19-Jul-23	2023-1999	Canadian Natural Resources Limited	NTS: A- 089-E/094-A-14	TRUCK	CENTRAL	Completed	In Compliance	Risk & Data Informed	-The IRIS system shows this well as SUSPENDED. But the wellhead has not been disconnected from the flowline, therefore, surface suspension needs to be completed. -there is a surface casing vent flow at this location. My personal monitor detected small amounts of H2S, as well as high LEL's and CO. In the last report dated December 2022, that is submitted by CNRL, it shows as NON SERIOUS. Due to the test being done in winter, and no reports of H2S, I think another test needs to be done to determine if H2S is present, and if so, where is is coming from.								9303

20-Jul-23	2023-2076	Canadian Natural Resources Limited	DLS: 16-25-087-24	TRUCK	MID	Completed	In Compliance	Officer Selected	Routine inspection of site 16-25-87-24 W6M. Inspected remaining equipment on site. No issues found at time of inspection.								9592			
20-Jul-23	2023-2084	Pieridae Alberta Production Ltd.	NTS: D- 090-C/094-I-14	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 03854: (D- 090-C/094-I-14) July 20, 2023: 1200 PM at site for inspection. Parent Well Head: surface casing valve was open, SCV no LEL was measured (Altair-5x), SCV no gas flow pressure was noted. Well head valve was open, and valves were chained and locked. Signage on site is compliant to standards. Flowline valves were observed as "closed" and ESD pressure sensitive valve was locked open. KERMIT last gas production date: 2022-07 (approximately 12 months of no gas production) (Operations are presently classed as "In Active"). Note: no gas production / activity will become classed as "Suspended" after > 14 months of inactive gas production. Chemical Storage: There are three chemical tanks on site, two double walled and one single walled with containment. All chemical tanks were grounded, SDS labels attached, and containment plugged installed. No issues concerns noted with well chemical building, as no spills/leaks were observed. Electrical building: no issues/concerns were noted. Well pad site was treated with herbicide; no invasive plants were noted on site. Comment: pipeline/flowline valve was observed as closed and pig barrel was chained, also observed a wetness at the top section of the flowline valve indicator "Close" label (comment).								9640			
20-Jul-23	2023-2081	Pieridae Alberta Production Ltd.	NTS: A- 076-C/094-I-14	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	WA#04193, (A- 076-C/094-I-14) July 20th, 2023: 1100 hours on site. Parent Well Head: surface casing valve was open, SCV no LEL measured (Altair-5x), SCV no flow observed (latex glove test). The ESD pressure sensitive valve is locked in the open position. Well-headed valves are cabled and locked. Posted signage is in compliance (meets standards/requirements). Chemical Storage: storage tank has SDS labels in place, grounded, and containment plug in place. Well chemical building had no issues/concerns noted (compliant). N.B.: pipeline /flowline valve was closed (verify production status). Pig barrel chain in place. The site was previously treated with herbicide, no invasive plants were noted/observed on site at the time of the inspection. Well pad site was clean and free of deleterious/derelict equipment/materials. Flowline: flowline valve was closed, KERMIT last gas production date: 2022-07 (approximately 12 months of no gas production) (Operations are presently classed as "In Active"). Note: no gas production / activity will become classed as "Suspended" after > 14 months of inactive gas production.								9627

Well Head: surface casing valve open, surface casing vent flow measured over-range (Altair-5x), SCV vent flow = fast fill (latex glove test). Pieridae Alberta Ltd. to provide a status/progress report of gas monitoring/testing for Well Head SCV gas flow (last SCV Flow assessment: 2015). Well head valves were chain and locked, no spillage/leaks were observed (liquid or gas). Signage is compliant to standards. Chemical storage tank: SDS labels present, grounded, and containment tank plug present. Flowline: flowline valve was closed, KERMIT last gas production date: 2022-07 (approximately 12 months of no gas production) (Operations are presently classed as "In Active"). Note: no gas production / activity will become classed as "Suspended" after > 14 months of inactive gas production. Pipeline: pig barrel bull chain present. No issues noted with service buildings. Well pad site: clean and free of debris/delict equipment and no invasive plants observed.								9589		
20-Jul-23	2023-2072	Pieridae Alberta Production Ltd.	NTS: A- 002-E/094-I-14	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 10519: (A- 002-E/094-I-14) July 20th, 2023: 12:15 am on site. Parent wellhead: surface casing valve open, surface casing vent no LEL (Altair-5x), SCV no flow observed. Well head valves were chained and locked. ESD pressure sensitive valve was locked (open). Signage is compliant to standards/requirements. Flowline: pig barrel chain present. Flowline valve was closed: KERMIT gas production rates.: 2022-07 (approximately 12 months of no gas production) (Operations are presently classed as "In Active"). Note: no gas production / activity will become classed as "Suspended" after > 14 months of inactive gas production. Chemical tanks: two single walled tanks on site, SDS labels present, containments plugged, and grounded. Well pad site was treated with herbicide; no invasive plants were noted upon a visual inspection, general area is clean and free of debris/derelict items, good well-maintained site overall.								9588		
20-Jul-23	2023-2052	Pieridae Alberta Production Ltd.	NTS: D- 079-C/094-I-14	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 10532: July 20th, 2023: 11:30 am on site. Parent well: the surface casing vent valve was open, surface casing vent no LEL was measured (Altair-5x), SCV no flow was noted. Well head valves were cabled and locked. ESD pressure sensitive valve was locked open. Flowline: flowline valve was closed, KERMIT last gas production date: 2022-07 (approximately 12 months of no gas production) (Operations are presently classed as "In Active"). Note: no gas production / activity will become classed as "Suspended" after > 14 months of inactive gas production. Chemical storage: SDS labels present, tanks grounded, and containment in place with plug. No issues noted with contents and operation of well chemical building. No issues noted with posted signage on site (compliant). No Invasive plant species noted on well pad.								9531		
20-Jul-23	2023-2035	NTE Energy Canada Ltd.	NTS: A-A016-C/094-I-14	TRUCK	NORTH	Completed	Non-Compliance(s) Found	Officer Selected	WA # 12275, July 20, 2023, 945hrs: Location: a-16-c / 94-I-14: Officer Selected Site: One well head on site. Parent well: NC: open hole, exposed steel piling (See Attached Photo). Surface casing valve opened, surface casing vent flow measured over-range LEL's (Altair-5x), surface casing vent flow - measured overrange flow (latex glove test - 12 seconds fill). Review gas monitoring testing in IRIS/KERMIT. Flowline valve was open - "Active" gas production site. HERMIT last gas production rate: 2023-05 Chemical storage: tanks are double-walled in containment, grounded, SDS labels present, and containment valve plug present/in place (See Attached Photos). Meter calibration service date: March 5, 2022 and orifice plate service date: June 18, 2023. No issues noted with well-building facility. Flowline valve leading out of facility is open. No issues noted with pipeline risers, valves are open. Flowlines (2x) to JIRO building are blinded (not active). Inside JIRO well building noticed oil leak and an open pail (comment only - See Attached Photos). Well pad site: minor incidence of invasive plants (Scentless Chamomile) was noted that the time of inspection. Telecommunications station was actively working on site.								9451

Parent Well Head: surface casing vent valve open, surface casing vent no LEL (Altair-5x), SCV no flow observed. Parent well cabinet was compliant as no issues/concerns were noted. Well head A: surface casing valve open, surface casing vent no LEL measured (Altai-5x), SCV no flow observed. Well cabinet A: NC: Gas spillage noted on the PSV gas meter: vent line has a continuous flow (non-compliance). No other issues noted with parent with Well head A. Two chemical storage tanks with containment plugged, SDS labels present, and grounded. One chemical storage tank double walled, SDS labeled, grounded, and no other issues/concerns noted. Well head B: surface casing vent valve open , SCV no flow and no LEL measured (Altair-5x). No issues noted with well chemical building. Well head C: surface casing vent valve open, surface casing vent no flow and no LEL measured (Altair-5x), and no issues noted with operation this well chemical building. Well pad site clean with no invasive plant species noted. Signage for site is compliant to standards. Calibration meter service date: March 3, 2022. Orifice plate change service date: June 18, 2023.								3510

Three well heads on site. Parent well: surface casing vent valve open, surface casing vent Low LEL (Altair-5x), SCV no flow observed. Parent well facility building: NC: spillage noted on the Gas Fisher (6-12) fuel gas scrubber line has a continuous flow (non-compliance) (See Attached Photo). Note: catadyne heater exhaust rusted / not attached to vent (See Attached Photo). KERMIT, last gas production rate date: 2022-10. Flowline valve to pipeline observed closed at time of inspection. Well head A: surface casing valve open, surface casing vent no LEL measured (Altai-5x), and SCV no flow observed. No other issues noted with Well head "A". KERMIT, last gas production rate date: 2023-04. Flowline valve to pipeline observed open at time of inspection. Two chemical storage tanks (double walled) on site, valves were closed, SDS labels present, and grounded. Well head B: surface casing vent valve open , SCV no flow and a Low LEL measured (Altair-5x). KERMIT, last gas production rate date: 2023-05. Flowline valve to pipeline observed open at time of inspection. Well pad site clean with no invasive plant species noted. Signage for site is compliant to standards. Calibration meter service date: No documentation found at site. Orifice plate change service date: May 26, 2023.							9442

27-Jul-23	2023-2088	Canadian Natural Resources Limited	NTS: C- 097-J/093-I-10	TRUCK	SOUTH	Completed	In Compliance	Risk & Data Informed	The Facility Activity ID#0008845 indicates in KERMIT as Active. Last production record submitted for WA 12542 was Nov 2017. The following requirements for and inactive facility are as follows: Drilling & Production Regulation Obligations on cancellation or cessation of operations 79. (0.1) In this section, "inactive facility" means a facility at which no petroleum, natural gas, water or substance referred to in paragraph (d) or (e) of the definition of "pipeline" in the Act is gathered, processed, measured or disposed of. (1) The removal of the facility from the facility site is prescribed with respect to a facility permit for the purposes of section 40 (e) of the Act. (2) The facility permit holder of an inactive facility must (a) within 12 consecutive months of the facility becoming an inactive facility, suspend the facility in a manner that ensures its ongoing safety and integrity, and (b) within 60 days of the suspension of the facility, notify the commission of the suspension. (3) A facility permit holder who has suspended operations at the facility must notify the commission at least 5 days before reactivating the facility.								9646

1-Aug-23	2023-2134	NTE Energy Canada Ltd.	NTS: C- 043-C/094-P-05	TRUCK	NORTH	Completed	In Compliance	Officer Selected	WA# 17808/14230 (C- 043-C/094-P-05): Aug. 1, 2023: 13:30 pm on site. Parent well: Abandoned (tombstone), no issues noted. Well Head "A": the surface casing vent valve was open, surface casing vent flow no LEL was measured (Altair-5x), SCV no flow was noted. Suitcase Cabinet: Orifice plate service date is April 17, 2021. Meter calibration service date: Jan. 22, 2022. No spillage was noted (gas/fluid). KERMIT last gas production date: 2023-06: "Active" status activity is compliant with reporting standards. No issues noted with posted signage on site (compliant). No invasive plant species noted on well pad. Comment: Some minor debris/garbage found along the flowline: pipeline insulation/wrap material was observed on the ground along the flowline (minor issue requires cleaning).								9724		
1-Aug-23	2023-2134	NTE Energy Canada Ltd.	NTS: C-A043-C/094-P-05	TRUCK	NORTH	Completed	In Compliance	Officer Selected									9725		
1-Aug-23	2023-2133	NTE Energy Canada Ltd.	NTS: D-A027-A/094-P-04	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	WA#14141 FID#00019793 (D- 027-A/094-P-04) Aug. 1, 2023: on site at 12:45 hrs. (heavy rain). Two well heads on site. One chemical storage tank (single walled) with containment, SDS labelled, grounded, and bull plug installed. Parent Well Head: surface casing valve open, surface casing vent measured no LEL (Altair-5x). SCV no flow was observed. No spillage/leaks (fluid/gas) were observed. Suitcase for parent well was compliant no issues noted: orifice plate service date was Sept. 19, 2023, and meter calibration was Nov. 25, 2015. Well head valves were chained and locked. Flowline: flowline valve was closed, KERMIT last gas production date: 2016-10. Note: no gas production / activity will become classed as "Suspended" after > 14 months of inactive gas production: flowlines need to be disconnected or blinded. Well head "A": Surface casing vent valve open, SCV no flow observed, and surface casing vent no LEL recorded (Altair-5x). No spillage/leaks (fluid/gas) were observed. Suitcase building - orifice plate service date May 22, 2023, no records found for meter calibration in suitcase building. Comment: flowline snake wrap + insulation is detaching/hanging off of pipeline, potential source of garbage if permitted to deteriorate (See Attached Photo). Site is clean of deleterious material and derelict equipment. In addition, no invasive plants were noted on site.								9718		
1-Aug-23	2023-2133	NTE Energy Canada Ltd.	NTS: D- 027-A/094-P-04	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed									9717		
1-Aug-23	2023-2129	Canlin Energy Corporation	NTS: A- 015-L/094-I-14	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	WA#22878 FID#00022843 Aug. 1, 2023: on site at 12:30 - partly cloudy skies: Signage is compliant to standards. Well heads have been removed (2x) both abandoned wells have been marked/signed (tombstone). No invasive plants were observed on well pad at the time of inspection. No other issues noted with well location.								9715		
1-Aug-23	2023-2129	Canlin Energy Corporation	NTS: A-A015-L/094-I-14	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed									9714		

1-Aug-23	2023-2123	Secure Energy Services Inc.	NTS: D- 098-I/094-I-14	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	FID#00007719 (D-098-I/094-I-14) Aug. 1, 2023: inspected site at 1100 hours. ERP review of plan/document: noted that Shanghai contact information was listed within ERP document (should be NTE). Also, OGC was referenced/identified within the plan which should be changed to BCER (Nov. 2022). Reviewed operations manual: noted record/ledger of "Gasfield" listed as completing the meter calibration/service dates (compliant with service date requirements). Completed joint site inspection with Facility Operator "Tony". ERP emergency alarm test: Facility operator proceeded to conduct a test of three alarm indicators for the facility (flashing lights: red, blue, and orange) which all were observed to be working properly at the time of the inspection. Observed one 3/4" bull plug missing at one of the pumps lines (cellar building). The pump was not being used and the Facility Operator proceeded to install the bull plug and correct the concern (compliant no issues). Fire Suppression/extinguishers on site were all recently serviced in May and June and July of 2023. No compliance issues/concerns were noted implementation of ERP.						3590				
1-Aug-23	2023-2120	Secure Energy Services Inc.	NTS: C- 062-J/094-I-14	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	WA#17797 FID#00007718 Aug. 1, 2023: 0954 hrs on site. Well Head: surface casing valve vent open, surface casing vent no flow, SCV no LEL measured (Altair-5x), Storage tanks were labelled with product name/identifier, no spillage/leaks were observed, and containment was functioning properly. Secure to provide BCER with the Well Head turbine meter calibration/service date for the site, as no documentation/service record or tag could be found in the well building at the time of the inspection. Signage is compliant to standards. Invasive Plant Species: a minor incidence of Scentless Chamomile was observed to be scattered on the east portion of the well pad (See Attached Photos).								9703

(13 km marker on the July Lake Rd.) Road number #04552 - Seg, # 001 (See Attached Photo). Comment: - Road # 0205 : A bridge corner W-54 delineator sign at lat/long: 59 27 50.8 / -120 46 01.2 - is not installed correctly (pointing wrong direction) (See Attached Photo). It is suggested that CNRL consider completing a review/assessment of signage requirements at bridge locations within their operating area. Comment: Significant invasive plant infestation (Canada Thistle) was noted at two locations along the 1) July Lake Road (59°29'8.48"N /120°45'6.10"W) and 2) WA# 16841 (59 26 49.4 / 120°48'57.60"W) (See Attached Photos).										33219

9-Aug-23	2023-2430	Coastal GasLink Pipeline Ltd.	UTM: 10N 578474.7E 6137931.4N	TRUCK	SOUTH	Completed	In Compliance	Major Project	Inspection with the operator of various locations in work pack one. Road 11F, RE 1009, BCER Road 04502, AD 100101656. The road has been reclaimed with topsoil put back and roll back on approximately 50% of the road area. Road to be inspected during the spring / summer of 2024. Road RE 840.0, BCER Road 04365, AD 100101659, segment 1, Road is still active, no concerns noted at the time of the inspection. Road 11A, RE 1004, BCER Road 04361, segment 1, AD 100101652. Road has been deactivated. Discussed ATV access through rock barrier is a hazard. Discussed ditch in front of rock barrier is a hazard. A portion of the road is still active to the Hydro lines. Timber Deck 5, AD 100084244, site has been reclaimed and prepped for natural re-vegetation. Minimal vegetation growth at the time of the inspection. An inspection is to be scheduled for the summer of 2024 to ensure natural re-vegetation is occurring. Campsite, AD 100084589, site has been levelled and topsoil put back. Site will be left for natural revegetation. Minimal vegetation growth at the time of the inspection. Site is in a tree planted area and discussed with the operator about planting trees to replace the ones that were removed during construction. An inspection is to be scheduled for the summer of 2024 to ensure natural re-vegetation is occurring. BCER Road 06332, segment 1, AD 100115418, Partially constructed road on the ROW from the Bluff Creek Road to KP 84 block valve site. There were no concerns noted at the time of the inspection. An inspection is to be scheduled once the road is completed.

