving reports are available for inspection on all production accounting meters such as the Inlet c3+ , truck loading, generator fuel gas, and the bullet level transmitters. 3. Submit production accounting meter calibration and proving reports. Please reply to OGC concerning the above action items. Thank you,						Central	00018142			Facility, Pipeline, Well

28-Jun-2022	077240984-001	Canadian Natural Resources Limited	4-Jul-2022		NTS: C 061-L/094-B-15	No	Truck	Passed Inspection (Complete)	4-Jul-2022	4-Jul-2022	Routine	The compressor station is listed as ACTIVE but it has been INACTIVE for years. The site has gone thru a proper suspension as well documented on the doors, windows and sides of tanks etc. There is a fire extinguisher and another item in the eroded gullies off the site to the south edge of the lease. What is the timeframe for the site to be decommissioned? My concern is the eroded gullies that continually get deeper. If there is going to be equipment in the area this should be addressed. It was noted in iMapBC that most of the road is permitted to the forest industry and the non-permitted portion has recently been applied for by CNRL. Thank you. 5-Jul-2022	077599740-001	KM LNG Operating Ltd.	3-Aug-2022			Yes	Truck	Passed Inspection (Complete)	3-Aug-2022	5-Jul-2022	Routine	Routine inspection of reclamation activities on Kitimat LNG ancillary areas on July 5, 2022. Storage area A had "no trespassing" sign noted at entrance to site as well as a "private property" sign on the Bish bridge crossing. Please remove signage as soon as possible. REM material being removed from Area A, noted Geo-Poly layer on top of REM material approximately 30cm below crush fill. Geo fabric was also noted at the base of the REM material, so the area was delineated in the past and is easier to identify layers than originally thought. Noted minor housekeeping with poly around Area A, ensure it does not blow off site into the natural environment. North Logistics Area cross drains have been filled in and access restored to the NLA for heavy vehicle traffic. Access roads within the NLA have been restored to complete restoration activities. NCD's in the area dry at time of inspection. Photos requested of the restoration of the drainage in this area, and this has already been provided. Water and monitoring wells still to be removed and abandoned prior to complete decommissioning of the site. Area H material has been removed and placed in Area G. Lower access road (spur road to nowhere) completely decommissioned and construction not complete at time of inspection. Area I. herbicide spray has been used for invasive plant treatment (only minor amount of spray required) and access road has been scarified. Area G Diversion of water between quarry G and storm water pond. Pump and hose onsite but not in use at time of inspection. Permit not available onsite during inspection and unauthorized withdrawal point noted during inspection. This has been forwarded to our enforcement staff for a determination and will be dealt with outside of this inspection process.						South			Pipeline, Road

14-Jul-2022	077439923-001	Canadian Natural Resources Limited	21-Jul-2022	23-Sep-2022	NTS: C 033-J/094-G-03	No	ATV/Snow Machine	Deficiencies Corrected	27-Sep-2022	21-Jul-2022	Routine	The following are observations made on the day of inspection; The well site has been recontoured with a few pieces of course wood debris placed on the lease. There were a few rills on the recontoured lease where fine soils are being displaced and the area left behind is starting to hardpan. There are some subsided areas where equipment used to be located. The winter access on the hill going to the lease has some minor ruts that are funneling the water down hill toward the lease. Trees have been placed perpendicular to the road in an attempt to slow the water down. The shallow water bars that have existed for many years should have been re-established to aid in erosion control. I would like to receive a copy of your plan that addresses the requirements for well and road restoration in the Upper Sikanni Valley/ Muskwa-Kechika Management Area (M-KMA). The requirements are in the M-KMA Act and Regulations and Pre-Tenure Plans. Could you please provide the information by the end of the day on August 25th 2022. Thank you. 14-Jul-2022	077506399-001	Cedar LNG Partners (GP) Ltd.	27-Jul-2022			Yes	Truck	Passed Inspection (Complete)	27-Jul-2022	14-Jul-2022	Routine	Routine inspection of Cedar LNG investigative works in the Kitimat area on July 14, 2022. Inspected boreholes BH22-BCHPP-02, BH22-AHHDD-02, BH22-BCHPP-01, TLBH-22-04. Access was muddy at time of inspection due to recent rains. CMT (stump) checked and was flagged off and not disturbed. Several areas already deactivated and coarse woody debris has been placed in the disturbed areas. Stream crossings were generally matted crossings with geo-fabric, and some also had splash guards installed. Minor gravelling requested at one crossing location and was completed immediately, and photos were provided to the BCOGC. Also took a quick look at the plant site post inspection of the IUP works. No non-compliance noted during inspection.						South			Pipeline, Well

15-Jul-2022	077473531-001	Tidewater Midstream and Infrastructure Ltd	29-Jul-2022	29-Aug-2022	NTS: C 053-J/094-G-03	No	ATV/Snow Machine	Failed Inspection - Follow-up Pending		25-Jul-2022	Follow Up	This inspection is a follow up for the outstanding work that was to have been completed on the well site and road. Would you please submit a plan as to what your intentions are for this site considering the work that was identified but not completed. Below are some observations made on the day of inspection; The slide area does not appeared to have been worked on. If it had been, part of it has failed again. What information can you provide as to the work that was completed in December 2021? It was also noted that there was no ground preparation for planting trees and no coarse woody debris distributed over the site as described in the e-mail sent on December 13th 2021 and is as follows; "Thank you for providing this additional information and resources related to this erosion site. This helps to define our final reclamation plans as we address the non-compliances. Operations and our equipment contractor (Half a Dime) are cc'd. Our end goal is to reestablish a functioning ecosystem by properly prepping the site for tree planting and shrub encroachment. This will involve scarification of the surface and spreading of coarse woody debris across the site to allow for proper tree seedling microsites. We will fix the slumped slope/erosion areas, rough contour the subsoil before re-spreading topsoil/strippings and leave woody debris across the site for tree planting in 2022. Appropriate tree species will be selected that match the forest ecosystem zone. Weed spraying/vegetation control may be required prior to planting. A suitable snow berm will be left at the access road entrance after we are finished to prevent access to the site. Will keep you informed of our progress and completed activities. Senior Environmental and Liability Coordinator									Central		09984	Pipeline, Well

