4-Jun-2019	055516938-001	Tourmaline Oil Corp.	5-Jun-2019	20-Jun-2019	DLS: 03-18-080-17	Yes	Truck	Deficiencies Corrected	21-Jun-2019	4-Jun-2019	Planned	Gas Plant Inspection Meet with E&I maintenance, operations, and the area foreman. Review plant accounting meter calibrations. Tourmaline plant meters were being done annually, last calibrations were done June 27, 2018. Discuss recent changes to the Measurement Guideline for gas plant accounting meter maintenance frequency, now semi-annual. The flare meter was recently inspected/serviced May 15-16, 2019. Facility shutdown checks and ESDV servicing were completed during the turn-around May 11- 15 , 2019. PSVs that failed pre-pop 3 years ago were also serviced. The E&I contractor made note and will schedule plant accounting meter calibration/verifications to semi-annual frequency. Verified the condensate tank level transmitters zeroed and were reading correct. Inspect the plant HMI LEL detection screen. Found that Refridgeration Package 1 was missing the propane LEL display faceplate on the HMI. Also noted plant blowdown valves were not on the HMI process screens. Noted that the LEL - local bypass timer max value was 299 minutes (5 hours) and the global bypass timer for fire detection was 5 hours. Request Tourmaline check corporate policy for maximum safety system bypass timer value, and align to corporate policy. Plant attend timer set at 300 minutes. There is a possibility that if operations staff leaves the site without turning LEL or Fire bypass off there would be a period of up to 5 hours were an incident could occur with no notification/callout or action (ESD). Found the purge gas meter to the trainH 1 header reading negative flow. The fuel gas line supplying purge gas to the header was plugged off. Operations staff cleared the blockage and restored purge to the flare header. Found the tanker truck loading NGLs not to be following Tourmaline loading procedure. The tanker wheels were not chocked (only one wheel chock was used and was not engaged against the wheel) Questioned whether the driver was in direct supervision of the loading operation, while sitting in the cab. Action Items: 1. Evaluate the plant PLC programmed settings for Fire and LEL detection bypass timer maximum values. Found max values set to 5 hours. Submit Tourmaline Oil Corporate safety system bypass policy. 2. Submit all plant accounting meter calibrations (2019) , including the flare meter calibration/verification. 3. Consider installing an alarm in the plant PLC to notify the operations staff of no flare header purge flow. Found No flow train #1 flare header- purge flow plugged off. 4. Revise plant accounting meter calibration/verification as per the Measurement Guideline- Since Nov 2018 the calibration/verification frequency has been harmonized with Alberta and Saskatchewan - semi annual. 5. Consider adding plant blowdown valves BDVs and status indication to the plant HMI process display screens. 6. Determine whether the NGL trucking company was following the truck loading procedure. Take corrective actions as required. 7. Ground the spill catchers on the field gathering flow splitter pigging barrels. 8. K-2000-1 repair gas leaks found from Thermal Scan Ventures IR inspection (start gas and fuel gas valve body) . 9. Refrig # 2 V-620B0 -Economizer- Replace missing valve handle on PSV block valve. Please see the items below of concern that are required to be resolved prior to Leave -To- Open. Conduct an Engineering Assessment: 1. Trapped gas between ESDV 6500 (PID 6501) and fuel gas scrubber inlet control valvePV 6510 (PID-6510) on Mode 1 ESD or loss of instrument air. 2. The fuel gas scrubber V-6510 does not appear to have a blowdown valve (BDV) on (PID-6510). 3. The turbine generators do not appear to have a fuel gas ESDV at skid edge outside of the generator building. 4. It does not appear that low pressure fuel gas header can blow down in the event of a Mode 1 ESD (PID-6510 and 6530). Also PV-6511 for the fuel gas low pressure header is a fail closed valve (PID-6510). Please reply to OGC concerning the above engineering assessment items. Thank you,						Central	00026696		Facility, Pipeline, Well

Thank you The access roads to some wells along the Tote Road will need some grading when conditions are appropriate. They are starting to have ruts and channeling water making the rutting worse. 18-Jun-2019	0558414308-001	Black Swan Energy Ltd.	19-Jun-2019	4-Jul-2019	NTS: C 038-C/094-H-04	Yes	Truck	Deficiencies Corrected	22-Jul-2019	18-Jun-2019	Planned	Routine Gas Plant Inspection Meet with the Black Swan c-38-C/94-H-4 plant lead operator. Review plant master car seal/lock list and methodology for recording the installation and removal of locks. Found that there was no record of when locks were installed or removed as part of the plant C-38-C/94-H-4 car seal list. Suggest that this should be reviewed and recorded on a secondary form, then update the master list. On a positive note, the system using locks with individual numbers engraved, made the entire system (the c-38-C/94-H-4 Car Seal List) easily to verify during the Inspection Audit. Discuss the plant accounting meter calibration/verification frequency. Found that Black Swan was not following the Measurement Guideline for Upstream Oil and Gas Operations for plant accounting meter maintenance frequency. Suggest that Black Swan maintenance planners refer to the Measurement Guideline and revise accounting meter PM scheduling to match. When examining meter calibration/verification reports some of the specification of acceptable tolerances were not correct for non delivery point meters. Also were meters do not pass Performance Evaluation (Flow Check) verification a detailed evaluation must be conducted. Inspect plant fire and gas detection displays on the plant HMI screens. Found LEL detector in K-602 reading 7.4 LEL and the H2S detector in the flare KO drum AE-70103 reading 2.23 PPM- slightly off zero. Perform a walk down of plant process equipment. Inspected the LPG tanker loading. Found the Oculus tanker improperly grounded with the Scully Ground permissive ground clamp attached to the aluminum fender of the tanker, and not to the tanker frame ground point. Request Black Swan operations staff follow-up with the trucking company to ensure a safe loading operation. Action items: 1. Review the maintenance requirement for plant accounting meters and ensure they align with the Measurement Guideline for Upstream Oil and Gas Operations Manual. 2. Plant accounting meter level transmitters- Guided Wave Radar- Production tanks and LPG storage- Include in accounting meter PM- keep records of inspection and maintenance. 3. Plant accounting meters- investigate and correct issues that are causing the meters to fail Performance Evaluation verification. 4. Submit the current plant metering schematic - Id all acid gas meters as to whether are production "accounting" or "non accounting" . 5. Plant master Lock List- Record when locks are installed and removed. 6. Gas detection- LEL K-602 - recalibrate. H2s detection AE 70103- recalibrate. AIT- 90601- Clear fault on controller. 18-Jun-2019	0558872562-001	Predator Oil BC Ltd.	20-Jun-2019		NTS: B 021-H/094-A-13	No	Truck	Passed Inspection (Complete)	20-Jun-2019	18-Jun-2019	Planned	COMMENTS: -WA# 18733, b-21-H well has been inactive for approximately 46 months. The pumpjack is still connected to the polish rod, the wellhead valves are chained and locked, but the flowline remains connected. The flowline needs to be disconnected from the wellhead as per the Drilling and Production Regulations. -WA# 20023, b-A21-H well is suspended properly. -The berm around the 750(?) bbl tanks is inadequate, as a portion of steel berm has been replaced by earth berm. I don't think the earthen portion looks like it would contain a liquid, and I would be interested in knowing if the containment area is adequate to hold 110% of the one tank. 20-Jun-2019	0559313394-001	AltaGas Ltd.	21-Jun-2019		NTS: D 058-F/094-B-16	Yes	Truck	Deficiencies Corrected	22-Jul-2019	20-Jun-2019	Planned	Routine Gas Plant Inspection. Meet with operations staff. Review plant master car seal list. Inspect plant accounting meter calibration records. Found that FE-0090 flare meter was last inspected Nov 28, 2017. It was mentioned that the flare meter major inspection/calibration frequency was on a (5) year cycle. There was discussion that plant flare meters were "accounting" meters and inspection/verification frequency is required to meet semi-annual as per the Measurement Guideline. On a positive note Alta Gas was maintaining the Blair 1 and Blair 2 inlet and fuel gas meters on semi-annual frequency. Inspect plant HMI LEL and Fire detection screens- no faults were found. Plant S/D checks were completed June 5, 2019. Perform a walk down to Blair 1 and Blair 2 process piping and equipment. Found that Blair 1 compressors K-800 and K-900 starter gas discharge were venting directly to atmosphere and not tied into the existing flare system. Industry Bulletin 2011-29 - For existing compressor facility installations where natural gas is being utilized as the motive force to start compressors and the gas is being vented directly to atmosphere, the Commission requires the permit holder to conduct and submit a documented review of the current venting practice in relation to the requirements set out in section 41(1) of the OPR. Proposed D&PR/Amendments- Pneumatic compressor starters 52.07 (1) Beginning on January 1, 2022, a facility permit holder who operates a facility that uses a pneumatic compressor starter must ensure that the emissions of natural gas from the compressor starter are(a) routed to hydrocarbon gas conservation equipment, if the facility includes hydrocarbon gas conservation equipment to which the emissions can be routed, or (b) flared in accordance with sections 42 to 44, if the facility includes a flaring system to which the compressor starter can be connected. Action items: 1. Blair 1 compressor starter gas discharge- Review Industry Bulletin 2011-29 and submit plan toOGCPipelines.Facilities@bcogc.ca. 2. Submit plant master car seal list. 3. Submit June 5 2019 Shutdown Inspection report. 4. Gas plant flare meters- Perform maintenance as per the Measurement Guideline for Upstream Oil and Gas Operations - gas plant accounting meters. 5. Submit all recent-last gas plant accounting meter calibration/proving reports and the gas plant measurement schematic.							Central	00007442		Facility, Pipeline, Well
20-Jun-2019	0573318831-001	Coastal GasLink Pipeline Ltd.	25-Aug-2019		From: NTS: A 077-A/103-I-02 To: NTS: A 035-B/103-I-02	Yes	Truck	Passed Inspection (Complete)	25-Aug-2019	20-Jun-2019	Routine	Routine inspection of CGL section 8 pipeline permit 100084230 and roads RW 140 (100101305) and RW 180 (100105457) on June 20, 2019 with Hasla liaison. Visited adjacent mining operations at approximately 0.5km on the Wathl FSR in and around WC 8113. Noted that further works have occurred within WC 8113 that were completed by adjacent quarry (mine) operations, not CGL. Viewed perimeter drainage recently established further up WC 8113 that has potential to induce sedimentation into the watercourse also completed by adjacent mining activities, not CGL. Stopped in and around 13km on N. Hirsch FSR where section 8 pipeline ROW crosses the road in the area that had been impacted by a wildfire earlier in the year and noted machine activity. CGL staff made the OGC aware that they were allowed to disturb the incident site as investigation in the area was complete. Road permit 100105457 (RW 180) under construction during inspection. Erosion and sediment control measures in place and construction ongoing up to CIAS location 4820-6 where it is estimated that a 140 foot bridge installation would occur. Amphibian isolation fencing in place in between CIAS location 4820-6 stream and active construction area. Active drilling and blasting occurring at laydown 39. Inspected road permit 100101305 (RW 140) and CIAS 3282-196 pipeline ROW stream crossing (bridge). Active rock crushing activities in the area. BCOGC inspector asked about PAG rock and was confirmed that testing has occurred and rock is not acid generating. No Non Compliance noted during inspection.							South			Pipeline Project

D&PR 25.(5) then comes into effect. noted below D&PR Inactive or suspended wells 25. (1) In this section: "active" means (a) production, injection or disposal of fluids, (b) drilling or completion operations, and (c) with respect to a well designated under section 2 (7), monitoring reservoir pressure or obtaining other formation information. "inactive" , in relation to a well, means a well that has not been abandoned but (a) has not been active for 12 consecutive months, or (b) if the well is classified as a special sour well, has not been active for 6 consecutive months. (2) The well permit holder of an inactive well must submit a report to the commission within 30 days of the suspension of a well. (3) The well permit holder of a suspended well must establish a program of inspections sufficient to ensure the ongoing integrity of the well. (4) The well permit holder of a suspended well must maintain records of the inspections referred to in subsection (3). (5) The well permit holder of an inactive well, within 60 days of the well becoming inactive, must do both of the following: (a) suspend the well in a manner that ensures the ongoing integrity of the well; (b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means. Records show the 2 - C-Rings have been on site since 2017. The site berm is breached in 3 locations. Please note Sections 51(6)(d) and 51(6)(l) of the Drilling and Production Regulation. 51(6) A well permit holder who uses an above ground structure with a liner as the primary means of containment to store water-based fluids with a concentration of total dissolved solids greater than 4 000 ppm must ensure that, (d) before the structure is used, a qualified professional verifies that contained fluids will not migrate beyond the lease boundary in the event of a complete containment failure, (l) the structure is decommissioned and removed from the site within one year from the date of first use unless there exists an engineered, lined or otherwise impermeable secondary containment system designed and maintained to be capable of holding a minimum of 110% of the fluid in the structure. Please provide the following information to OGC by July 10, 2019, 1. What is the planned future use for these C-rings? Observations - the C-rings are holding ~1' of fluid each. Residue and particulates in the fluid. It does not appear the units were cleaned after use. A hose pipeline is established at the C-rings and along the lease and up the road. Comment used for H2S detection - does not meet the requirements of D&PR 39(4) or 39(5) and the system is not included in the "leak detection and control system" in Kermit. Please analyze the soil at surface and at a depth of approximately 30 cm for the following parameters: detailed salinity, BTEX, LEPH/HEPH and CSR metals. Report to be sent to OGC The report prepared by Matrix Solutions, entitled '2016 Flare Stack Assessment CNRL Et Al Inga 13-07 Well Site, 13-07-88-23 W6M', was received by the Commission, in September 2016, by request, through Canadian Natural's Compliance Coordinator. The Commission requires the permit holder to establish a means to prevent access to the entire impacted area identified in the above report by October 31, 2016. Please submit an update and photos when the issue has been addressed." Why has the fencing been removed? Evidence of animal activity is present inside the flare/bermed area. Please provide documentation that the impacted area has been remediated or confirmation that the access control measures have been reestablished around the impacted area to OGC by July 18, 2019 at 12:00 pm. 17-Jul-2019	0574543848-001	LNG Canada Development Inc.	27-Aug-2019				Yes	Truck	Passed Inspection (Complete)	27-Aug-2019	17-Jul-2019	Incident	Incident follow up on hydrocarbon like substance that was discovered salvaging fish in southern section of Ab-3 wetland. Routine inspection of North Haul road brushing activities, Kitimat river water intake and overall water sustainability act authorizations on July 17, 2019. No impact as yet on the crown land authorization in NE corner nor on the gate five archeology site. Complexeig commencing in Kitimat river side channel reconstruction. Burm 2 had topsoil placed over riprap on one corner, LNG Canada asked to mitigate potential for sedimentation to adjacent watercourse. Incident site is on Rio Tinto Alcan lease area. Incident is isolated with very little water in the wetland and adjacent culvert has been sandbagged. LNG Canada to update once further activities in the area occur (if necessary). Fish salvage ongoing with the tributaries to Anderson creek and a 1/2 stream bypass under construction for future bridge location. Inspected the North Haul road for brushing and grubbing activities adjacent to roadside, ESC fence in place to prevent sedimentation into adjacent stream. Viewed Kitimat river water intake location and discussed future activities in that area. No non compliance noted.							South			Pipeline, Road

29-Jul-2019	0567807762-001	ConocoPhillips Canada Resources Corp.	30-Jul-2019		NTS: C 011-K/094-A-12	Yes	Truck	Passed Inspection (Complete)	30-Jul-2019	29-Jul-2019	Planned	Measurement Inspection -Review prepared gas plant accounting meter documentation and inspect ABB- RMC-100 configuration. Found that "Flow check' Performance evaluations for the gas plant gas meters were not documented completely. The Flow Check Reports were missing the EFM % Difference , Volume and the Set-up (page 2) , Fluid properties (analysis), and the P&T values used to do the flow calculation. The prepared documentation was also missing the ABB-RMC-100 System Parameter Configuration Reports for each plant accounting meter run. Found that FE-1010 and FE-1020 inlet separator Mag Flow meter pulse outputs were not being read by the ABB-RMC-100 input at the high output frequency at the upper flow range. Also found that conversion factors to convert pulse/m3 to pulse/US Gal were not entered in the ABB meter run configuration exactly, rounding errors in the conversion factors lead to unacceptable errors in the indicated flow. The conversion factors were corrected and entered in to yield the best results. Discuss revisions that are required to correct the plant measurement schematic, "accounting" vs "non accounting" meter designations. Action Items: 1. Upon completion of construction of the plant and within 30 days of commencing operations, the permit holder must provide (to the satisfaction of the Commission) the following: Prepare an electronic version and assemble a binder with all accounting meters indexed with printed copies of the documentation listed below. Include: a) copies of all electronic accounting meter volume configurations. b) copies of calibration reports for all accounting meters and/or, transmitters used in the determination of accounting volumes. c) copies of gas and liquid analysis used in the determination of volumes for accounting meters at start up. d) Manufactures calibration certifications. e) Vendor commissioning reports (if applicable- eg flare/incinerator metering). f) EFM Reports with system parameters. g) Full "Flowcheck" Reports for all plant accounting gas meters. 2. Repair issue with the pulse output from the inlet water meters(FE1010 and FE1020) not being read by the ABB-RMC-100 input at upper end of flow range. 3. Submit a revised gas plant measurement schematic, showing correct "accounting " vs "non accounting" meter designations. 4. Prior to commencing operations provide a gathering system schematic, indicating BC BT delineation boundaries, and confirm PETRINEX reporting configuration for the legacy wells feeding into the plant, and de-linking of wells to d-87-J and d-50-C compressor sites if that is the plan. 5. Provide confirmation on how the plant acid gas stream will be reported in to PETRINEX. 6. Plant Roots PD Meters - Install metal tag on the meter with meter ID and date of installation. 7. Plant accounting Coriolis Meters- Perform smart meter verification with the meter tube full blocked flow. Perform initial meter proving with high accuracy meter prover. Submit initial reports to the OGC. 8. Within the first month of operation update the gas analysis of all plant accounting gas meters. 9. Within 3 months of operation prove the plant inlet water meters FE-1010 and FE-1020 and submit proving reports. 10. At the time of the plant flare system start-up ensure that the purge gas rates in the flare headers are set as per engineered specifications. Ensure the purge gas is not measured by the flare meter and the low flow cut-off is set correctly.							Central	00026696		Facility, Pipeline, Well

Find that there were critical "A" punch items remaining. Some of the remaining "A" punch list items were on the water treatment plant, the plant analyser building EGM-75, the amine building H2S analyser AIT-2030 (eg. loop checks not complete), and the amine air cooler that requires hydro testing. The Waste Discharge Permit also had not been issued at this time for CPC to commence operations. Witness a satisfactory Mode 1 emergency shutdown test. Verified that plant emergency block valves and blowdown valves operated and traveled to the correct positions as per the plant shutdown key logic, when a fire-eye (detector) in the power generation building was triggered. Determine that mechanical, electrical, instrumentation and controls were substantially complete to allow CPC to introduce gas into the Plant fuel gas system to commision the utility systems, the power generation equipment, and to purge and pressurize the plant process piping and equipment in preparation for the commencement of operations. Once all " A" punch list items are complete, and the Waste Discharge Permit is in place, please arrange for the final Leave-To-Open Inspection. Thank you,							Central	00026696		Facility, Pipeline, Well