15-Aug-23	2023-2213	Bonavista Energy Corporation	DLS: 07-19-088-17	TRUCK	CENTRAL	Completed	In Compliance	Internal Request	Follow up to spill: Onsite: with Synergy & Contractor Vac truck onsite with labors washing down barrels in containment. Did a walk around: because of clean up began before she got out there she was not aware or had seen where staining or sheens were present. * underground tanks were emptied * no sampling where liquids had spilled out of containment and ran in under concrete blocks * no offsite sampling in area where sheen was seen in vegetation and into draw offsite. Sampling was done on North side of lease where water was accumulated. This is the area where arsenic was found. * was not aware of staining around compressor. Bellhole barrels were emptied. * no sampling by piping where reddish substance was. Guessed to be red spray paint. * no sampling of ponded water by culvert under road and ditched out to south side of lease. * no sampling of water in flare pit. Fence was put back up. Gap at bottom where beaver can still enter. * secondary containments of tanks sucked out. * garbage bins were removed and evidence of vac around where garbage bin with liquids was sitting. No sampling done in this area. Tank had held liquids and they didn't see any leaks from tank. Thinks liquids were from snowmelt and rain and hydrocarbons were from what was in secondary containment or underneath. * tanks jet washed I asked if they had taken any samples from with in the secondary containment. She took samples from soils/? on top of liner. She didn't want to compromise liner, no samples from under.							3703

19-Aug-23	2023-2409	Enbridge G and P Canada Pipelines Inc.		TRUCK	KTNY	Completed	In Compliance	Internal Request	Inspection with the operator of the Deadman River Revetment site. Work is being conducted under an Emergency Works Water Sustainability Section 11 authorization dated June 2, 2023. The river has been diverted to a diversion channel and the main flow is now bypassing the work area. Water is being pumped from the start of the diversion channel to the original channel by 6 - 3" pumps in 3 screened pump boxes to prevent fish mortality, while the main channel out of stream bank work is being completed. Discussed minor concerns with the fish screening on the pumps with the operator. A block net is in place at the downstream end of the original channel work area. Water quality monitoring is in place with sondes at 100m upstream and 100m & 250m downstream. With grab samples 3 times daily at T1 and Pool 3. The armor being placed at the outside bend will contain root wads and have spikes built in below the root wads. There were no significant concerns noted at the time of the inspection.										
20-Aug-23	2023-2528	Trans Mountain Pipeline ULC		TRUCK	LMVI	Completed	In Compliance	Major Project	Inspection with the operator of Spread 5B. KP 159+500, POD 009, Wahleach Creek, AD 100116310, STWU 0006294 permit on site, withdrawal records on site, signage adequate, there were no concerns noted at the time of the inspection. KP 1053+662, Hunter Creek, channel has been restored. KP 1032+720, BC 648.05, in isolation sandbags and poly upstream and downstream, equilibrium maintained, no concerns noted at the time of the inspection. KP 1032+680, trench dewatering, trench pumps to pig pens, discussed maintenance on the pig pens with the operator, well points (clean water) to the Coquihalla River with the option to divert through a splitter to pig pens if it becomes silted. WQM in the Coquihalla River by grab samples 3 times / day. Site specific pump off plan on site. A header has been installed on the discharge line to the Coquihalla River and water trucks are using this source to fill for dust control and fire prevention activity (filling tanks). Operator could not produce a WSA section 10 authorization for the use of this ground water. Operator stated it was a project decision based on a Trans Mountain Field Change Request Form. Water withdrawal records on site are labelled, Dust and Fire Suppression Water Use Tracker. Discussed with the operator that a check will be done to look for a WSA section 10 authorization. Discussed with the operator that if no authorization is in place the matter will be referred to the BCER Enforcement Manager for follow up. KP 1021+510, BC 633A, FB, clear span bridge with ESC, ESC requires maintenance.										100118225

21-Aug-23	2023-2515	Trans Mountain Pipeline ULC		TRUCK	LMVI	Completed	In Compliance	Major Project	Inspection with the operator of Road reinstatement at various instream locations. 965.4, an S5 stream with a watercourse crossing designed to flow over the road to recreate the existing ford. Rock sump installed in the high side ditch line that will slow / hold water and allow flow over and along the road and into the high side ditch. No hard surface on road, no culvert, no French drain. No ESC to prevent sediment laden water from flowing into the Coquihalla River. Discussed with the operator that an Information request for engineered drawings and delineation of flow from the catchment area of the S5 will be submitted. 966.1, an S5 stream with a water course crossing designed similar to 965.4. The high side sump is substantially smaller. There is no hard surface on the road, no culvert, no French drain. Potential that this crossing is not completed. Discussed with the operator that an Information request for engineered drawings and delineation of the flow from the catchment area of the S5 will be submitted. 966.7, an S5 stream that has an alluvial gravel / rock fan that has been removed from the road and pushed up on the high side blocking the road ditch. There is no defined channel for flow to follow post construction and no barrier to prevent the gravel / rock material from being pushed onto the road once water starts to flow. The designed crossing is to allow water to flow across the road with no ESC in place to prevent sediment laden water from entering the Coquihalla River. Discussed with the operator that an information request for engineered drawings and delineation of the S5 catchment area to determine flow will be submitted. Concerns that effective drainage has not been established at this location.										
21-Aug-23	2023-2515	Trans Mountain Pipeline ULC	UTM: 10N 641502.124E 5496965.188N	TRUCK	LMVI	Completed	In Compliance	Major Project

21-Aug-23	2023-2436	Trans Mountain Pipeline ULC	UTM: 10N 625968.923E 5479865.235N	TRUCK	LMVI	Completed	In Compliance	Major Project	Inspection with the operator of the 992 revetement. AD 100117898. S6 in isolation, sandbags and poly, 2 - 3" pumps one active to the Coquihalla River. WQM, sondes, 50 upstream and 50 / 100 downstream. Additional grab samples based on instream activity Discussed ESC on culverts in the travel lane. Coquihalla main channel diversion by meter bags to the permanent realignment channel with approximately 75% of the flow to the realignment channel at the time of the inspection. There are 2 - 10" pumps in screened baskets placed at the diversion point with lines ready, should they be required. Fish salvage in the original channel as required as the work progresses. There is a mat crossing on the original channel to avoid using fording techniques. The downstream area of the original channel is set up to capture turbid water in a holding area created with meter bags and has 2 - 4" pumps in screened baskets to pump to filter bags in a well vegetated area. Inspection with the operator of 963.8 post emergency work Phase 3. AD 100084645. Work has been completed on a 120m area of bank repair of the Coquihalla River. There were no concerns noted at the time of the inspection. Inspection / orientation of the 1K 965 bridge. Work upgrading the super structure of the bridge will begin in the near future. there were no concerns noted at the time of the inspection. Inspection of the 967.1 Gravel Fan, AD 100117818. Instream work to reinstate the original channel flow and repair the road. Rocks altering the flow in channel were removed and placed at alternate locations in the channel. A French drain is to be constructed in the road at 0+137 (gravel fan location) to allow water to flow. Inspection with the operator of, AD 100118001, Baldwin Creek (969.1). removal of the 80' clear span bridge has started. A 120' clear span will be installed as the replacement. The damaged bin wall will be removed, and a lock block grade control structure will be installed. A temporary travel lane has been installed and is active. The creek is in isolation with meter bags and poly upstream and the earthen travel lane downstream. Equilibrium is being maintained with 2 - 6" pumps and 2 - 4" pumps to downstream diffusers. trench pumps are 2 - 3" to specified dewater area. Pipe has been exposed and a 42m inspection area will be daylighted. Inspection / orientation of the Coquihalla 10 crossing, AD 100117805. Early stages of the project, with 90% of the logging now completed. Blasting will be started in the immediate future.

21-Aug-23	2023-2358	Campus Energy Partners Operations Inc.	DLS: 07-20-078-15	TRUCK	NORTH	Completed	In Compliance	Officer Selected	The following items were observed and/or discussed during a routine inspection. Please submit information associated with the follow-ups below by September 21, 2023. Submissions are to be sent to the BCER. OFFICE TRAILER - Safety & operational orientation provided. * No truck loading planned. Plant running at ~50% capacity. * Process overview provided using HMI screens as reference. Fire & Gas screen displayed. * Discussed bypasses - operator stated there are no recurring bypasses required. * One detector noted to be in fault - operator stated quarterly maintenance was performed recently. FOLLOW UP 1: Provide evidence to show the fault has been resolved. Discussed venting sources * During normal loading, venting occurs as a result of loading lines being cooled from ambient to LNG temperatures. Operator indicated that the venting can be managed and the vapor recovered to the process (i.e. limited or no atmospheric venting). * Warm trucks are expected to receive a shot of N2 before arrival to cool down. Trucks containing N2 are blown down to atmosphere to prevent N2 accumulation in process. Observed Safety Board * ERP present * Evidence of remedied leaks present. FOLLOW UP 2: Provide most recent leak detection survey report. * Noise survey present * Portable fire extinguisher confirmed to be in date. FIELD CONTROL ROOM - No comments. POWER GENERATORS - No comments.								3781

23-Aug-23	2023-2357	K2LNG Energy Services Corporation	NTS: C- 076-G/094-J-10	TRUCK	NORTH	Completed	In Compliance	Officer Selected	BCER Personnel - The following items were observed and/or discussed during a routine inspection. Please submit information associated with the follow-ups below by September 25, 2023. Submissions are to be sent to the BCER --- OVERVIEW Site Safety & Operations orientation provided. Plant offline; waiting on parts for MR compressor. Truck loading expected in afternoon. 60,000kg LNG in tanks at time of inspection (2-4 trucks depending on truck config per Operations) Northern Rockies Fire Rescue is the responding agency for incidents at the plant. Facility is powered by BC Hydro with backup from auto-starting diesel genset on location (safety systems and compressed air). --- CONTROL ROOM ERP noted to be present in control room. Last ERP exercise was Tabletop in Q1/Q2 2023. Operations reps provided a process walkthrough using HMI. * Discussed alarm management * Discussed truck loading processes. * Discussed flaring log – Operations was not aware of a log. * Reviewed Fire & Gas status - no faults or bypasses at the time of inspection --- INLET AREA Insulation removed from inlet line. Operations states this was to allow gas to warm slightly to avoid hydrates. Recommend ensuring integrity program has been updated as required to reflect current condition.								3817

24-Aug-23	2023-2291	Canfor Pulp Ltd.		TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Internal Request	Myself and Inspector met with Canfor Pulp staff to look at onsite pipeline infrastructure. At the time of inspection pipeline project #4439 seg #1 was shut in at the line heater/pressure regulator building. Canfor has plans to open the pipeline for building heating come colder temperatures this fall. There were no notable safety concerns observed in the field at time of inspection. In conversation it was noted that Canfor did not have a pipeline integrity management program available. A non-compliance is being issued for the following: 7 (3) A pipeline permit holder must not construct or operate a pipeline approved by the permit unless the holder has first prepared a pipeline integrity management program. For further guidance please contact Engneering

24-Aug-23	2023-2290	Aduro Resources Ltd.	DLS: 05-31-081-21	TRUCK	SOUTH	Completed	In Compliance	Officer Selected	Joint inspection completed at Aduro 5-31 facility with site operator. Equipment on site includes: - compressor (x2), glycol dehydrator (x2), inlet separators (sweet & sour), amine skid, production tanks (water & condensate), Flare & Flare KO, Incinerator (not in service), Generator, Inlet & outlet pipeline headers. Fire extinguishers service/inspections completed Aug 18, 2023. Action items noted in inspection: -Gas detection and fire eyes calibrated Aug 22, 2023. H2s head AT 1000 and LEL head AT 3051 found in fault. Repair and send HMI screen shot of updated gas detection. -Noted no lock/car seal on HP SD on sweet inlet separator. Ops installed lock immediately. -K 400 compressor BDV not locked/car sealed (valves are open but handles removed) Compressor not in service on day of inspection. BDV is passing and is waiting for repair at upcoming TA (Sept 5, 2023) Send verification of car seal/lock once repairs are completed. -Auto igniter at flare stack is flashing fault. Flare is active and lit. Ops to address at upcoming TA (Sept 5, 2023) Send verification of repairs. -Fuel gas meter cal due. Will be completed at upcoming TA (Sept 5, 2023). Send verification of calibration. -Hydrocarbon staining observed beside and under K400 compressor. Send photo verification of clean up. Please email to the BCER. Please include a copy of current SD key as well as the last UT testing done at the facility. Thanks for taking the time for the facility tour.						3775

27-Aug-23	2023-2407	Westcoast Energy Inc.		WALK	KTNY	Completed	In Compliance	Major Project	Inspection with the operator of the Coldwater 1 Remediation - phase 2, located at 7L1, KP88. Remediation of previous highwater event that caused bank erosion and pipe exposure. Construction of a permanent diversion channel to allow instream work and will act as a highwater flood mitigation channel for future highwater events. The diversion channel is flat with sloped banks and no armor. Temporary bridge installed over main channel, discussed maintenance on the bridge ESC. Excavation north of the 30" pipe, dewatering to a well vegetated area, discussed using filter bags. Ditch excavation dewater site is a pig pen located in the main channel (not active at the time of the inspection). Discussed permit condition 17(f) sediment laden water is not to re-enter the Coldwater River and relocating the pig pen to a suitable area. WQM, 20m upstream and 150m & 300m downstream with plans in place to add additional downstream locations to 1.5 km if required when diversion is activated. Samples are taken 2 times daily and will be increased in frequency if required. There have been no significant spikes in NTU values to date. Rock used for armoring has been PAG tested and washed prior to placement.

29-Aug-23	2023-2439	Prairie Provident Resources Canada Ltd.	DLS: 06-31-087-17	WALK	CENTRAL	Completed	Non-Compliance(s) Found	Officer Selected	This inspection has been carried forward from original inspection dated October 27, 2021, Kermit Inspection 074921200. First nations had brought forth information of landslide activity in the proximity to the access road and were concerned in regards to the affect on the abandoned well. Upon inspection of access a steel pipe culvert approximately 20 feet long was found in a stream crossing, with other debris in stream and on stream banks. This steel pipe and debris is to be removed from the stream.							10152

29-Aug-23	2023-2365	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	Non-Compliance(s) Found	Major Project	Inspection with the operator of the 3 - S6's, J138.99 located at approximately KP 144+100, J138.98 located at approximately KP 144+060 and, and J138.97 located at approximately KP 144+000. These water course have been bored by a Horizontal Directional Bore and have had a fluid / mud release in each water course which are varying in severity and volumes. In addition to the fluid / mud releases the ground cover over the bore has slumped / collapsed for approximately 150 meters and has caused erosion / slumping on the banks of all 3 of the S6 water courses. WC J138.99, during the drilling of the pilot hole a small fluid / mud release to surface was observed at surface in the water course channel. this release was estimated to be approximately 5 cubic meters and was vac-trucked for disposal. During the 24-inch ream a second fluid / mud release occurred estimated at approximately 40 cubic meters that ran down the S6 channel and into a wetland off ROW. Drilling was stopped the channel was isolated and cleanup started on the S6 channel. There was containment installed on the channel off ROW. remediation of the wetland is being planned. Additional mud was brought to surface when the pipe was pulled and was contained in the isolation. See non-compliance. WC J138.98During the 36-inch ream a fluid / mud release was observed in the channel and was contained on ROW. WC 138.97, a fluid / mud release was observed after the pipe was pulled. During the inspection slumping along ditch line was noted from the exit location through to the bank of J138.99 on the entrance side. The slumping involves. the banks of the water courses and the ground between the water courses.