19-Jul-2022	077418790-001	NorthRiver Midstream Operations GP Inc.	20-Jul-2022		From: NTS: D 093-K/094-A-11 To: DLS: 09-10-087-21	Yes	Truck	Passed Inspection (Complete)	20-Jul-2022	20-Jul-2022	Complaint	This inspection was in response to a complaint regarding strong odors experienced on July 19, 2022 at approximately 9:45AM by passing motorists at KM 27 of the Beaton River Airport Rd (73 RD). In reference to CSA2362:19 Section 10.5.8 Environmental Effects Operating companies shall establish effective prevention and control measures to maintain the effect of pipeline system operations upon the environment within acceptable levels. Note: Matters that should be considered include the following: k) adverse effects on public health; i) inconvenience to the public Drilling and Production Regulation Venting and fugitive emissions 41 (1)A permit holder must not vent gas unless the gas heating value, volume or flow rate is insufficient to support stable combustion and (a)the venting is conducted in a manner that does not constitute a safety hazard, (b)the venting does not cause off-site odours, (c)the quantity of vented gas is minimized, and (d)the duration of venting is minimized. An assessment of flare system design is to be completed to ensure gases vented from pigging activities at pig barrels are being fully combusted at flarestack. A P&ID of the flare system is to be submitted to OGC by August 22, 2022. At time of inspection there were noticeable odors from the open sumps at the pig barrels. Pictures of pig barrels, open sumps and flarestack. Three pig barrels are on this site. One is pigged annually and the 16" and 20" are pigged daily. There were pigging activities on the 16" at approximately 9:20AM July 19, 2022. The pig barrel is vented to a flare stack. There is no purge gas. The operator said the piping to the flarestack is approximately 6". The flarestack is approx. 300 m from pig barrels. The flare stack is approximately 12 m with an auto ignitor that could be audibly heard zapping approximately every 30 seconds. The 16" and 20" pig barrel each have an open sump (approx 10'x10') that the condy from removing the pig is dumped into. There were odors coming from these sumps. There is a suspended compressor station onsite and another inactive compressor/dehy facility adjacent to this site.						Central			Pipeline Project

20-Jul-2022	077470630-001	Coastal GasLink Pipeline Ltd.	22-Jul-2022		From: NTS: C 006-J/093-L-04 To: NTS: A 077-A/103-I-02	Yes	Truck	Deficiencies Corrected	5-Aug-2022	20-Jul-2022	Routine	Routine inspection of Section BW in the North Hirsch FSR on July 20th, 2022. WC 280 KP 647+892 pipe install, bank restoration complete. Exceedance report follow up and beaver pond now running clean. Adjacent bell hole filled, and area appears to be holding water better. No further concerns in this area. WC 718 KP 646+873 trenchless crossing now complete as well as the tie ins and backfilling is ongoing. Some minor trench water still being pumped into floc tank then to a sump and into vegetation. Signage has been updated for the STWU POD in the area. UN 11-117 KP 647+279 alluvial fan with significant flow at this time of year. Banks holding and no issues noted in this area. KP 636+100 additional temporary workspace where leave of the commission was granted for condition 24. ATWS cleared and ESC has been established adjacent to Hirsch Creek. No concerns with the extra clearing required. Wetland 2319 KP 634+500 Rockwork placement occurring at time of inspection to widen running track. Wetland disturbance caused sediment laden water to enter the wetland during inspection. Water was bypassing ESC measures and operator and ESC crews were onsite, but no actions were occurring to prevent this sedimentation. CGL Lead EI stopped works immediately and mustered crews to address the situation. Deficiency noted with EPMR Section 12 no deleterious materials into streams, wetlands or lakes. Rest of the streams in area running clean. WC 692 KP 629+507 bypass still in place, pipe in trench and crossing has been filled in. Bank restoration still to be completed once adjacent pipe is installed. No concerns noted in area. Steep slope 10 preparations ongoing for cable crane installation at ~KP 627+500. Viewed current works and discussed potential use of ATWS in adjacent wetland. No concerns noted in area.						South			CIAS, Pipeline, Road