29-Jul-2019	0568809572-001	Black Swan Energy Ltd.	6-Aug-2019		NTS: C 045-D/094-H-04	No	Truck	Passed Inspection (Complete)	6-Aug-2019	29-Jul-2019	Planned	COMMENTS: -Ensure that the lids on the chemical injection pumps remain in place (c-A45-D well) when in use. This is deemed a hazard as there are moving parts when the pump is in use. -the fencing around the water pits is falling down, or being pushed down by wildlife accessing the water. In many places its pushed down to only 2'-3' high. This is not preventing access. -All location signage is required to have a flammable symbol on it "if the well may produce flammable gas". So, basically all location signage at wellsites would require a flammable symbol. The sign at the lease entrance has a flammable symbol, but none of the signs at the wells have the symbol . Review prepared QC documentation for selected fabricated piping spools (Weld Control # 11081D-A, 11451A-B, and 23151A-A) for compliance with ASME B31.3 Code. All items on the BC Oil and Gas Commission Facility B31.3 Code Check List were satisfactory. No issues were found. The QC documentation was well organized and indexed, which facilitated a smooth Audit process. Action Item: 1. Submit a statement for the inspection of structural steel along with a Civil PID sheet with mark-ups as an example to show how structural welds were inspected (ie: demonstrate a system for record of the inspection). 3-Aug-2019	0570001133-001	FortisBC Energy Inc.	11-Aug-2019		NTS: C 061-H/092-G-03	Yes	Truck	Passed Inspection (Complete)	11-Aug-2019	3-May-2019	Routine	Routine inspection of Tilbury LNG facility #COGC legacy file 9707946 AD#100079790 on May 3, 2019. Transfer of control training ongoing, lock out tag out and hot work procedures inspected. Reviewed tanker loading procedure and also checked a walkthrough field hazard assessment that had been completed and checked. Inspected all ERP's to confirm they could be easily located, that they were current and have the same issue date. Practice tests and drills are being completed in house to prepare for transfer of control. No issues noted during inspection.						South	00017977		Facility, Pipeline, Well

6-Aug-2019	0568868803-001	Black Swan Energy Ltd.	7-Aug-2019		NTS: C 046-C/094-H-04	Yes	Truck	Deficiencies Corrected	13-Aug-2019	6-Aug-2019	Planned	Construction Inspection Meet with ALLARDYCE BOWER CONSULTING INC. Review B31.3 Audit Check List and Process Piping Mechanical Document QA Inspection List to assist in Black Swan in the preparation of Audit material. Choose vendor packages for mechanical Q/A; (2) Compass packages (K-609-Acid Gas Compressor, K-601 Process Compressor), and (1) KPS Sales Fuel Gas Building. Request Q/A examples for (3) welds from Furlong for manufactured piping spools (ANSI Class 150, 300, 600). For the on-site welding - request Q/A examples for (3) fit-up repairs. Discuss the need for the On-site Owner's Inspector to do spot checks on welders doing the repairs, that they are following the WPS, using correct the filler material and proper care of welding rods is adhered to. Request the On-site Owners Inspector complete a daily Surveillance Report. Do a site tour, walk through various process areas and buildings. Inspect Centarus CNG trailers and temporary fuel gas hook-up to commission Finning generator packages. The Finning mechanics were on site and had just finished tests for Generator 301. Found that there was gas leak on one coupling on the low pressure fuel gas supply line. Found that the Centarus LP Fuel Gas Trailer fuel gas discharge PSV pressure setting (175 PSI) was set above the Max pressure (150 PSI) of the Fisher Type 299IH regulator for the generator fuel gas. There was an electronic high discharge pressure shutdown (set at 135 PSI) on the Centarus LP trailer. Reference D&PB 7B1.1); a sound engineering practice is to use a mechanical shutdown (PSV), rather than rely on an electronic shutdown. Request the Centarus LP trailer discharge PSV setting be lowered to 150 PSI to protect the Finning generator fuel gas regulator. Request calibration records for the shutdowns associated with the Centarus CNG trailers. Found instrument regulators operating on fuel gas not vented safely outside of the trailer. Verify that the Centarus CNG trailers were electrically grounded, and temporary gas leak detection equipment was used. Action Items: 1. Lower the Centarus CNG LP trailer discharge pressure PSV setting to 150 PSI. 2. Provide reports that show recent calibration and testing of emergency shutdowns on the Centarus CNG trailers. 3. For the Mechanical QA Audit - provide a description of the weld location, the piping Line List number, and weld number on the weld map. 4. Provide a mechanical stress analysis report example in the with the mechanical QA Audit documentation. 5. Once the On-site welding is complete and all other mechanical Q/A documentation is organized, upload the documentation to the pre-designated FTP site, and arrange a date to do the Audit. 12-Aug-2019	0570781600-001	ARC Resources Ltd.	14-Aug-2019		DLS: 03-18-081-16	Yes	Truck	Passed Inspection (Complete)	14-Aug-2019	12-Aug-2019	Audit	3-18-81-16 Arc Resources OGC Pilot Project - Production Accounting Audit Travel to site. Conduct an inspection of all production accounting meter installations, wellhead, test and group, gas meter transmitter calibrations, hydrocarbon liquid and produced water meter proving. Found that there were some errors recording the orifice meter run upstream ID on the Reports that were attached to the meter runs. Need to verify the " Clear- SCADA" orifice meter run parameters, by reviewing PDF configuration reports. Will also need to verify if the hydrocarbon and produced water meters are pulse output, that the K-factors in the transmitters match those K-factors that are programmed in to the "Clear -SCADA." Review Arc Resources first data submission for April 2 - June 30, 2019 to the Commission. Findings : 1. The Group Separator- Hysis calculated shrinkage differed from lab shrinkage analysis by 6.14 % 2. The Group Separator Hysis calculated GIS Factor differed from the lab GIS factor by 9.32 % 3. Group Separator lab shrinkage and GIS factors were not applied to production volumes for 36 days 4. NJ\ 3-18 Well test Separator Hysis calculated shrinkage differed from the lab shrinkage factor by -64.61 % 5. NJ\ 3-18 Well test Separator Hysis calculated GIS factor differed from the lab shrinkage factor by - 44.92 % 6. The test separator lab shrinkage and GIS factors were not applied to production volumes for 40 days. 7. No production accounting steps taken to correct volumetric data that is being reported based on initial Hysis calculated GIS and shrinkage factors. 8. The test separator - it appears from test data that there is no water cut done before applying shrinkage, (water cut analyser or proportional sample required). 9. The interpretation Tab on the excel spread sheet is missing proration comparison percentage differences for May and June. Action items: 1. Develop production accounting methods to address all findings. 2. For all production accounting meters - submit "Clear- SCADA " PDF version of the system parameter configuration report (one report /meter). 3. Arrange for a meeting to review production accounting procedures.								South	00026835		Facility, Pipeline, Well

Permanent road repairs occurring on the West Morice FSR during inspection and rig mats being removed in some areas once repairs are complete. Discussions on wildlife deterrents and procedures at camp 9A. I was informed that the Shea road turns into Canfor Road permit at 8km. Bridge repairs discussed on the Canfor RP road and follow up photos of bridge repairs were provided by CGL. Fuel handling discussed and cache at the end of the Shae road (~25km) being relocated at the time of inspection. Streams within the pipeline ROW have been crossed with corduroy and matting, some matting showing signs of wear but no debris noted in the streams. Noted that only the wildlife monitors are allowed to carry firearms, not the security personnel. Continued with investigation of potential non compliance with ROW clearing from KP 585+700 to 586+300.											South			Pipeline, Road

Need to work on silt fence installation practices (straw socks are not being staked in the ground properly. There are some concerns about the potential for mineral soil/silt laden water going off site. This has not happened yet but the potential is there in the future. Concerns about top soil being stripped behind the top soil storage piles and permitted area boundaries. Water is collecting in these areas and is silt laden.						South			Pipeline, Road
21-Aug-2019	0575631161-001	Shell Canada Limited	13-Sep-2019		DLS: 11-20-080-18	No	Truck	Passed Inspection (Complete)	13-Sep-2019	29-Aug-2019	Planned	Multi-use site SB area B - Campsite Culvert on in-site access on NCD needs to be replaced as it is blocked and water is starting to backup near site boundary. Filter bag was on hose at dewatering point, no erosion/siltation noted. There are some concerns with the site drainage and grade. These concerns are regarding how the site will shed water and what the plan is for pooled water in the future. It appears that drainage on site was not built using laser/GPS equipment. Some of these drainage features appear to flow to areas where they will pool and not follow the natural drainage patterns of the landscape. Multi-use site SB area A - Storage area There are some concerns with erosion control on this site. TC is trying new methods to mitigate these going forward. There were 2 areas where the silt fences didn't hold up and mineral soil moved off the permitted area. These areas were cleaned up and rock guard/silt fences were re-installed. Review the facility Permit conditions Job# 0142464457-001. Inspect prepared documentation for plant accounting meter volume configurations, and calibrations, as per condition 8. Two meter calibration forms were provided. Noted that the Petronas Electronic Gas Meter Calibration Report was missing the serial number for the calibration equipment used, A serial number is required to trace the calibration instrument back to the laboratory calibration certificate. The Techmation Controls EFM Calibration Report contained the calibration equipment information with a serial number which was traceable back to the laboratory calibration certificate . The accounting meter transmitter calibrations were validated using the Techmation EFM Report. Perform a walk down and inspect production accounting meter runs. Witness pulse tests for the inlet condensate turbine meters (FE-1003, FE-1053, FQIT 1125) back to the Fisher ROC 800. Inspect the configuration of all production accounting meters in the Fisher ROC. Two (2) corrections were made, one on FE-1008 and one on FE-6905 on the pipe diameter.Two (2) corrections were made on the Techmation EFM Calibration Reports, one on FE-6902 and one on FE-6903. These corrections were done at the time of the inspection. Overall - a high level of quality was achieved. Recommendation: 1. Petronas EFM Calibration Report- include the serial number on the report in the information for the calibration instrument used.						Central	00018229		Facility, Pipeline, Well

22-Aug-2019	057453283-001	Trans Mountain Pipeline ULC	27-Aug-2019			Yes	Truck	Passed Inspection (Complete)	27-Aug-2019	22-Aug-2019	Incident	South side work area looks good no concerns. POD #2 has no issues, water is being metered at POD location (364.14m3) were metered at the time of the inspection. North side work area looks good 24" ream was underway during time of inspection. Drilling fluid release area was inspected and initial cleanup was complete. Area was logged and matted to access the fluid loss location, with a vac truck on standby in the case of further fluid losses. 74m3 of fluid were unaccounted for, with 30m3 being recovered during the clean up and 44m3 remaining in the formation. The area of origin was not determined during the cleanup. Monitoring will be increased during reaming operations to ensure any losses remain contained. Containment area in the side channel looks good. Final clean up will occur after the pipe has been installed under the North Thompson River. A follow up inspection will occur after this.						South			Pipeline, Road
23-Aug-2019	057357701-001	Black Swan Energy Ltd.	25-Aug-2019		NTS: C 046-C/094-H-04	Yes	Truck	Passed Inspection (Complete)	25-Aug-2019	23-Aug-2019	Planned	Measurement Inspection Meet with Black Swan operations staff and Allardyce Bower Consulting managing the plant construction. Review prepared documentation for the inspection of production accounting meter construction, volume calibrations, configurations, and production accounting designation for reporting into PETRINEX. Production accounting orifice meter runs - Found that : FE- 16218, FE-16213, FE-16210, FE-16230, and FE-16225 meter run upstream diameters " dr" were not recorded on the calibration reports and were not entered correctly into the plant PLC meter run system parameters. The orifice meter run upstream pipe diameters were corrected in the PLC at the time of the inspection. The calibration reports will be required to be revised and associated Flow Checks re-done using the correct parameters. A few potential errors on the designation of plant accounting meters for the reporting into PETRINIX were found (sweep gas meters, NGL bullet, condensate, and produced water tank level transmitters). Also the designation concerning the condensate and water measurement for prioration from the gas multi-well effluent battery (group point) delivering to the plant. If the group point is the inlet separator V-100, then FE- 10013 condensate out and FE-10017 water out are production accounting meters. Please confirm, if so, manufacture certifications (initial proving reports), PLC configurations (screen shots), are required to be added to the measurement binder, meter run tagging and sample points identified ect..., and to update the plant accounting meter table and the measurement schematic. Action Items : 1. Correct the discrepancies in the Flow Check reports concerning the entry of the upstream pipe diameter and add missing information on the calibration reports concerning orifice meter run upstream diameters- "dr" as stamped on the meter run data plate. 2. Submit meter calibration test equipment laboratory calibration certification - found missing - Required to validate production accounting meter calibrations via test equipment serial number recorded production accounting meter calibration reports. 3.Submit flare meter - Technician " on-site" commissioning report + PDF version of flare meter configuration with low flow cut-off on the PDF configuration report. 4. Verify all meter table meter designations for reporting into PETRINEX - The flare sweep gas meters (2 stage reporting flare measurement), LPG bullet and condensate and PW (production tanks level transmitters for reporting into PETRINEX (gas plant month opening and closing inventories), and V-100 inlet condensate and water meters FE-10013 and FE-10017 . If determined to be production accounting meters, calibration and Flow Check reports for the sweep gas meters, and calibration/configuration reports for NGL bulet and production tank level transmitters will be required. Revise the plant measurement schematic and meter table as required. 5. Plant ultrasonic sales meter and analyser - PA meter- delivery point - sampling + calibration and verification of transmitters + 7 year calibration to Trans Canada Calibrations = submit maintenance plan(s). Lock out tag says Feb. /2018.Some wiring disconnected. Inlet separator inactive. Compressor removed. One of two generators removed. Inlet ESD disconnected. Some piles cut and piled. Waste oil tank. Line heater. Pump building. Tank farm in "C" ring containment. Two flares with one above ground knockout and one buried knockout. MCC/office building. Site is fenced with open gate. Status in KERMIT is "active." CNRL must submit proper paperwork through eSubmission to indicate "suspended."						North	00009078		Facility, Pipeline, Well
26-Aug-2019	057399559-001	ARC Resources Ltd.	26-Aug-2019		DLS: 05-35-079-14	Yes	Truck	Passed Inspection (Complete)	26-Aug-2019	26-Aug-2019	Audit	Arc Resources S-35-79-14 Liquids Upgrade ASME B31.3 " Vendor" and "Shop" Fabrication QC Audit Review Vendor QC documentation for : Alco- Sour Condensate Stabilizer Packages (Skid A and Skid B) , Argo- VRU Separator, and CSM- Pump Package. Cornerstone Engineering provided very thorough, very detailed shop inspection reports. These packages have Construction Data Reports and are registered with ABSA. Meet with Alstar Oilfield Contractors LTD for the audit of " shop" fabricated pressure piping at the Arc Resources Dawson Creek office. Shop weld QC examples were provided for PWHT Spool- 273-PG-DC-065 (Spool 8A), Stainless Spool LSHH on Condensate Tank TK01A0, Internally coated PW line # 89-PW-ES-265-38H-GT-IC (CN 36A), and a Sockolet with a gap shot (Process Heat Medium) Line # 60-PHMS-A-711-38H (CN 562A). The OGC Facility B31.3 Piping Verification Checklist was used to evaluate. Alstar Oilfield demonstrated an exceptionally high level of QC with a shop repair rate of 0.16 % with no NCRs recorded. One innovative QC feature was noted on the Alstar Oilfield Pressure Welders Log - Log AOC-QAQC-3074-0 - The cell with the welders PQ expiry would turn orange in color when the welder was coming due to requalify again. There is some follow-up information required to complete this portion of the audit. The Commission would like to verify that the following items are being inspected by the Owners inspector: ASME B31.3 Code reference default - "Normal" Fluid Service. See M328.3, K328.2 for other services, See A328.3 for Bonding Materials; Sub-sections include: 328.3.1 Electrodes and Filler Metal. ASME B31.3 Code reference default - "Normal" Fluid Service. See K328.4, U328.4 for other services, See A328.4 for Bonding preparation. Sub-sections include: 328.4.1 Cleaning, 328.4.2 End Preparation, 328.4.3 Alignment. See Fig.328.2 for Typical Butt Weld End Preparation details, 328.3.2 Weld Backing Material, 328.3.3 Consumable Inserts Action Items: 1. Submit - Arc Resources Owners Inspector - "shop" surveillance reports (3 reports as examples). 2. Once job is complete - Arc Resources Owners Inspector- Sign-off and submit complete Alstar Oilfield ITP. 3. Submit- Buffalo's approved procedure for NDE inspection. 27-Aug-2019	0S7480948-001	ConocoPhillips Canada Resources Corp.	27-Aug-2019		NTS: C 011-K/094-A-12	No	Truck	Passed Inspection (Complete)	27-Aug-2019	27-Aug-2019	Planned	Measurement Inspection Meet with EPFC construction and commissioning team. Review the plant measurement schematic. Found some graphical miss representation (not matching process piping). The Cambrian FG supply connects downstream of the sales reference meter and there is a bypass line downstream of the sales meter that connects to FE1699. Confirmed with EPFC that plant accounting meters with pulse outputs (excluding compressor fuel gas Roots meters) have had pull-up resistors installed and have been pulse checked back to the DCS at an output frequency greater than the max frequency at the stated upper measuring range value. Perform a walk down and inspect production accounting meter runs. Inspect meter and sample point field tagging. Found that FE-2814 was tagged in the field incorrectly as an accounting meter. Verified that Flow Checks were done for gas meters. Verified that a daily flare log was being kept and that flared volumes during the commissioning process were being logged. Verified that Roots meters were tagged in the field with the installation date for future inspection as PD fuel gas meters have a seven year maintenance cycle. Verify orifice meter run pipe diameter in the ABB DCS. Act 1) Update the screen shots in the prepared measurement binder showing the orifice meter size in the plant DCS meter configuration information that did not match the orifice size on the EPFC reports for FE-1018, FE-1028, and FE-2814. Verify the correct orifice plate size in the DCS. 2) Ultrasonic meters FIT -6036, FIT- 6050, and FIT 6006 the low flow cut-off was set below the manufacturer's lower measuring range value of 0.03 m/s. The manufacture does not published a measurement uncertainty for the measurement of a gas velocity below 0.03 m/s. The meter can not be measuring flow outside of it's the stated manufacture measuring range. Set the low flow cut-off in the ultrasonic meters as per the manufacturer's stated lower range value. 3) Inlet separator water meters (FE-1010 and FE1020) are identified as production accounting meters do not have proving taps. How are they going to be proved? The Measurement Guideline states: 2.8. Water Meters If a meter is used to measure water production, injection, or disposal or injection or disposal of other water-based fluids, the meter must be proved: 1) Within the first three months of operation. The meter factor may be assumed to be 1.0000 until the first proving is conducted. 2) Annually thereafter. 4) Complete commissioning/calibration work on the analyzers in the in the plant Analyzer Building. Also the Ametek - H2S Analyzer on the amine filter to sales compressor has not been calibrated, and nily outputs to the DCS that imitate a Mode 2 block and hold have not been commissioned. These analyzers will be required to be fully commissioned and functional for an unconditional plant LTO approval. 5) Investigate if AGA3 2012 can be used to calculate gas flows rather than the older version AGA3- 1992. If there are no issues and AGA3 -2000 meter runs are used, then use the most recent version of AGA 3 to compute gas flows.						Central	00026696		Facility, Pipeline, Well