29-Aug-23	2023-2348	Bench Creek Resources Ltd.	NTS: A- 090-J/094-I-08	HELICOPTER	NORTH	Completed	In Compliance	Officer Selected	This is a follow-up inspection to confirm removal of contaminated dirt below chem tanks stored behind the Facility. Contaminated dirt has been removed. A subsequent request was made this morning by email to Bench Creek to ask that the corroded steel chem tanks (...the source of the previous ground contamination) were removed to prevent further leaks and contamination. A request was also made to address the Scentless Chamomile widely dispersed across the Facility property.						3812

30-Aug-23	2023-2521	Canadian Natural Resources Limited	NTS: B- 024-L/094-B-15	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Officer Selected	The processing equipment has been decommissioned and the well cut and capped.	OGAA	EPMR	15(a)	(a) make reasonable efforts to ensure that seed, plant parts or propagules of an invasive plant are not transported into the area while carrying out the oil and gas activities.	Scentless chamomile is becoming established on the wellsite since the well was cut and capped. At this point in time, the plants could be picked before the seed is fully dispersed.			10513			
30-Aug-23	2023-2520	Canadian Natural Resources Limited	NTS: D- 077-L/094-B-15	TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	It was observed that the barricade has been removed from around the wellhead. There was only 1 moose track in proximity to the wellhead and no bison.								10510			
30-Aug-23	2023-2517	Canadian Natural Resources Limited	From NTS: B- 029-G/094-B-15 To NTS: D- 077-L/094-B-15	TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	This inspection is for the bridge at km 17 on the Genesis Road located in the Cypress Field. In the last 2 engineered inspections, the bridge received an overall structure rating of fair to poor. The engineering report recommends all timber components to be replaced and the fit for purpose is checked as "No" with a comment for light duty vehicles only. There is a wellhead to abandon and a lease to reclaim and restore and the bridge needs to support the traffic needed for that work. An inspection (#2023-2475) was send for the bridge at km 13 on the Genesis Road and it requires repairs. This bridge at km 17 should be assessed for its upcoming purpose and repairs made. Due to system limitations, this inspection will show as a PASS, however, there are concerns about the condition of the bridge.									37798		
30-Aug-23	2023-2478	Canadian Natural Resources Limited	From NTS: A- 035-L/094-B-15 To NTS: A- 034-L/094-B-15	TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	No concerns noted at the time of inspection. The well has been cut, capped and abandoned in the recent past.									37710

31-Aug-23	2023-2441	PETRONAS Energy Canada Ltd.	NTS: C- 046-H/094-G-01	TRUCK	CENTRAL	Completed	In Compliance	Risk & Data Informed	This well has been INACTIVE for 12 consecutive months. The wellhead is chained and locked and the ESD is tripped. This well should be considered for surface suspension. -There are faint odours around the wellhead and building area, check for leaks.							10387		
31-Aug-23	2023-2441	PETRONAS Energy Canada Ltd.	From NTS: C- 046-H/094-G-01 To NTS: C- 057-H/094-G-01	TRUCK	CENTRAL	Completed	In Compliance	Risk & Data Informed										
31-Aug-23	2023-2440	PETRONAS Energy Canada Ltd.	NTS: B- 051-G/094-G-01	TRUCK	CENTRAL	Completed	In Compliance	Risk & Data Informed	This is a suspended wellhead only site. The valve handles need to be chained and locked for proper suspension requirements to be met. The chain and lock are there, but not used and are not on the valves handles for proper lock out. Please put chain and lock in place. -The surface casing vent is leaking. I see the last test was submitted in 2022 and it says there are NO EMISSIONS, but I put a latex glove over the vent assembly and the latex glove fully inflated and I can hear it gurgling. -The location signage at the lease entrance is in the name of PROGRESS, emergency number difficult to read and has vegetation growing up in front of the signage. Please make the signage legible and conspicuous as per the Regulations. Also, the location signage at the beginning of the lease road is missing a 'sour symbol', as the location signage at lease entrance has a sour symbol. As per the gas analysis esubmission for this well, there is no H2S present in the gas stream, therefore the sour symbol on the location signage at the lease entrance should have the sour symbol removed if no H2S present.							10386

1-Sep-23	2023-2411	Canada Energy Partners Inc.	NTS: A- 020-D/094-A-04	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Internal Request	Facility inspection was completed at site as per BCER internal request. This facility is inactive and has been so since Sept 1, 2018. Injection well has been abandoned and well head removed. There is line power to site and power is locked out on disconnect switch on pole. Equipment on site consists of : -electrical/breaker panel building (building is not secured and doors are open) -400 bbl tks (X5) and associated piping inside a steel secondary containment. -plastic chemical tks (X3) on stands. -injection pump, filter canister and associated piping inside building (building is secured/locked) Action items identified during inspection are: 1. Bull plugs missing on piping inside secondary containment. 2. Pipeline into facility does not have positive isolation and valve at header is closed but not locked. Status of pipeline is unclear at this time. 3. Inhibitor chemical pails with broken lids and unknown product in them were noted beside the electrical power building. 4. Old barrels (one with product inside) were observed outside the injection pump building. 5. Some pieces of derelict equipment (piping and old well head) were noted on site. 6. Facility status in CMIS indicated that it is active. Facility has not been active since Sept 1, 2018. Please see Oil & Gas Processing Facility Regulation 23(1) a,b for facility suspension requirements. Please direct communications regarding this inspection by email to the BCER Thank you								10339

6-Sep-23	2023-2609	ConocoPhillips Canada Resources Corp.	From DLS: 08-23-088-24 To DLS: 05-27-088-24	TRUCK	CENTRAL	Completed	In Compliance	Officer Selected	Conducted field inspection with (site supervisor). Reviewed permit and discussed project specifications. Welders were qualified Sept 5 with repair welding qualifications occurring Sept 6th. Observed pipe stringing and field welding. On-site welding inspector was present and observed, timing welds, ensuring preheat temps were correct and conducting visual inspections on completed welds. 100% of welds are visually inspected. Visited bore drill pad, HDD rig was not yet on-site. Pad looks good. Soil handling and construction activities on project look good. A follow-up inspection will be conducted to review QA/QC documentation. No concerns at time of inspection.

6-Sep-23	2023-2498	ConocoPhillips Canada Resources Corp.	NTS: C- 011-K/094-A-12	TRUCK	CENTRAL	Completed	In Compliance	Facility Start-Up	On Sept 6, 2023 BCER Technical Advisor met with FPFC Commissioning & Start-up team to conduct a pre-start-up inspection at Phase 2 of the ConocoPhillips Inga North c-11-K/94-A-12 Gas Processing Plant- Facility ID 26696, Amendment AD#100108377 & 100113066. An FTP folder has been created to house the required start-up documentation. FPFC has uploaded the appropriate documentation into this folder. Some of the documentation included are: 1. Master Punch list 2. ERP Review 3. Flare Log Sheet 4. Declarations of Completeness 5. Waste Discharge Permit 6. Master Car seal & Critical Valve List 7. Measurement Binder 8. Shut Down Key Inspection also included witnessed verification of mode 1 SD (fire eye) with screen shots prior to and after SD. Documented flare stack Flame Failure Test was also reviewed and available in FTP folder. Also discussed was the requirement by BCER Engineering for CPC to provided monthly flare reports for the Phase 2 start-up until further notice. Prior to the Phase 2 plant inspection, BCER Technical Advisor was made aware of EPFC's desire to only start up the gas processing component of Phase 2 as the CRU (Condensate Recovery Unit), WTA (Water Treatment Unit) and RSA (Remote Storage Area) had components that were not yet ready for a Full LTO. The inspection was completed in all areas of Phase 2 with this in mind. Prior to the LTO inspection concerns were raised regarding the fuel gas PSHH and LSHH. These have since been reviewed and found to be appropriate.							3978

No invasive plant species noted on well pad at time of inspection.	ERAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	NC: Signage not compliant to standards - missing flammable symbol in well building/site (See Attached Photo).			10524		
6-Sep-23	2023-2530	Canadian Natural Resources Limited	NTS: A- 060-K/094-P-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 16683 - Sept. 6, 2023, 13:29 pm on site. Well Head: surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. KERMIT last gas production date: 2019-05 (Suspended production status). NC: Well head not disconnected/ blinded from flowlines as required by Sec. 25 (5) Pipeline Regulation. CNRL has provided an action plan to BCER which identifies this well to be scheduled for disconnection fall 2023. Well Building: No service records for meter calibration / orifice service plate date were found in well building. CNRL to provide BCER inspector with service date records via email. Cata-Dyne regulator vent line in place. NC: Signage not compliant to standards - missing flammable symbol (Suspended status) (See Attached Photo). DPR Sec. 15 (1)Until the well is abandoned, a well permit holder must ensure that a permanently legible and conspicuous sign is displayed and maintained at each well, and that sign must show all of the following: (a)the name of the well permit holder; (b)current emergency notification information, including a telephone number; (c)the location of the surface site of the well as specified in the well permit; (d)if the well may produce flammable gas, a flammable gas symbol from Schedule 1; Chemical Storage: double wall tank, SDS labels present, grounded, and valve									10521		
6-Sep-23	2023-2529	Canadian Natural Resources Limited	NTS: A- 063-L/094-P-10	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 16623 - Sept. 6, 2023, 13:22 pm on site. Well Head: surface casing valve open, SCV flow measured no LEL (Altair-5x), and SCV no fill/flow observed. Comment: Adjacent to well head observed hole in the ground which is partially covered with planks (See Attached Photo): deemed a safety hazard. In addition, some (2x) small metal pilings (about 5") were observed to be protruding/cut off approximately 10cm from the ground level (tripping hazard)(See Attached Photo). CNRL to address safety concerns on site. KERMIT last gas production date: 2023-07 (Active status - flow lines open). NC: Signage not compliant to standards - missing flammable symbol (Active Status) (See Attached Photo). DPR Sec. 15 (1)Until the well is abandoned, a well permit holder must ensure that a permanently legible and conspicuous sign is displayed and maintained at each well, and that sign must show all of the following: (a)the name of the well permit holder; (b)current emergency notification information, including a telephone number; (c)the location of the surface site of the well as specified in the well permit; (d)if the well may produce flammable gas, a flammable gas symbol from Schedule 1; Well Building: Meter calibration service date: Aug. 8, 2020(5yr exempt term) and Orifice plate service date: Aug. 20, 2022. Cata-Dyne regulator vent in place. Chemical Storage: double wall tank, SDS labels present, grounded, and valve closed. Flowline: Note that flowline valves were open. No invasive plants were observed at the time of the inspection.	ERAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	NC: Signage not compliant to standards - missing flammable symbol in well building/site (Active Production Status) (See Attached Photo).			10520		
6-Sep-23	2023-2527	Canadian Natural Resources Limited	NTS: A- 091-L/094-P-10	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 18775 - Sept. 6, 2023, 13:14 pm on site. Well Head: surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. NC: missing bull plug from well head assembly (See Attached Photo). Comment: Garbage/debris (snake wrapping) found at base of well head see attached photo. KERMIT last gas production date: 2021-05 (Suspended production status - flow lines connected). NC: CNRL has provided BCER with a 2023 disconnect action plan to service (disconnect/blind) these suspended status wells. WA#18775 is on CNRL work list for 2023. NC: Signage not compliant to standards - missing flammable symbol (Suspended status) (See Attached Photo). 15 (1)Until the well is abandoned, a well permit holder must ensure that a permanently legible and conspicuous sign is displayed and maintained at each well, and that sign must show all of the following: (a)the name of the well permit holder; (b)current emergency notification information, including a telephone number; (c)the location of the surface site of the well as specified in the well permit; (d)if the well may produce flammable gas, a flammable gas symbol from Schedule 1; Well Building: Meter calibration service date: not found on site (CNRL to provide copy/details of last meter calibration date) and Orifice plate service date: July 23, 2021. Cata-Dyne regulator vent in place. Chemical Storage: double wall tank, SDS labels present, grounded, and valve closed. Flowline: Note that flowline valves were disconnected. Pig barrel chain in place. No invasive plants were observed at the time of the inspection.	ERAA		37(1)(a)	(a) prevent spillage, and	NC: Missing bull plug from well head assembly (See Attached Photo).			10518

See attached photo. Other proposed concerns/actions: NC: Well head not disconnected/ blinded from flowlines as required by Sec. 25 (5) Pipeline Regulation. CNRL has provided a well disconnect/suspend action plan to BCER for fall 2023; this well site is not identified on list of wells to be completed/scheduled for disconnection fall 2023.	3985				
6-Sep-23	2023-2504	Canadian Natural Resources Limited	NTS: B- 088-E/094-P-10	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 05526 - Sept. 6, 2023, 11:30 am on site. Well Head: Wing valves chained and locked, surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. KERMIT last gas production date: 2019-10 (Suspended production status). NC: Well head not disconnected/ blinded from flowlines as required by Sec. 25 (5) Pipeline Regulation. CNRL has provided an action plan to BCER which identifies this well to be scheduled for disconnection fall 2023. NC: Signage posted is not compliant to standards: missing flammable symbol (Production Status Suspended). See attached photo. NC: Active spillage/leak: pig barrel cover: overrange LEL measurement on Altair-5x (See attached Photo). Chemical Storage: double wall tank, SDS labels present, grounded, and drain plug in place. Flowline: Note that flowline valves were closed, not disconnected or blinded at time of inspection. NB: Portions of the flowline snake wrap and insulation is hanging/falling from flowlines onto ground, possible source of garbage/debris if not maintained (See Attached Photo). No invasive plant species noted on well pad at time of inspection.	ERAA		37(2)(b)	(b) contain and eliminate the spillage;	NC: Active spillage/gas leak: pig barrel cover: overrange LEL measurement on Altair-5x (See attached Photo). Additional concerns/actions: NB: Portions of the flowline snake wrap and insulation is hanging/falling from flowlines onto ground, possible source of garbage/debris if not maintained. NB: Signage posted is not compliant to standards: missing flammable symbol (Production Status Suspended).			10498		

6-Sep-23	2023-2492	Erikson National Energy Inc.		HELICOPTER	NORTH	Completed	In Compliance	Internal Request	This inspection was completed September 6 2023 to determine compliance with General Order 2021-0053-03 (April 21 2023) and Review Decision R-2023-01 (July 13 2023). Pumping operations at Flowback Pond observed to be inactive and in same state as previous inspection (Aug. 8 2023, Inspection # 2023-2163). No Personnel on site. Infrastructure at flowback pond includes submersible pump, intake line and header/valve assembly, inline turbine meter, above ground poly flowline to adjacent inactive d-24-G Facility. Infrastructure observed at inactive d-24-G Facility includes water pump building and tie-in to d-24-G Facility above ground steel pipeline. Pump and turbine meter inside pump building has been removed. No personnel at inactive d-24-G facility. Genset not operating. See photos in Notebook tab.											100073125

Went through the welding records with lead welding inspector (CWB Level 2 #5001687). WPS was provided and approved by Ovintiv. Welders were qualified Aug 26th and Aug 30th at the laydown location. 100% of welds were visually inspected with none requiring repairs. RT was completed on 100% of the mainline 8" with 1 weld requiring repair. Reviewed coating report with documented peel tests. Right of way is in good condition, they are watering for dust control and to ensure proper compaction of backfill material. Ditching looks good with smooth ditch bottoms. Backfill material is suitable. No concerns at time of inspection.

13-Sep-23	2023-3041	Orphan Fund	From DLS: 05-28-088-17 To DLS: 06-28-088-17	WALK	CENTRAL	Completed	In Compliance	Officer Selected	inspection 2023-2709 was sent to Bonavista with comments: South of the wellhead it appears there is piping. Both pipelines to this site have abandoned status and should be cut and capped below ground level. Please confirm what this piping is and respond back to INSPECTOR Received a call from the operator saying that this is not Bonavista's pipe. I contacted Orphan Fund BCER and reviewed with him. He didn't feel it was the Orphan Funds. He has contacted OF contractor. I gave Bonavista's operator contact information. Gate at beginning of access could be locked, site is a short walk into field from fenceline along access road. The direction of how pipe is protruding from ground seems to be lined up with the Orphan Fund well to the West than the Bonavista pipeline from the south.									
13-Sep-23	2023-2787	Tidewater Midstream and Infrastructure Ltd.	NTS: A- 007-D/094-G-07	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Officer Selected		ERAA	DRPR	78(6)(b)	(b) the facility site is clean and free of garbage, debris and derelict equipment.	The 2 tanks removed from this location were placed at the compressor station at TIDEWATER SIKANNI A-042-I/094-G-03. These tanks are a full truck load and need to be removed from field to be either reused or recycled. By not removing these from the field, the decommissioning requirement for a-7-D is not fully satisfied.	4018

13-Sep-23	2023-2601	Tourmaline Oil Corp.	UTM: 10N 558050.109E 6276889.169N	TRUCK	CENTRAL	Completed	In Compliance	Incident	Met with Supervisor and HSE to discuss fluid loss event and subsequent cleanup operations. Sept 7 - Tourmaline reported a fluid loss during HDD operations in an S6 stream. Sept 12 - Tourmaline reported increase in total losses to 60m3. These were being contained and recovered at point of loss. Sept 13 - Visited HDD operations to conduct an inspection on the fluid loss area and observe current status of cleanup. At the time of the fluid loss event EnviroBore was drilling the pilot hole. They had drilled 130m into the 310m path when rig mud return rates dropped. HDD crew and Sage Creek pipeline workers were doing frac watch and noticed the fluid loss frac out. At this time drilling was stopped and cleanup plans were initiated according to the Fluid Release Contingency Plan. H3M Environmental was dispatched to the spill to conduct drilling fluid sampling, lab analysis and record the extent of the spill in the S6 stream. Initial estimates of fluid losses were ~10m3 and travelled a distance of ~300m down stream from the initial frac out point (next to bridge on temp access on S6). 5 separate sandbag berms were in place and trash pumps were being used to return fluids to vac trucks for landspread disposal. They were able to provide the following documents for review: 1) HDD Drilling Execution Plan. 2) Fluid Release Contingency Plan. 3) Pre-bore plan. 4)Drilling waste recovery, water use tracking and drilling waste disposal report. Current losses are contained and being recovered in a timely manner. A follow-up inspection will occur next week to see the clean-up status of drilling fluids that went further down stream. Note: Temp access/road leading down to the bridge had some potential areas of concern. These were discussed and they are going to have crews work on sediment and erosion control measures.

14-Sep-23	2023-2603	NTE Energy Canada Ltd.	NTS: A- 100-J/094-I-12	TRUCK	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 13200 and 20103 - Sept. 14, 2023 - 13:05 pm on site. Parent Well Head: surface casing vent valve open, SCV flow no LEL measured (Altair-5x), and SCV no/slow flow observed. NC: Spillage - Gas leak at well head wing valve (packing): over-range measurement detected on Altair-5x device and also noted smell/audible gas leak. Well Head "A": SCV valve open, SCV flow no LEL measured (Altair-5x), and SCV no/slow flow observed. Signage compliant to standards, no issues noted. Well Cabinets: Meter calibration date: Mar. 5, 2022, and Orifice plate service date: July 23, 2023. Cata-Dyne reg. vent in place. Chemical storage: metal containment - single wall tanks (2x), SDS labels present, grounded, and bull plug in place. Comment: Unknown white residue observed at base of metal containment (See Attached Photo). NTE to inspect site and provide origin/occurrence of white substance observed to BCER inspector. Flowlines: Flowline valves open, no leaks of gas or fluid was observed at time of inspection. Flare flowlines disconnected/not active. NC: Pig barrel chain missing (See Attached Photo). No invasive plants observed on site at the time of the inspection. Well site clear and free of debris/garbage; well-maintained site.	ERAA		37(2)(b)	(b) contain and eliminate the spillage;	NC: Spillage - Gas leak at well head wing valve (packing): over-range measurement detected on Altair-5x device and also noted smell/audible gas leak. Comment: Unknown white residue observed at base of chemical storage - metal containment (See Attached Photo). NTE to inspect site and provide origin/occurrence of white substance observed to BCER inspector.			10727

The road under permit to Canfor has been deactivated just before the lease where trucks cannot get to your lease. The same road has a large washout that stops all large industrial traffic unless a new stream crossing is installed. The ground around the pumpjack well c-a-32, is showing signs of contamination as wildlife are drawn to the wellhead and the ground is bare. This is not happening at the other wells. Please conduct ground sampling and if contaminated erect a fence to keep wildlife and livestock out of that area. Due to system limitations, this inspection will show as a PASS however there is a request for information. Please submit the ground sampling information to BCER by the end of the day on October 20th 2023 with a plan of action. Thank you.