27-Jul-2022	077604984-001	PETRONAS Energy Canada Ltd.	3-Aug-2022		NTS: B 076-C/094-G-08	No	Truck	Passed Inspection (Complete)	3-Aug-2022	27-Jul-2022	Planned	COMMENTS: -There is a sour water and condy horizontal tank with containment around it. The stairs to access into this area (building on end of tank) appears to me like it could be considered a hazardous or confined space area. With the stairs going over the containment wall, and down into the containment area, and with it being sour water and condy, I think this should be assessed by your company. Maybe you already have, but I look forward to your response on this matter. -Many buildings labelled as out of service, and compressors (3) not running at time of inspection. 4-Aug-2022	077742645-001	Coastal GasLink Pipeline Ltd.	16-Aug-2022		From: NTS: C 090-G/093-J-10 To: NTS: D- 072-F/093-J-10	Yes	Truck	Passed Inspection (Complete)	16-Aug-2022	16-Aug-2022	Routine	Inspection August 3 & 4 with operator of of section 3, KP 212+100 to KP 190+150. KP 212+100, Several pile of metal and wood debris that had the following items mixed in, electrical wire, DEF containers, Geo fabric and misc. garbage. Discussed with operator about removal of the plastics and garbage. KP 211+675, Sandpoint operation, 2 pump offs 4" lines to plastic diffusers (no filtering). Discussed with the operator filtering the discharge once trench excavation is started. The amphibian fence requires maintenance and was discussed with the operator. KP 211+100, Housekeeping issues, discussed with the operator to be cleaned-up, KP 208+600, Road 19A , RE 220.0 PTN A, connects with the ROW. Sand was being stored and trucked at approximately KM 0.5. An information request was submitted for verification of the authorization to use this area. KP 206+800, WC 97C, S4, Excavator working in the riparian area completing prep work for pipe installation. KP 206+474, WC 96C, S3, Clear-span with ESC. this WC was previously blasted (for trenching) and rock removed in winter conditions. Excess rock is remaining in the channel and is impeding flow in low water conditions. Discussed the requirement to adhere to all site specific procedures for in-stream work for this S3 . KP 205+200, Crew daylighting the pipe and installing a bentonite plug. Conversation with the supervisor revealed that they were installing 11 plugs from KP 201+742 to KP 205+279. An information request was submitted for clarity on these installations after pipe is installed. KP 201+564, WC 12B, pipe ends have been removed from the riparian area as discussed on a previous inspection. Pipe ends were placed on the ROW, discussed why these were not removed from the working area. KP 201+250, Shoofly 1B, RE 250.1, Sand being piled along the edge of the ROW, trucks hauling sand to and from the pile with an excavator loading trucks. The area of the sand pile does not show as permitted ground on my spatial data. An IR was submitted for clarity on the authorization to use this area. KP 201+146, WC 11D, Red Rocky Creek, S2, clear span with ESC, bridge requires maintenance and was discussed with the operator. Arch site, Soil and Clay piles from this arch site are being stored on ROW. Piles are covered, fenced and have signage. KP 200+209, WC 324J, S4, clear span with ESC requires maintenance as discussed with the operator, WC is in isolation, Up-stream meter bags and poly, down stream plate, WC is dry but pump around in place to diffuser down stream, if needed, trench has pipe in with weight bags , sand pointing active at site with approximately 36 points to headers and 2 lines to plastic diffusers with no filter bags. Discussed with operator that this is now considered trench water as the sand points are just below an open trench and require filter bags. 6" trench pump to 4" line to filter bag. KP 201+169, WC 83.C.1, NCD, in isolation, dry no flow, backfilling at the time of the inspection. KP 199+950, Area of previous sediment release off ROW that has been cleaned up by hand, Vegetation is starting to come through cleaned area, discussed raking the area.						South			Pipeline Project

8-Aug-2022	077767536-001	Trans Mountain Pipeline ULC	16-Aug-2022		From: NTS: A 035-F/083-D-03 To: NTS: D 075-B/092-P-08	Yes	Truck	Passed Inspection (Complete)	16-Aug-2022	16-Aug-2022	Routine	Inspection with operator of spread 4A. KP 643+260, BC 224, Sundh Creek, FB, in isolation with meter bags and poly upstream and downstream, Pump around with 6-10" pumps in closed top screened boxes to diffusers downstream, 2 - 3" water pumps for utility use one with a worn screen on the bottom of the box, not in operation at the time of the inspection, discussed with the operator about repairing the screen before operation. WQM 50 upstream and 50, 100, and 200 downstream. KP 644+220, BC 227A, FB, started flowing from spring located on the ROW and connects to a Fish Bearing stream. Travel lane does not go through 227A. KP 644+175, BC 227, FB, Tum Tum Creek, Channel has been reclaimed with armored banks and a cobble channel with woody debris. KP 648+500, BC 239, FB, split channel that has been reclaimed with cobble banks and channel. Travel lane is a matted open air crossing. BC 229 (Fish Bearing S3) and the Avola Mountain Road. TMEP contract water truck was observed to be filling the truck tank from this stream. Inspection determined that there is no section 10 for this location. This matter is now under investigation and has been referred to the BCOGC Manager of Enforcement. This inspection is a conditional pass pending the results of the investigation. 8-Aug-2022	077840821-001	Trans Mountain Pipeline ULC	22-Aug-2022			Yes	Walk	Passed Inspection (Complete)	22-Aug-2022	22-Aug-2022	OGC Requested	Inspection with the operator of Coq 16, BC 654, wet open cut, CIAS 00050BD-21, located at approximately KP 1040+800. the inspection was conducted over 2 days August 8 & 9, 2022. August 8th inspection. This site is a DFO authorized wet open cut. At the time of the inspection 2 excavators were working instream digging the trench for pipe installation. Rock trucks were hauling the excavated trench material away from the water course to be stockpiled. 20 - 10" pumps have been placed instream above the work area and are actively pumping water around the work area to diffusers placed approximately 75 meters downstream. Pump intakes are enclosed in closed top boxes that are encased in fish screening. Signage has been installed upstream and downstream to prevent boaters from entering the site and orange snow fence was placed on the upstream side of the work area but does not go into the water. Fish are allowed to move freely in and out of the work area. WQM is in place at 150m upstream and 200, 500, and 1000m downstream. The TMEP representatives advise that water quality has not exceeded the DFO parameters. The side channel adjacent to the work area is being fish salvaged and there are 2 - 4" pumps pumping from the river to the side channel to keep the channel "wet" . Discussed flow being maintained to channel after work is completed. August 9th inspection Side channel fish salvage was completed the evening of August 8th and channel is currently dry. Approximately 820 fish salvaged . Observed 3 excavators in stream completing the trenching and measurements being taken to ensure specifications for final trench requirements are met. Observed side booms moving 36" pipe to the water course and pipe installation. Front 2 side booms were required to go instream during pipe installation. Confirmed the side booms going instream had been properly cleaned and oils and grease were compatible with instream work. The 20 - 10" inch pumps are still in place and active. 10-Aug-2022	077756528-001	Coastal GasLink Pipeline Ltd.	16-Aug-2022		From: NTS: A 077-A/103-I-02 To: NTS: D 025-B/103-I-02	Yes	Truck	Passed Inspection (Complete)	16-Aug-2022	10-Aug-2022	Routine	Routine inspection of CGL Section BW in and around the Municipality of Kitimat, the Wathl FSR and North Hirsch FSR on August 10, 2022 with Haisla liaison. WC 1073 666+450 dry SZ channel not being used for water discharge at this time, awaiting permit from BCOGC. Inspected C-Ring adjacent to WC 1073, water clean within c-ring and is being discharged into "pig pens" adjacent to site. Significant volume being pumped to this site and water running clear through adjacent vegetation. Inspected UN-22-20 and UN22-19 and, other than a sheen of road dust on the surface both were running clean. Direct bore on UN 22-20 active at time of inspection. Significant water infiltration noted in bore bays, water being pumped to C-Ring. WC 6E additional works within streambed completed and minor surface flow noted. No flow noted upstream at the culvert crossing at 0.5km. ROW from Wathl to WC 6E topsoil has been replaced and is waiting to be seeded, minor housekeeping noted and was dealt with immediately. WC 716 crews actively cleaning out isolated S6 crossing, soils/construction debris being removed from streambed downstream of isolation. Culvert outlet will flow directly onto debris and suggested culvert extension or flume be installed prior to removing isolation. BCOGC requests photo follow up of culvert outflow at this location once works complete and isolation has been removed. WC 714 KP 640+462 (West side) inspected grade works in riparian zone, no inputs noted into WC 714. More drilling and blasting required for crossing, planned for January, to get site to grade for pipeline install. Spawning deterrents noted in stream channel. WC UN 11-97 KP 640+218 S6 stream above WC 714 was previously re-aligned around workspace. Recent works have placed a 90 degree bend in the stream that just terminates into worksite, no flow noted at time of inspection. Re-align channel through worksite as required and follow up photo documentation requested by the BCOGC. UN 11-97 KP 640+218 no current in stream works, adjacent activities occurring. WC subsurface at vehicle crossing due to low flow at this time of year, no concerns noted at crossing. Temporary spans have been removed that were noted in a previous inspection. WC 713 KP 639+682 pipeline crossing complete and adjacent bell hole has been filled in. Remaining ESC measures have been removed as per previous inspection and new ESC measures have been installed on the approach slope. Old discharge area poly lining has been replaced and is currently not in use. No non compliance noted during inspection.									South			CIAS, Pipeline, Road