28-Aug-2019	0S7491834-001	Black Swan Energy Ltd.	29-Aug-2019		NTS: C 046-C/094-H-04	Yes	Truck	Passed Inspection (Complete)	29-Aug-2019	28-Aug-2019	Planned	Leave-To-Open Inspection AD # 100103539 Meet with Allardyce Bower Consulting. Review the gas plant Technical Facility Permissions. Review the Waste Discharge Permit. Confirm the Facility start-up meeting was conducted Aug 20, 2019 and Post HAZOP IFC drawings had been received by the OGC Facilities Branch and reviewed on Oct 11, 2018. Completed the plant measurement inspection and verified that production accounting meter designations were correct, (meter table and schematic) - Recommend showing the PA meters on the meter schematic as a different color. Verified that there was a (2) stage flare measurement and reporting strategy used, and that the ultrasonic meter low-flow cut-off matched the lower measuring range of the meter (entered into the PLC). Confirmed that all production accounting meters and sample points were physically tagged in the field for inspection purpose.Confirmed the Black Swan Start-up Procedure and Commissioning Plan documents were completed. Received the plant S/D logic Key and Plant Master Car Seal List. Confirmed written records will be kept for the acid gas compressors, VRU, plant recycle compressors, and the annually operating efficiency will be tracked. Confirmed that a Pre-Start-up Safety Review was conducted and all shutdown systems were commissioned and tested on Aug 26, 2019. Inspect that dilution gas control for acid gas to HP flare was complete. Witness V-60853 dilution gas control valve stroke via the dilution gas controller output. Review electrical + instrumentation, mechanical, process control declarations of completeness. Electrically there was some heat trace wiring still left. Verified that all electrical seals in hazardous areas were packed and poured. Verified all bolt-ups and torques of flanges were complete and signed off - no " A" deficiencies remained. Verified all safety devices (Fire, LEL, H2S, Smoke + Manual PBs) were functional - No faults on the HMI. Perform a walk down on process piping and equipment. Verify that locks and car seals were in place on safety devices, as required. Witness a satisfactory Mode 1 ESD test when a fire-eye in K-601- AIT 8SH- 20202 was triggered. Noted that there was a potential for trapped gas on the downstream side of MOVs 21306 and 21406, to the inlet compressor suction header, and up to the inlets of the compressors, if the MOV 21306 and MOV 21406 were both in the closed position and a Mode 1 ESD occurred. Black Swan agreed to lock the MOVs open until the risk case is examined that the MOP of the piping could not be exceeded due the expansion of gas and hydrocarbon liquids (vapour) from external heat input due to fire impingement on the inlet compression suction header piping. Action Items: 1. Perform a HAZOP on the trapped gas case as mentioned above, and submit the results to the Commission. 2. Submit the manufacturers certifications for the sweep gas meters. 3. Add the plant gas design compositional analysis for gas, hydrocarbon liquids, and acid gas streams to the OGC Measurement Binder. 4. Submit a revised " As-built plant Master Carseal List post start-up.						Central	00026623		Facility, Pipeline, Well

Review the Facilities Technical Permissions. Verify that the Facilities conditions were met, or will be met once the plant is in operation. CPC to perform final PSSR Sept 19/19 and Primacy transfer Sept 23/19. One "A" deficiency remained. The VRU-1 Lube Oil Cooler had a leak, and a replacement was on order. Estimated delivery for the replacement cooler is Sept 11/19. The Planned Plant Start-up is Sept 26/19. Review Facility/Plant Start-up List. Verify that production accounting meter configuration, and field tagging issues were resolved. Perform a plant walkdown of process piping and equipment. Noted that some CPC water treatment equipment required commissioning work to be completed. Witness a control test of the plant trip to recycle and block and hold function when a 19.8 PPM sample of H2S was sampled by H2S analyzer AIT-2030 in the Amine Building. Verify that there was LP Flare Makeup Gas Control (FIC-6021) built in the plant DCS to maintain a minimum heating value of 20 MJ/m3 as per the Waste Discharge Permit. Action Items: 1. Submit final PSSR. 2. Submit analyzer commissioning reports. 3. Update FIC- 6021 LHV values (fuel gas + acid gas) once sales commence. 4. Ensure an air monitoring program is in place as per section 4.1 of the Waste Discharge Permit. 5. Submit "most up-to-date" plant car seal list once operations commence. 7. Corporate Policy- Evaluate the maximum bypass timer setting on safety systems (Fire, LEL, & H2S detection). Current bypass timer maximum set @ 600 minutes. Submit Corporate Safety System Policy for review. 8. Spill catcher LPG Load + Vapour return- complete grounding work. 9. Complete WHMIS identification of process lines and production tanks. 10. Propane Accumulator- Supply a truck loading ground strap and a load procedure sign. 11. Ensure all Cata-dyne heaters are installed with vent hoods and vented outdoors. 12. Amine H2S Analyzer- AIT 2030 - Determine a setpoint for the plant block, hold, and recycle as not to exceed the TC Energy pipeline maximum H2S specification. 3-Sep-2019	05765213 3-001	Black Swan Energy Ltd.	3-Sep-2019		NTS: C 038-C/094-H-04	No	Truck	Passed Inspection (Complete)	3-Sep-2019	3-Sep-2019	Audit	Measurement and Production Accounting Audit As per the OGC 2019 Executive Business Plan, Black Swan Energy Ltd. has been selected for a production accounting audit for the wells connected to the gas multiwell effluent battery delivering to the c-38-C/94-H-4 gas plant. The audit will focus on the Measurement Guideline Chapter 6 requirements for well testing, sampling, effluent correction factor determination, for volume correction and allocation for reporting purpose for the wells. 1.Submit the PETRINEX codes (BCBT and gas plant) for the gas multiwell effluent proration battery delivering the c-38-C/94-H-4 gas plant and list all wells connected to the proration battery. 2. As per Chapter 6 section 6.3.3(3) Submit confirmation (proof) that initial well test datawas submitted to the eSubmission Portal as outlined in the "Well Testing and Reporting Requirements Guideline" found at Well Testing and Reporting Requirements Guide." 3. As per Chapter 6 section 6.3.3(6) Submit records, reports, spread sheets that show each new well must be tested not fewer than once per month with each test being a minimum 12-hour duration. Monthly testing must continue until the difference of the last 3 consecutive ECF tests are within 5%. Upon meeting this condition, the testing period may be extended to once every 6 months as long as the last 3 consecutive ECF tests continue to remain within 5 % and battery/facility group proration targets 0.95000 to 1.05000 are met, else revert back to monthly or more frequent testing. If two consecutive tests indicate that the LGR has dropped below 0.280 m3/e3m3 then the well testing frequency in the Well Testing Decision Tree section 6.5.3 will apply. The methodology for determining the ECF difference is: Average ECF from last 3 tests – Smallest ECF (from last 3 tests) ---------- Average ECF of the last 3 tests 4. Measurement Guideline section 6.3.3(7) Submit records, reports, that show each well and the group separator must be sampled as outlined in section 8.4 to obtain an analysis of gas and hydrocarbon liquids (condensate). The gas and condensate analysis for individual wells must be used to calculate the well gas and condensate gas equivalent volumes. The group gas and condensate analysis must be used to calculate the group gas and condensate gas equivalent volumes.						Central	00018237		Facility, Pipeline, Well

Review the gas plant approval conditions, and verify that the conditions were met. Verify that items on the Facility/Gas Plant Inspection List were completed. Verified locks/car seals were in place as required. Verified all safety systems were functional and there were no faults on LEL, and Fire detection systems. Perform a walkdown of process piping and equipment. Witness a mode 1 ESD function test when a fire-eye AT-1804 in the De-ethanizer Overheads Compressor was triggered with a UVIR test lamp. The plant is waiting for inlet and sales pipelines to be completed. Expected start-up by the end of September. N2 purging to commence Sept 6 th. Technical Safety has requested that the glycol and hot oil boiler fuel gas trains be locked out until a field inspection can be conducted. The Commission requested that operational locks be installed at the first isolation valve upstream on the boiler fuel gas trains to comply with the Technical Safety requirement. Petronas is scheduled to perform a Pre-Start-up Safety Review (PSSR) of process piping and equipment on Sept 11 th. Action Items: 1. Submit the PSSR 2. Submit Flare Log Sheet. 3. Submit Purge Procedure and Start-up Plan. 4. BDV- 1057 - Install a position indicator on the valve stem. 5. Flare KO Building- Move the instrumentation vent away to at least 1 meter from the window. 6. K-1390- Sales Coalescer- repair the safety chain on the filter man-door. 6-Sep-2019	0577947?3-001	Canadian Natural Resources Limited	9-Sep-2019		NTS: B 002-G/094-A-13	No	Truck	Passed Inspection (Complete)	9-Sep-2019	6-Sep-2019	Planned	COMMENTS: -Arrived at site to find the depression around the wellhead, which is approx. 8 feet diameter, full of water and what looked to be oil sludge. The lease is quite wet from local rains and has water running off lease. My concern is if more rain arrives in the area, the depression will overflow, and the oil water mixture with flow off lease. I called operator and give him my information and findings. He sent a CNRL employee to verify. called me back to say he was having a vac truck sent to site to clean up around wellhead. CNRL employee was also going to check the SCV for a flow. Maybe the oily substance was from a SCVF? This well has been suspended since November 2017. Sent me a pic showing the mess to be cleaned up. He will follow up with a SCVF test, and is also having the water on lease tested for contaminants.						Central		04146	Well

11-Sep-2019	057943060-001	PETRONAS Energy Canada Ltd.	12-Sep-2019			No	ATV/Snow Machine	Passed Inspection (Complete)	12-Sep-2019	12-Sep-2019	Planned	The radio frequency and name sign for this road (#3980 segment 1) was knocked over this past winter and should be stood up or removed if it was meant to be a temporary measure while the well site was being reclaimed. The OGC inspectors removed a length of discarded geotextile in proximity to the Horseshoe Creek crossing. There were no issues noted with the removal of the stream crossing that was installed and removed this past winter. Of note, we were not able to cross Horseshoe Creek due to water velocities. The initial intent was to inspect the work that has been completed on the c-49-H / 94-B-10 well site and the remaining length of the access.						Central			Road

One is equipped with a pressure gauge. Wellhead valves all disabled. Flowline isolated from wellhead and pipeline. Surface equipment remaining: above ground piping, meter enclosure, esdv, wellhead, pipeline risers. OGC by October 25, 2019.						Central	00022860	22912	Facility, Pipeline, Well
11-Sep-2019	058022225-001	Canadian Natural Resources Limited	17-Sep-2019		NTS: D 043-H/094-B-10	No	Truck	Passed Inspection (Complete)	17-Sep-2019	17-Sep-2019	Follow Up	While in the area I checked the fencing for livestock exclusion. The following are some observations noted on that day. The fence has had the top barbed wire broken off in 4 spots due to moose and perhaps other animals entering the site (fresh moose tracks were present on the day of inspection). There did not appear to be any areas in which the moose were attracted to as no ground disturbance had been noted. The fence should be repaired. Also, the water monitoring wells in the northwest corner have attracted animals and one of the red posts is knocked over. The fence panels should be replaced or this area fenced as was suggested when discussing the livestock fencing.						Central		00433	Well

18-Sep-2019	0580879931-001	PETRONAS Energy Canada Ltd.	19-Sep-2019			No	Truck	Passed Inspection (Complete)	19-Sep-2019	19-Sep-2019	Follow Up	The storage yard on Mile 131 at former well site (AOGA 2214, C-4B-J / 94-B-16) was cleaned up. This site had been on the radar for clean up for a couple of years. The same observations but a much longer timeframe have been made for the storage yard at approximately km 9 on the Mile 103 road (AOGA 2331, d-30-K / 94-A-12). At this location there are materials that are garbage, some to recycle an some that may be of use. There are numerous empty barrels and other containers, a pump jack engine weeping oil, a former underground fiberglass tank that has a big hole in it and large cracks, steel vessels from the 1950's etc. This inspection will show as a PASS but there are concerns about the site not just being used as a storage yard but a bit of a dumping ground. It reads d-13-E when it should actually be d-a-13-E. Please add the "a" onto the sign. The d-13-e well was abandoned in 1963. Please update KERMIT to show that the well facility has been removed.						Central	00020436	01330, 16868	Facility, Pipeline, Well
18-Sep-2019	0581746631-001	Canadian Natural Resources Limited	23-Sep-2019		NTS: C 091-D/094-G-02	No	Truck	Passed Inspection (Complete)	23-Sep-2019	23-Sep-2019	Routine	The well has had a steel barricade around it for many years. As a observation, the barricade was placed off to the side of the lease when another zone was abandoned in January 2019. The cellar area around the wellhead collects water and grows grass which would be an attractant to the Stone Sheep that are increasingly common on Pink Mountain and use this lease. The OGC did receive a complaint in 2017 regarding Stone Sheep digging in another area of the lease in which the results were negative for contamination. Consideration should be given to replace the barricade or perhaps fill in the area around the wellhead so that water does not collect. As I walked around the lease I collected some minor pieces of garbage and these should be removed when you attend to the deficiency on the d-a-13-E / 94-G-02 lease located just down the road. 24-Sep-2019	0582228793-001	Sanling Energy Ltd.	25-Sep-2019		DLS: A 16-20-087-15	No	Truck	Deficiencies Corrected	20-Jan-2020	25-Sep-2019	Complaint	This inspection is the result of a complaint regarding odors. At the time of the inspection there were some odors at site. Please check thief hatches on production tanks are not leaking. Complaint S8210590 active pumpjack, psv off separator has a pressure s/d and what appears to be a burst disc - piping continues to pop tank, 2 production tanks tied in to flare with arrestor - high level shutdowns on tanks, chemical tanks, 2 propane tanks, above ground knock out and flarestack stuffing box shutdown, presco, ESD on flowline Majority of calibration tags for shutdown were dated 2017. Last gas analysis received by OGC was from 2012 with 4% H2S. Please submit calibration records for all shutdowns on site and shut down key to OGC October 7, 2019. Gas detection at wellhead and inside secondary containment for production tanks does not appear to be working. Gas detection inside building is reading a fault (F125). Back pressure regulator on flowline appears to be leaking. Ensure visi gauges on production tanks are operational. Ensure auto igniter at flarestack is working. Above ground flare knock out psv does not appear to have a pressure switch to immediately shut in well/facility to minimize any sour gas to atmosphere. Access road to this lease needs some maintenance.						Central	00007958, 00024885	26814	Facility, Pipeline, Well

25-Sep-2019	0584874499-001	Painted Pony Energy Ltd.	1-Oct-2019			No	Truck	Passed Inspection (Complete)	1-Oct-2019	1-Oct-2019	Routine	This inspection is for the first 4.5 kms of the Mile 122 road. The main focus was on the road and its impact to the unnamed fish bearing stream at km 4.5. The stream crossing was found to be in good shape even considering the water and dirt on the bridge deck. The following are some observations made on the first 4.5 kms of the road; -there is a grader berm that has a tendency to keep water from flowing off the road and directing it downhill. -there are some take offs on the high side of the road that could be opened up as when operational they redirect water out of the ditch, reducing water volume and velocity. The take offs start at the top of the hill at km 3 and haven't been cleaned out lately.							Central				Pipeline

Review the approval permit " Facility Conditions". Ensure the conditions were understood, are, or will be met. Review declarations for mechanical, electrical and instrumentation, and process control (PLC programming) completeness. Review associated punch lists, ensure there were no outstanding " A" deficiencies. Review the plant Controlled Valve Log sheet. Noted some locks were not in place due to commissioning. Inspect the plant HMI, fire and gas detection systems. Noted a fault on AT-1104, reading -15%, and a fault on a smoke detector in the MCC-09-PK-9100. Confirmed that new production tank levels and new NGL bullet levels were reading ok. Found that the Enbridge Sales Meter was showing flow 3297 e3m3/day flow rate @ 750 Kpa with no flow or pressure. The PLC programmer was able to fix the I/O mapping error at the time of the time of inspection. Perform a walkdown of the new equipment and process piping. Witness a satisfactory Mode 1 ESD function test when fire-eye S3058-AT was triggered using a UVIR test lamp. Action Items: To be complete prior to admitting hydrocarbons into the process piping and equipment: 1. Remove all commissioning bypasses and forces in the PLC. If a bypass must remain it must have authorization and be recorded. Submit email of completion. 2. Desand Separator Fire-eyes - remove covers and clean lenses. 3. Sales Compressor 1100- Fix fault on AT-1104. 4 Submit revised Controlled Valve Log Sheet. Lock or seal open isolation valves on : 01-PIT-0032, 01-PIT-0013, 01-PIT-1013, lock open isolation valves on BDV 5121 and BDV-5001. 5. Complete packing and pouring electrical seals on all Scully Ground Permissive Systems. Submit revised electrical QC for electrical end device seals to include these missed seals. Repair electrical hand switch vent fan 51-EC-530313 in the refrigeration compressor package- missing cover plate machine screw. 6. NGL truck-out- replace thermal PSV on vent piping. 7. Plant accounting meters- Complete sample point identification- as per permit condition. Follow-up items: 1. Repair smoke detector in MCC-09-PK-9100. 2. Repair safety chain on PAV on 16 inch inlet from 1-34. 3. Enbridge sales line- remove temporary pig sender. 4. NGL truck load-out- install load procedure sign. 5. Produced water and Condensate truck loading- Install spill containment, load procedure sign. 6. Tank farm and tank farm loading - load procedure sign and WHMIS product identifiers, 7. De-ethanizer Overheads Compressor- Vent 3rd stg PSV pilot outdoors.							South	00024114			Facility, Pipeline, Well