19-Sep-23	2023-2731	Erikson National Energy Inc.	NTS: B- 038-J/094-P-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 17178 Sept. 19, 2023, 14:09 pm on site. Well Head: surface casing valve open, SCV flow measured no LEL (Altair-5x), and SCV slow fill/no flow observed. KERMIT last gas production date: 2023-06 (Active production status). Flowlines are connected to well head/building and flowlines valves were observed to be closed (See Attached Photos). NC: Signage with appropriate/required (PDR-Schedule 1: symbol) flammable symbol was posted inside well building. For safety efficacy: ERIKSON should install appropriate symbol at exterior of building to alert persons to safety hazards while approaching facility. Well Building: Meter calibration date: 9/03/2021 and Orifice plate service date: no records found in well building (Gas Production is classed as "Active" status). Cata-dyne regulator vent line in place/installed. Flowline: Pig barrel chain in place/installed (2x). Chemical storage: double wall tank, SDS Labels posted, and grounded. No invasive plants noted on site at the time of the inspection.								11017		
19-Sep-23	2023-2730	Canadian Natural Resources Limited	NTS: A- 059-J/094-P-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 16860 Sept. 19, 2023, 14:01 pm on site. Well Head: surface casing valve open, SCV flow measured no LEL (Altair-5x), and SCV slow fill/no flow observed. KERMIT last gas production date: 2021-12 (Suspended production status). Flowlines are connected to well head/building and flowlines valves were observed to be closed (See Attached Photos). NC: Well head is not disconnected/ blinded from flowlines as required by Sec. 25 (5) Pipeline Regulation (> 14 months not producing gas). CNRL has previously identified and provided an action plan to BCER FN Office for proposed 2023 well head disconnects. This plan does not identify/list this well site (WA#16860) for disconnect in 2023. CNRL to confirm with BCER Inspector the scheduling of this well head for disconnection in the fall of 2023 or 2024. NC: Signage posted is not compliant to standards: missing flammable symbol. CNRL to install appropriate symbol as per DPR - Schedule 1: listing. Well Building: Meter calibration date: 8/28/2017 and Orifice plate service date: no records found in well building (Gas Production is classed as "Suspended" status). Cata-dyne regulator vent line in place/installed. Flowline: Pig barrel chain in place/installed. Chemical storage: double wall tank, SDS Labels posted, and grounded. No invasive plants noted on site at the time of the inspection.								11016

19-Sep-23	2023-2726	Canadian Natural Resources Limited	NTS: A- 088-K/094-P-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 16644 Sept. 19, 2023, 13:39 pm on site. Well Head: valve handles removed, surface casing valve open, SCV flow measured no LEL (Altair-5x), and SCV slow fill/no flow observed. KERMIT last gas production date: 2019-08 (Suspended production status). Flowline disconnected from well head and to well building *See Attached Photos). Comment: Signage posted is not compliant to standards: note small flammable symbol posted on well building (See Attached Photo)- is a reference to Methanol: a general flammable symbol for well sites producing gas is required as per DPR Sec. 15 (1)(d) If the well may produce flammable gas, a flammable gas symbol from Schedule 1; is required which need to be posted on site as displayed in DPR - Schedule 1 : Flammable Symbol which needs to be a minimum 100mm x 100mm in size. Well Building: Meter calibration date: no records on site and Orifice plate service date: 05/06/2019 (Suspended Site - Ok). Cata-dyne regulator vent line in place/installed. No invasive plants noted on site at the time of the inspection.							11013		
19-Sep-23	2023-2717	Canadian Natural Resources Limited	NTS: A- 019-C/094-P-15	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 18779 Sept. 19, 2023, 13:32 pm on site. Well Head: surface casing valve open, SCV flow measured high LEL (Altair-5x), and SCV slow fill/flow observed (latex glove test). KERMIT last gas production date: 2023-07 (Active production status). Flowline connected to well head. Signage is compliant to standards. Well Building: Meter calibration date: 08/05/2023 and Orifice plate service date: 07/05/2021. Cata-dyne regulator vent line in place/installed. Well building low LEL alarm measured with ALtair-5x: CNRL to investigate source of leak in well building. No audible leak was noted at the time of the inspection. Chemical storage: double wall tank, SDS labels present, and grounded.							10901		
19-Sep-23	2023-2716	Canadian Natural Resources Limited	NTS: C- 026-C/094-P-15	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 16663 Sept. 19, 2023, 13:22 pm on site. Well Head: valves chained and locked, surface casing valve open, SCV flow measured no LEL (Altair-5x), and SCV no flow observed. KERMIT last gas production date: 2020-10 (Suspended production status). Flowline connected to well head. NC: Well head not disconnected/ blinded from flowlines as required by Sec. 25 (5) Pipeline Regulation (> 14 months not producing gas). CNRL has previously identified and provided an action plan to BCER FN Office which does identify/list this well site (WA#16663) for the 2023 proposed disconnect plan. CNRL to confirm when disconnect is complete through BCER monthly updates/accomplishments of their 2023 disconnect plan. NC: Signage is not compliant to standards: missing flammable symbol (See Attached Photo). Well Building: Meter calibration date: No records found at time of the inspection and Orifice plate service date: 03/10/2019. Cata-dyne regulator vent line in place/installed. NC: open hole (cut off pilling) safety hazard on site (See Attached Photo). Chemical storage: double wall tank, SDS labels present, and grounded. Flowline: Pig barrel chain in place.	ERAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	NC: open hole (cut off pilling) safety hazard on site (See Attached Photo).			10900		
19-Sep-23	2023-2715	Canadian Natural Resources Limited	NTS: D- 047-C/094-P-15	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 20031 Sept. 19, 2023, 13:15 pm on site. Well Head: surface casing valve open, SCV flow measured no LEL (Altair-5x), and SCV no flow observed. KERMIT last gas production date: 2023-07 (Active production status). Signage is compliant to standards: please note that Company information and location identification is faded / not readily visible (See Attached Photo). Well Building: Meter calibration date: Aug. 15, 2020 (5yr schedule) and Orifice plate service date: May 16, 2023. Cata-dyne regulator vent line in place/installed. Chemical storage: double wall tank, SDS labels present, and grounded. NB: Invasive plant species on site: Canada Thistle noted on well pad at time of inspection (0.2 ha in size): requires treatment (See Attached Photos).							10899

19-Sep-23	2023-2714	Canadian Natural Resources Limited	NTS: D- 059-C/094-P-15	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 7238 Sept. 19, 2023, 13:07 am on site. Well Head: Wing valves handles chained and locked, disconnected from flowline, surface casing valve open, SCV flow measured no LEL (Altair-5x), and SCV no flow observed. KERMIT last gas production date: 2019-10 (Suspended production status). NC: Signage is not compliant to standards: missing flammable symbol (See Attached Photo). Flowline: disconnected from well head. Pipeline: Pig barrel chain in place/installed. NC: Potential spillage, bull plug missing from ball valve located at pipeline riser: A-81-A/94-P-15 to a-23-E/94-P-15 (see Attached Photos). NC: Spillage observed on well head wing valve packing (low LEL alarm) (See Attached Photos). Chemical storage: double wall tank (3x), SDS labels present, and grounded. No invasive plant species noted on well pad at time of inspection.	ERAA		37(1)(a)	(a) prevent spillage, and	NC: Potential spillage, ball valve missing bull plug located at pipeline riser: A-81-A/94-P-15 to a-23-E/94-P-15 (see Attached Photos).			10898		
19-Sep-23	2023-2714	Canadian Natural Resources Limited	NTS: D- 059-C/094-P-15	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed							4176			
19-Sep-23	2023-2713	Canadian Natural Resources Limited	NTS: C- 036-F/094-P-15	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 9545 Sept. 19, 2023, 12:55 am on site. Well Head: Wing valves handles removed, surface casing valve open, SCV flow measured no LEL (Altair-5x), and SCV no flow observed. KERMIT last gas production date: 2023-07. NC: Spillage observed on well head wing valve packing (low LEL alarm) (See Attached Photo). Well Building: meter calibration date: March 23, 2023 and Orifice Service Plate date: May 13, 2023. cata-dyne regulator vent line in place. High LEL alarm noted (Altair-5x) in well building, no gas spillage/leak found at the time of inspection. CNRL to investigate possible source of LEL gas leak. Signage is compliant to standards. Pipeline: Pig barrel chain in place/installed. Chemical storage: double wall tank, SDS labels present, and grounded. No invasive plant species noted on well pad at time of inspection.	ERAA		37(2)(a)	(a) remedy the cause or source of the spillage;	NC: Spillage observed on well head wing valve packing (slow leak) (low LEL alarm) (See Attached Photo).			10897		

19-Sep-23	2023-2712	Canadian Natural Resources Limited	NTS: C- 015-F/094-P-15	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 9544 Sept. 19, 2023, 12:47 am on site. Well Head: Wing valves chained and locked, flowline valves closed, surface casing valve open, SCV flow measured overrange LEL (Altair-5x), and SCV fast fill/flow observed (latex glove test). A review of BCER's IRIS database has indicated that CNRL has maintained their emission testing for this SCV up to date. KERMIT last gas production date: 2019-10. NC: Well head not disconnected/ blinded from flowlines as required by Sec. 25 (5) Pipeline Regulation (> 14 months not producing gas). CNRL has previously identified and provided an action plan to BCER FN Office which does not identify/list this well site (WA#9545) for 2023. CNRL to confirm with BCER Inspector the scheduling of this well head for disconnection in the fall of 2023 or 2024. Signage is compliant to standards. Pipeline: Pig barrel chain in place/installed. Chemical storage: double wall tank, SDS labels present, and grounded. No invasive plant species noted on well pad at time of inspection.							10896		
19-Sep-23	2023-2711	Canadian Natural Resources Limited	NTS: B- 072-C/094-P-15	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 12017 - Sept. 19, 2023, 12:36 am on site. Well Head: surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. KERMIT last gas production date: 2023-07. (Active status - flowline connected). Well Building: Meter calibration date: Feb. 4, 2022 (5yr. schedule) and Orifice Plate service date: Feb. 21, 2020. Cata-dyne regulator vent line in place/installed. Posted signage is compliant to standards. Flowline: Note that flowlines were connected from well head to well building. Pig barrel chain in place/installed. Comment: Some garbage insulation/plastic snake wrap from the flowline liner has detached from the flowline and was noted to be scattered onto ground (See Attached Photo). No invasive plants were noted at the time of the inspection.							10895		
19-Sep-23	2023-2710	Canadian Natural Resources Limited	NTS: A- 053-C/094-P-15	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 9152 - Sept. 19, 2023, 12:26 am on site. Well Head: valve handles chained/locked, surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. KERMIT last gas production date: 2020-11. (Suspended status - flowline disconnected from well head). Well Building: Meter calibration date: No records found on site. and Orifice Plate service date: July 16, 2019. Cata-dyne regulator vent line in place/installed. Posted signage is compliant to standards. Flowline: Note that flowlines were disconnected from well head to well building. NC: flowline attached to pipeline from well building is missing a bull plug top of ball valve (See Attached Photos). No invasive plant species were noted at time of inspection.	ERAA		37(1)(a)	(a) prevent spillage, and	NC: flowline attached to pipeline from well building is missing a bull plug at the top of the ball valve (See Attached Photos).			10894		
19-Sep-23	2023-2708	Canadian Natural Resources Limited	NTS: A- 041-C/094-P-15	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 20029 - Sept. 19, 2023, 12:19 am on site. Well Head: valve handles removed, surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. KERMIT last gas production date: 2023-03. (Active Staus - flowlines were closed at time of inspection). Well Building: Meter calibration date: July 5, 2023 (5yr schedule) and Orifice Plate service date: April 22, 2022. Cata-dyne regulator vent line in place/installed. Posted signage is compliant to standards (main location ID / company information is faded) - CNRL to consider replacing/updating sign (See Attached Photos). Chemical Storage: double wall tank, SDS labels present, and grounded. Flowline: Note that flowline valves were closed from well head and well building. Pipeline: pig barrel chain in place/installed. No invasive plant species were noted at time of inspection.							10893		
19-Sep-23	2023-2708	Canadian Natural Resources Limited	NTS: A- 041-C/094-P-15	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed							4175			
19-Sep-23	2023-2707	Canadian Natural Resources Limited	NTS: A- 011-C/094-P-15	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 16580 - Sept. 19, 2023, 12:11 am on site. Well Head: valves chained and locked, NC: surface casing valve closed (See Attached Photo): BCER inspector at about 12:00hrs same day discussed issue with CNRL operator (K. McLeod) who stated that valves were possibly temporarily closed due to wildfire incidence in area. CNRL to open SCV valve when current wildfire hazard dissipates. SCV vent flows were not measured at the time of the inspection. KERMIT last gas production date: 2019-11 (Disconnected / Suspended production status). Well building door locked, not able to gain access and inspect. CNRL to unlock and leave door accessible to BCER inspectors. NC: Open holes from cut off large diameter pilings (2x) (safety issue) (See Attached Photos). Posted signage is compliant to standards, found placard sign face down on ground, detached from well building (CNRL to consider more permanent fixture of sign onto well building (See Attached Photo). Chemical Storage: double wall tank, SDS labels present, grounded. Flowline: Note that flowlines were disconnected from well head and well building. No invasive plant species were noted at time of inspection.	ERAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	NC: Open holes from cut off large diameter pilings (2x) (safety issue) (See Attached Photos).			10890		
19-Sep-23	2023-2706	Canadian Natural Resources Limited	NTS: D- 009-B/094-P-15	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 18771 - Sept. 19, 2023, 12:03 am on site. Well Head: valves chained and locked, surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. KERMIT last gas production date: 2019-06 (Disconnected / Suspended production status). NC: Posted signage is not compliant to standards (missing flammable symbol - Action: CNRL to post flammable symbol on well building door) (See Attached Photos). Chemical Storage: double wall tank, SDS labels present, grounded. Flowline: Note that flowlines were disconnected from well head and well building. Pipeline: Pig barrel chain in place. No invasive plant species were noted at time of inspection.							10889		
19-Sep-23	2023-2705	Canadian Natural Resources Limited	NTS: A- 034-B/094-P-15	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 11686 - Sept. 19, 2023, 11:57 am on site. Well Head: valves chained and locked, surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. KERMIT last gas production date: 2019-05 (Disconnected / Suspended production status). Posted signage is compliant to standards (partly faded flammable symbol - CNRL to consider replacing). Chemical Storage: double wall tank, SDS labels present, grounded. Flowline: Note that flowlines were disconnected from well head and well building. No invasive plant species were noted at time of inspection.							10888		

19-Sep-23	2023-2703	Canadian Natural Resources Limited	NTS: B- 049-A/094-P-15	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 9528 - Sept. 19, 2023, 11:49am on site. Well Head: surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. KERMIT last gas production date: 2023-07 (Active production status). Removed compressor station from site, CNRL to update BCER KERMIT records. CMIS identifies compressor station as "Active" should be removed. Posted signage is compliant to standards. Well Building: Calibration meter service date: Sept. 28, 2020 (5yr. exemption schedule) and orifice service date: Sept. 28, 2020. Cata-dyne regulator vent in place. Chemical Storage: double wall tank, SDS labels present, grounded. Flowline: Note that flowline valves were open. Invasive plant species: Scentless chamomile (1x) noted in well cellar at time of inspection (See Attached Photo).						4170