11-Aug-2022	077797137-001	Zargon Oil & Gas Ltd.	17-Aug-2022		NTS: D 013-H/094-G-08	No	Truck	Passed Inspection (Complete)	17-Aug-2022	11-Aug-2022	Planned	COMMENTS: - During my inspection of this compressor site, I found that the surface casing vent on the suspended well was not vented outside of the wellhead cover. The piping was there, but was disconnected. **Also, during this inspection, I found that the diesel tank containment was about half full of water and sludge/sheen. It was quite obvious, that there was hydrocarbon, most likely diesel, mixed in with the water inside of the containment. Upon looking closer at the fluid, I noticed that there were six (6) dead birds floating in the diesel/water mixture. I went and located the operator that I had spoke to earlier in the day about the other sites, and took him over to have a look at what I had found. The birds were black (like a small raven or a crow), but also had what looked like moss on parts of them, so I think they had been in there probably most of the summer, obviously not real recent. Operator said he would get the containments cleaned out, but he hasnt contacted me to say so. Having the containments cleaned out before the things are half full of water, and being aware of the hazards associated with dirty containments, should be observed prior to dead wildlife being found. If any more are found, please contact OGC Enforcement as has been discussed. **Contact me when containments have been cleaned out**									Central	00007488	00474	Facility, Pipeline, Well

17-Aug-2022	077862976-001	Coastal GasLink Pipeline Ltd.	24-Aug-2022		From: NTS: D 031-F/093-P-05 To: NTS: C 046-F/093-J-16	Yes	Truck	Passed Inspection (Complete)	24-Aug-2022	23-Aug-2022	Routine	Inspection with the operator of section 2, KP 133 to KP 138. It was observed during the inspection that several NCD's had been removed or channels blocked off for construction purposes. Please ensure that drainage channels are put back as expediently as possible, as discussed with the operator. On most of the water course crossings the RBZ's have not been marked off, please ensure these are marked off, as discussed with the operator. There are several areas where ESC requires maintenance, please ensure that all ESC is functional and in good repair, as discussed with the operator. It was observed that ROW drainage ditches have been directed to flow into NCD channels crossing the ROW some of which feed directly into wet land areas. At KP 136+780, WL B075, requires ESC installed along the ROW. Drainage ditches on the up hill side of the ROW feed to a flume crossing the ROW that feeds directly into WL B075 with no ESC in place to trap sediment and or sediment laden water. At KP 136+740, NCD 501, ROW drainage ditches feed directly into the NCD. KP 133+504, J93.50, NCD, Active trenching through a flowing NCD with no isolation. CGL inspectors identified the problem and were dealing with it prior to the OGC inspection. CGL had stopped work at this site prior to the OGC inspection. Workers on site were not conversant in what procedures were required for this type of work and the supervisor was not at the site. Supervisor was requested to attend the site but was busy. An IR will be submitted for an explanation why there was a lack of qualified supervision at this site and how this will be corrected.						South			Pipeline, Road