3-Oct-2019	0585780064-001	Coastal GasLink Pipeline Ltd.	4-Oct-2019		From: NTS: A 077-A/103-I-02 To: NTS: A 035-B/103-I-02	Yes	Truck	Deficiencies Corrected	16-Oct-2019	3-Oct-2019	Incident	Incident follow up on right of way grading at 660+300 adjacent to Haisla boulevard and general inspection on section B pipeline permit 9708372 in the South Hirsch creek area. Water management activities (Drainage control and rock lined ditches) ongoing with the grading activities that occurred at 660+800. Sediment laden water from the ROW is isolated, being pumped to vegetation and not impacting the adjacent Pine Creek. Sediment is still running in tributaries to Pine creek from adjacent Alcan private road (Non CGL responsibility) as well as other industrial activities upstream (mining). BCOGC requested photos, water quality measurements and timeline of events during site visit. Proceeded to the South Hirsch and inspected WC 727 and the adjacent hillside. Rock burms, sumps, pumps and ESC measures are in place to prevent sedimentation from entering WC 727. Signage in place as well as permit and recording log for short term water use permit 100107299 at WC 727. WC 728 confirmed grading ended 10m from this S3 stream although it was noted that the stream was significantly sediment laden and very brown. Deficiency issued under section 12 of the EPMR. 4-Oct-2019	0585846638-001	Ovintiv Canada ULC	4-Oct-2019		DLS: 03-01-081-18	Yes	Truck	Passed Inspection (Complete)	4-Oct-2019	4-Oct-2019	Planned	Disposal Facilty Inspection Meet the site construction manager, and Encana representative. Reviewed a printed copy of the site PLC Logic S/D key. Found the pump high discharge set-point at 16,000 Kpa which exceded the max wellhead injection pressure (MAWHP) of 15,550 Kpa. Current status of construction: The site construction manager mentioned that the Fisher ROC was not receiving pulses from the disposal MAG meter. Electrical seals in hazardous areas were not poured at the time - Techmation controls was working completing the electrical. The wellhead surface casing vent was not piped to vent out side of the enclosure. The Rockwell Automation PLC programmer was completing final site PLC S/D Key tests/checks - approx. 1/2 way done. He was working off site. Contacted him by phone. He will be complete and be able to sign-off on the site S/D Key by 4 pm. Confirmed at the time that the pump high discharge pressure, tubing high pressure, and the casing high pressure S/D set-points in the PLC were lowered from 15,580 Kpa to 15,550 Kpa. Spoke with the construction manager and expressed concern that the setting values in the PLC did not leave adequate compliance safety margin as per ORDER 19-02-005 conditions 2(b) and 2(f). The site construction manager said he would relay these concerns to the project engineer. Items to be completed before any disposal of fluids into the formation. 1. The site PLC logic (the S/D Key) commissioning is complete. 2. S/D set-points for the tubing, casing, and pump discharge pressure, are set an appropriate values as not to exceed disposal well permit ORDER 19-02-005 conditions 2(b) and 2(f). 3. Electrical seals in hazardous areas are packed and poured. 4. The disposal meter is functioning and the injection pressure is measured. -Drilling and Production Regulation 74 5. Pipe the wellhead surface casing vent safely outside of the wellhead enclosure.						South	00027010, 00027011		Facility, Pipeline, Well

16-Oct-2019	0587896593-001	Canadian Natural Resources Limited	21-Oct-2019		DLS: 16-07-087-23	No	Truck	Deficiencies Corrected	18-Nov-2019	17-Oct-2019	Complaint	The OGC received a complaint (0587408Z6-001) regarding odours coming off this lease. I inspected the lease on Oct 16 2019 and noted a surface casing vent flow. There was a strong hydrocarbon odour when close to the wellhead and vapours can be seen coming out of the vent piping. The odour totally dissipated when about 5 m away from the wellhead. The closest tire tracks were approximately 190 m away from the lease. I am wondering if there is an increase in the surface casing vent flow at times? Also, it was noted the underground utilities have been located, surface equipment removed and I am enquiring as to when this well is scheduled to be abandoned. Would you have a timeframe in mind for abandonment? Could you please respond to OGC Thank you						Central	00000326	02122	Facility, Pipeline, Well

17-Oct-2019	0588548T7-001	Painted Pony Energy Ltd.	17-Oct-2019		NTS: A 010-J/094-B-09	Yes	Truck	Deficiencies Corrected	29-Oct-2019	17-Oct-2019	Planned	Start-up Inspection: Station Upgrade. Meet the site construction manager, and Painted Pony area foreman. Site construction was not complete at the time of inspection. Found some electrical end device seals in the compressor not packed and poured. Requested that the electrical service provider inspect that all electrical seals on site are packed and poured prior to admitting gas into the process piping, and submit an electrical QC inspection report. Found a number of Fisher 67 regulators in the compressor that were not vented outdoors. The spring casings on the regulators were those that would be used in an instrument air service. Inspect new H.P. flare meter installation, which was photon optical meter. These meters are very susceptible to probe tip fowling due to dirty gas in the flare stream. Recommend installing a Low flow- Dirty optic alarm. Walk down the new facility equipment. Noted that not all torques on flanges were recorded by a tag or a paint ball marking system. The Torque Report was not complete or available. Noted at the time of inspection that two flanges on the compressor discharge piping were not squarely lined up face to face. This caused concern, enough to question the bolt-up, and the even distribution of pressure to the flange gasket. An unsafe practice was noted at the time. A crew worker pulling a blind on the low pressure inlet separator behind a closed block valve on the c-89-G/94-B-9 line had the flange partially unbolted without establishing a bleed point on the line first. Prior to admitting hydrocarbons into the facility piping and equipment complete the following: 1. Perform an electrical QC inspection - Ensure all electrical seals in hazardous areas are packed and poured. 2. Compressor discharge piping: Correct flange face to face miss alignment. Complete inspection of all flanges that bolt-up and torques are at spec. Make record of the inspection. Submit the Torque Report. 3. Compressor High Discharge S/D- Lock or car seal open the pressure sensing isolation valve. 4. Dehy PSV Pilot - separate vent from other common vents and vent separately outdoors. Action Items: 1. Test separator- calibrate test meter, last done Aug 14, 2018. 2. Compressor- Replace Aux H2O low level S/D switch. Submit updated Compressor Panel Report. 3. H.P Flare Meter - Note optic probe insertion depth on calibration tag and on calibration report. Submit Calibration Report. Recommend installing Low- Flow / Dirty Optic diagnostic alarm back to the PLC. 4. Submit revised S/D Key once all red lines are complete.						Central	00007817		Facility, Pipeline, Well

18-Oct-2019	0588699B9-001	Canlin Energy Corporation	18-Oct-2019		DLS: 06-29-081-15	Yes	Truck	Passed Inspection (Complete)	18-Oct-2019	18-Oct-2019	Planned	Gas Plant Up-Grade Inspection Meet with the Canlin Energy Fort Nelson & Montney Area Foreman and E+I Technician, the site construction manager, and contract engineer. Review the Disposal Well Special Project Permit for Ab-29-81-15 (WA # 23159) disposal well and shutdown key. Confirm the new pump, P-3500 high discharge pressure, PAHH 3502, was set below 9000KPa, set @ 8900 KPa. Perform a walk down of the new equipment and piping modifications. Witnessed a test of the disposal pump P-3500 shutdown, closing the inlet and discharge valves, by applying 8900 Kpa pressure to the pump discharge pressure transmitter PIT 3502. Confirmed that pressure sensing isolation valves for the pump S/Ds were locked open. Noted some loose bull plugs on pressure transmitters and that the electrical seals in P-3500 Building were not packed and poured. Also noted that the floor drain level switch was not installed at the time, and (2) Fisher 627 regulators shared a common vent line without upsizing the vent piping. Witnessed the the P-3500 disposal meter K-factor input and pulse output factor programmed into the electronic meter head. There are (2) disposal meters, the other meter was at the disposal well, and will be deemed as a "non-accounting " meter. Request that the meters be field tagged as such. Construction work was still underway, completing the installation of (2) produced water and (1) condensate tank. Grounding of the truck-out load lines had not been completed, ground connections had not had anti-corrosion paint applied, truck loading ground straps, load procedure signage, and WHIMS product identification was missing on the new tanks. Action Items: 1. Ensure all electrical seals are packed and poured and conduit bull plugs are tight in P-3500 Building and other hazardous areas. Complete an Electrical QC Report. Submit the report. 2. P-3500 Building- Complete the installation of the floor drain level switch. 3. P-3500 Building - Separate Fisher 627 regulator vents. 4. Production Tanks- Complete grounding work, ground truck load boxes, supply truck ground straps, and a load procedure signage, apply anti-corrosion paint to ground connections. Install product identification (WHIMIS ID) on the tanks. 5. S/D Key- Submit final reline S/D key, signed and stamped by the project engineer. 6. Disposal meter P-3500 - Identify the meter as "accounting". Submit the Manufacturer Calibration Certification.						South	00000317		Facility, Pipeline, Well
18-Oct-2019	0588699S1-001	Canlin Energy Corporation	18-Oct-2019		DLS: A 06-29-081-15	Yes	Truck	Passed Inspection (Complete)	18-Oct-2019	18-Oct-2019	Planned	Produced Water Disposal Special Permit - Order # 19-02-007 Witness (2) tests of the disposal wellhead ESD valve. The first test was done by tripping a hydraulic pressure switch, set at 8900 KPa. The second test initiated a well head ESDV closure by dropping out a solenoid connected to the Fisher ROC SCADA by pressuring up tubing pressure transmitter to 8900 Kpa. Noted that there was a 10 KPa calibration difference between the tubing pressure transmitter display and the test equipment used to pressure up the transmitter. Reviewed the disposal well S/D Key, verified there was a casing high pressure alarm set at 100 Kpa. Noted that the wellhead pressure transmitters, tubing and casing pressure transmitter ranges were high at 27,000 Kpa, limiting SCADA trending resolution. The Canlin E+I Technician agreed that the transmitters and SCADA could be re-ranged to 15,000 KPa. Did not confirm if the bottom end of the of the transmitter ranges were set to (-100 kpa) to record wellhead pressures if the well was to go on vacuum. Noted the flow meter at the wellhead was missing the K-factor tag and the electronic meter head was not yet programmed and a wellhead enclosure had not been installed. Action Items: 1. Re-range and calibrate the wellhead tubing and casing transmitters (-100 to 15,000 KPa). Submit the transmitter calibration reports. 2. Disposal meter- Complete electronic meter head programming. Submit the Manufacturer Calibration Certification. Identify the meter as "non-accounting". 3. Submit the relined S/D key, stamped and signed by the project engineer. 4. Install a wellhead enclosure and vent the surface vent piping outside of the enclosure.						South		23159	Pipeline, Well

29-Oct-2019	059291189-001	Coastal GasLink Pipeline Ltd.	1-Nov-2019			Yes	Truck	Passed Inspection (Complete)	1-Nov-2019	29-Oct-2019	Routine	SB Campsite - The campsite is now fenced. The surface drainage system looks ok. There are some concerns with the south side water catchment area, but no issues were present during the inspection. (DWB is making a drainage plan for all 3 sites in this area). SB Storage site - During the inspection it was noted that water was being pumped out of the sites water catchment area onto water trucks. This water was then being transported to a nearby gravel pit (non permitted) and pumped into a pigpen where the water filtered into the surrounding area. CGL was asked to cease operations and find another way to dispose of this water. CGL should also remove any infrastructure that is in place in the gravel pit, and restore the site to its existing conditions.						South			Pipeline
29-Oct-2019	059297456-001	Coastal GasLink Pipeline Ltd.	1-Nov-2019			Yes	Truck	Passed Inspection (Complete)	1-Nov-2019	29-Oct-2019	Routine	9A Storage site - Looked at water catchment area. There were no concerns were the water was running into the adjacent forested area. No silt or erosion issues were noted off site. CGL is looking at ways to deal with erosion issues on site and is currently making a plan for this.						South			AOGA

5-Nov-2019	059371176-001	Painted Pony Energy Ltd.	6-Nov-2019		NTS: A 033-I/094-B-09	No	Truck	Passed Inspection (Complete)	6-Nov-2019	5-Nov-2019	Audit	Audit - Measurement Guideline Chapter 6 - Wet Gas Measurement - BCBT 0026248 The Audit will focus on the Measurement Guideline Chapter 6 requirements for well testing, sampling, effluent correction factor determination, for volume correction and allocation for reporting purpose. 1. As per Chapter 6 section 6.3.3(3) Submit confirmation (proof) that initial well test data was submitted to the eSubmission Portal as outlined in the "Well Testing and Reporting Requirements Guideline" found at Well Testing and Reporting Requirements Guide. " 2. As per Chapter 6 section 6.3.3(6) Submit records, reports, spread sheets that show each new well must be tested not fewer than once per month with each test being a minimum 12-hour duration. Monthly testing must continue until the difference of the last 3 consecutive ECF tests are within 5%. Upon meeting this condition, the testing period may be extended to once every 6 months as long as the last 3 consecutive ECF tests continue to remain within 5 % and battery/facility group proration targets 0.95000 to 1.05000 are met, else revert back to monthly or more frequent testing. If two consecutive tests indicate that the LGR has dropped below 0.280 m3/e3m3 then the well testing frequency in the Well Testing Decision Tree section 6.5.3 will apply. The methodology for determining the ECF difference is: Average ECF from last 3 tests – Smallest ECF (from last 3 tests) ---------- Average ECF of the last 3 tests 3. Measurement Guideline section 6.3.3(7) Submit records, reports, that show each well and the group separator must be sampled as outlined in section 8.4 to obtain an analysis of gas and hydrocarbon liquids (condensate). The gas and condensate analysis for individual wells must be used to calculate the well gas and condensate gas equivalent volumes. The group gas and condensate analysis must be used to calculate the group gas and condensate gas equivalent volumes. 4. Submit a Measurement Schematic for BCBT 0026248 showing delineation, and disposition points with corresponding Petrinex BCBT codes.						Central	00026577		Facility, Pipeline, Well

6-Nov-2019	059417315-001	ARC Resources Ltd.	6-Nov-2019		DLS: 05-34-079-14	Yes	Truck	Passed Inspection (Complete)	6-Nov-2019	6-Nov-2019	Planned	Disposal Well Inspection Meet with Arc Resources operations staff in the S-35-79-14 plant control room. Inspect the disposal well tubing and casing alarms and shutdowns in the RTU and in the plant PLC. Found the alarm call-outs in the plant PLC were not enabled. This was corrected at the time. Noted that the casing HiHi shutdown was set high relative to the operating pressure, and would allow disposal operation if hydraulic isolation was lost, up to a casing pressure of 500 Kpa. Request this shutdown be lowered to an appropriate value to give early indication and shutdown in the event of loss of hydraulic isolation between the tubing and casing. Verified the disposal well flow meter K-factor was programmed correctly according to the meter proving report. Review commissioning and calibration documentation. Noted a casing pressure shutdown setpoint was missing from the Service Provider Shutdown Report. Visit the disposal well site. Perform an inspection of equipment. Noted that pipe bull plugs were used instead of conduit bull plugs to electrically seal the pipeline and tubing pressure transmitters. Request these be replace with the correct bull plug. Noted that the fuel gas supply line was not electrical insulated from the facility piping and piling, also a tubing line ran into the enclosure to supply fuel gas to the heater. Recommend a cathodic survey be conduced to ensure the fuel gas line is not electrically connected to the well head and well bore. A 17 Kpa difference was noted between the tubing pressure transmitter display and the value indicated on the SCADA RTU. Noted a 4 Kpa difference on the casing transmitter display compared to the SCADA reading. Request both the tubing and casing pressure transmitters be re-verified, calibrated on the input pressure cell, display, and on the 4-20 mA current output if necessary. Also request the SCADA input A/D be calibrated so displayed transmitter values are actual (traceable back to a calibration instrument standard) and match values transmitted by the RTU and recorded on the plant PLC trending. Action items: 1. Casing pressure hihi shutdown - re evaluate and update setting. 2. Casing pressure shutdown - check - create a report for file, and submit the report. 3. Wellhead tubing and casing pressure transmitters - Calibrate transmitter inputs, current outputs, and displays. 4. SCADA RTU inputs - calibrate RTU A/D inputs so wellhead tubing and casing pressure transmitters are reading actual, traceable back to a calibration standard, and values on the transmitter displays match RTU transmitted values. 5. Pipeline and tubing pressure transmitters- Replace pipe bull plugs with conduit bull plugs as required. 6.Evaluate whether electrical insulator is required on the fuel gas supply line to electrically isolate the wellhead from the fuel gas pipeline. 7. Update the "Well Type" in KERMIT under this application, currently showing as "Undefined".						South		15377	Pipeline, Well