19-Sep-23	2023-2700	Canadian Natural Resources Limited	NTS: C- 094-I/094-P-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 7622 - Sept. 19, 2023, 11:40 am on site. Well Head: surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. KERMIT last gas production date: 2023-07 (Active production status). Posted signage is compliant to standards. Well Building: Calibration meter service date: Aug. 4, 2023 and orifice service date: May 31, 2023. Cata-dyne regulator vent (2x) in place. Large raptor nest located at top of dehydrator stack (See Attached Photo). Chemical Storage: double wall tanks (3x), SDS labels present, grounded. Flowline: Note that flowline valves were open. No invasive plant species noted on well pad at time of inspection.						4169				
19-Sep-23	2023-2700	Canadian Natural Resources Limited	NTS: C- 094-I/094-P-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed								10883		
19-Sep-23	2023-2697	Erikson National Energy Inc.	NTS: C- 074-I/094-P-10	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Officer Selected	WA# 5255 - Sept. 19, 2023, 11:35 am. on site. Well Head: Wing valves chained and locked, disconnected from flowlines, surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. KERMIT last gas production date: 2013-02 (Suspended Production Status - disconnected flow lines). NC: Signage at site is not compliant to standards: 1) flammable symbol is missing, and 2) company name is outdated (Predator Oil BC listed not ERIKSON) (See Attached Photo). Chemical Storage: double wall tanks (4x), SDS labels present, grounded, and drain valve closed. Flowline: Note that flowlines were disconnected from well head at the time of inspection. No invasive plant species noted on well pad at time of inspection.	ERAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	NC: Signage at site is not compliant to standards: 1) flammable symbol is missing and 2) company name is outdated (Predator Oil BC listed not ERIKSON) (See Attached Photo).			10874		
19-Sep-23	2023-2695	Canadian Natural Resources Limited	NTS: C- 054-I/094-P-10	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 7783 - Sept. 19, 2023, 11:29 am on site. Well Head: surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. KERMIT last gas production date: 2023-07 (Active production status). NC: Spillage: slow gas leak at wing valve packing on well head (High LEL alarm - Altair-5x) (See attached Photo). Posted signage is compliant to standards (very weathered) (See Attached Photo). Well Building: Calibration meter service date: Aug. 02, 2021 (5 yr. exempt/schedule) and orifice service date: March 2, 2021. Cata-dyne regulator vent in place. Flowline: Note that flowline valves were open. No invasive plant species noted on well pad site at time of inspection.	ERAA		37(2)(a)	(a) remedy the cause or source of the spillage;	NC: Spillage: slow gas leak at wing valve packing on well head (High LEL alarm - Altair-5x) (See attached Photo).			10873		
19-Sep-23	2023-2694	Canadian Natural Resources Limited	NTS: B- 066-I/094-P-10	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 7250 - Sept. 19, 2023, 11:11 am on site. Well Head: surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. KERMIT last gas production date: 2023-07 (Active production status). NC: Posted signage is not compliant to standards: flammable symbol is faded/not legible; therefore, missing appropriate flammable symbol posted which requires replacing (See Attached Photo). Well Building: Calibration meter service date: July 4, 2023 and orifice service date: May 27, 2021. Cata-dyne regulator vent (2x) in place. Compressor, line heater building is tagged out of service. Inactive produced water tank in berm. Inactive separator building disconnected (See Attached Photos). Chemical Storage: single wall tank in metal containment, SDS labels present, grounded. NC: Metal containment missing bull plug (See Attached Photo) with ball valve closed. Flowline: Note that flowline valves were open and disconnected to processing buildings (out of service). Pipeline: NC: Pig barrel chain missing (See Attached Photo). No invasive plant species noted on well pad at time of inspection.	ERAA	PREG	3(1)(a)	(a) the pipeline that is the subject of the permit;	NC: Pig barrel chain missing (See Attached Photo). Please note other action items listed/identified in the inspection details section of this report.			10872

19-Sep-23	2023-2687	Canadian Natural Resources Limited	NTS: C- 067-I/094-P-07	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 12595 - (c-67-I/94-P-07) Sept. 19, 2023, 09:53 am on site. Well Head: Wing valves chained and locked, disconnected from flowlines, surface casing valve open, SCV flow measured overrange LEL (Altair-5x), and SCV fast fill/flow observed (latex glove test). KERMIT last gas production date: 2012-01. *CNRL is to complete a pressure build-up gas emissions test for the SCV of the well head as per DPR Sec. 41 (2) emission reporting requirements. A search of BCER IRIS database/program revealed that no CNRL SCV emission records/results were submitted/found within BCER IRIS program. CNRL to submit SCV emission report. NC: Signage is not compliant to standards - no flammable symbol posted at well building entrance or at well head (source of flammable gas) and location ID is faded not legible at building entrance. Facility buildings: all posted out of service (not functioning/disconnected). NC: oil spillage observed on floor of main compressor building (See Attached Photos). Pipeline: Pig barrel chain in place/installed (3x) at pipeline riser section (c-67-I to a-84-J) of well pad. No invasive plant species noted on well pad at time of inspection.								10869		
19-Sep-23	2023-2683	Canadian Natural Resources Limited	NTS: B-A084-G/094-P-07	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 14842 - (b-A84-G/94-P-07) Sept. 19, 2023, 09:39 am on site. Well Head: Parent well head tombstone found on adjacent well pad. Well Head "A": Wing valves chained and locked, flowline valves closed, surface casing valve open, SCV flow measured no LEL (Altair-5x), and SCV no fill/flow observed. KERMIT last gas production date: 2022-06. NC: Well head not disconnected/ blinded from flowlines as required by Sec. 25 (5) Pipeline Regulation (> 14 months not producing gas). CNRL has previously identified and provided an action plan to BCER FN Office which identifies/lists this well site (WA#14842) to be scheduled for disconnection in the fall of 2023. NC: Signage not compliant to standards - missing (faded+not legible) flammable symbol (Suspended status) (See Attached Photo). Well Building: Calibration meter service date: Aug. 1, 2022, and Orifice service date: Aug. 1, 2022. Cata-Dyne regulator vent in place. Chemical Storage: two single wall tanks in metal containment, SDS labels present, grounded, and NC: containment bull plug missing (See Attached Photos). Flowline: flowline valves were closed and not disconnected/blinded. No invasive plant species noted on well pad at time of inspection.								10856		
19-Sep-23	2023-2683	Canadian Natural Resources Limited	NTS: B- 084-G/094-P-07	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed							4146				
19-Sep-23	2023-2680	Canadian Natural Resources Limited	NTS: D-A019-J/094-P-07	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 11317 - Sept. 19, 2023, 09:33 am on site. Well Head "A": Wing valves chained and locked, disconnected from flowlines, surface casing valve open, SCV flow measured overrange LEL (Altair-5x), and SCV slow fill/flow observed (latex glove test). KERMIT last gas production date: "No data found" was registered into database records. Signage is compliant to standards, no concerns noted. No invasive plant species noted on well pad at time of inspection. Site revegetated to approximately 80% brush/deciduous species and 20% herbaceous vegetative cover.								10854		
19-Sep-23	2023-2679	Canadian Natural Resources Limited	NTS: D-A019-J/094-P-07	HELICOPTER	NORTH	Completed	Retracted	Risk & Data Informed	WA# 11317 - (d-A19-J/94-P-07) Sept. 19, 2023, 09:33 am on site. Well Head: Parent well head tombstone found on adjacent well pad. Well Head "A": Wing valves chained and locked, disconnected from flowlines, surface casing valve open, SCV flow measured overrange LEL (Altair-5x), and SCV slow fill/flow observed (latex glove test). KERMIT last gas production date: "No data found" was registered into database records. Signage is compliant to standards, no concerns noted. No invasive plant species noted on well pad at time of inspection. Site revegetated to approximately 80% brush/deciduous species and 20% herbaceous vegetative cover.								10853		
19-Sep-23	2023-2678	Canadian Natural Resources Limited	NTS: A- 076-F/094-P-07	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 10127 - Sept. 19, 2023, 09:20 am on site. Well Head: Wing valves chained and locked, disconnected from flowlines, surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no fill/flow observed. KERMIT last gas production date: 2015-10 (Suspended Production Status - disconnected flow lines). Comment: Signage at well head is not compliant to standards: flammable symbol posted is faded and not readily visible requires replacing (See Attached Photo): in addition, signage is laying on the ground and not posted/hung on well head. NC: Open holes (2x)(open steel pilings) were noted in the immediate area of the well head (safety concern - human/wildlife) (See Attached Photos). Chemical Storage: double wall tank, SDS labels present, grounded, and drain valve closed. Flowline: Note that flowlines were disconnected from well head at the time of inspection. NB: missing bull plug off of ball valve from pipeline riser (valves on pipeline were closed) (See Attached Photos). No invasive plant species noted on well pad at time of inspection.								10852		
19-Sep-23	2023-2678	Canadian Natural Resources Limited	NTS: A- 076-F/094-P-07	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed		ERAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	NC: Open holes (2x)(open steel pilings) were noted in the immediate area of the well head (safety concern - human/wildlife) (See Attached Photos).	4144				
19-Sep-23	2023-2676	Bench Creek Resources Ltd.	NTS: A- 011-I/094-P-06	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 19173 - Sept. 19, 2023 - 09:10 am. on site. Parent well head: Surface casing vent valve open, SCV flow measured no LEL (Altair-5x), SCV no/slow flow observed. Kermit last gas production date: 2023-07. NC: Signage posted on well building: Company name and contact phone number emergency information is outdated (identified as Sanling not Bench Creek)(See Attached Photo). Company to update signage on well building signage. Well Building: Meter calibration date: Aug. 10, 2023, and Orifice plate service date: March 16, 2022. Cata-dyne vent regulator in place/installed. Chemical Storage: double wall tanks (2x) on site, SDS labels present, and grounded. Flowlines: Flowline valves open, no leaks gas or fluid leak observed. Cata-dyne regulator valve installed. Comment: Garbage on site: snake wrap and insulation has detached from flowlines and is scattered onto the ground which requires clean-up (See Attached Photos).	ERAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	NC: Signage posted on well building: Company name and emergency contact phone number information is outdated (identified as Sanling not Bench Creek)(See Attached Photo). Company to update signage posted on well building.			10848		
19-Sep-23	2023-2675	NTE Energy Canada Ltd.	NTS: A- 073-G/094-P-06	HELICOPTER	NORTH	Completed	Retracted	Risk & Data Informed	WA# 18751 - Sept. 19, 2023 - 09:00 am. on site. Well Head abandoned status (removed Christmas tree), well pad clearing is revegetated with 60% brush/deciduous and 40% herbaceous (grass) species cover. No debris/derelict equipment on site, area is clear and free of material/equipment/buildings. No visible invasive plants were observed at the time of the inspection.								10847		
19-Sep-23	2023-2675	NTE Energy Canada Ltd.	NTS: A- 073-G/094-P-06	HELICOPTER	NORTH	Completed	Retracted	Risk & Data Informed							4140

20-Sep-23	2023-2972	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	Hunter Creek Camp - * Perimeter driven. Generally orderly, fence intact, sumps functioning as expected. No concerns noted. TD 28 * Refueling tray could use cleaning - sheen/about to spill over. * Snow fence maintenance still not completed. * Follow up e-mail received on September 25th 2023 with photos indicating action items completed. * Now have no concerns with site. Laydown 37b * Discussed potential of long-term storage and potential permitting requirements. * Noted monitors onsite to gauge slope movement as site is in close proximity to Kitimat River. Cable Crane toe slope KP 634+470 * No signs of continued slope instability. No rilling/no erosion noted. * Sumps functioning and recently pumped out. * All adjacent streams running clear. * Discussed potential hydromulch/ESB cover for winter. * Ongoing trench filling on Cable Crane Hill as per engineered design. Raised bore steep slope 5 * Hydrotest complete. One final section of pipe to be installed. * Tunnel still to be grouted. * Very little equipment remains and most has been de-mobed. WC 655 KP 613+433 * Pipe install complete. Stream put back, no concerns. * Adjacent S6 WC 174 C 613+241 required additional rip rap to maintain bank stability. * Stream has been rock lined. Pipe install complete, water flowing clear. No concerns. No non-compliance noted during inspection.

A bulletin came out from the Regulator in January 2020 regarding the use of forage species for restoration and is not an acceptable practice as these species are extremely detrimental to the establishment of wildlife habitat. The species noted were clover and alfalfa. The area the clearing now occupies was formerly a pine/aspen stand with a minor under story of spruce plus shrub species. To satisfy the EMPRs the site should be promoting the wildlife habitat that existed prior to the energy resource activity which is described as above and would have been identified by the vegetation survey gathered prior to the application. The EPMRs have been in effect since 2010. There are also some scentless chamomile plants present and those are spread out and could be handpicked.

21-Sep-23	2023-2778	Canadian Natural Resources Limited	From NTS: D- 055-A/094-B-16 To NTS: C- 076-A/094-B-16	WALK	CENTRAL	Completed	In Compliance	Officer Selected	There is orange plastic snow fencing that had been erected years ago and has fallen down. This is also true for the area around the well bore. The orange plastic snow fencing is not an acceptable measure to keep wildlife out of the contaminated areas. There is evidence that wildlife has frequented the water filled flare pit. The flare pit and well bore area need to have wildlife fencing installed. Upon gently poking a stick in the bottom of the flare pit, a strong hydrocarbon odor was detected. Please send your last contamination report to BCERby the end of the day on October 20, 2023. Thank you The pipeline 00002178 is listed as ACTIVE in our system but this appears not to be the case. Would you please confirm the status of this pipeline and respond by October 20, 2023. Due to system limitations, this inspection will show as a PASS, however, there are concerns about the contaminated flare pit and the style of fencing to keep wildlife out.

21-Sep-23	2023-2728	ConocoPhillips Canada Resources Corp.	NTS: B-A013-B/094-B-16	WALK	CENTRAL	Completed	Non-Compliance(s) Found	Officer Selected	This is a follow up inspection after the road was noted last winter to have been deactivated and the lease restoration could only be inspected under snow free conditions.	ERAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	The restoration activities for ground decompaction on the lease has revealed a buried tank or drum that has hydrocarbon in it. Pictures will be uploaded in this file. This is located in the far right corner of the lease and is marked by a dead willow/alder and wood lath. Aside from removing the hydrocarbon, container and any contaminated ground there should be a much broader examination for any other buried items.			11012			
21-Sep-23	2023-2728	ConocoPhillips Canada Resources Corp.	NTS: B- 013-B/094-B-16	WALK	CENTRAL	Completed	Non-Compliance(s) Found	Officer Selected		ERAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	There is an old buried culvert at the beginning of the lease that needs to be removed. A piece of pipe was retrieved from along the deactivated road and added to the pile of steel that also needs to be removed.			11011			
21-Sep-23	2023-2762	Canada Energy Partners Inc.	From NTS: C- 050-D/094-A-04 To NTS: D- 050-D/094-A-04	WALK	MID	Completed	In Compliance	Internal Request	No equipment or materials remaining, no monument or signage in place. Site is heavily vegetated with fescue/ alfalfa, no evidence of gas migration. Access road and pipeline ROW have been restored, fenced off and returned to agricultural use (ploughed). No issues found at time of inspection.

22-Sep-23	2023-2752	NTE Energy Canada Ltd.	NTS: B- 060-C/094-I-12	TRUCK	NORTH	Completed	In Compliance	Officer Selected	WA# 15287, 16189, and 16604 - Sept. 22, 2023, 13:20 am on site. Well Head - Authority # 15287, 16189, and 16604: all three wells were connected to flowlines, surface casing valve open, SCV flow measured no LEL (Altair-5x), and SCV no flow observed. KERMIT last gas production date: 2023-08 (Active status). Signage is compliant to standards, flammable symbol only posted on one well sign, no other concerns noted. Well suitcase (3x): Meter calibration date: Jan. 26, 2022 and Orifice Plate Service date: May 28, 2020. Cata-dyne regulator vent lines in place/installed. Suitcase facility (A and B) did not have individual orifice records posted in cabinets. Flowline: Flowline valves were open. Comment: some snake wrap and insulation are detaching from flowlines, possible future source of garbage/debris if left untreated/maintained (See Attached Photos). Chemical storage: Metal containment (2x) with two tanks, SDS labels present, bull plug in place, and grounded. No invasive plant species noted on the well pad at time of inspection. Site revegetated to approximately 10% brush/deciduous species and 90% herbaceous vegetative cover.								11131

3-Oct-23	2023-2883	Canadian Natural Resources Limited	NTS: B- 099-G/094-O-08	TRUCK	NORTH	Completed	In Compliance	Officer Selected	WA# 23315 - Oct. 3, 2023, 13:15 hrs. on site. Well Head - Parent: Wing valves removed, disconnected from flowlines, surface casing valve open, SCV flow measured HIGH LEL (Altair-5x), and SCV slow fill observed (latex glove test) (Audible Gurgling from SCV). KERMIT last gas production date: 2015-05 (Suspended Status). Well Facility: Disconnected flowlines to well head and flowlines/pipelines. Chemical storage: double wall steel tank, SDS labels present, grounded. Cata-dyne regulator vent in place. Signage is compliant to standards, no concerns noted. Geotextile fabric / rolls of material stored on site (See Attached Photos). No invasive plant species noted on well pad at time of inspection. Site revegetated to approximately 15% brush/deciduous species and 85% herbaceous vegetative cover.								11320			
3-Oct-23	2023-2883	Canadian Natural Resources Limited	NTS: B- 099-G/094-O-08	TRUCK	NORTH	Completed	In Compliance	Officer Selected								4341				
3-Oct-23	2023-2814	Canadian Natural Resources Limited	NTS: D- 087-G/094-O-08	TRUCK	NORTH	Completed	In Compliance	Risk & Data Informed	FID # 00024187 - Oct. 3, 2023 - 14:04 hrs. on site. (Suspended Status) Majority of associated mechanical buildings are removed from the site. Onsite the following was noted: two double wall chemical storage tanks (empty), various detached/disconnected flowlines/pipelines, disconnect flare stack and flowline assembly, two utility buildings, pipeline risers and assembly areas (2x), above ground metal storage tanks (2x), electrical poles and utilities boxes with underground cables (See Attached Photos). NC: No facility name/location signage was noted at the entrance to the site: Well pad mats covered a majority or the cleared area (40%). No invasive plants were noted on site at the time of inspection. NB: Invasive plants: A minor incidence of Scentless Chamomile was noted (scattered) along the main access road to site.								4353

4-Oct-23	2023-2870	Canadian Natural Resources Limited	NTS: B- 047-D/094-H-06	HELICOPTER	CENTRAL	Completed	In Compliance	Internal Request	Internal request from Engineering to try to land and conduct a methane leak test. This is a follow up from a fixed wing aircraft survey that detected a potential methane leak. I was able to land and conduct a test that showed 2-3 ppm methane. The methane detector does not have a working menu screen, No self test or reset or any other functions as to it ability to operate properly was noted so confidence in the survey is lower.								11465		
4-Oct-23	2023-2869	Canadian Natural Resources Limited	NTS: C- 011-K/094-H-03	HELICOPTER	CENTRAL	Completed	In Compliance	Internal Request	Internal request from Engineering to follow up with on ground methane detection after a fixed wing aircraft survey detected a potential methane leak. Could not land but there is a road 200m away and this site could be walked into and tested. There is only a wellhead on site.								11464		
4-Oct-23	2023-2868	Canadian Natural Resources Limited	NTS: C- 092-G/094-H-03	HELICOPTER	CENTRAL	Completed	In Compliance	Internal Request	Internal request for a methane leak follow up after fixed wing identified a potential methane leak. There is a tombstone but the site is too overgrown to land. No follow up completed.								11463		
4-Oct-23	2023-2867	Canlin Energy Corporation	NTS: D- 037-D/094-H-02	HELICOPTER	CENTRAL	Completed	In Compliance	Internal Request	Requested by BC-ER to land and try to find a methane source that was identified by a fly over earlier in the summer. No tombstone so the well bore location could only be guessed to be in the middle of the lease. No metal detector. The menu screen is non-functional for any of the reset/self test processes and other info. Reliability on the readings would be low in my estimation given the failure of the menu screen. Mostly grass with one 3 m tall pine tree. Methane reading of 3-6 ppm with the 6 ppm in the middle of the lease. Lots of ungulate sign.								11462		
4-Oct-23	2023-2866	Orphan Fund		HELICOPTER	CENTRAL	Completed	In Compliance	Internal Request	The site was too overgrown to land. The internal information request from Nova Williams was to check and see if equipment had been removed. All that remains on site is a tombstone for the well bore.