18-Aug-2022	077835330-001	Coastal GasLink Pipeline Ltd.	19-Aug-2022		From: NTS: D 031-F/093-P-05 To: NTS: C 046-F/093-J-16	Yes	Walk	Deficiencies Corrected	16-Sep-2022	19-Aug-2022	Routine	Inspection with the operator of section 2 from KP 106+653 to KP 106+964. KP 106+653, WC 79, 56, Clear-span with ESC, Note both slopes leading to the water course have substantial water management / ESC measures in place. There is some confusion on the placement of some of the water management/ ESC and why it leads back to the water course. An Information Request will be submitted to obtain clarity on these measures. Note: there has been a small amount of sediment overrun the ESC and enter the riparian zone of this water course, discussed with the operator KP 106+700, small amount of sediment off ROW at the end of the water bar. KP 106+820, J21.01, NCD, closed off by top soil pile, discussed with the operator KP 106+964, WC 80.1f, 54, Rocky Creek, clear-span with ESC, ESC requires maintenance as discussed with the operator . The bridge deck is loaded with mud / dirt and has pushed the side boards out at the bottom causing dirt to fall into the riparian area. The water course is in isolation with an up-stream plate and down stream sandbags and poly, Pump around with 2 - 8" pumps downsized to 4" lines to down stream diffuser. The pump intakes are inside a screened box and the screen has pulled away from the side of the box creating an opening that will allow fish to pass through. See deficiency. Fish barrier nets were placed up stream and down stream with the down stream having holes in it. Both nets appeared to larger mesh openings than the screening on the pump intake box. WQM was installed at 25m up stream and 25m, 50m, 100m, and 200m down stream, with no unusual. spikes to date. Data is being downloaded once per day. Grab samples are being done 3 times per day. No issues with wetland crossings were found; however inspector found a bare patch within the otherwise heavily vegetated right of way. Coordinates 55.87523 N, 120.40318 W. Action Item - request Plateau Pipe Line Ltd. to investigate the site to determine the cause of the lack of vegetation, include any reports from QPs involved, and inform of any remedial actions required within 30 days of receiving this inspection report. This inspection report will indicate that the inspection was satisfactory; however this is CONDITIONAL to Plateau's response and may be rescinded. Please send any follow up communications to OGC.						South			Pipeline, Road

30-Aug-2022	077999404-001	Canadian Natural Resources Limited	31-Aug-2022			No	Truck	Deficiencies Corrected	27-Sep-2022	31-Aug-2022	Routine	Inspection was completed on the Boulder Road #DO163/ ADK#2006#107 from km 1 to km 20. It was noted that the bridges at km 5.5, km 15.2 and km 18 are missing delineator markers. The bridges are not missing all the markers but each bridge is missing one or more. Though normal CNRL operations activities have ceased or been scaled back, maintenance on these bridges is till required. At the time of inspection there was regular road use taking place up to and beyond km 20. On day of inspection a contracting company was completing reclamation work on a small mine past km 20. They indicated that they may be completing some reclamation work for CNRL at B-21-D/ 93-O-9 at the end of the Boulder road.						South			Pipeline, Road
30-Aug-2022	078002245-001	Canadian Natural Resources Limited	31-Aug-2022		NTS: B 041-K/093-O-08	No	Truck	Deficiencies Corrected	27-Sep-2022	31-Aug-2022	Planned	During the inspection of the facility it was noted that there was indication that the site had been vandalized. Several pieces of cut off electrical cable were laying on the ground and the MCC and generator rooms had the locked doors pried open. The site is not active and the flowlines in and out have been blinded. The facility is listed as active in Kermit. please update Kermit to reflect the current status. Equipment on site consists of compressor, inlet separator, flare KO, flare stack, MCC/generator building. There is a secondary containment underneath the compressor building that appears to have been added on after the construction of the compressor facility.						South	00004409		Facility, Pipeline, Well

30-Aug-2022	078162680-001	Pacific Northern Gas Ltd.	15-Sep-2022		From: NTS: A 032-C/093-L-10 To: NTS: A 059-E/093-L-10	Yes	Truck	Passed Inspection (Complete)	15-Sep-2022	30-Aug-2022	Routine	Routine inspection of Telkwa drill site on August 30. Met at the Telkwa laydown yard and reviewed welding procedures, PQR's, welder qualifications and visual inspection documentation. No concerns noted with review of welding practices. Exit pit area noted as being neat, tidy, and organized for such a small working area. Minor discussions on ESC measures on access road. Pipe being pulled at time of inspection. Entrance pit hydraulic leak occurring at time of inspection. Spill was actioned immediately, and more supplies being brought to site as inspection occurring. Spill may have migrated though rig mats and some soil clean up may be required. SDS provided for the drilling mud utilized onsite, currently no additional additives are being used. Site supervisor noted that drill logs were being received on a daily basis. Frac walks were occurring during inspection, but no logs were being kept. If there ever is an inadvertent fluid release one of the things that will be requested by BCOGC investigators is the documentation that proves these walks are occurring and at what frequency for due diligence defense. Although not legislated it is recommended to document frac walks as additional due diligence during drilling operations. No noncompliance noted.						South			Pipeline, Road

31-Aug-2022	078028337-001	Coastal GasLink Pipeline Ltd.	2-Sep-2022		From: NTS: C 006-J/093-L-04 To: NTS: A 077-A/103-I-02	Yes	Truck	Deficiencies Corrected	19-Sep-2022	31-Aug-2022	Routine	Routine inspection of CGL Section BW North Hirsch area with Haisla liaison on August 31, 2022. WC 679 KP 625+213 pipeline crossing is complete, watercourse is running clean and no current active construction. Wetland 9101 KP 625+300 minor sedimentation noted in wetland due to recent rain event. ESC work ongoing in the area. Minor culvert works requested as inlet is slightly raised and flow going under culvert and through the road base. Follow up photos requested once works are completed. Wetland 9104 625+348 pipe installation is complete, and no noncompliance noted in this area. WC 683 KP 625+534 SS stream is isolated with pump around in place. Trench work ongoing, blasting required. Suggested relocation of grey water discharge further away from stream channel and this was completed during inspection. No further follow up required. Upper Lake off project footprint at approximate KP 626+150 turbidity noted in Lake, clean water currently entering lake and no evidence of project related sediment causing this turbidity. Minor ESC maintenance requested on small drainage from ROW to Lake. Follow up photos requested once works are completed. Lower Lake off project footprint at approximately 626+400 visibly turbid from the road. Hiked into the East side of the lake first to pig pen noted on ridge between two receptors and set up was not effective. Residual sedimentation noted throughout, but no plume noted from this side of the lake. During inspection of the area, it was noted that WC 684 had curlex blocks established instream that have become unstable, remove from stream as soon as possible. Noted plume on West side of the lake and inspected that area next. Sediment boxes adjacent to the work area handling run-off from road surface. Two "big O" pipes running from sediment boxes, one perforated and wrapped in cloth has little to no flow, the second pipe flows into a sediment bag then filters through vegetation. The flow through the sediment bag has oversaturated the adjacent vegetation and sediment laden water was noted entering the Lake. Sediment box also receiving clean water from WC 684.2T bypass, water not being directed into natural channel. This extra water was a contributing factor to the discharge location becoming oversaturated. Deficiency noted with EPMR section 12.									South				CIAS, Pipeline, Road