7-Nov-2019	0594278807-001	Altagas Holdings Inc.	7-Nov-2019		DLS: 06-29-087-20	Yes	Truck	Passed Inspection (Complete)	7-Nov-2019	7-Nov-2019	Planned	Construction Inspection - Rail Yard Expansion Meet with Altagas Project Engineering team, Area Foreman, and Construction Managers. Discuss the expansion, determine that it is under the original application approval, issued September 23, 2016. Discuss the increased storage capacity for (6) propane, (1) NGL, (2) Butane bullets, increasing by (9) x 120,000 USGAL and whether it would affect the ERP Emergency Planning Zone. Inspect the rail yard modifications. Walk the upper loading platform. Noted that not all permanent railing had been installed. Some temporary scaffolding was erected as a railing system in some sections, but there were some sections where truck tie-down straps were used to span open (un-railed) sections of the platform. Report this to Altagas as an unsafe condition. Altagas noted this, and agreed to complete the temporary scaffolding railing system. Action Items: 1. Upper rail yard loading platform- complete temporary railing system. 2. Evaluate whether the increased storage capacity at both the facility and the rail yard warrants a re-calculation of the emergency planning zone. Revise ERP if required. 3. Contact OGC Security and Emergency Management, referencing the increased storage capacity at the facility and rail yard determine whether a Facilities Start-up Meeting is required. 4. Submit a rail yard loading start-up procedure. 5. Submit a facility and rail yard measurement schematic with meter table showing "accounting" and "non-accounting" meters. 13-Nov-2019	0595546244-001	ARC Resources Ltd.	14-Nov-2019		DLS: 13-07-080-14	Yes	Truck	Passed Inspection (Complete)	14-Nov-2019	13-Nov-2019	Planned	Dawson Phase 4 - Fuel Gas Partial LTO Inspection. Meet with Arc Resources operations, phase 4 construction managers, Electrical and Instrumentation service providers, and PLC programming contractor. Review prepared commissioning documentation. Perform a inspection of the fuel gas skid and temporary fuel gas inlet ESDV 263000. Inspect the fuel gas buyback meter and Fisher ROC EFM configuration. Found the upstream pipe diameter value that was programmed in to the Fisher ROC EFM not as stamped on the meter run . This was corrected at the time. It was noted that in the Fisher ROC Station Set-up , the Calculation Standard selected was AGA3 -1992. This was not the latest AGA Calculation Standard , as AGA3 - 2013 option is available which offers increased calculation accuracy. Witness a Mode 1 ESD when a ESD push button was pressed on the Utility Heat Medium package. Witness a Mode 2 ESD function test when a 50% LEL sample was applied to a gas sensor in the fuel gas building. Action item: 1. Remove temporary fuel gas ESDV 263000 that was installed on the fuel gas buyback supply once the phase 3 and phase 4 PLC systems are interlocked together. This will allow the buyback fuel gas supply from the phase 3 sales to blowdown through the phase 4 fuel gas system piping in the event of a phase 3 or 4 Mode 1 ESDD. 2. Evaluate whether the 13-7-80-14 gas plant phase 3 and phase 4 and field EFM Gas Calculation Standards can be updated from AGA-3 1992 to use the must recent Calculation Standard AGA3-2013. 19-Nov-2019	0596555276-001	Altagas Holdings Inc.	20-Nov-2019		NTS: A 033-J/094-B-09	Yes	Truck	Passed Inspection (Complete)	20-Nov-2019	19-Nov-2019	Planned	Mercaptan Treatment Facility Start-up Inspection Meet with Altagas project manager, and construction staff. Review prepared commissioning documentation. Questioned meter designation: meters on FIT- 1002, FIT- 3512, FIT 3503, and 3407A, Questioned minimum turndown of fuel gas to the Mercaptan T-3434 Oxidizer Tower as to whether FIT 6405 would measure that gas above the low flow cut-off. May need to use FQIT 3407A if below minimum measuring range of FQIT 6405. Missing documentation included production accounting meter ROC EFM Reports, transmitter configurations, Flow Check Reports, and meter range output pulse tests to max output frequency were not available for inspection. As a result the measurement component of the inspection could not be completed. Perform a walkdown of new equipment. Noted that the Re-run 9162 NGL sample point required a sample quill. Found that grounding was not complete for the Fresh Caustic, Spent Caustic, and DSO tanks, and a Scully ground permissive system had not yet been installed. It was confirmed that unit ESD function tests, and "call-outs" were completed and all DCS forces were removed Nov 18, 2019. Inspected new fire, and gas detection systems on the DCS. Found AIT-3402 NW Side Caustic Pump Building had a fault. Confirmed that PSV isolation (stop) valves were car sealed open, and that the T2B fuel gas supply was blinded - off. Give permission to nitrogen purge new piping for initial leak tests. Noted that Altagas was managing construction deficiencies well. Request an updated deficiency list to confirm that remaining "A" deficiencies be resolved prior to admitting hydrocarbons into the Mercaptan. Action items: 1. Arrange for a measurement inspection once construction, configuration, and testing of all new production accounting meters associated with the Mercaptan Treatment phase is complete. Prior to admitting hydrocarbons into the new Mercaptan Treatment process piping: 2. Resolve outstanding construction punch list "A" deficiencies. 3. Submit an updated construction punch list . 4. Complete and make functional all production accounting measurement.						Central	00018246		Facility, Pipeline, Well

21-Nov-2019	0597000866-001	Canadian Natural Resources Limited	22-Nov-2019	4-Feb-2020	NTS: D 039-H/094-K-13	No	Walk	Deficiencies Corrected	10-Feb-2020	21-Nov-2019	Complaint	COMMENTS: -This inspection was prompted by a complaint called into the OGC for odours coming from this location. -The complaint was called in on November 20, and I responded to location on November 21, 2019. -I walked into the abandoned wellsite, found the abandoned signage/grave marker. Upon first arrival, I did not smell any odours. The wind was coming from the south (at my back walking into location). I walked around the site a bit, but did not smell anything. -I brought the OGC Infra Red Methane Detector and also carried that into location. I started sampling the area around the grave marker signage and began to get methane readings. As I detected closer to the area of wellbore (where signage is posted), the methane readings began to climb. As I detected right at the hole where the sign post goes into the ground, that is where the maximum readings occurred. -I was able to get methane readings to approximately 3'-4' diameter around the abandoned signage. -I did observe a couple of times while onsite, a very faint odour, but only once or twice did i smell anything. -This well was abandoned in 1992 and acquired by CNRL in 1994. 21-Nov-2019	0597006348-001	Shanghai Energy Corporation	22-Nov-2019	15-Feb-2020	NTS: D 050-A/094-O-15	No	Truck	Deficiencies Corrected	13-May-2020	22-Nov-2019	Planned	All wells active except for d-A50-A. All signs ok. Comments: 1) LEL detected from surface casing vents at d-G50-A and d-F50-A. The gas detector overranged on LEL from each of these vents. Slow fill on latex glove test for each vent. Last information in OGC systems for these two wells shows they passed a bubble test in Jan 2014. Please re-test SCV's at each of these two wells for flow and stabilized buildup and submit results to OGC via e-submission and cc to Engineering 2) Last EFM cal Nov 2017 by Gasfield, but no date visible for most recent annual orifice meter checks. Please provide records/ledger showing date of last orifice meter check for all wells to OGC. 3) Please provide records/ledger of last wellhead ESD function test/pressure pilot calibrations for all wells to the OGC 4) Produced water observed dripping from some Master Flo chokes and several wellhead ESD's and some tubing lines onto snow in and around wellheads needs to be cleaned up. 5) Separator building tied to d-50-A is not in service. Please ensure positive isolation between the active well (d-50-A) and the inactive separator building. 6) No WHMIS labels observed on 3 chem tanks at Separator #2. No WHMIS labels observed at 2 of 3 chem tanks at Separator #1. Also, Texsteam pump covers are not secure in both Separators. 7) Tanks in tank farm should have WHMIS labels or signs. 8) If portable Catadyne in water pump building is to remain it requires an exhaust hood and vent. 9) Fac 25228 (d-I50-A) and Fac 25225 (d-F50-A) show in OGC systems as Suspended but both wells are Active. Please amend the Facility status. 10) Well d-G50-A shows in OGC systems as Suspended but the well is Active. Please amend the Well status. 27-Nov-2019	060042849-001	Altagas Holdings Inc.	4-Dec-2019		NTS: A 033-J/094-B-09	No		Passed Inspection (Complete)	4-Dec-2019	27-Nov-2019	Audit	ASME B31.3 QC Audit- Mercaptan Expansion- Watts Shop and Site Meet with Altagas QC Manager. Review missing components from the Nov 21, 2019 Audit of Watts " Construction (In Shop)". Found there were still missing components, and could not confirm if the Owner's Inspector Global Inspection Services had incorporated the items on the " Welding Parameter Check List " into the Surveillance Reports. Found that WPI -2 (Rev 2) used for line # 324-DBL1-PG-1001 WPI-73 was no longer valid as the " Combined Deposited Weld Metal Thickness for ASME B31.3 " had changed from 0.750 in. maximum to 1.00 in maximum. This lead to an error on the Line List where PWHT was specified but was not required as per the most recent ASME B31.3 Code. A response has not been received for a request sent to Watts to : 1. Provide an NDE Summary Sheet. 2. Weld Fabrication Log- Change the heading "Spool Number" to "Line number" and add a column for spool number, add NDE report number associated with RT/MT number. 3. Hydrotest Log - Add "Pass" or "Fail" column. 4. As-Built Drawing- Add heat numbers for valves. 5. Provide a Weld Repair Log and repair rate tracking for this project. 6. Provide an NCR log for this project. Missing Documentation: 1. Buffalo Inspection Services Inspection Procedure. 2. Clear Image Inspection Procedure. 3. Missing MT- 46 Report for line # 324-DBL1-PG-1001. 4. On-site Welding- Owner's Inspector Surveillance Reports. Engineering Follow-up Item: 1. Ensure corrective action is taken as to not use outdated Weld Procedures (WPS) - Check all parameters on the WPS as per ASME B31.3 code requirement.						Central	00018246		Facility, Pipeline, Well

28-Nov-2019	060241254-001	Canadian Natural Resources Limited	9-Dec-2019		NTS: C 037-B/094-B-09	No	Truck	Passed Inspection (Complete)	9-Dec-2019	9-Dec-2019	Planned	I met CNRL Lead Operator Brad Decker on the access to the c-67-K facility. Brad asked me to give him feedback about how he had put in 2 blinds on the flow due to concerns about the ability of the pilings to support a length of pipe. We do allow blinds to be put in place and our guidance has been to accept that standard where wells are remote and are flown into. The other example is where support of the flow line is compromised if a portion of piping is removed is removed. This well site seems to be okay for blinds to be installed. It was noted that the methanol line is still attached to the wellhead and this can serve a flow for gas should a well head valve and the check valve fail. The methanol line should be disconnected and bull plugged. This type of failure occurred at another companies' location this past summer and our guidance is going to be updated to reflect this. Review prepared documentation for production accounting meter volume configuration and calibrations for FQIT- 3500, FIT 3512, FIT 6401, FIT 3512, FIT 3503, FIT 6405, and FIT 9162. Physically inspect the construction of FIT-0110. Verified that the meter run upstream pipe I.D. was corrected in the Fisher ROC to 2.897 in - 73.5838 mm, and a write to EPROM was done after the change was made. Action Items: 1. FIT 6405 - The low flow cut-off is set in the meter @ 1.1 m3/hr which is below the Manufacturer's stated lower measurement range of 8 m3/hr. Ensure the low-flow cut-off is set correctly to meet the single point measurement uncertainty for flared/ incinerated gas of +/-5%. 2. FIT 6405- Confirm minimum fuel gas flow rate through the Mercaptan Oxidizer Tower is above the Manufacturer's stated lower measurement range of 8 m3/hr . If not, set-up logic in the DCS to use FIT 3407A to report incinerated gas when the minimum fuel gas flow rate to the Oxidizer Tower is below 8 m3/hour. 3. Submit Fisher ROC EFM Reports for FIT 3503, and FIT 9162.						Central	00018246		Facility, Pipeline, Well
2-Dec-2019	060244589-001	PETRONAS Energy Canada Ltd.	9-Dec-2019		NTS: D 002-B/094-B-16	No	Truck	Deficiencies Corrected	24-Dec-2019	9-Dec-2019	Planned	Thanks to Petronas for accompanying me on these joint inspections. We had some good conversations throughout the day. There was LEL in the d-c-2-B / 94-B-16 sand filter skid and when talking to the Petronas Operator it was discovered it was originating from the methanol sitting in the tray containment as a result of a leaking solar pump at the head/manifold. Consideration should be given to addressing this leak as it is enough to be a source of LELs vapours. Noticed that the Neutron valves in the test separator are labelled as ESD valves. Please check your shut down key as I had been informed by Petronas that these are just directional control valves for sending flow to the separator and not actual ESD valves. 5-Dec-2019	060122702-001	Altagas Holdings Inc.	5-Dec-2019		DLS: 06-29-087-20	Yes	Truck	Passed Inspection (Complete)	5-Dec-2019	27-Nov-2019	Planned	Altagas 6-29-87-20 North Pine Rail Expansion (6) New Modules- 12 New Load Stations Meet with the Altagas Project Lead Engineer, Northern Operations Manager, Construction Manager, and Rail Lead Loader. Spartan Controls was on-site completing the final shutdown key checks at the time of inspection. Review commissioning documentation, and Declarations of Substantial Completion. Confirmed that electrical seals were packed and poured. Confirmed that the facility ERP had been updated for the extra storage capacity with the rail expansion. A printed copy of the ERP was not available, but Altagas Operations agreed that the revised ERP would be loaded on the Altagas Server, and be available on the operations computer desktop. Inspect the drainage ditch at the rail loading terminal. Found that the drainage culvert from the ditch to the containment pond was partially blocked off with snow and ice on the ditch side and fully covered with snow on the pond side. Request that Altagas create an operations procedure to ensure the drainage culvert is kept open at both ends. Witness a satisfactory Mode 1 ESD function test for the rail loading facility when Fire-eye AT-9992 (Dog House west side) was triggered using a UVIR test lamp. The product inlet valve and rail loading valves closed as per the Shutdown Key. Confirmed that both Spartan - Rail Vue and the existing Corsair systems shutdown. Action Items: 1. Submit final PSSR prior to commencing rail loading operations. 2. Make available a printed copy of the revised ERP @ the Rail Terminal and in the Control room. 3. Operations Procedure- Create an operations procedure for the drainage ditch to containment pond culvert to inspect and maintain an open culvert at both ends, free of debris, snow and ice. Review information provided. Tour site. Power down to panel at time of inspection on low voltage. Insulating kit needed for inlet piping. Some of the lights not working in compressor building. 100 BBL if used needs containment. Update WHMIS labels on piping. Action Items: 1.) Vent regulators outside in compressor and guards for some of the sight glasses. 2.) Submit screen shots for HMI in normal Run and ESD state. 3.) Submit one UT on inlet piping of compressor. Thank you for information provided at meeting.						Central	00007666	23044	Facility, Pipeline, Well
6-Dec-2019	060278189-001	ConocoPhillips Canada Resources Corp.	10-Dec-2019		NTS: B 022-K/094-A-12	No	Truck	Passed Inspection (Complete)	10-Dec-2019	10-Dec-2019	Planned	This inspection is for the initial construction activities for the road and lease. The only comment would be referring to permit condition #7 and ensuring there is the line of sight barrier. It is recognized the pipeline construction is still active. There is a pile of dirt at the intersection of the pipeline and road as well as piled on top of the borrow pit area associated with this development. It is assumed this dirt may be the line of sight barrier when construction activities are completed. No concerns noted for the actual lease and road construction.						Central		38608	Well
6-Dec-2019	060324482-001	PETRONAS Energy Canada Ltd.	11-Dec-2019		NTS: A 038-D/094-A-13	Yes	Truck	Passed Inspection (Complete)	11-Dec-2019	11-Dec-2019	Planned	This inspection is for the lease and access construction. Thanks to Petronas) and Brandt) for our discussions on lease construction techniques and the specifics to this particular lease. Boyd accompanied me to look at the archeology site and pointed out the physical changes to the original construction plan such as a reduced footprint due to various factors. These changes have been well thought out and are appreciated. The road was looked at on Dec 10 2019 while travelling in the area. As with any construction activities it is recommended that water management strategies be reviewed for effectiveness during the spring thaw. No concerns noted at the time of inspection. Review Service Provider daily rounds check sheets for (2) tanks and (1) CNG vaporization unit. Review CNG Service Provider fire and gas calibration documents. Found that the Service Provider fire and LEL detection was last calibrated August 1, 2019. Request that the Service Provider gas detection equipment be tested for a response, and calibrated if not indicating an acceptable response. Require the Service Provider install a hard wired ESD push button and connect to the main CNG control panel. The ESD push button is to be placed at a safe distance away from the CNG trailers and HeatTech boiler package. Request that the HeatTech Boiler Building fire and gas detection be made functional with the ability to initiate a plant alarm and operator call-out. Require the plant operator to be trained and be familiar with the temporary CNG trailer ESD push button locations. Inspect CNG trailer installation, equipment grounding, temporary fuel gas connection piping, and verify that there was a temporary PSV (set @ 165 PSI / 1137 Kpa) installed to protect the boiler main fuel gas regulator (Max operating pressure 175 PSI). Inspect temporary gas detection (Shack Rat) system located outside between the CNG trailers and the HeatTech Boiler Building. This system has remote sensors which communicate via radio signal to an alarm horn and beacon system. Action Items: 1. CNG Service Provider -Test gas and fire detection system . Calibrate gas LELs gas detection if the response is not within acceptable tolerance. 2. CNG Service Provider- Install a remote ESD push button and locate at a safe distance away from the CNG trailers and HeatTech Boiler Building. 3. CNG Service Provider- CNG Vaporizer trailer ground to the frame of the trailer. 4. Ensure the plant operator is aware of the CNG equipment ESD push button locations. 5. Vent the temporary fuel gas PSV discharge upwards, and install a rain cap on the PSV vent. 6. Prior to commissioning and start-up of the HeatTech Boiler: a) Building safety systems (fire and gas detection) and operator call-out are to be made functional. Submit calibration and commissioning documentation for these safety systems. b) Provide electrical Q/A documentation that all electrical seals in the HeatTech Boiler Building have been inspected that they have been packed and poured. 7. Submit Service Provider calibration documentation for the Shack Rat remote gas detection equipment.						Central	00026801		Facility, Pipeline, Well

3-Feb-2020	061465921-001	Altagas Holdings Inc.	5-Feb-2020		NTS: A 033-J/094-B-09	Yes	Truck	Passed Inspection (Complete)	5-Feb-2020	3-Feb-2020	Planned	Altagas Townsend 2B Measurement Inspection - Review prepared accounting meter documentation. Discuss flare measurement and (2) stage reporting. Noted that FIT - 9135, FIT-9151, FE-1130, FE-4298 are designated on the Metering Schematic as plant balance. These meters are deemed to be production accounting meters as they are required to report flare purge and pilot gas as flared gas. The purge and pilot meters will need to be moved from the DCS to the Fisher ROC EFM. It was noted hat the K-factor on FE-9110 was low, set at 50. Request that Altagas contact the vendor and see if the measurement resolution can be increased by changing the K-factor to 100. It was noted that there was a gauge pressure transmitter installed on FE-9110 rather than an absolute pressure transmitter. Flare measurement should utilize an absolute pressure transmitter as in some cases the pressure in the flare header can go slightly negative. Request a calculation to confirm that the flare meter FE-9110 low flow cut-off is set correctly. PA ultrasonic meters- discuss incorporating monitoring of critical Modbus diagnostics in the plant DCS such as SOS. FE- 6100 and FE- 6115 are shown on the Metering Schematic as production accounting. Request Altagas determine if these are indeed used to report the plant sales gas into Petrinex. If not, change the meter designation on the Metering Schematic to " non-accounting". Found that FE-3145 Solar fuel gas meter was missing a grease fitting. orifice meter data plate, and TFE orifice plate holder. Request photos of all orifice meter run data plates. Inlet gas FE-1210 - ultrasonic meter was found to have a bad analog to digital board and (1) failed ultrasonic path. The meter will still function but not average (4) ultrasonic paths. Verify that all production accounting meters are live back to the plant DCS. Noted that FE-1011 was showing 4e3m3/day with no flow. This meter will require a calibration of the ROC A/D output to the DCS input. Noted a check of the Modbus mapping for all PA meters from the ROC back to the DCS was not complete. Perform a walkdown of production accounting meter installations. Action Items: 1. Repair FE-1210. Submit a new vendor commissioning report once the repair is complete. 2. Production accounting ultrasonic meters- Determine if critical meter diagnostics such as SOS should be monitored and alarmed in the plant DCS. 3. FE-3145 - Install an orifice meter run data plater, a grease fitting, a TFE orifice plate holder, and an orifice plate. 4. Revise the Metering Schematic to show plant balance meters FIT-9135, FIT- 9151, FE-1130, FE- 4298 as "accounting meters" . 5. Determine if FE-6115 and FE- 6100 are used to report the T2B plant sales in Petrinex. If not, change the designation to " non- accounting" . 6. Move FE- 9151, FE- 1130, FE- 4298, FE-9135 from the DCS to the Fisher ROC and map back to the DCS. 7. Submit the T2B OGC Measurement Binder and a revised Metering Schematic. 8. Flare meter- FE 9110 . Determine if an absolute pressure transmitter should be installed to measure flared gas if the flare header pressure goes negative. Investigate if the FE-9110 K-factor can be changed from 50 to 100 to increase measurement resolution. 9. Submit a calculation and confirm the low-flow cut-off is set correctly in FE-9110. 10. On start-up perform a check to ensure the total flare header purge gas is not measured by the main flare meter. 11. Submit confirmation that (2) stage flare reporting is used. Total flared gas = purge gas meters (FE- 9151, FE- 1130, FE- 4298) + pilot gas meter (FE-9135) + main flare meter (FE-9110). 12. Complete the verification of Modbus Mapping of accounting meters in the Fisher ROC to the plant DCS.						Central	00018246		Facility, Pipeline, Well