ERAA	EPMR	19(1)(d)(i)	(i) promote the restoration of the wildlife habitat that existed on the area before the oil and gas activity was begun, and	A bulletin came out from the Regulator in January 2020 regarding the use of forage species for restoration and is not an acceptable practice as these species are extremely detrimental to the establishment of wildlife habitat. The species noted were clover, some sweet clover, alfalfa, and timothy. It was also noted that some beneficial fall rye was present. The area the well site now occupies was formerly a pine/aspen stand with a minor under story of spruce plus shrub species. To satisfy the EMPRs the site should be promoting the wildlife habitat that existed prior to the energy resource activity which is described as above and would have been identified by the vegetation survey gathered prior to the application. The EPMRs have been in effect since 2010.

11-Oct-23	2023-2973	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	In Compliance	Major Project	October 11, 2023 Endako East * Private land slope to grade. * Site close to completion. * Viewed slope stability works on edges of Endako River. Slope instability non-project related. * Viewed archaeological site - has remained undisturbed. Snow fencing removed but no longer needed. * Appears to be significant soils remaining. BCER inquires where excess soil will be utilized. * Visited de-watering area. Downslope no concerns. Ongoing construction debris removal * Visted private land wetland near rail crossing KP 390+660. Discussed re-establishment of NCD between wetlands prior to winter. Endako West * Walked in - slope too slippery to drive. * Drainage focused into one corner of slope. Grade appears to be lower than the original grade adjacent to the river. Concerns with focusing all water from the slope to a sump immediately adjacent to river. * Macro and CPESC onsite prior to inspection discussing slope in question. * BCER requests site specific plan signed-off by CPESC. Laydown 10a RW 1330.0.1

11-Oct-23	2023-2882	Cardinal Energy Ltd.	DLS: 11-34-081-14	TRUCK	SOUTH	Completed	Non-Compliance(s) Found	Officer Selected	A joint inspection was completed with Cardinal facility operator at Cardinal 11-34-81-14 Mica Oil Battery. Battery compressors C600 and C660 were down the day of inspection due to North River Plant process maintenance. It was noted during inspection that both gas detection and shut down checks were completed July 27, 2023. A check of the HMI alarm screen verified that there were no alarms bypassed or at fault. Sales Gas meter was calibrated Sept 15, 2023, and Fuel Gas meter calibrated Mar 14, 2023. Site was clean and well kept. Action items identified during inspection: 1)Several bull plugs were missing on recycle pump line ball valves in recycle pump building. Facility operator installed plugs immediately. 2)Test separator PSHH transmitter not locked/car sealed 3)In dehy building, fuel gas scrubber PSHH transmitter not locked/car sealed Thank you for taking the time to participate in the facility inspection.	ERAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Inspection identified lock/car seal missing on test separator PSHH in inlet building. Inspection also identified lock/car seal missing on fuel gas scrubber PSHH in glycol building.	4399

12-Oct-23	2023-2904	ARC Resources Ltd.	DLS: 01-34-079-14	TRUCK	SOUTH	Completed	Non-Compliance(s) Found	Planned Inspection Program	Meet with Operations staff. Inspection fire and gas detection HMI display screens - ok, no faults found. The flare was lit - flame fail on HMI -ok, no faults found. Confirm all accounting and X-border meter calibrations were up to date. Request to inspect the facility valve lock/car seal list. The list was not produced at the time of inspection. Perform a walkdown of the facility equipment. It was noted there was no blowdown valve on the common compressor suction header downstream (after) the check valve on the V-100 group separator PDCV-100A FO open valve. After reviewing the PIDs it appears in the event of an ESDD gas may be trapped between the check valve after PDCV-100A and the compressor suction control valves. Action Items: 1. 5-23 Pouce Pig sender - Found the PAV safety chain was too long - recommend shortening the safety chain as it would allow the end cap thread to be disengaged from being fully tightly closed without removing the PAV. 2. C-320- Faded ESD pushbutton sign on the north door - recommend replacement. 3. Recommend an engineering assessment to examine if the common compressor suction header can automatically blowdown in the event of an ESDD situation. 4. Valve lock/car seal list- recommend the list be easily accessible to operations staff, for review, updating, and the recording of periodic valve lock/car seal installation inspections. Please submit the facility valve lock/car seal list for inspection. Please reply to OGC concerning the above Action Items and to the attached deficiencies through CMIS.	ERAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Found: 1. Water Storage Tank Make-up Gas- Fisher 627 not safely vented to atmosphere. 2. C-330 - 2nd. Stg Discharge PSV Pilot- not safely vented to atmosphere.	4407				
13-Oct-23	2023-2975	Coastal GasLink Pipeline Ltd.		TRUCK	COASTAL	Completed	In Compliance	Major Project	October 13, 2023 All areas from S85+500 - S88+000, including RW300, and S94+700 - 608+000 * Running track still intact through this area. Generally single lane with allowable pullouts * Final grade complete except S85+000. * Machine cleanup complete. * Active works scattered throughout - topsoil replacement, rollback, cross drains, ECB installation, hydromulch, crushing for crossdrains, NCD's, S6 linings. * Final restoration almost complete throughout the entire area. * Line of sight barrier/access controls established in planned locations. * Noted secondary containment on small generators requires maintenance throughout. RW 211 KP 608+000 * Road has been recontoured. * Rollback complete, crossdrains completed. * Minor ECB installation ongoing during inspection. Clore Crossing 595+600 * Additional riprap placed and keyed in on negative side of river. * Positive side floodplain nearing rollback completion. * Positive side steep slope rollback complete other than running track.

16-Oct-23	2023-2926	Erikson National Energy Inc.	DLS: 14-22-083-18	TRUCK	MID	Completed	In Compliance	Risk & Data Informed	Initial inspection 2023-2829, retracted. Sufficient justification to retract inspection with non-compliance. Second remedial cement job circulated to surface renders the SCVA inoperable and outside the intent of the D&PR 18(9)(a)(c). Inspection is re-issued as satisfactory.								11603			
17-Oct-23	2023-3058	Tidewater Midstream and Infrastructure Ltd.	NTS: C- 053-J/094-G-03	ATV	CENTRAL	Completed	Non-Compliance(s) Found	Officer Selected	This well site was to have been fully restored immediately after it was abandoned. While restoration has taken place there were issues including but not limited to; the seed mix used, a landslide, a culvert still in the pulled back road and the lack of coarse woody debris as required in the Upper Sikanni Management Plan area. The Upper Sikanni Management Plan which is a legal plan, assented into law in 1997. Tidewater did go into the site to address some deficiencies, however, not all of these deficiencies have been addressed. Due to this failure to fully address the issues and complete the restoration of the well site and the road, this has been referred to BC-ER Enforcement for their awareness. An update that on Oct 26 2023 an e-mail was sent by Tidewater stating they had secured an environmental company to conduct the work in 2024. While my e-mail asked for a plan to be submitted by Oct 1st 2023 none has been received. A new e-mail from Jenn Resch stated a plan from the environmental company will be received by the end of October 2023. This deficiency will be issued so that the compliance to the e-mail request for a plan and requirements of restoration in the Upper Sikanni Management Plan will be tracked in our processes.	ERAA		21(b)(i)	(i) this Act and the regulations,				11681		
17-Oct-23	2023-2999	Coastal GasLink Pipeline Ltd.	UTM: 10N 491933.772E 6030714.47N	HELICOPTER	MID	Completed	Non-Compliance(s) Found	Major Project	Aerial inspection with the operator of sections 3 & 4. KP 168+400, crews preparing the ROW for winterization. KP 172+250, storage area 16, construction is underway to build 2 large in ground cells to contain GLC from ROW. Engineered plans on location. Discussed with the operator that additional research into permitting is required. KP 182+000, soil movement / slumping on ROW, mater bags have been placed mid slope to prevent additional soil movement. The matted travel lane to the site is still active. KP 191+000, slide area discussed additional action to promote vegetation growth. KP 199+800, matted travel lane is still active from the Hambone FSR to KP 199. KP 211+500, block valve 6, gated and fenced, no concerns noted at the time of the inspection. KP 229+500, WC 118, silt fence observed in the water course, discussed with the operator to be removed from the water. KP249+500, Raccoon Lake block valve 7, gated and fenced, soil in the stockpile area, no concerns noted at the time of the inspection. KP 249+500, BCER Road 4347, Seg 001, active, no concerns noted at the time of the inspection.										
17-Oct-23	2023-2999	Coastal GasLink Pipeline Ltd.	UTM: 10N 491903.08E 6030670.549N	HELICOPTER	MID	Completed	Non-Compliance(s) Found	Major Project		ERAA	EPMR	17(a)	(a) not cause the soil of the area to become unstable, and	The slopes on WC SR#4 located at KP 295+750 have had soil movement along the rock lined chutes. The East slope soil movement has created a 60% to 80% blockage of the channel. The West slope has had soil enter the riparian area. The blockage is to be removed and the slopes stabilized to prevent additional soil movement. It is expected that additional slope work and remediation work will be required when ground conditions will allow better access. Please provide a plan to the undersigned C&E Officer that details the temporary work with a timeline and any / all addition work required when ground conditions will allow, with a timeline for completion. It is anticipated that an extension for the additional work will be required. Please ensure the requested plans are provided before the due date of the non-compliance in order for an extension to be granted.

18-Oct-23	2023-3008	Coastal GasLink Pipeline Ltd.		TRUCK	MID	Completed	Non-Compliance(s) Found	Major Project	Inspection with the operator of sections 2 & 3, October 18 & 19 KP 166+750, WC 56C, S3, in isolation, 3 upstream dams consisting of sand bag / poly dams. First dam overrun by flow, 2nd and 3rd dams leaking, equilibrium maintained by 2 - 6" pumps and 3 - 4" pumps at the first dam. Equilibrium maintained by 2 - 6" pumps and 3 - 4" pumps at the second dam. downstream dam consists of sand bags and poly. Pumps are in screened open top boxes, the pump boxes at the upper dam have water periodically entering the box and pump intakes through the (non-screened) open tops. The upper block net is submerged and not effective. Downstream plywood diffuser. WQM in place, upstream at 15m, downstream at 50, 100, 150m. Sondes and grab samples 2x/day. The inadequate fish screening of the pumped water has been referred to the BCER Manager of Enforcement for review. KP 169+000 - KP 171+000, WC 174 restored as wide rock lined channel. Discussed with the operator. WC J234.01, restored as a rock lined channel. discussed with the operator. The restored channel does not align with the upstream flow. water flow is running across the surface of the ROW. See non-compliance. WC J230.99, restored as a rock lined channel, discussed with the operator. The restored channel does not align with the upstream flow. There is a small portion of the flow that is running across the surface of the ROW. See non-compliance. WC 173, soft bank wrap with good vegetation growth.	ERAA	EPMR	17(b)	(b) minimize any alteration to the natural surface drainage patterns on the area.	During an inspection with the operator water courses J234.01 and water course J230.99 were observed to have flow onto the ROW and outside of the restored channel from where the restored channel and the boundary of the ROW connect. The flow is to be contained in the restored channels, as discussed with the operator during the inspection. Please provide details and pictures when completed.					100082292

19-Oct-23	2023-3700	LNG Canada Development Inc.	NTS: A- 005-B/103-I-02	TRUCK	COASTAL	Completed	In Compliance	Major Project	BCER Engineering in conjunction with C&E and Haisla Nation liason performed a routine inspection of the LNG Canada facility on October 19, 2023. Post-inspection documentation requests reviewed during a meeting on November 15, 2023. MARINE AREA Viewed marine area combi-wall, fenders, and mooring quick release hooks. Cathodic Protection system on wall inactive due to rectifier design issue. Permit Holder waiting on updated rectifiers to be shipped to site. * Discussed layers of redundancy in corrosion mitigation design (corrosion allowance, coating, cathodic protection system). * No concerns noted in relation to cathodic protection system being temporarily offline to remediate rectifier design concerns. Loading Module Drain Drum hoarded and inaccessible due to insulation work. Requested information regarding Drain Drum relief vent location. * Permit Holder representatives provided updated P&IDs which no longer show relief valve for the drum. * Follow up 1: Provide supporting information associated with the design change (including details on overpressure protection philosophy for piping and Drain Drum) Reviewed liquid loading line valve arrangement for consistency with CSA Z276 and exemption application. * Physical arrangement appears consistent with exemption documentation. * Follow-up 2: Provide additional detail regarding approach to local operation of valve(s) per CSA Z276. Reviewed closure weld records (procedures, qualifications, inspection results,repair details) for weld 1965 and 1971 (trestle Pre-Assembled Rack interface). No additional follow ups or concerns noted. NITROGEN UNIT						5132

Well Head-"A": surface casing valve open, SCV flow measured no LEL (Altair-5x), SCV no flow observed. KERMIT last gas production date: 2023-09 (Active production status). Signage posted is compliant to standards. Well Building: Calibration meter service date: Feb. 8, 2022 (< 5 yrs.) record found on site. Orifice Plate service date: April 26, 2023. NC: Spillage - gas leak - High LEL - (Altair - 5x) measured from both well cabinets. Cata-dyne regulator vent line in place. Chemical Storage: single wall tanks (2x), SDS labels present, grounded, bull plug in place. Flowline: Note that flowline valves were open. Comment: Garbage/Debris on site: snake wrap and insulation is detaching from flow lines and scattered onto the ground; NTE to perform clean-up of site as required (See Attached Photos). No invasive plant species noted on site at the time of the inspection; vegetative cover consist of 60% herbaceous grass cover with 40% deciduous brush	ERAA		37(2)(a)	(a) remedy the cause or source of the spillage;	NC: Spillage - gas leak - measured High LEL (Altair - 5x) within both well cabinets; source of leak unknown (not audible).			12416

21-Oct-23	2023-3010	Trans Mountain Pipeline ULC		TRUCK	LMVI	Completed	In Compliance	Major Project	inspection with the operator of spread 5B. KP 1070+700, access road has been reclaimed, BCER ancillary number 00171464, there were no concerns noted at the time of the inspection. KP 1070+600, BC 690, FB, Patterson Creek, restored channel with engineered rip rap and a gravel / cobble stream bed. KP 1070+200, BC 690A, FB, restored channel with engineered rip rap. KP 1070+100, active access road, BCER ancillary number 00171462, there were no concerns noted at the time of the inspection. KP 1064+750, Mountain 3 HDD site, North pad, BC 678B has been bermed on the West aspect to prevent surface water flow from entering it from the highway. Pulling 42" ream. Mud pressures adjusted to allow for additional water entering the bore at 8 cubic meters / hr. Discussed low level LEL's in the doghouse with the operator. KP 1059+819, Pump off location from trench, 3" pump to filter bag on stable gravel surface. Site specific pump off plan and tracking sheet on location. KP 1059+500, POD 009, Wahleach Creek. 3" pump with screened intake and metered line pumping to tanks, trucks are filling from tanks. Permit and withdrawal records on site. signage meets requirements, there were no concerns noted at the time of the inspection. AD 100116310, STWU 006294 KP 1059+300, 2 freshwater C-rings, with nets, note: one of the C-rings contains returned hydrostatic test water that is discolored (brown). Operator says dissolved Iron from the pipe has caused the discoloration. Discussed with the operator that I will be forwarding information to BCER SME for additional evaluation. Hydrostatic testing is active in section 7C, KP 1067+100 to KP 1069+050. KP 1059+300, Hydrostatic test dewater site, water is sampled to meet requirements prior to release.										100101022
21-Oct-23	2023-3010	Trans Mountain Pipeline ULC		TRUCK	LMVI	Completed	In Compliance	Major Project	POD 001, AD100138226, STWU 006578, a drilled well located on private land. Permit and tracking sheet on site. Signage not required by permit. Truck on site has copy of the permit as required. There were no concerns noted at the time of the inspection. KP 1032+700, BC 648.05, NFB, in isolation, upstream sandbags and poly dam, equilibrium maintained by 3" pump to downstream diffuser. KP 1030+790, BC 646, FB, Railway Creek, clear span bridge with ESC, partially restored channel with armored banks and rock / cobble channel. BC 645D, in isolation, upstream dam is sandbags and poly, 3" pump to downstream, block net in place for tadpoles. BC 645C, in isolation, dams are sandbags and poly BC 645 B, in isolation, dams are sandbags and poly BC 645A , restored channel. KP 1019+500, Road 18, BCER Road 004617, segment 13, active road, there were no concerns noted at the time of the inspection. KP 1018+600, BC 360, FB, Box culvert with ESC. KP 1018+250, BC 629A, NFB, culvert with ESC. KP 1016+970, BC 628, NFB, Box culvert with ESC KP 1016+910, BC 627A, NFB, culvert with ESC KP 1016+820, BC 627, NFB, culvert with ESC, rock lined channel KP 1016+750, BC 626, NFB, culvert KP 1016+380, BC 625, FB, existing 2meter culvert with closed bottom, gabion baskets on upstream end for scour protection KP 1016+150, BC 624, NFB, in isolation, upstream sand bags and poly, downstream dirt dam, Access Road through the trench area will have culvert installed prior to completion. KP 1016+060, BC 623, NFB, ground water flow coming to surface at the edge of or just off the ROW.								183435