13-Sep-2022	078130624-001	PETRONAS Energy Canada Ltd.	13-Sep-2022		NTS: B 089-J/094-B-16	Yes	Truck	Passed Inspection (Complete)	13-Sep-2022	13-Sep-2022	Planned	Inspection for turbine generator # 3 G-8210 commissioning, tuning, synchronization, load sharing, and 4 hour break-in run. Petronas received an email concerning the Waste Discharge Permit - clarification stating the following ; "There will be no issue with running the third generator driver for a limited duration of time to preform the required test. Please ensure that there are administrative controls in place, or the third unit is locked out/tagged out to ensure that it is not used as routine plant process until the discharge authorization is amended." Review commissioning documentation for new fire detection (AT-B210), gas detection (AIT-B208), (XV-B240), and (XV-B240). Witness a satisfactory ESD function test of the turbine generator main fuel gas isolation valve (XV-B240) and blow down valve (BDV-B240) when a 50 % methane sample was applied to LEL gas detector AI-B208. Confirmed that a remote shutdown signal was sent to the turbine generator # 3 control panel for a fast stop and that XV-B240 closed and BDV-B240 opened. 16-Sep-2022	078193175-001	STRATHCONA RESOURCES LTD.	20-Sep-2022		DLS: 06-19-080-20	Yes	Truck	Passed Inspection (Complete)	20-Sep-2022	16-Sep-2022	Planned	Inspect fire and gas detection display screens on the plant operations display. Noted that fire and gas detection testing and calibrations were being done at the time of inspection. The contractor commented that one fire detector in Amine Building # 1 and one fire detector in Refridge Building # 1 did not ring back to the operator display when they were testing. There was still one functional fire detector in each building. The operator said he would follow-up and confirm the repair once completed. Action items: 1. Buyback fuel gas pressure transmitter PIT 6413 root valve was not locked or car sealed open. 2. V-1100 PSV pilot was not vented outside of the inlet separator building. 3. V-1100 ESDV Bypass valve was not locked or car sealed closed. 4. LP Flare KO Level Bridal- Car seals were not tight to prevent the isolation valve from being closed without removing the car seal. 5. V-1100 and V-1000 inlet produced water meter were overdue for meter calibration . Last done July 21/21. 6. Confirm that Amine #1 and Refridge # 1 fire detection ring back to the plant PLC and operations display when function tested.						South	00007795		Facility, Pipeline, Well

20-Sep-2022	078240463-001	Coastal GasLink Pipeline Ltd.	27-Sep-2022		From: NTS: C 080-G/093-K-01 To: NTS: B 003-E/093-K-03	Yes	Truck	Passed Inspection (Complete)	27-Sep-2022	20-Sep-2022	Routine	Routine inspection of CGL Section 5 with BCOGC pipeline technical advisor. WC 11C2A KP 346+266 crossing is complete, and flows have been re-established and no concerns with the crossing. Approach slopes should either be put to bed or a site specific ESC plan implemented prior to fall rains. WC 15C2A KP 353+516 fish salvage ongoing, passive traps being utilized. Block nets in place and open cut is planned to commence within the next week. Once complete ensure slope reconstruction utilizing RMA soils where feasible. Crossing is a four-channel braided crossing that is complete with minor touch ups ongoing. Two bridges and two culverts installed at the vehicle crossing location, only main channel has flow at this time of year. Wetland 11264 trench water discharge directly into wetland. Pumps shut off immediately upon discovery but noticeable sediment laden water leaving active ROW and into wetland. Deficiency with EPMR Section 12 No deleterious materials into streams, wetland or lakes. Deficiency corrected on site and followed up photos shown to BCOGC officer the next day during further inspections. No further action required with this deficiency as it has been corrected prior to inspection being filed. Pipe in trench at KP 360+240 noted skewed pipe in trench, elevated and touching sidewalls. Discussion with CGL GI onsite on next steps foreword in order to align pipe in trench. No BCOGC concerns once discussions completed with CGL GI. Re-visited sedimentation leaving ROW South of KP 371+650 adjacent to WC 58C1. Regrowth occurring over silty/sand deposit off ROW. Area generally non-forested within a previously harvested cutblock and contains mainly Willow and Alder with an understory of sedges, grasses, and horsetail with very few conifers. Noted that any clean up activities would be detrimental to the establishing vegetation onsite, monitor regrowth to ensure that the area continues to fill in. This statement does not supersede any potential recommendations/follow up actions from the forestry tenure holder responsible for this area. Ormond creek 59C1 KP 374+650 direct bore complete and pipe in place, trench excavation ongoing for tie in. Minor hydraulic leak noted (non reportable) as well as minor garbage and these were actioned immediately. Fraser Lake cliff bore at approximately 380+700, discussed drainage on steep slope as well as bore path and technique. No concerns noted during discussions. Highway rail crossing at approximate KP 390+500. Crossing complete and BCOGC was provided with the as built depth of coverage. Entry pit being prepped for tie in. Minor spill already being actioned at entry pit, site was clean and well maintained. Endako River entrance pit KP 383+500 under construction and rock lining occurring during inspection. Discussed with GI and told that rock being sourced from ROW. No concerns. Inspected POD 19 BCOGC permit #100111750. Permit with withdrawal records onsite and no concerns with the installation and location of the POD.						South			Pipeline, Road