Cleared area for ancillary within existing cutblock/log deck area. Riparian area is clearly flagged/defined for Stuart river. Follow up inspection in spring.						South				CIAS, Pipeline, Road
6-Feb-2020	0618555595-001	Coastal GasLink Pipeline Ltd.	14-Feb-2020			Yes	Truck	Deficiencies Corrected	17-Mar-2020	14-Feb-2020	Planned	RW 1530.1 - Storgeon Point West rd. Snow berms undercut on upslope side of access road. Adequate passages present for wildlife. Please address deficiency listed. No additional concerns at time of inspection. RW 1530.1 - Storgeon Point West rd. Snow berms undercut on upslope side of access road - possible vegetation was not adequately cleared on road ROW to allow for snowload/snow removal - follow up in spring 2020 . Adequate passages present for wildlife. 2 x clearings (workspaces) not associated with road permit being utilized associated with road maintenance activities - 1. 10U 457796 6000928 - being utilized as a laydown/stockpile site for gravel being trucked in/ rock trucked to road construction. CGL/Sommerville Aecon could not produce a permit for workspace - claimed they had permission from canfor (within existing cutblock). 2. 10U 458100 6000641 - being utilized as a staging area (medic). Goal posts in place when site was accessed for inspection. Gravel laid down over ~60m x 10m area.						South				CIAS, Pipeline, Road
6-Feb-2020	0621312950-001	Painted Pony Energy Ltd.	27-Feb-2020		NTS: A 041-F/094-B-16	No	Truck	Deficiencies Corrected	2-Mar-2020	27-Feb-2020	Planned	The road permit deficiency has be removed in the new inspection. Please respond to the deficiency and comments in this new inspection. The following observations were made on the day of inspection; On the a-41-F well sign, the hazard symbol is badly faded and needs to be replaced. Group Separator- the one chemical pump not in use needs to have the PSV car sealed before use. On the a-A-41-F well sign, the "1" missing in "-41". Please add a "1", there is room for it. The sign at the edge of the lease should have the hazard symbols on it. All of your other sites have the symbols.						Central	00018318	27246, 27365, 27367, 27366, 31510, 31511		Facility, Well, Road

7-Feb-2020	0617254S5-001	Kelt Exploration (LNG) Ltd.	10-Feb-2020		From: DLS: 01-31-087-21 To: DLS: 16-32-087-21	No	Truck	Passed Inspection (Complete)	10-Feb-2020	7-Feb-2020	Routine	COMMENTS: - Kelt has a riser site at this location as per the signage, that has been disconnected, but remains in place. There are several piping segments that have been disconnected and the site appears inactive. This site sits alongside the road and also has a building. -In the OGC database, it only shows a CNRL Battery site #2254, Satellite Battery #2666, and another Battery site #3604. And as for BAYTEX...it only shows a Test facility which was cancelled. So as there is a building and what looks to be approx. 4 disconnected riser segments, and only a KELT location sign, I am wondering why no facility in the database at this site recorded to KELT? There is only one pipeline segment that is registered to KELT, but 4 pipelines. So maybe there needs to be some records updated?						Central			CIAS, Pipeline, Road

13-Feb-2020	061400957-001	Bonavista Energy Corporation	18-Feb-2020		NTS: A 039-F/094-G-08	No	Truck	Passed Inspection (Complete)	18-Feb-2020	28-Jan-2020	Planned	COMMENTS: I am a bit confused with this site; wells and signage: -The a-39-F/94-G-8 (WA#1334) well has PETRONAS signage on the methanol tank and the labels on the meters are in PETRONAS' name. Does PETRONAS operate this well for BONAVISTA? - The location sign hanging on the a-39-F well requires a flammable symbol. -ON A SEPARATE lease above the a-39-F well (WA#1334), there is a BONAVISTA location sign at the lease entrance that reads: a-B39-F/94-G-8. The first well on site as you drive into the wells is signed as a-B39-F/94-G-8, but the OGC database shows well a-B39-F is ABANDONED. The well further back on this lease has not been plowed open, but the signage reads through binoculars as a-A39-F/94-G-8. **As per the OGC database: a-39-F/94-G-8 = ACTIVE. WA#1334 a-A39-F/94-G-8 = SUSPENDED. WA#8232 (NO surface suspension yet) a-B39-F/94-G-8 = ABANDONED. WA#19793 (on lease as per signage) a-C39-F/94-G-8 = COMPLETED. WA#20182 (I did not see this well signage) Maybe the signage is not correct on the a-B39-F well?? I did not see an a-C39-F well that has been abandoned on this location. Is the abandoned well back where the a-a39-F well is and is not plowed open?? Please call or email me to discuss. 250 261 5943 The signage and the status of these wells need to be updated??						Central	00000282	01334, 08232, 19793, 20182	Facility, Pipeline, Well
13-Feb-2020	061849684-001	Storm Resources Ltd.	13-Feb-2020		NTS: B 048-G/094-H-04	Yes	Truck	Passed Inspection (Complete)	13-Feb-2020	13-Feb-2020	Planned	Measurement Inspection Meet with Allardyce Bower Consulting. Review the prepared documentation for the plant accounting meters. Noted that Storm Resources intends the FE-15519 the plant sales gas ultra-sonic meter to report plant sales to Petrinex. Verify the meter was calibrated at Trans Canada Calibrations. Verify that critical meter diagnostic alarms are monitored by the plant PLC. Request Storm develop a maintenance plan to re-send the meter and flow conditioner to TCC for calibration in 7 years. Inspect the plant H.P and L.P flare meter configuration. Request the FR-Flow thresholds and the Frequency Threshold calculation for the low-flow cut-off programmed into the plant PLC. There was a discussion as to whether FE-11907 should be marked as PA, and FE 30409 on the condensate stabilizer not marked as PA. Discuss if a multi-stage Flash Liberation Analysis (FLIB) across the Stabilizer Feed Separator V-119 and the Condensate Stabilizer C-303 could be used to obtain a shrinkage and GIS factor which could be used with FE-11918 shrunk condensate volume and multiplied by the GIS factor from the multi-stage flash to obtain the extra gas from inlet condensate. The extra gas would then be added to the inlet separator gas meter FE-10007 to obtain the battery total inlet gas. Request Storm production accountants decide as if this would be the best way to do it. Perform a physical inspection of orifice meter run construction. The acid gas meter FE- 44106 requires a vendor data sheet with the inside pipe diameter for meter run parameter programming. The upstream pipe diameter could not be verified. Check that plant accounting turbine meter K-factors were programmed correctly into the turbine meters. The turbine meters use RS485 Modbus to communicate to the plant PLC. Action Items: 1. Develop a maintenance plan for FE-15519. The ultra-sonic meter run must be removed from service and re-calibrated at Trans Canada Calibrations every 7 years. 2. H.P and L.P meters - Provide low flow cut calculation for FR-Flow Thresholds and Frequency Flow Thresholds. 3. Stabilizer Feed and Condensate stabilizer Flash gas - provide production accounting method to account for extra inlet gas to be added to the inlet gas meter FE- 10007. 4. Measurement Binder- include data sheets for all plant accounting orifice meter runs. Provide photos of the orifice meter run data plates. 5. FE- 44106 and FE-12906 Acid Gas Meters- Develop an operations procedure to safely perform annual maintenance such as orifice plate inspection and transmitter calibration. 6. FE- 11918- Install proving taps. 7. Perform initial meter proves on plant production accounting condensate and water meters at the plant. Live proves. Request master meter inline proving Submit the initial meter proving reports. 8. FE- 15621. Remove low spots in 1/2 SS tubing, ensure liquids will drain back into the orifice changer. 9. FE- 15511- Shorten 1/2 SS tubing impulse lines to (1) meter in length. 10. FE- 15519- Provide meter calibration verification and sampling frequency (As specified in the Sales Agreement with Alliance).						Central	00026801		Facility, Pipeline, Well

18-Feb-2020	061886825-001	Storm Resources Ltd.	18-Feb-2020		NTS: C 038-G/094-H-04	Yes	Truck	Deficiencies Corrected	20-Feb-2020	18-Feb-2020	Planned	Acid Gas Well Start-up Inspection Meet with Allardyce Bower Consulting Project On-site Construction Managers and Storm Resources Exploitation Engineer. Discuss the need for a baseline leak test of the subsurface check valve. It was agreed that the test will be performed prior to disposal, then the plan was to test on a 6 month frequency using nitrogen. Review prepared commisioning documentation, and verified that the max wellhead injection pressure shutdown was set at 12,000 KPa on PIT 067 and PIT 071. Verified that there was a high casing pressure shutdown set at 345 Kpa, and the wellhead flowline had injection temperature measurement. Inspect the wellhead. Found that there was a small surface casing vent flow of sweet gas. It slowly inflated a glove and registered LEL on personal 4 way monitor. Request that Storm perform a surface casing vent flow test and submit the results to the OGC. It was also noted that there was no UWI sign with an emergency contact number at or near the well. Found critical pressure sensing isolation valves for PIT 067, PIT 071, and PIT 073 were not locked or car sealed open. Commented that the surface casing vent line was not standing vertical and terminated very close to ground level. Request that the surface casing vent piping be stood-up and terminate at least 30 cm above ground level as not to become blocked with snow and ice. Found a flowline spool disconnected with one end in the dirt. Request it be checked and cleaned out prior to re-install. There were a number of bull plugs missing on the flowline, and (1) conduiet bull plug not installed on the casing pressure transmitter. No leak piping leak check had been performed. Also noted that some cathodic insulator kits were not installed on the acid gas disposal line, fuel gas line, and flare line as per the Engineering PIDs. Witness an ESD function test when a manual push button to the injection well building was pressed. Noted that the wellhead ESD valve was slow to close. A quick release was not installed as per Engineering PID. Verify that the PLC pre-start-up programming and trending for the acid gas disposal well was complete. Witness an ESD function test from the operator control screen when an ESD control box on the operator display was clicked. Action items: 1. Install cathodic insulator kits, and insulator gaskets if required, on acid gas disposal , fuel gas, and flare lines as per Engineered PIDs. 2. Install flowline spool and complete bolt-up, torques, and leak test of flow line piping. 3. Install missing bull plugs on the flowline piping. 4. Install (1) conduiet bull plug on the wellhead casing pressure transmitter. 5. Lock or car seal open critical pressure sensing isolation points PIT 067, PIT 071, PIT 073 as per the injection well shutdown key. 6. Lock or car seal closed a valve on the wellhead ESD-069 bypass line. 7. Stand the surface casing vent piping up. Ensure the surface casing vent terminates at leaast 30 cm above ground level. 8. Install a quick release on the wellhead ESDV-069 and re-test function. 9. Perform a surface casing vent flow test. Submit the results to the OGC. 10. Prior to commencing disposal operations perform an initial baseline leakage test on the subsurface check valve.						Central		37395	Pipeline, Well

19-Feb-2020	061910642-001	Storm Resources Ltd.	19-Feb-2020		NTS: B 048-G/094-H-04	Yes	Truck	Deficiencies Corrected	21-Feb-2020	19-Feb-2020	Planned	Gas Plant Leave-To-Open (LTO) Inspection Meet with Allardyce Bower Site Construction Managers, PLC programmer, and Storm Resources Operations Representative. Review the gas plant Facility Technical Approval Conditions. Verify that Electrical, Instrumentation, Mechanical, and PLC Programming declarations of substantial completion were signed off, and that the Pre Start-up Safety Review (PSSR) was completed. Not all car seals and locks were installed at the time of inspection. The commissioning team opted to not seal some valves (360 of 420 valves done) in the correct positions until after purging and pressurization was complete. Perform a walk down of plant process piping and equipment. Witness a satisfactory ESD function test when a fire-eye in K- 607 was triggered with a UVIR test lamp. The PLC logic performed as designed. Action items: 1.Prior to commencing operations -Submit the most up-to-date plant operations valve lock/ car sear list. 2. Prior to commencing operations – Submit the signed off PLC programming deficiency punch list. 3. Prior to commencing operation perform a complete review of the plant S/D key and ensure all locks and car seals are installed to prevent a safety system (ESD) device from being bypassed. Some examples include - Lock or car seal open all instrument air pressure sensing points (low instrument air pressure shutdown). L.P and H.P flare KO - lock or car seal open the level bridles (high level shutdowns).Lock or car seal open critical hi/lo pressure sensing points. 4 Ensure there is an authorization form to record if a safety device bypass is required. 5.Prior to commencing operations perform a complete scan of PLC logic/code and ensure al PLC forces are removed. 6. Develop an Operations procedure for purging low point drains and production tanks. 7.Develop an Operations procedure to manually blowdown the refrigeration propane system in the event of an emergency when safe to do so. 8. Submit the OGC Commissioning Binder to the OGC Front Counter within 30 days of commencing operations. 9. Verify that the flare header purge gas rates are set correctly and that the plant main flare meter is not measuring the total flare header purge gas volume. 10. Physically test the flare stack flame fail, and ensure proper function (initiates a block and hold). 11. C3/C4 truck load –out station - install load procedure signage. 12. Complete condensate and produced water truck load-out station and install load procedure signage. 13. Tank VRU - install conduit cover on electrical fitting. 14. Complete pouring of electrical seal on the 2nd. Stg. discharge to recycle compressor suction header. 15. Generator #2- Repair/tighten ground on the outside of the generator building west side. 25-Feb-2020	062068667-001	Altagas Holdings Inc.	26-Feb-2020		NTS: A 033-I/094-B-09	No		Deficiencies Corrected	19-Mar-2020	26-Feb-2020	Audit	Mechanical QC Audit - Mercaptan Treatment Units Conclude audit that was started Nov 27, 2019. Review QC documentation for (3) process welds for the Mercaptan Treatment Project Line #s ATM 341-PI-IS-34014-3-1, ATM 700-PI-IS- 70016-3-2, and ATM 731-PI-IS-73007-3-1. Use OGC ASME B31.3 Check LIST to conduct the evaluation of compliance with ASME B31.3 . Meet with AltaGas QC Manager. During the course of the audit the QC Manager found and took corrective action where the minimum 5% NDE RT was not met. The additional RT was completed prior to the project start-up. The audit identified that there were errors in the piping line class specifications. NDE % for ASO and ATO did not match the Piping Line list. The Line List had 5% NDE and the class specifications required 100%. This lead to errors in the AB83, and Technical Safety BC piping registration information. Material receiving reports do not match for package 730. Noted there was no "Welder Declaration" to acknowledge understanding the of Weld Procedure Specification (WPS). Stress analysis reports were requested, but not supplied and the fabricator confirmed that they had no procedure for flushing and cleaning of fabricated spools after hydrotesting. It is a consideration in ASME B31.3 Appendix F. Action Items: 1. Submit the signed-off Construction Data Report. Revise Line List for changes in NDE % and Line class specification changes and update for Technical Safety BC and AB83 piping registration. 2. Submit a corrective action plan for the failure to follow the Vendor Inspection Test Plan (ITP) process. 3. Submit corrective action plan for not including a "Welding Parameter" inspection by the "Owner's Inspector" in the "Surveillance Reports".						Central	00018246		Facility - Active

Pipeline break in field has yet to be cleaned up. Pipeline is blinded.						Central	00000106	02575, 03723		Facility, Pipeline Project, Well
28-Feb-2020	062176396-001	Altagas Holdings Inc.	28-Feb-2020		DLS: 06-29-087-20	Yes	Truck	Deficiencies Corrected	19-Mar-2020	28-Feb-2020	Planned	Meet with AltaGas Project Manager, Engineering, Operations staff, and E+I Construction and Commissioning staff. Review prepared OGC Start-up binder. Review declarations for substantial completion for the instrument air system, the flare system, and MCC Energization gear. Confirm V-355 V-455, BU-211, BU311, BU411 electrical seals were packed and poured. Review the project deficiency list. Note that were outstanding "A" deficiencies open that will closed once final tie-ins are complete. Found that PIT-3501 off the instrument air header was required to be car sealed open. Operations car sealed the isolation valve to PIT-3501 open at the time of inspection. Confirmed the PSSR for the instrument air was completed Feb 14, 2020. Review configuration documentation for 6 new propane, 2 new butane bullets LITs. Confirmed the LITs were set up and configured correctly. Witness a satisfactory Unit ESD function test for BU211 when fire-eye AT 2110 was triggered. At the time of inspection a Mode 1 block and hold occurred as a result of Phase 1 GC bypass time out. A part is on order for repair. Perform a walk-down of the new production equipment. Action Items: 1. Provide documentation for final testing of hard wire PLC inter connect between North Pine 1 and North Pine 2 SDS systems. Provide a witnessed and signed-off S/D Key by Operations, Operations engineering and mCloud Technologies Corp. Provide signed-off loop checks by EPSCAN Controls. 2. Provide HMI screen shot to show the GC LEL healthy state + calibration record. 3. Flare meter- Calculate the low flow cut. Ensure that it is set to an appropriate value. Submit the low-flow calculation and flare meter configuration. 4. Provide missing substantial completion sign-offs for E+I and mechanical. 5. Provide CWP to determine where bolting and torques are required. Submit confirmation that the bolting and torques for missing spools are complete for final tie-ins. After the outage provide signed-off substantial completions + PSSRs. 6. GC BU 214 Building prior to admitting fuel gas into the package provide the Electrical QC that electrical seals have been inspected that they have been packed and poured. 7. Heat Tech building BU511- Ensure vendor electrical commissioning is complete and the electrical seals are packed and poured prior to bringing fuel gas into the building. 8. Submit signed-off Electrical QC for BU 214, and BU511. 9. Prior to admitting LPG and commencing operations close outstanding "A" deficiencies, and submit the working project deficiency list. 10. ESD and Unit shutdown push buttons on the outside of process buildings- Ensure the labels for the push button function (USD or site ESD) are distinctly different to clearly indicate function. 11. Submit the latest revised shutdown key for phase 1 and phase 2. 12. Submit the OGC Commissioning Binder within 30 days after phase 2 start-up.						Central	00026230			Facility - Active