23-Oct-23	2023-3084	Trans Mountain Pipeline ULC	UTM: 10N 640708.853E 5496271.475N	TRUCK	LMVI	Completed	In Compliance	Major Project	inspection with the operator of several Transmountain Line 1, WSA section 11 sites. 1KP 992, work has been completed, with seeding to take place in the summer of 2024. Main channel has been armored, with 6 spurs, and the newly constructed back channel is flowing. There were no concerns noted at the time of the inspection. AD 100117898. 1KP 965, bridge replacement with an 80-foot clear span is complete. There were no concerns noted at the time of the inspection. AD 100118138 1KP 965+400, instream work to establish a ford on the access road, course rock has been added in the road for drainage. AD 100118140. 1KP 966+100, Instream work to establish a ford on the access road, course rock has been added in the road for drainage. The catchment on the upstream side of the road has not been enlarged to hold more water as was discussed with the engineer on site during the previous inspection. Discussed with the operator to get clarity on this matter. AD 100118140. 1KP 966+700, instream work to establish a ford on the access road, course rock has been added in the road and does not match the stream channel. Drainage has not been established to flow to the course rock. This area will require re-inspection post freshet. This was discussed with the operator at the time of the inspection. Potential sediment deposit over the road and into the adjacent river was discussed with the operator due to water course channel not being defined where it crosses the access road. 1KP 967+100, gravel fan, work has been completed, course rock has been added in the road for drainage. An upstream berm to assist water flow away from the road has been added, rock and debris has been moved instream to accommodate flow. AD 100117818.										
23-Oct-23	2023-3084	Trans Mountain Pipeline ULC		TRUCK	LMVI	Completed	In Compliance	Major Project	1KP 969.1, Baldwin Creek, Bridge replacement, block wall installation and pipe repairs have been completed. A low flow channel has been established with less gradient and step / resting pools for fish passage. Seeding of the banks will occur in 2024. There were no concerns noted at the time of the inspection. AD 100118001. 1KP 976+000, Coquihalla 10 site, limited activity at the site as most of the equipment has been demobilized for winter. Activity consisted of loading 2 rock trucks from rock and soil stockpiles for use at the Baldwin Creek site. There were no concerns noted at the time of the inspection. AD 100117805.										100118140

23-Oct-23	2023-3190	Canadian Natural Resources Limited	NTS: A- 083-D/094-P-08	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 6996 - Oct. 23, 2023, 15:39 hrs. on site. Well Head: SCV valve open, SCV flow no LEL measured (Altair-5x), and SCV no flow observed. KERMIT most recent gas production date: 2018-04 (Suspended Status): flowlines disconnected. Signage posted is compliant to standards. Well Building: Meter calibration date: Sept. 8. 2017 (<5yrs) and orifice plate service date: Sept. 8, 2017 (< 1yr.). NC: Garbage/debris (insulation) on site scattered onto ground adjacent to flowline (See Attached Photos). Flowline: Flowline valves were disconnected. Chemical storage: double wall tanks (1x), SDS Labels posted, and grounded. No invasive plants noted on site at the time of the inspection.	ERAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	NC: Garbage/debris (insulation) on site scattered onto ground adjacent to flowline (See Attached Photos).			12408		
23-Oct-23	2023-3189	Canadian Natural Resources Limited	NTS: C- 068-C/094-P-08	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 8291 - Oct. 23, 2023, 15:30 hrs. on site. Well Head: SCV valve open, SCV flow Overrange LEL measured (Altair-5x), SCV moderate fill/flow (latex Glove Test) observed. To date: CNRL has not conducted/submitted a SCVF emissions: build up test report into IRIS for this well head. KERMIT most recent gas production date: 2020-01 (Suspended Status). Well Building: Meter calibration date: Mar. 1, 2023 and orifice plate service date: Mar. 1, 2023. Cata-dyne regulator vent line in place. Flowline: Flowline valves were open. Chemical storage: double wall tanks (1x), SDS Labels posted, and grounded. No invasive plants noted on site at the time of the inspection.								12407		
23-Oct-23	2023-3188	Canadian Natural Resources Limited	NTS: D- 096-C/094-P-08	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 8297 - Oct. 23, 2023, 15:20 hrs. on site. Well Head: SCV valve open, SCV flow no LEL measured (Altair-5x), and SCV no flow observed. KERMIT most recent gas production date: 2023-09 (Active Status). Signage posted is compliant to standards. Well Building: Meter calibration date: July 12, 2023 (<5yrs) and orifice plate service date: Oct. 1, 2020 (> 1yr.). CNRL to provide BCER with most recent record/date of orifice plate service date for site, current records (date) found on site exceeds timeline/interval allowance (annually). NC: Potential Spillage - fluid and gas leak (2x): unknow flowlines (gas +chemical line?) has no bull plug (See Attached Photos). CNRL to review attached photos and provide response to BCER Inspector regarding source of flowline. Flowline: Flowline valves were connected. Chemical storage: double wall tanks (2x), SDS Labels posted, and grounded. No invasive plants noted on site at the time of the inspection.								12406

Well Head: SCV valve open, SCV flow no LEL measured (Altair-5x), and SCV no flow observed. KERMIT most recent gas production date: 2023-09 (Active Status). Signage posted is compliant to standards. Well Building: Meter calibration date: Aug 8, 2023 (<5yrs) and orifice plate service date: Oct. 3, 2021 (> 1yr.). CNRL to provide BCER with most recent record/date of orifice plate service date for site, current records (date) found on site exceeds timeline/interval allowance (annually). NC: Spillage - active fluid leak: chemical line is leaking (See Attached Photo/Video). Flowline: Flowline valves were connected. Chemical storage: double wall tanks (1x), SDS Labels posted, and grounded. No invasive plants noted on site at the time of the inspection.	ERAA		37(2)(a)	(a) remedy the cause or source of the spillage;	NC: Spillage - active fluid leak: chemical line off of pump is leaking/actively dripping (See Attached Photo/Video).			12405		
23-Oct-23	2023-3184	Canadian Natural Resources Limited	NTS: A- 082-C/094-P-08	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 8293 - Oct. 23, 2023, 15:05 hrs. on site. Well Head: SCV valve open, SCV flow low LEL measured (Altair-5x), and SCV no flow observed. KERMIT most recent gas production date: 2023-08 (Active Status). Signage posted is compliant to standards. Well Building: Meter calibration date: June 7, 2023 (<5yrs) and orifice plate service date: Sept. 30, 2022 (< 1yr.). NC: Potential Spillage - gas leak: unknow flow line (fuel gas line?) has no bull plug (See Attached Photos). CNRL to review attached photos and provide response to BCER Inspector regarding source of flowline. Flowline: Flowline valves were connected. Chemical storage: double wall tanks (1x), SDS Labels posted, and grounded. No invasive plants noted on site at the time of the inspection.								12404		
23-Oct-23	2023-3182	Canadian Natural Resources Limited	NTS: B- 080-B/094-P-08	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 8287 - Oct. 23, 2023, 14:57 hrs. on site. Well Head: SCV valve open, SCV flow high LEL measured (Altair-5x), and SCV no flow observed. KERMIT most recent gas production date: 2023-09 (Active Status). IRIS: CNRL completed emission SCVF test: 2014-06-16 (no emission recorded). Signage posted is compliant to standards. Well Building: Meter calibration date: July 8, 2023 (,5yrs) and orifice plate service date: July 8, 2023 (, 1yr.). NC: Potential Spillage - gas leak: unknow flow line (fuel gas line?) has no bull plug (See Attached Photos). CNRL to review attached photos and provide response to BCER Inspector regarding source of flowline. Flowline: Flowline valves were connected. Chemical storage: double wall tanks (1x), SDS Labels posted, and grounded. No invasive plants noted on site at the time of the inspection.								12403		

23-Oct-23	2023-3181	Canadian Natural Resources Limited	NTS: D- 002-F/094-P-08	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 8299 - Oct. 23, 2023, 14:47 hrs. on site. Well Head: SCV valve open, SCV flow low LEL measured (Altair-5x), and SCV no flow observed. KERMIT most recent gas production date: 2023-09 (Active Status). Signage posted is compliant to standards. Well Building: Meter calibration date: July 8, 2023 (,5yrs) and orifice plate service date: July 6, 2023 (, 1yr.). NC: Spillage - gas leak - low LEL measured at door of well building, BCER Inspector vented building, no further LEL was measured. CNRL to investigate minor source of gas leak/build-up detected. Flowline: Flowline valves were connected (Inactive / not suspended status). NC: Snake wrap/ insulation detaching from flowlines onto ground: garbage/debris on site (See Attached Photo). Chemical storage: double wall tanks (1x), SDS Labels posted, and grounded. No invasive plants noted on site at the time of the inspection.	ERAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	NC: Snake wrap/ insulation detaching from flowlines onto ground: garbage/debris on site (See Attached Photos).			12339		
23-Oct-23	2023-3180	Canadian Natural Resources Limited	NTS: B- 020-G/094-P-08	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 8300 - Oct. 23, 2023, 14:40 hrs. on site. Well Head: SCV valve open, SCV flow no LEL measured (Altair-5x), and SCV no flow observed. KERMIT most recent gas production date: 2019-06 (Suspended Status). NC: Spillage - gas leak on well head: master valve (packing) - Overrange LEL (Altair-5x), NC: Well head is not disconnected/ blinded from flowlines as required by Sec. 25 (5) Pipeline Regulation (> 14 months not producing gas). CNRL has previously identified and provided an action plan to BCER FN Office for proposed 2023 well head disconnects. This plan does identify/list this well site (WA#8300) for disconnect in 2023. CNRL to confirm with BCER Inspector the scheduling/completion of disconnect of this well head site for suspended status in the fall of 2023 or 2024. Signage posted is compliant to standards. Well Building: NC: Spillage - gas leak - High LEL measured at door of well building, BCER Inspector did not enter building. Flowline: Flowline valves were connected (Inactive / not suspended status). Comment: Snake wrap/ insulation detaching from flowlines onto ground: garbage/debris on site (See Attached Photo). Chemical storage: double wall tanks (1x), SDS Labels posted, and grounded. No invasive plants noted on site at the time of the inspection.	ERAA		37(2)(a)	(a) remedy the cause or source of the spillage;	NC: Spillage - gas leak on well head: master valve (packing) - Overrange LEL (Altair-5x), NC: Spillage - gas leak - High LEL measured at door of well building (Altair-5x). BCER Inspector did not enter building.			12338		
23-Oct-23	2023-3178	Canadian Natural Resources Limited	NTS: B- 100-B/094-P-08	HELICOPTER	NORTH	Completed	Non-Compliance(s) Found	Risk & Data Informed	WA# 8025 - Oct. 23, 2023, 14:33 hrs. on site. Well Head: SCV valve open, SCV flow Overrange LEL measured (Altair-5x), SCV fast fill (latex Glove Test) observed. KERMIT most recent gas production date: 2020-01 (Suspended Status). NC: Signage posted is not compliant to standards: missing flammable symbol on well building (See Attached Photo). Flowline: Flowline valves were closed and disconnected (suspended status). NC: garbage/debris on site, BCER collected debris into pile (See Attached Photo). Chemical storage: double wall tanks (1x), SDS Labels posted, and grounded. No invasive plants noted on site at the time of the inspection.	ERAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	NC: garbage/debris found on site, BCER inspector collected debris into pile (See Attached Photo).			12315		
23-Oct-23	2023-3177	Canadian Natural Resources Limited	NTS: B- 098-B/094-P-08	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 8288 - Oct. 23, 2023, 14:25 hrs. on site. Well Head: chain and locked, SCV valve open, SCV flow no LEL measured (Altair-5x), SCV no flow observed. KERMIT most recent gas production date: 2020-04 (Not Suspended Site). NC: Well head is not disconnected/ blinded from flowlines as required by Sec. 25 (5) Pipeline Regulation (> 14 months not producing gas). CNRL has previously identified and provided an action plan to BCER FN Office for proposed 2023 well head disconnects. This plan does identify/list this well site (WA#8288) for disconnect in 2023. CNRL to confirm with BCER Inspector the scheduling/completion of disconnect of this well head site for suspended status in the fall of 2023 or 2024. Signage posted is compliant to standards. Well Building: Meter calibration / verification date: Oct. 14, 2018 (<5yrs.) and Orifice plate service date: Jan. 28, 2014 (> 1yr.) (non-active - productive site). Cata-dyne regulator vent line in place/installed. Flowline: Flowline valves were closed and connected (KERMIT - Active flow status). Chemical storage: double wall tanks (1x), SDS Labels posted, and grounded. No invasive plants noted on site at the time of the inspection.								12314		
23-Oct-23	2023-3176	Canadian Natural Resources Limited	NTS: B- 026-G/094-P-08	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	WA# 8994 - Oct. 23, 2023, 14:16 pm on site. Well Head: SCV valve open, SCV flow HIGH LEL measured (Altair-5x), SCV slow fill/no flow observed. KERMIT most recent gas production date: 2023-09. Signage posted is compliant to standards: weathered sign - company name and flammable symbol not readily visible, CNRL to consider replacing these items (See Attached Photos). Well Building: Meter calibration / verification date: Feb. 21, 2023 (<5yrs.) and Orifice plate service date: Feb. 21, 2023 (< 1yr.). Cata-dyne regulator vent line in place/installed. Flowline: Flowline valves open / connected (Active flow status). Comment: some garbage/debris on site (See Attached Photos). CNRL to consider removal of these items at next site visit. Chemical storage: double wall tanks (1x), SDS Labels posted, and grounded. No invasive plants noted on site at the time of the inspection.								12313

23-Oct-23	2023-3050	Erikson National Energy Inc.		HELICOPTER	NORTH	Completed	In Compliance	Internal Request	This inspection was completed Oct. 23, 2023, 11:00 hrs. to observe TROYER's (BCER Contract) pumping operations at The ERIKSON Flowback Pond (d-24-G/94-P-10). Pumping operations from the flowback pond were active; water hauling, well water injection, and disposal of plastic balls. Through discussions with onsite operators/staff, the following was noted. * Water Hauling: Approximately 12 trucks were continuously hauling (38 - 40 m3 of water per load) 7 days per week. TROYER was delivering approximately 22 - 24 truck loads per day, with an estimated total of 900 - 1000 m3 of water per day being delivered. Four loading/pumping stations sites were located along the west site of the flowback pond (no leaks/spills were noted/observed at the time of the inspection). Off-loading is to the SECURE- Kotch and CNRL-Pego disposal wells with an estimated 900-100m3 delivered per day. * Water Injection (d-24-G facility): In addition: Approximately 1000m3 of water per day were being pumped through the pipelines to the assigned water injection site. * Disposal of Plastic Balls: An industrial tracked shredder / excavator was onsite, located at northwest corner of the flowback pond, and actively loading/ shredding the plastic balls into and industrial size container. TROYER is in the initial stages of disposing of these plastic balls; progress/timelines to completion is yet to be determined/forecasted. TROYER's operations supervisor stated that the disposal of the plastic shredded materials will be delivered to the appropriate waste disposal site (SECURE disposal facility or NRRM local landfill pending test results of plastic materials. TROYER onsite supervisor stated that it was difficult to determine how much more pumping is required as the profile/bottom of the flowback pond is unknown.										100073124

24-Oct-23	2023-3088	Trans Mountain Pipeline ULC		TRUCK	COASTAL	Completed	In Compliance	Major Project	Inspection with the operator of culvert removal located on the 955-access road. 1KP 954+620, Henning Creek, removal of 2 closed bottom culverts installed during emergency work post high-water event. Creek is dry with no flow at the time of the culvert removal. Contingency work included installing block nets and isolation of the work area with sandbag poly dams should flow occur during the 2-day work window. Pumps in screened boxes and lines are in place to maintain equilibrium should flow start. The crossing will be left as a temporary ford through the winter months and a permanent structure will be installed in 2024. There were no concerns noted at the time of the inspection.										100118535

24-Oct-23	2023-3094	Westcoast Energy Inc.		WALK	KTNY	Completed	In Compliance	Major Project	Inspection with the operator of the Coldwater 1 Remediation Phase 2 site, located at 7L1 KP 88. Work at the site is 80% completed, with some final reclamation and bridge removal outstanding. The exposed pipe is covered with a cement blanket and armor rock in place. The side channel is completed with flow established, with rock clusters in place. The main channel is completed with flow established, with woody debris in stream. The flood mitigation berm on the pipeline ROW is constructed. The dewatering location has no sediment deposited or erosion channels. There were no concerns noted at the time of the inspection.