21-Sep-2022	078228066-001	Ovintiv Canada ULC	26-Sep-2022		DLS: 08-31-078-16	Yes	Truck	Deficiencies Corrected	4-Oct-2022	21-Sep-2022	Planned	Inspect the source and disposal wells and the facility equipment. Confirm the disposal well max wellhead injection pressure HI S/D was set at 9775 Kpa as not to exceed condition 2 (b) of Order # 22-02-001. Noted that the disposal well casing pressure HI S/D was set high at 9755 Kpa. Recommend Ovintiv examine this set point given condition 2 (f) Cease injection and notify the Commission at Reservoir@bcogc.ca immediately if there are any indications that hydraulic isolation is lost in the wellbore or formation. Found the instrument air drier bypass valve open, bypassing the air drier. Recommend to the operator that an operations lock be installed on the bypass valve to prevent the air drier from accidently being bypassed. Questioned whether the disposal meter in the pump building was a " Reporting " meter, as it was not identified as such. Action Items: 1. Identify the disposal meter in the pump building as "reporting" if this is the case. 2. Disposal well high casing shutdown - Examine the setting with respect to condition 2 (f) in Order # 22-02-001.						South	00026228, 00027368	30817, 30818	Facility, Pipeline, Well
21-Sep-2022	078244063-001	Coastal GasLink Pipeline Ltd.	27-Sep-2022		From: NTS: B 003-E/093-K-03 To: NTS: A 002-I/093-L-02	Yes	Truck	Passed Inspection (Complete)	27-Sep-2022	21-Sep-2022	Routine	Routine inspection of CGL Section 6 with BCOGC pipeline technical advisor on September 21, 2022. WC 02C1 KP 440+000 previously completed water crossing by contractor not active in this area approximately two years ago. Currently flow being disrupted and entering trench, definite lack of connectivity in the S3 stream due to trench saturation. BCOGC requests CGL to restore stream connectivity and monitor in the interim after rain/increase flow due to risk of fish stranding. Please advise BCOGC once repairs to stream commence. BCOGC has considerable concerns with leaving these works uncompleted for an extended period of time. WC 106C1 KP 447+172 Jacobs WQM onsite during inspection. Fish salvage traps were utilized and area has been e-fished with no fish captured. Fish salvage permit requested and provided to the BCOGC. Inspector confirmed appropriate personnel onsite for these works. Block nets in place and no concerns noted onsite. Lacey FSR ROW KP 449+380 pipeline crossing complete. Road bypass still in place but road is open. Pipe is rock guarded, well bedded and site looked good. Underground pipe marking in place >1.0m from top of pipe. WC 7C2 450+422 crossing complete and no concerns with crossing nor the bridge installation but it was noted that there were no delineators on the bridge. WC 459 453+171 no flow at time of inspection. Riparian soils placed adjacent to stream with no ESC measures in place, no risk at time of inspection but this may increase during fall rains. Stream was not isolated during pipeline installation. I was told that isolation equipment was nearby in a vehicle, but the vehicle was not able to travel the ROW due to active pipeline installation. Recommend having isolation material adjacent or in closer proximity to the crossing. Active welding onsite. Discussed welding procedure (tie-in) with inspector onsite. Welding procedures provided immediately and no concerns with welding from BCOGC. WC 461 KP 455+586 bridge installation complete and pipeline crossing completed. Organic top layer of stream has been returned as it was removed (in order) and crossing looked good. No concerns. WC 462 KP 457+097 and WC 464 457+911 pipeline crossing complete and no concerns noted on each stream, crossings inspected during the day were well done. No non-compliance noted during inspection.						South			CIAS, Pipeline, Road

But the flowline is not disconnected at the well, and the well is showing as "active". Therefore, I am curious as to how the gas is moving? Is there a different pipeline that should be associated with this well, or has this line become 'active' again rather that 'deactivated'? - I see that this well has produced quite a bit of water recently, but the 400bbl tank onsite is labelled as "out of service". Where is the water going? No chain and lock on flowline disconnect						Central	00018511	01378	Facility, Pipeline, Well