10-Mar-2020	062705680-001	Painted Pony Energy Ltd.	11-Mar-2020		NTS: C 089-G/094-B-09	No	Truck	Passed Inspection (Complete)	11-Mar-2020	11-Mar-2020	Planned	The PSVs on the chemical pumps in the sand filter skids have tags dated Feb 25 2020 but are not car sealed. There is a leak from the chemical pump in the c-a-89-G sand filer skid- this is identified with orange flagging tape. The pipeline inspection is limited in scope to the on site equipment and signage where expected to be encountered. I later met Painted Pony Operator on the a-10-J lease and we discussed my findings in this inspection. tated the instrumentation company would be coming back the next day and he will get them to car seal the PSVs. For the leak at the chemical pump he identified it earlier and is waiting for the parts to arrive. Thanks for our discussion. 11-Mar-2020	062739345-001	PETRONAS Energy Canada Ltd.	12-Mar-2020		NTS: A 053-B/094-G-08	Yes	Truck	Passed Inspection (Complete)	12-Mar-2020	11-Mar-2020	Planned	Start-up Inspection: Inspect (1) new sales compressor C-300, (1) new generator # 3, (1) new VRU package, (1) produced water + (1) new condensate tank , (2) new cascade water tanks, inlet, fuel gas, start gas, and flare piping with production tank back pressure control modifications, (2) new fuel gas meters, flare header purge set-up, and production tank level transmitters. Inspect the facility PLC HMI, fire and gas detection, displays. Noted not all required locks or car seals were installed at the time of inspection. Witness a satisfactory ESD function test when C-300 fire-eye 1390 was triggered with a UVIR test lamp. Prior to N2 and fuel gas purging: 1. Submit an updated and signed off car seal / lock list as confirmation that all PSV stop valves have been sealed or locked open. 2. Submit the Pre-Start-up Safety Review (PSSR) for new equipment and process piping. Prior to commencing operations: 1. Submit the updated and signed off car seal / lock list as confirmation that ALL car seals / locks are installed as required . 2. Install a position indicator on the Inlet ESDV. Submit an MOC to install an electronic position indicator for positive confirmation back to the PLC (HMI) of the ESDV position status. Reasoning: instrumentation, the solenoid could be de-energized by the PLC output but fail to bleed off and the inlet ESDV could fail to close, or not close fully, remaining partially open. The site may not isolate and blowdown. Recommend a valve travel alarm be programmed in the PLC to alert the operator of a valve position problem. 3. Facility PLC HMI – Production tank level displays. Verify that all indicated values on the graphical display are correct and that level transmitters are reading correctly back to the PLC for reporting of monthly opening and closing inventories. 4. Set the flare header purge rates as per engineering specification, ensure the main flare meter is not measuring and recording the purge gas. Other Items: 1. Production Tank Guided Wave Level Transmitters. Contact the supplier and see if there is software that can generate a configuration and maintenance diagnostic report. Manually record the production tank level transmitter configurations and submit. Contact Petronas maintenance planner and develop a production tank level transmitter annual accounting meter maintenance plan in MAXIMO which will generate a report for file. Please change the status of Project 18300 segment 001.					North		21346	Pipeline Project, Well
25-Mar-2020	063212140-001	Shanghai Energy Corporation	30-Mar-2020		NTS: B 068-K/094-P-05	No	Truck	Passed Inspection (Complete)	30-Mar-2020	30-Mar-2020	Follow Up	This was an inspection to verify work completed under Order 2019-005. Oakridge Environmental confirmed excavation of contaminated soil has been completed in an area adjacent to Tsea River. This area is in the southern part of the Facility property up against the River. I walked this area and observed the affected area measuring approximately 9 metres X thirty metres in size. Prior to being backfilled with non-contaminated fill, the excavation was lined with geotextile fabric. The excavated area is approximately 3 or 4 metres from the Tsea River. (The area was snow covered so measurements are only rough estimates). An earthern berm remains on the north side of the excavation. It's possible that snowmelt and rainwater will accumulate against the berm over time, as the site slopes to the south towards Tsea River. The contaminated dirt was placed on surface in a fenced area adjacent to the work area and was later trucked to the Tervita Northern Rockies Land Farm. All contaminated fill has been removed. Steel fence panels remain in place. Rep estimated that a gravel or stony lens was generally observed roughly 2 to 2.5 metres below surface when test pits were dug in the and around the southern part of the property. Oakridge will submit a final report to Shanghai, with photos and more precise volume data, and next steps. Comment: 1) Status of Facility #00324 (Compressor/Dehydrator) and Facility #008139 (Gas Sales Meter) show as "Active" despite the Facilities being removed some time ago. Please submit update for these two Facilities, as "Removed" by e-submission.					North	00000324, 00008139		Facility - Active

26-Mar-2020	063146533-001	ARC Resources Ltd.	27-Mar-2020		DLS: 13-07-080-14	Yes	Truck	Passed Inspection (Complete)	27-Mar-2020	27-Mar-2020	Planned	Dawson 4 LTO Inspection. Meet with Arc Resources On-site Construction Manager, The Project Engineer, and the Measurement Specialist. Review prepared measurement documentation, declarations of substantial completion, and assess readiness to start. Confirmed all S/D Key safety system function tests were completed for both Dawson 3 and Dawson 4 plants on March 25th. Confirmed the acid gas, HP and LP flare meter low flow cut-offs were calculated, and the meters were updated with the new values. Perform a walkdown of the new production equipment and process piping. Noted that the plant was under a nitrogen blanket. To prevent accidental blowdown and loss of nitrogen (1) manual isolation valve on plant automated blowdown valves was locked closed. Noted that some fire detectors were not positioned for optimal coverage of the process buildings. A satisfactory inspection was completed to issue the LTO approval with the following conditions: Prior to the introduction of hydrocarbons into process piping and equipment: 1. Ensure all isolation valves up and downstream of automated blowdown valves are locked or car sealed in the open position. 2. Submit the most up-to-date car plant master car seal / lock list. 3. Ensure all fire detection equipment is targeted for optimal coverage of equipment. Construction Follow-up Items: 1. Complete identification of all "non- accounting ' meters. 2. Complete identification of ESD push buttons outside of process buildings. 3. Propane Accumulator - Ground the load point , install truck ground strap, and safety signage "attach ground cable". 4. Complete vendor commissioning of process and tank VRUs. 5. Arrange for an inspection of the truck-in station once complete.					South	00018270		Facility - Active

26-Mar-2020	063255495-001	Tourmaline Oil Corp.	31-Mar-2020		NTS: A 080-L/094-A-13	No	Truck	Passed Inspection (Complete)	31-Mar-2020	26-Mar-2020	Planned	COMMENTS: -There is a sour/H2S symbol on your location signage at the lease entrance. As per the gas analysis on file for this well, there is zero H2S, therefore the symbol is not correct. Please remove or cover the symbol asap, as this could be considered a deficiency for "posting) a warning symbol where no hazard exists." Flammable symbol is required "if the well may produce flammable gas" -Also, as the a-A80-L well (WIA# 285B9) was completed in September 2015, but has not produced since completed, the flowline should not be connected to the wellhead as per the regulations. The wellhead is chained and locked, and the database shows no production from this well since completed. If it is connected due to recent production, please disregard or contact me to discuss. Otherwise, the flowline needs to be disconnected at the wellhead.						Central	00018228, 00025716, 00025717	28588, 28589	Facility, Pipeline, Well

7-Apr-2020	063542949-001	ARC Resources Ltd.	8-Apr-2020			DLS: 04-20-084-24	Yes	Truck	Passed Inspection (Complete)	8-Apr-2020	7-Apr-2020	Planned	Addition of one Separator and one Sweetening Towerto existing Compressor/Dehydrator Facility. Meet with Arc Resources Area Foreman, Programming Specialist, and the site Construction Manager. Review commissioning documentation, and confirmed that flange bolt-up torquing was complete. Verified that electrical seals in hazardous area areas had been inspected and were poured. A Roughneck heater in the separator building was removed and wiring was exposed. When checking if lock out procedures were followed, it was found that the electrical breaker was turned off but not locked out. It was evident that the installed breaker was missing a metal piece that was necessary to install a locking seal to prevent the breaker from being turned on. An electrician was called to disconnect the wiring to the Roughneck heater, and the electrical contractor notified of the deficiency. Final bolt-up the Sweeting Tower was being completed at the time of inspection. Noted that not all PSV stop valves were car sealed and open to flare. Request ARC confirm that all new PSVs stop valves related to the project are car sealed open to flare prior to purging and pressurization. Action Items: 1. Submit Arc Handover Check List (final walkdown). 2. Submit final facility lock/ car seal list prior to commencing operations. 3. Separator Building BU -1300 - Replace Roughneck Heater breaker so it can be locked-out as required.						Central	00018327		Facility, Pipeline, Well
7-Apr-2020	063548298-001	ARC Resources Ltd.	8-Apr-2020			DLS: D 02-27-084-24	No	Truck	Passed Inspection (Complete)	8-Apr-2020	7-Apr-2020	Planned	Inspect new wells (K,D,E,F,G,H), effluent and gas lift meter runs, EFM configurations, and new piping up to the test and group headers. Checked all new wells for surface casing vent flow. Found no vent flow. Request that thread sealant compound be put on all bull plugs installed on the new effluent and gas lift meter runs. The On-site construction Manager tasked a pipefitter to do this at the time of inspection. Noted at the time of inspection pressure sensing isolation valves on pressure transmitters for the wellhead high pressure shutdowns were not locked or car sealed in the open position. Action Item: 1. Flowline and lift gas ESD valve function- Prior to commencing operation lock or car seal open pressure sensing isolation valves on flowline pressure transmitters that initiate ESD valve closure. 21-Apr-2020	063819969-001	Shanghai Energy Corporation	22-Apr-2020		NTS: C-C 068-B/094-O-15	Yes	Truck	Passed Inspection (Complete)	22-Apr-2020	22-Apr-2020	Routine	This was a joint inspection with Shanghai Operator. This is an inspection of the disposal well, well facility, disposal station and pipelines. Disposal well is active. Surface casing vent checked, ok. Disposal well Casing transmitter and tubing transmitter last date on cal tag is Oct 2017. No gauges visible (wellhead is wrapped in insulation). Pipelines are active. Signage, cathodic ok. Disposal facility is active. Chem tanks ok. Tank farm ok. Signage ok. The following deficiencies were observed, but are being presented as Comments, as this was a joint inspection. The expectation is that these will be addressed: 1) ESD is latched open. Normally, this would be a SERIOUS deficiency. 2) Load boxes at tank farm are rusted out (produced water drains into containment ring). 3) In the pump building, valve on PSV line from duplex pump can be functioned past the carseal cable. (Valve handle was removed at time of inspection). Please undertake the repairs and advise OGC when completed.						North	00007784, 00024111	25340	Facility, Pipeline Project, Well

22-Apr-2020	063891379-001	Attagas Holdings Inc.	24-Apr-2020		DLS: 15-26-088-24	Yes	Truck	Deficiencies Corrected	20-May-2020	23-Apr-2020	Planned	Truck Terminal Inspection Meet operation staff. Perform an inspection of the facility process piping and equipment. Generally the site is in good condition. Some small things like valve handles had vibrated off valves in the truck-in/out buildings. Noticed garbage and debris on lease from pipeline construction, some just under the facility perimeter fence, and some that some had blow over the pipeline ROW and into the tree line. Noted one small leak on NGL sales thermo-well 1201-1 fitting into the pipe and that WHMIS signs on the NGL bullets were faded and required replacement. A question came up as to what the maintenance frequency was on the truck-in/out piping thermal relief was. There was no tag as to when they were installed or to indicate if they had been replaced. Action Items: 1. Clean-up garbage and debris as per comments. 2. Inlet Building Discharge PSV- Install blow-off cap on PSV vent discharge. 3. Replace faded WHMIS Product ID s on NGL bullets. 4. Respond as to what the maintenance frequency is for mini- thermal relief valves. 5. Truck-in/out buildings - replace missing valve handles.						Central	00018303		Facility, Pipeline, Well

23-Apr-2020	0638767278-001	Plateau Pipe Line Ltd.	24-Apr-2020		DLS: 10-19-088-23	Yes	Truck	Deficiencies Corrected	20-May-2020	23-Apr-2020	Planned	Pump Station Inspection. Meet operations staff. Perform a walkdown of the facility equipment. Recent up-grades: Tourmaline and CPC inlets, additional C3 storage, booster & shipping pumps P-412 and P-413, station ESD skid, and Piston Prover and meter proving line installation. Noted there was alot of garbage and debris left over from construction scattered over the lease. Noted that some of the C3 bullets were missing WHMIS product identifiers. The magnetic plaques on some bullets lost adhesion and were on the ground. Suggest another method be developed for the placement of the WHMIS identifiers such as placing WHMIS plaques at ground level. Noted staining on the ground around the underground phase 1 KO tank from the P-910 gear box oil line to atmospheric breather. Noted @ Riser #1 the spring loaded valve on the truck in vent remained open after operating it causing a continuous flare. This valve requires replacement. Noted (1) thermo-relief PSV pilot on the Station ESD Skid, and (2) thermo-relief PSV pilots on the shipping pumps had outlets relieved to atmosphere, where liquid product would go to the ground. If the pilot was to fail it would continuously relieve product to the ground, creating a spill and potentially a hazardous situation. Plateau must examine if the pilot outlets can be tied into the flare system via the flare KOs. Reviewed Feb, and March proving reports for FE-2150. The meter factors were consistent. Action Item: 1. Load station #1 - Replace spring return valve on vapour line bleed. 2. Install permanent WHMIS Product ID plaques on C3 bullets.						Central	00026263		Facility, Pipeline, Well

27-Apr-2020	064027497-001	PETRONAS Energy Canada Ltd.	30-Apr-2020		NTS: C 065-G/094-B-08	Yes	Truck	Deficiencies Corrected	20-May-2020	27-Apr-2020	Planned	Meet Operations Staff. Noted there was a recent upgrade to the plant discharge piping to increase the rating from ANSI 600 to ANSI 900 rating to sell to TC Energy. As part of the upgrade the sales compressor discharge bottle and cooler were replaced. The ANSI 600 flanges on the discharge piping were replaced with ANSI 900 flanges and a new section of discharge piping and sales ESDV to the TC Energy pipeline was installed. The Commission was not notified of the upgrade. This was not a Replacement In Kind because there was a change in design. A Notice of Intent (NOI) should have been submitted. Refer to the OIL and Gas Activity Operations Manual Section 12.4.1. It was noted that the plant flare meter FIT-6000 was removed. The Commission was not notified of the removal of the flare meter. The question came up if the de-ethanizer overheads compressor shuts down and the gas sent to flare, how would the flared volume be determined? The de-ethanizer overheads meter is deemed to be non-accounting. The flare meter was included in the Instrumentation PIDS and was reviewed in the application process. The removal of the flare meter will be under review. Action Items: 1. Provide a detailed explanation of how the flared gas volume is determined if the de-ethanizer overheads compressor shuts down. Examine if the de-ethanizer overheads meter can be used to determine the flared volume when the overheads compressor shuts down. 2. Have a discussion with the OGC Pipelines & Facilities Branch to determine what actions will be required as a result of the sales compressor discharge pressure design changes to address the following regulatory gap as described below. D&PR 78 (4) A facility permit holder must submit to the commission all record drawings including piping and instrumentation diagrams, metering schematics and plot plans, signed and sealed by a professional engineer licensed or registered under the Engineers and Geoscientists Act, within 3 months of beginning production or completing permitted modifications, as applicable. Because this was not a PERMITTED activity the Commission will have no updated Instrumentation PIDs on record. A Notice of Intent (NOI) or historical as-built submission may be required. 28-Apr-2020	064142283-001	PETRONAS Energy Canada Ltd.	4-May-2020		NTS: B 065-J/094-B-16	No	Truck	Passed Inspection (Complete)	4-May-2020	4-May-2020	Complaint	The methanol line is still connected to the wellhead and should be disconnected. Although the Drilling and Production Regulations states the following under Section 5; "The well permit holder of an inactive well, within 60 days of the well becoming inactive, must do both of the following: (a) suspend the well in a manner that ensures the ongoing integrity of the well; (b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means. " After an incident where the well was shut in, the master valve failed as well as the methanol check valve , sending gas into the meter skid. After a discussion with OGC Engineering, there will be an update to the guidance for inactive/suspended wells to include all flow lines regardless of product and not just "the flow line" as described in the regulations. There are also some rags to pick up on the lease.						Central	00017953	24047	Facility, Pipeline, Well

Inspect prepared commissioning documentation. Confirm bench prove and meter factor on the disposal meter. Electrical Q/C completed. Verified that locks were installed on shut down devices. Noted that the max wellhead injection pressure was set exactly at 13,700 Kpa as in the disposal permit. Recommend lowering S/D set points 100 Kpa to give some safety margin for pressure transmitter and Presco Switch calibration deviation. Disposal well tubing can go on vacuum, recommend re-ranging the tubing pressure transmitter and the SCADA input -100 Kpa to 15,000 Kpa. Noted that the disposal well was in operation and the surface casing vent was not piped outside of the enclosure. Also it was noted that a valve on the 1-32-80-15 sales riser inside the enclosure on site had a bull plug removed. The inner threads of the valve were corroded such that a bull plug could not be installed. Tourmaline agreed to replace the damaged valve and install a bull plug as required. Action Items: 1. Re-range the tubing pressure transmitter and SCADA input (-100 Kpa to 15,000Kpa). 2. Lower the max well injection pressure S/D set point 100 Kpa. (Presco & Tubing TX). 3. Post a copy of the Disposal Permit inside the disposal well enclosure. 4. Replace faded sign at lease entrance.						South		23533	Pipeline, Well

30-Apr-2020	064897508-001	Coastal GasLink Pipeline Ltd.	12-Jun-2020		NTS: A 077-A/103-I-02	Yes	Truck	Passed Inspection (Complete)	12-Jun-2020	30-Apr-2020	Routine	Routine inspection of the meter station, section B pipeline corridor, blasting activities accessed from the South Hirsch road, ROW adjacent to Pine Creek and ROW in and around the Haisla Village Road. Inspected the meter station and associated drainage and settling ponds. Minor fence damage noted during winter operations and water quality testing is occurring to ensure settling ponds are not discharging turbid water off of permitted area. WC 729 inspected area post blasting activity, all run off from ROW running clear and no blasting debris noted in the stream. WC 728.37 had active blasting and stream protections in place. Noted from these areas is to watch for potential aid mixing in topsoil piles from blast rock/subsoil as storage areas are filling up quickly and piles are creeping closer together. Also watch for potential erosion of topsoil due to snow storage areas melting. Inspected WC 3E and the Wathl road, enhanced ESC measures in place and stream running clean. ROW greening up well and ESC measures holding up during spring rains, no sedimentation noted leaving the site towards Pine Creek. Monitor these ESC measures to ensure they stay intact as some were reaching capacity. Very impressed with ESC measures put in place around the Alcan road ditchline, very limited options with the proximity of the PNG pipeline and the ditch. Monitor sumps above Haisla village Road to ensure they are not transporting sedimentation below the road to the adjacent ditchline and subsequent watersourses downstream. No Non-compliances noted.						South	00018343		Facility, Pipeline Project