22-Sep-2022	078524093-001	Coastal GasLink Pipeline Ltd.	13-Oct-2022		From: NTS: B 018-K/093-L-03 To: NTS: A 021-L/093-L-03	Yes	Truck	Passed Inspection (Complete)	13-Oct-2022	22-Sep-2022	Routine	Routine inspection of CGL Section 8E with BCOGC pipeline technical advisor on September 22, 2022. Viewed the camp 9A spill rehabilitation area. Seeding has taken well and getting close to complete coverage. Generally good survival on the planted trees, fairly consistent with minor small gaps noted, area does have pockets of non-productive ground. Seedlings generally performing well, minor poorer growth noted in extreme wet areas/NP ground. Also noted natural Cottonwood inseeding occurring. Lake 1F deactivation ongoing during inspection. Archeologist onsite monitoring the deactivation. Two of three portions of the heritage trail have been reconstructed under the supervision of the Archeologist. Corduroy, matting and rock has been removed down to native ground, area to be seeded once completed except for trail area. Amphibian salvage activities occurring during inspection. Trail has been surveyed and marked prior to reclamation and post reclamation. Bridges have been removed. Silt curtain established in the lake as a preventative measure in case of sedimentation. No sediment laden water noted during inspection. Wetland 2297 fill slope failure site. Wetland clear and free of sediment. Silt curtain was adjusted after previous BCOGC inspection. Natural regeneration of grass complex within impacted area is proceeding well. No further concerns with this site. WC 643 KP 607+927 had previously been reported to the BCOGC as being in exceedance. Source was noted as being snow pile melt adjacent to construction boundary. Documented corrective actions that have been taken which include: -Removal of snow pile -Established multiple sumps -Pump off occurring to stable ground -Hydroseeded Stream running clear and water quality monitoring has been removed. WC 49C2A KP 608+747 had previously been reported to the BCOGC as being in exceedance. Source was road runoff pooling on the bridge deck. Documented corrective actions that have been taken which include: -Negative approach has been regraded, positive slope to steep. Water now able to flow across bridge and off road surface. -Sump has been established and sediment laden water being pumped off to vegetation. Stream now running clean. Noted turbid water in non-connected sidechannel. Clean out overflow side channel prior to high water to prevent this water from entering the mainstem. KP 599+920 Soil stockpile migration location. Two of three locations have been cleaned and third is likely to be completed summer 2023. No risks noted to any sensitive receptors. Burnie Gorge 592+640 stream crossing and upchain pipe installation complete, downchain installation ongoing with welding in progress, trench complete. No noncompliance noted during inspection. 23-Sep-2022	078541243-001	Coastal GasLink Pipeline Ltd.	14-Oct-2022		From: NTS: B 018-K/093-L-03 To: NTS: A 021-L/093-L-03	Yes	Truck	Passed Inspection (Complete)	14-Oct-2022	23-Sep-2022	Routine	Routine inspection on CGL Section 7 with BCOGC pipeline technical advisor on September 23, 2022. Marten Road/Morice River drill pad mix bury cover stripping and site preparation active at time of inspection. Discussed process that will be completed for the disposal of drilling mud. Additional road ROW clearing has occurred on Marten Road which is a Canfor Road permit road and not BCOGC. Clearing competed for safety reasons. Morice River Drill pad discussed ongoing works and prosesses as well as future development of the site. Viewed equipment and materials to be used. BCOGC would like to make a few requests: -SDS for the materials to be used in the drilling process. -What is going to be remaining at the vertical entry shaft once drilling is complete (if already determined). -Drill plan. Travelled shoefly 14 to shoefly 10 KP 529+000 to 525+000. Stripping and most grade work complete, minor blasting still required. Noted a few sump outflows lined with wood mulch/chips without any backing. Wood will become buoyant if flows occur and this technique has questionable efficacy. No concerns at this time as area is very dry but will follow up once fall rains occur. WC 140C1 and J38B.01 KP 527+784 and 527+780 bridge crossing installed. Did not note any delineators nor load ratings on bridge but no concerns with the installation. Grubbing has occurred within 10m of these fish bearing watercourses. BCOGC requests the timing of the pipeline installation to ensure compliance with condition 24 of pipeline permit legacy BCOGC file #9708371. ESC measures in place as per approved WEP and has been inspected by third party monitors (IESCA). Shallow poly lined ditches are to direct water flows to approved sump locations. Noted check dams in place utilizing sandbags without overflow or "V" installation which would slow flows and assist in keeping the flow within the trench. No flow at time of inspection and no concerns but will follow up once flows occur. Structures appear to be temporary due to upcoming pipe installation. Viewed blast at ~KP 524+800 from the recommended safe distance. Owen Bluffs viewed west slope, stripping and grading in process. Significant blasting required to get slope to grade. East slope to grade and ESC measures in place, no concerns noted. WC 134C1 KP 522+527 channel dry at time of inspection, bridge install looked good however no delineators noted. Parrot Creek WC 510 pipe install complete and bed/bank restoration also complete and was advised that willow staking is still to be completed. Bridge install also completed and noted the delineators are not the appropriate type for a bridge crossing. No concerns noted and all crossings were well done. No noncompliance noted during inspection.						South			Pipeline, Road
24-Sep-2022	078230052-001	Foothills Pipe Lines (South B.C.) Ltd.	27-Sep-2022			Yes	Truck	Passed Inspection (Complete)	27-Sep-2022	26-Sep-2022	Routine	Inspection with operator of POD 001 on Michel Creek. POD is active but was not in use on the day of the inspection. Intake and screened box on site, nothing in the water. Discussed screen with operator. Signage is present and permit is located on site. There are no tracking sheets on location and operator states that a specific foreman is assigned to control water trucks and loads. Tracking is maintained with sheets located in the trucks and the foreman keeps a running log of daily totals to ensure no overages. KP 0+900, WL 000.01 travel lane through wetland geo fabric and rig matts. KP 1+100, WC 100, FB, Clear-span with ESC, ESC requires maintenance as discussed with the operator. KP 1+600, WC 102.00, FB, Clear-span with ESC, no concerns noted at the time of the inspection. KP 1+541, WC 001.01, dry channel. Trench dewatering to pig pen. Discussed with operator recommended to use filter bag on the end of the hose inside the secondary containment. KP 3+750, WC 108.00, FB, Matted crossing on travel lane, WC is isolated, with upstream plate and downstream with sandbags and poly, equilibrium by 1 - 3" pump to downstream diffuser, redundancy is in place and fish screening meets requirements. No block nets installed and discussed with the operator, WQM 3 times daily by grab samples at 50 upstream and 10 and 25 downstream. Backfilling of the trench at the time of inspection. Review the plant measurement schematic and plant production accounting meter maintenance records. The CPC instrument technician commented that the measurement schematic from previous operator KELT LNG was being reviewed. It was noted gas analysis for all production accounting gas meters (including FG and Sales) were not being regularly updated and pushed to the EFM. The instrument technician said CPC is aware of this issue and is working on a system to do this. Inspect the plant fire and gas detection HMI safety system display screens - No faults found. Inspect production equipment - No issues to report. Action Items: 1. Flare meter maintenance - Ensure the service provider is performing maintenance as recommended in the product manual. 2. Update all production accounting gas meter analysis for EFM. 3. Review the 2-10-88-23 measurement schematic. Ensure the schematic delineation and meter designation matches plant reporting structure and codes set-up in PETRINEX. Submit revised measurement schematic to the OGC.