5-May-2020	064189880-001	PETRONAS Energy Canada Ltd.	6-May-2020		NTS: B 088-I/094-B-01	Yes	Truck	Deficiencies Corrected	20-May-2020	5-May-2020	Planned	North and South Gas Plant Inspection Perform a walkdown of in-service production equipment. Found the north plant inlets-1200 and 2200 had gas leaks, reading 7-8 % LEL inside the buildings. The fixed gas detection was reading low indicating 6 % LEL in the buildings. Constant exposure to methane coats the gas sensor catalytic bead. Found high LEL in the H.P flare KO enclosure. South plant (2) broken carseals were found on the water level bridle on the HP inlet S-1200 . This bridle did not have a high level S/D but had a low level S/D to ESD the water dump. K-6400 - some oil staining was found on the ground by the south exit and inside by the compressor end. Underneath the decking there was evidence of oil leakage, a small amount of lighter colored oil was present. There was an area of oil staining on the underside of the compressor floor pan above the staining on the ground. K-8400 was found to have a more significant oil leak. The oil was leaking through the compressor pan and onto the ground. Action Items: 1. Inlet 2200- Inlet gas meter - PT-2101 and TIT -2101 last calibrated Mar 11/19. Check if these transmitters were missed during routine meter calibration. 2. Inlet -1200 - Inlet gas meter- PT 1200 recent calibration- April 25/20. TT-1200- last calibration Mar10/19. Check if this transmitter was missed during routine meter calibration. 3. Report the K-8400 oil spill to Emergency Management BC (EMBC). 4. Install WHMIS product identifier plaques on the C3/C4 bullets.						Central	00007778		Facility, Pipeline, Well

12-May-2020	064414182-001	Canadian Natural Resources Limited	14-May-2020		NTS: A 052-H/094-A-13	No	Truck	Passed Inspection (Complete)	14-May-2020	12-May-2020	Planned	COMMENTS: -the location signage at lease road has the sour symbol too faded to see, update. -oil seepage/leakage at the polish road and seeping down wellhead -the ground cable on the methanol/chemical tank and solar pump skid does not have the end of the cable attached. If the solar pump skid is welded/attached to piling, then ground is complete. If there are no pilings, i dont think the cable is properly grounded. If there is a proper ground, maybe cut the cable to proper length so that it is not a trip hazard, or looks to be unattached for a proper ground.						Central	00022325	21651	Facility, Pipeline, Well

20-May-2020	064478588-001	Coastal GasLink Pipeline Ltd.	21-May-2020	21-Jun-2020		No	ATV/Snow Machine	Deficiencies Corrected	7-Apr-2021	21-May-2020	Routine	Inspection of Road 05163 was started on May 14, 2020 and was deferred to May 20, 2020 due to restricted access and ATV requirements. The road has been roped off to prevent vehicle access. Please ensure the proper notification has been submitted to the BCOGC as required by the Oil and Gas Road Regulation 20(3)(b) No boundary flagging along the first 1 1/2 kilometers of the road. Several snow / debris piles were observed to be pushed into the tree line, the debris is required to be pulled back at the first opportunity when the required equipment is on site. Sediment control on the bridges is not being maintained, it was observed that the fabric had rips and holes in several locations and that the fabric was no longer attached to the stakes in an upright position. Some of the wing walls on bridge approaches have openings were they meet the bridge that will allow sediment to enter the RMA.						South			Road

21-May-2020	064492767-001	Tourmaline Oil Corp.	22-May-2020		NTS: A 021-I/094-B-09	Yes	Truck	Passed Inspection (Complete)	22-May-2020	21-May-2020	Planned	Start-up Inspection For New 198 MMSCFD Compressor/Dehy Facility Meet with Tourmaline operations and construction staff. Review the permit conditions and prepared commissioning documentation. Q/C documentation was provided for (3) welds on fabricated process piping (blow case to bullets and to (2) tanks, tanks to new pumps to water pipeline). This exceeded the requirement as the preparation of the material is only required for gas plant Mechanical Q/C Audits. None the less, it demonstrated a high level of quality control. Confirm that the bolt-up and flange torquing was complete, records, and a declaration of mechanical completeness were provided. Verified the Waste Discharge permit was issued, dated April 22, 2020. Safety system and ESD function testing was completed May 20, 2020. Inspected accounting meters. Noted that the H.P and L.P flare meter MCUs were not communicating with the host PLC. Requested that this issue be fixed prior to commencing operations. Perform a walk down of the new equipment and process piping. Noted some car seals were missing on critical pressure sensing linked to ESD function on the inlet header and on the instrument air pressure low shutdown. Tourmaline quickly dealt with these and the required car seals were installed. A revised car seal list will be required after start-up. Verified that check valves were installed on the compressor starter gas discharge to the HP flare header. Witnessed a satisfactory ESD test. Noted that the black start diesel generator was removed for service. Action Items: 1. H.P and L.P flare meter MCU - Prior to commencing operations repair communications problem. 2. Prior to the introduction of hydrocarbons perform Tourmaline Pre-start-up Safety Review (PSSR) and submit completed signed-off form. 3. Confirm with the Tourmaline's Production Accounting Dept. that the total flared volume reported includes an estimate of pilot gas. Total flared = total HP and LP flare metered volumes + total purge gas(flare headers) + estimated pilot gas. 4. Identify all accounting meter gas and hydrocarbon sample points on process piping. 5. FE-9204 - install a meter ID tag. 6. Prove new condensate meters within the first month of operation and submit proving reports with photos of the display front face to confirm K-factor have been entered and saved correctly in the meter head. 7. Update inlet and sales gas composition analysis, and submit composition analysis. 8. AltaGas condensate meter FE-1001 provide a photo of the front display face of the to show the K-factor is programmed into the meter head and matches the manufacturer's certification. 9. Submit a revised car seal list.						Central	00007924		Facility, Pipeline, Well

21-May-2020	065072937-001	Coastal GasLink Pipeline Ltd.	23-Jun-2020			Yes	Truck	Passed Inspection (Complete)	23-Jun-2020	21-May-2020	Routine	Routine inspection of CGL activities along the Upper (North) Kitimat FSR on May 21, 2020. Stopped by the pipe storage yard (non BCOGC permitted) and looked at the pipe that has been delivered as well as talked with the practice welding that was ongoing. Requested welding procedures be provided as well as an opportunity to view welders as they are preforming the qualification tests. Follow up emails provided welding procedures and a separate site visit to view the active welding at the Kitimat River DPI. Also noted some pipe caps had been removed and left on the ground, requested that these be reinstalled unless otherwise required to leave them off. Proceeded to Hunter Creek camp, PTP permit 9638363. Construction appeared to be within permitted area. Watch topsoil piles for potential ad mixing during site development and ensure ESC measures in place to mitigate topsoil erosion. Discussed fuel storage and the installation of barricades. Site drainage under development at time of inspection and drainage management plan provided upon request. Branch 128 road construction underway and temporary crossing in place, well done removal of trees adjacent to stream, no debris noted in the watercourse. Ensure filter cloth on deck is operational and no gaps occur. Minor removal of ESC measures downstream requested if not required, stockpile of material had no impact to the stream at this time. P4 has been cleared and grubbed but stream inside boundary has been left intact. A29.8B Borrow pit has been temporarily accessed across the PTP ROW. Clearing and grubbing has occurred and some salvageable wood has been decked onsite. Once permanent access established please ensure that proper access controls and signage is in place. A29.13 Borrow pit has been active in the past and some material has been removed. Requested appropriate signage be in place as per Mines Act and associated Regulations, follow up photo of the new sign provided to the BCOGC as requested. No non compliance noted. 22-May-2020	064524136-001	Canadian Natural Resources Limited	25-May-2020		NTS: D 043-H/094-B-10	No	Truck	Passed Inspection (Complete)	25-May-2020	25-May-2020	Follow Up	The pipeline project 6448 is still showing as ACTIVE in Kermit. This is the originating well which last flowed in 2013. It does not show up in your exemption list. Please add it to your list. All the equipment has been removed off site. The berms around the tank farm, underground tank and flare stack were all removed to prevent pooling water and attracting wildlife and livestock. There is very little pooled water on location to attract animals. There are a few strands of barbed wire that have broken off due to moose as evident of hair entanglement. These should be reattached prior to the range tenure holder releasing their animals. No other concerns noted at the time of inspection.								Central	00018419	00433	Facility, Pipeline Project, Well
22-May-2020	064524765-001	Canadian Natural Resources Limited	26-May-2020		NTS: B 070-C/094-B-09	No	Truck	Passed Inspection (Complete)	26-May-2020	25-May-2020	Planned	The insulation batts are just starting to loosen off of equipment and shed some insulation. This should be removed before it becomes litter. Thank you								Central		08804	Well

This has resulted in a fall/trip hazard as the hole size can fit a human foot. This particular lease has some holes that can be filled in with a shovel. There are other leases that have the same issue. Please check your other sites. There is also some trench subsidence with the removal of the on lease pipeline. So far, these have been gradual in nature but should be monitored. For the pipeline inspection, only the on lease abandonment activity was inspected. 27-May-2020	0646686670-001	PETRONAS Energy Canada Ltd.	2-Jun-2020				No	Truck	Passed Inspection (Complete)	2-Jun-2020	2-Jun-2020	Routine	I happened to stop by this sump at about km 13 on the West Gundy Road after inspecting the d-62-J well pad. I talked to a Petronas representative by the name of Cam. Thanks to Cam for our discussions. It was good to see these sumps fully decommissioned and great to see that they are being planted with trees. The cat was observed ripping to decompact the ground. As I drove around the Gundy Creek area I noticed the sumps have been reclaimed with additional coarse woody debris scattered around. It was noted that at the sump beside well site d-35-B / 94-B-16 the ground has become really hard and will require trees to be planted with this in mind. Overall the sump areas with the additional coarse woody debris scattered around looks good.						Central			Pipeline, Road

28-May-2020	0645643335-001	Storm Resources Ltd.	28-May-2020	13-Jun-2020		NTS: B 048-G/094-H-04	No	Truck	Deficiencies Corrected	18-Jun-2020	28-May-2020	OGC Requested	HP and LP Flare Meter Inspection On May 21, 2020 the Commission received a email from the engineering firm on behalf of Storm Resources that the HP flare meter (FE - 90004) has been registering flow velocities inaccurately up to about 0.4 m/s. This roughly calculates to 15,760 e3m3/day. Storm has conducted tests using the senior orifice meter run for dilution gas measurement, with pressure and temperature compensation, to establish that a measurement error is present at low flow velocities. A low flow cut-off was set for the HP flare meter in the PLC at 1Hz. This is not the preferred method. The measurement low flow cut-off is to be set in the meter. The HP flare meter low flow cut-off must be set to 0.03 m/s which is at the published accuracy. The Commission requires Storm to characterize the measurement of the HP flare meter in the plant PLC. A third order polynomial curve fit is to be used to match various test flow rates through the dilution gas meter. The measurement characterization is to apply to up to the point where the HP flare measurement is within the manufactures published uncertainty and meet a total measurement uncertainty for the flared gas of +/- 5% . Action items: 1. LP flare meter- Determine if the LP flare meter is reading accurately at low flow velocities. 2. LP flare meter- Provide test data. 3. LP flare meter- Set the low flow flow cut-off in the flare meter main control unit (MCU) at the published accuracy. 4. LP flare meter - Provide the flare meter (Photon) configuration report to show the low flow cut-off is set in the MCU.						Central		00729	Facility, Pipeline, Well

4-Jun-2020	0647403374-001	Coastal GasLink Pipeline Ltd.	5-Jun-2020		From: DLS: 02-24-077-21 To: DLS: 03-23-077-21	Yes	Walk	Passed Inspection (Complete)	5-Jun-2020	5-Jun-2020	Routine	Joint inspection with operator of ROW from KP 000+400 to KP 001+820. Laydown # 1 has been taken to grade, top-soils stored on location. KP 000+450 water has ponded on ROW, frogs / tadpoles present. Exclusion fencing is to being installed June 5th. KP 000+782 Wetland 11763 isolated from ROW KP 001+041 Wetland 11762 - water has ponded on both side of the ROW Isolation fencing is not effective. Please ensure the wetland is appropriately isolated from the ROW and that frog exclusion fencing is installed along the public access road and where required along the ROW. KP 001+200 Hot Line crossing- no concerns noted at the time of the inspection. KP 001+780 Sediment fence is partially loaded from previous rainfall event ,please ensure the appropriate maintenance is completed KP 001+820 SEC measures have failed at the low corner, sediment has migrated onto private land along the railroad easement. Operator stated the failure occurred approximately 2 weeks ago and that the contractor SMIV was notified to correct it. SMIV failed to complete adequate corrective measures and the operator will be issuing an NCR for the corrective measures to be completed with a requirement to meet typical drawing requirements. The operator is to provide photographs of the completed work and a follow-up inspection will be conducted by Randy Lang. Please ensure that the SEC measures in section one are adequate for the intended purpose and that maintenance of the SEC measures is completed on a regular basis.						South			CIAS, Pipeline
4-Jun-2020	0647450992-001	Coastal GasLink Pipeline Ltd.	5-Jun-2020			Yes	Truck	Passed Inspection (Complete)	5-Jun-2020	5-Jun-2020	Routine	Joint inspection with operator of road RE 1000.0 Arch gap flagged off. Deck area has been notched out of the upper bank causing an undermining of the stockpiled upper surface material. Please ensure that the stockpiled material is pulled back so that it will not collapse into the work space. A ditch line has been established on the upper side of the road. The deck area located by the Arch Gap appears to have rocks placed along the ditch line for drainage. This is not adequate to maintain water flow in the ditch. Please ensure that adequate drainage is in place at this location. This was discussed with the operator at the time of the inspection. The upper bank along the road has been cut into the standing timber damaging the root mass of some trees. Having a danger tree assessment was discussed with the operator.						South			CIAS, Pipeline

4-Jun-2020	0647777383-001	TAQA North Ltd.	8-Jun-2020		NTS: D 041-H/094-G-08	No	Truck	Passed Inspection (Complete)	8-Jun-2020	4-Jun-2020	Planned	COMMENTS: -The location is not legible on the location signage. Please update. -Also, the sour symbol is present on the location signage. As per the OGC IRIS database and Esubmission, this well does not have any H2S present in the gas stream. I have made comments in the past, as to your location signs having sour symbols when there should not be a sour symbol displayed. I have asked that the symbols either be covered over or removed. This applies to ALL your wellsite locations, In the future I will be submitting a deficiency where warranted. Please have your personnel keep an eye out for these situations and have the signage updated. -Also, the drip tray under the solar pump is full of water, and overflowing onto the ground, which in turn makes the drip tray pointless. The tray is lying on the ground, at an angle and not level, which in turn, does not allow for the tray to contain the amount it was intended. Please address these items. Thank you. 18-Jun-2020	065331806-001	LNG Canada Development Inc.	7-Jul-2020			Yes	Truck	Passed Inspection (Complete)	7-Jul-2020	7-Jul-2020	Routine	June 18/2020 inspection: -Kitimat River Water Intake: very clean and organized site. Booms in place. No concerns. - Oxbow area: fence in place for amphibians. No work completed yet at time of inspection. - Anderson and Moore Creek bridges: sediments guards missing on bridges (not OGC. Just a comment/observation made). Moore bridge was being removed soon. - Giobule area: excavation/hydrovac underway. Liner to be completed that day. To be seeded. - Anderson realignment: in great condition. Planted. Berm to come out soon. - North Haul Rd: sedimentation in creek due to missing pump from natural sump. Pump was replaced while on site, and water quality tests were being completed (tests were later sent. Thank you for the quick response/follow up). Other ESC measures all appeared to be in good working condition. - KRSC: 1 culvert plugged but inlet still functioning well. Overall in great condition. Overall site appeared to be extremely clean, and very well maintained. No garbage seen during the inspection.						South			Pipeline, Road

24-Jun-2020	065150063-001	Kelt Exploration (LNG) Ltd.	26-Jun-2020		DLS: 02-10-088-23	Yes	Truck	Passed Inspection (Complete)	26-Jun-2020	24-Jun-2020	Planned	Gas Plant LTO Inspection Meet with Kelt project lead engineer, construction, and operations staff. Reviewed the permit conditions, and verified that a Waste Discharge Permit was in place. Verified that the process piping was substantially complete. A heat medium PSV POP tank needed to be installed. Kelt expects this to be completed June 25th. Technical Safety will do a Heat Medium boiler inspection. The Dehy #1 and Heat Medium systems are being certified to be CSA b149.3 compliant. Verified that the safety system commissioning was completed June 23rd. Reviewed PLC screen shots of the ESD function tests. Verified that the fire and gas detection were live back to the PLC and had no faults. ESD push buttons on the new process equipment buildings were tied in. PSV stop valves, and pathways to flare were sealed open at the time of inspection. Due to the manipulation of valves for purging and pressurization not all car seals are installed on Emergency Shutdown Devices. The OGC requested the Kelt project lead engineer, calculate the vented gas volumes during the sweet gas purge based on process piping size + vessel size, and the hold pressure for reporting of vented volumes into Petrinex. It needs to be confirmed that the calculations are completed, and each purging step is recorded. There will be a few pressurization, hold, and vent cycles, possibly four (4) until the O2 is 4% or lower and it is safe to start. Each cycle and associated volume will have to be recorded and totalized and included in the monthly vented gas total. My preference is to have a method set-up for recording the vented volumes before purging. Reviewed the Master Deficiency List (Punch List) and performed a walkdown of the new process piping and equipment. Kelt is managing the project and Master Deficiency List very well. A conditional LTO approval was granted with the following conditions to be completed before commencing sour sales. LTO Approval Conditions 1. H2S Analyzer AIT 501 - Complete the commissioning and enable the high H2S shutdown. 2. Acid Gas Divert Control Valve (PCV-0025) – Install position feedback to plant PLC. 3. LP Flare Stack Flame Failure – Light flare and verify that the flame fail control circuit relay clears. Perform a function test of the flame failure control circuitry back to the plant PLC. 4.Submit the Plant Master Car Seal List, signed by operations and the project lead engineer, that al carseals have been installed as per the Drilling and Production Regulation 49 - Emergency shutdown devices. Action Items: 1. Record ,calculate, and report all vented gas from the start-up and purging process. Submit records of purging activity. 2. Check Operations Procedures and verify if Kelt has a written procedure for bypassing a safety device that meets the intent of the Drilling and Production Regulation 49-Emergency Shutdown Devices. 3. LP flare meter- Submit (PDF) meter configuration parameters and verify a low flow cut off is set in the meter as per the manufacture published specification.