24-Oct-23	2023-3137	FortisBC Energy Inc.	UTM: 10N 482052.774E 5501905.765N	TRUCK	LMVI	Completed	In Compliance	Major Project	Woodfibre Site - Quarry Area - AD# 100114575 * Quarry area has been cleared and wood removed offsite. Invasive plants onsite from prior industrial activity. Soils containing invasive plants are being buried, tarped and isolated to prevent further spreading. * Discussed storage of PAG rock. To be lined/covered and water to be pumped to water treatment plant. * R1-318 - Burn has been established around perimeter of stream. Discussed ESC & EC8 measures for location. * Lower toe slope quite saturated. Sumps/pumps with the use of filter bags may be required for excess pooling. * Access road to quarry site - road has been widened, 750mm culvert installed at crossing. Discussed potential stream impacts of downward hydraulic pumping due to rock truck traffic at crossing location. West Portal (Drill Entrance) * Entrance has been cleared, grubbed, and test blasting occurring. Wood has been removed from site.* 750mm temporary culvert installed. Permanent 1500mm concrete pipe installation planned. Riprap looked good; entrance of culvert is sealed with sandbags. Remainder of stream planned to have riprap installed. * Viewed water discharge authorization site. * Viewed site plans for water treatment plant. BC Rail Site - East Portal (Drill Entrance) * Sheet piles established at east portal entrance. Soils being excavated and removed from site by Sumas Transport. Clean fill being brought in. No groundwater noted within sheet piling. * Water treatment facility almost complete. Water tanker will be used for initial commissioning prior to use of POD. Discussion held regarding system redundancies.* No discharge occurring at time of inspection.

24-Oct-23	2023-3051	ARC Resources Ltd.	DLS: I09-12-080-15	TRUCK	SOUTH	Completed	In Compliance	Drilling Rig	rig and location clean and well set up. Rig and BOP area warm. No concerns at the time of completing the inspection.								12015		
25-Oct-23	2023-3074	Canadian Natural Resources Limited	NTS: D- 044-C/094-B-16	TRUCK	CENTRAL	Completed	Non-Compliance(s) Found	Planned Inspection Program	Meet with operations. Inspect fire and gas HMI display screens- no faults found V-700 LEL reading 5 %. Mechanics were rebuilding throw (4) on c-1100 and Instrumentation was performing panel S/D checks. Inspect production accounting meters- last calibrations ok- 06/23/23. Found calibration tag missing on Dehy 3000 sales. Instrumentation contractor installed a replacement tag at the time of the inspection. Perform a walkdown of the production equipment. Noted no LEL in V-700. Noted that V-800 inlet separator and inlet pipeline were not in service and were under nitrogen, and the blowdown pathway to flare was not disabled. The CNRL Foreman indicated that they would look at taking a precaution to not lose the nitrogen in the event of a facility ESDD. Action items: 1. Submit the Measurement Schematic. 2. C-1100- Recommend installing missing black spring casing cap on Fisher 912 regulator. 3. V-700 - Recommend a re-calibration of the LEL sensor. Please reply toOGC concerning the above action items and to the attached deficiencies through the CMIS. Thank you,	ERAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Found: 1. C-1300- Upstream isolation valve on the flare valve was not locked or car sealed open- the valve handle was not attached to the valve and was hanging by the car seal. 2. C-1200- Up and downstream isolation valves on the flare valve were not locked or car sealed open.	4620

25-Oct-23	2023-3105	Trans Mountain Pipeline ULC		TRUCK	KTNY	Completed	In Compliance	Major Project	Inspection with the operator of spread 5A. KP 976+750, Coldwater 3 site, construction of flood mitigation berm along the pipeline ROW for approximately 400 meters. The berm is approximately 8 meters wide and 4 meters high and will be armored, covered with topsoil and erosion control blankets when completed. Clean ground water is being pumped from the area to the Coldwater River by a 6" pump and through a diffuser. There was no active grey water pumping at the time of the inspection. KP 976+150, BC 569B, culvert with ESC KP 976+020, BC 569A, culvert with ESC KP 966+300, BC 558, FB, restored channel has been realigned and gradient adjusted to be more suitable for fish. Banks are armored, low flow cobble channel established. Road A76, BCER Road 4618, Segment 216, AD 100101507, there were no concerns noted at the time of the inspection. KP 954+460, BC 548, Coldwater 1 site, construction of flood mitigation berms, approximately 300 meters East to West off set from the river and 300 meters North to South along the ROW. The berm width is approximately 25 meters and height is approximately 4 meters. There are 9 groynes being installed at the North end of the berm, rock is installed subsurface and comes approximately 1 meter above ground to assist with flood water drainage and flow. Pump off from the current trench dug at the toe of the berm to a filter bag in a well vegetated area. Discussed the inlet and one small hole leaking on the filter bag. Habitat work in this section of the Coldwater River includes the placement of several rock clusters and full trees along the outward bend that are secured by cable to large rocks. Woody debris has also been placed in the riparian area.										100100228

2-Nov-23	2023-3219	Coastal GasLink Pipeline Ltd.	NTS: A- 077-A/103-I-02	TRUCK	COASTAL	Completed	In Compliance	Major Project	Meet with CGL Regulatory, the Area Manager, CGL Associate (Permitting Coordinator), CGL Measurement Technicians and Operations Staff. Also in attendance was the BCER Area Inspector and a Haisla Natural Resources (NRS) Haisla Environmental Liaison. A satisfactory inspection was completed as per condition # 17 of the Facility Permit dated April 26, 2016. Review Facility Permit Engineering Permissions # 17, #18, and the Advisory Guidance points # 4 and #5. Confirm that permission # 18, the facility start-up meeting was conducted on Oct 12/23. Confirm operations had on-line access to the ERP and there was a printed ERP copy on site. Discuss next steps to wet commission reporting meters and analyzers with CGL Measurement Technician. In the first step the flow will be simulated by using a pulse generator set to 60 % of max output. The Gas Chromatographs (GC) will use a calibration gas sample, and Flowtek software used to verify the flow computer flow calculation. To complete the second step there must be actual gas flow of 3m/s. The GC will be sampling live gas and again Flowtek software used to verify the flow computer flow calculation. Measurement Canada has 1 year after start-up to sticker and certify the GC's. Verify all flow computers, and transmitters were powered and were functional and that the GC passed primary checks. Review BCER Reporting Meter Inspection Item List with the CGL Measurement Technician. Confirm that Transmitter Calibration report includes the recording of calibration equipment serial numbers for traceability back to the laboratory standard certification. Confirm that the Measurement Technician's calibration equipment is sent to TransCanada Calibrations (TCC) on an annual basis for calibration and certification. Request in the SharePoint Transmitter Verification Reports folder that TCC calibration equipment certifications.								4798				
2-Nov-23	2023-3183	Canadian Natural Resources Limited	NTS: D-A056-D/094-H-03	TRUCK	MID	Completed	In Compliance	Drilling Rig	Rig and location well organized. Sub and BOP area clean and warm. No issues at the time of completing inspection								12401			
3-Nov-23	2023-3260	Pacific Northern Gas (N.E.) Ltd.		TRUCK	COASTAL	Completed	In Compliance	Incident	Inspection November 3, 2023 conducted following self-reported spill of propylene glycol from pipe heater. Volume reported was an estimated 500 litres. Leak was first identified November 1, 2023, by a PNG employee at approximately 15:00. PNG notified BCER November 2, 2023, at 14:16 and provided EMBC Spill No. 234264, photo documentation of site, and initial cleanup plan. Upon arrival at site, it was noted that leak was being contained in a tote which had secondary containment. Adjacent utility lines were identified and marked prior to initiating dig. Dig was conducted with a compact excavator (Bobcat E32) and assisted by employee with a shovel. Excavated soils (approximately 0.75 cubic metre) were placed into containment bins and to be hauled offsite for proper disposal. Onsite "sniff" testing occurred during dig, and samples were taken for offsite third-party testing. Propylene glycol in containment tote will be discharged into barrels and taken offsite for proper disposal. Tote will be placed back to ensure any remaining leakage will be contained. PNG employee will continue to monitor site until repairs are completed. PNG is waiting for manufacturer P&ID prior to completing repairs. Repairs expected to be completed next week. No further inspection required, however, will follow up with PNG for sampling results and confirmation of completed repairs. No non-compliances noted during inspection.

6-Nov-23	2023-3261	PETRONAS Energy Canada Ltd.	NTS: B- 089-J/094-B-16	TRUCK	CENTRAL	Completed	In Compliance	Incident	BCER Technical Advisor responded to a Level 2 incident that occurred on Nov 3, 2023 at Petronas Refrigeration Plant. Followed up with Advisors regarding the level 2 incident at Petronas b-89-J/94-B-16 as he was the EO on call at the time the incident was reported. Forwarded the contact information he had received and contact was made with Company. Operator was able to verify the event and the current status of the Petronas facility, and he was able to get contact information of the on site supervisor at b-89-J/94-B-16 facility. EO entered notification #IB0018445. On site supervisor was able to provide an update on the incident, the steps that have been taken to safely secure the site and also the potential cause of the fire. As reported in the initial contact with BCER EO, the plant received a HiHi LEL alarm at 17:11 hrs followed a few seconds later by a Fire Detection (MODE 1) alarm. The plant was in full ESD mode at approx. 17:30 hrs. There were no injuries as a result of the fire and the plant was evacuated. WorkSafe BC attended the incident and at approx. 8:00 PM on Saturday (Nov 4) and gave approval for workers to enter the site. Altec inspection was brought in to verify structural integrity of any affected buildings on site. Approval was given to enter the area except for the Hot Oil building which was where the fire started. This area remains ribboned off until further inspection can be done (Nov 6th). At this point Petronas has chosen to leave the process portion of the facility down as they have identified damage to control system. Until this damage is repaired, they feel that safety systems that protect the facility may be compromised. Utility air, instrument air and fuel gas into the Hot Oil building have been blinded off as safety measure.						4840

9-Nov-23	2023-3285	ARC Resources Ltd.	DLS: 05-35-079-14	TRUCK	SOUTH	Completed	In Compliance	Planned Inspection Program	Meet with the Dawson Foreman, the Measurement Specialist, the Plant Lead and operations staff. Inspect and confirm that all production accounting and Xborder meters calibrations/proves were up to date. Noted that meter maintenance frequency met, and in some cases exceeded the requirements in the BC Measurement Guideline. Excellent work! Inspect the plant fire and gas detection HMI display screens- no faults found. Verify that there were no alarms present on the plant flare flame fail. Inspect NGL bullet and production tank level transmitters diagnostic reports - all level transmitters were healthy. Perform a walkdown of production equipment. (2) condulet bull plugs were found to be missing on Exp. receptacle boxes in the Desand Building. Confirmed these were installed by the end of the inspection. Perform a spot audit on locks/car seals on critical valves. Arc operations mentioned that they intended to examine whether the lower bridal isolation valve on the Desand LSLL 1010 was to be locked, or car sealed open. PIDs showed the upper bridal level switch isolation valve as locked/sealed open, but not the lower bridal isolation valve? Found (2) "ESD" pushbutton identification stickers to be faded. Noted a small oil leak in the acid gas compressor. Found that K-1100 and K-1200 Stage 1 Discharge PSV pilots were not vented safely to atmosphere. Action Items: It was recommended at the time of inspection to: 1. replace faded ESD pushbutton stickers- Desand and Heat Medium #2 south facing entrances. 2. trace and repair small oil leak - Acid Gas Compressor.						4881				
9-Nov-23	2023-3309	Bench Creek Resources Ltd.	NTS: A- 025-E/094-I-10	HELICOPTER	NORTH	Completed	In Compliance	Risk & Data Informed	 Well shows as Active. (Last production August 2022, 15 months ago). No Suspension evident on the well or flowline. See Internal note added re conversation with Smith/Clark Nov 15.23 on reactivating the well this coming winter. Sign, Building, Chem tank & containment ok. Surface casing vent checked, ok. Last meter cal/orifice plate inspection March '23.						4909

INSPECTION DATE	INSPECTION NUMBER	ACT	REGULATION	SECTION	SECTION TEST	NON-COMPLIANCE COMMENT
29-Jun-2022	2023-1745	OGAA	DRPR	15(3)(a)	(a) that the well site is maintained in a condition so as to minimize hazards, including but not limited to hazards associated with pits, holes, storage of materials and equipment;	Open deep hole at lease entrance, on the left side. Wooden picket and piece of steel were placed in the hole. Appears to be an area of recent excavation .
3-Nov-2022	2022-0114	OGAA	DRPR	53(a)(ii)	(ii) each product stream used for reporting purposes at a facility, and	Found: 1. No fuel gas buy-back meter. The concern is when the facility is flat (de-pressurized) and has to take sales gas to repressurize the fuel system, and start up. Fuel gas buyback would affect the monthly gas volume reported in Petrinex (the disposition) for battery (BCBT 0004070).
3-Nov-2022	2022-0246	OGAA		21(b)(ii)	(ii) a permit issued to the person, if any, and	This wellsite and a portion of the road are within the Upper Sikanni Management Plan Area (USMP). The USMP was assented in 1997 to become a legal document and includes oil and gas tenures that previously existed. From the flight on Nov 3rd 2022 it was noted there was no coarse woody debris nor slash piles over most of the well site. The woody debris was limited to the fill slope. The USMP states the wildlife habitat must be equal to or better than the habitat that existed prior to the oil and gas activity. While being viewed under snow conditions, it was difficult to see if the well site, associated disturbances and the portion of the road within the USMP were planted with trees and shrubs. It was noted in SNC Lavalin's plan that planting of trees would augment that of existing woody vegetation and that a layer of mulch/woody debris be of assistance in establishing vegetation. Could you please confirm if these step were taken? What is the rooting depth on the lease and will that impact the ability of this site to at least provide equal habitat values that existed prior to the disturbance?
3-Nov-2022	2022-0246	OGAA	OGRR	27(1)(b)	(b) section 19 of the Environmental Protection and Management Regulation, as applicable.	No statement has been received.
3-Nov-2022	2022-0246	OGAA	OGRR	23(1)(a)	(a) the commission;	This is a non-permitted road that was deactivated and the Oil and Gas Road Regulations (OGRR) still apply. The Oil and Gas Commission did not received any notification as per section 23 of the Oil and Gas Road Regulations. Since the OGC was not notified please provide the written notifications to local Indigenous Nations and the Peace District Forest Office. If there were any responses, please include them in the submission. Please note the notification form is waiting an update to be an e-submission and the Indigenous Nations and Local forest district office are not listed but are a regulatory requirement and should be referred to on the existing form.
3-Nov-2022	2022-0246	OGAA	OGRR	23(3)	23 (3) A road permit holder may not begin deactivating an oil and gas road unless at least 30 days and not more than 60 days have elapsed since the road permit holder provided notice under subsection (1) in relation to the deactivation.	No notice was received by the OGC and the work was completed without our knowledge.
3-Nov-2022	2022-0246	OGAA		21(a)(i)	(i) the person holds a permit that gives the person permission to carry out that oil and gas activity, or	This road was not permitted. There were also a bridge and stream crossings removed with no Water Sustainability Act authorization under Section 11 (changes in and about a stream).
3-Nov-2022	2022-0246	OGAA	OGRR	27(1)(a)	(a) section 24, and	No signed statement has been received to state the road has been deactivated. The signed statement should refer to both the Environmental Protection and Management Regulations for that section outside the Upper Sikanni Management Plan and should contain a clause regarding the Upper Sikanni Management Plan and its requirements for road deactivation within the plan area.

21-Nov-2022	2022-0235	OGAA		21(b)(ii)	(ii) a permit issued to the person, if any, and	This one inspection replaces KERMIT inspections 078866047 (permit conditions in regard to restoration) and 78124899 (open mouse hole not permanently abandoned). Extension requests have been received from CNRL in KERMIT and will or have been approved and will have them submit the extension requests again to the new CMIS inspection. This well site has been reclaimed and revegetated, however, there is a shortfall in the revegetation that has taken place. One resource material that has not been referred to in the Sikanni Area Based Closure Program are the Habitat Impact Assessments and Mitigation Measures that were part of the application process for wells in the Upper Sikanni Valley / Muskwa-Kechika Management Area. This document is on file at the Oil and Gas Commission. There will be other well sites and roads within the Upper Sikanni Valley Management Plan that may also have these mitigation measures as noted above. The oversight is found in the Mitigation Measures Table 1 (page 21) under Section 5 that states " Reseed and reclaim well sites and roads with seed Mix #1 and local tree and shrub transplants. It is the local tree and shrub transplants that are missing on the revegetated leased will need to be planted on the road when the time comes for final restoration. The ability to provide "transplants" might impact the natural revegetation that has taken place on the road right of way and other tenured areas. There may be some options to consider such as planting of tree stock that meets the provincial tree seed transfer guidelines and this could be discussed. The shrub component would also need to be addressed. The lease surface is rather smooth and has resulted in movement of fine soil particles resulting in rills, exposing gravels and cobbles which reduced the available area for revegetation.
21-Nov-2022	2022-0235	OGAA+G9912F991	DRPR	15(3)(a)	(a) that the well site is maintained in a condition so as to minimize hazards, including but not limited to hazards associated with pits, holes, storage of materials and equipment;	The entire lease fill slope was pulled back but the mouse hole was not deal with at that time when heavy equipment was on site. The mouse/rat hole was also not filled in as identified in my inspection in July 2022. It was discovered in the fall of 2022 on a follow up inspection that a steel plate was placed over top of the hole and a shallow amount of dirt placed on top. This is not an acceptable practice as it does not address the long term hazard risk especially when the well site is undergoing permanent restoration. Steel rusts and will fail, revealing the hazard once again. Upon pulling the casing or permanently filling in the hole, please take and submit a picture of the gravel, dirt etc. that completely fills the hole plus extra for settling. Upon receipt of the picture with a date stamp the deficiency status will be reviewed. Thank you
28-Nov-2022	2022-0020	OGAA		37(1)(a)	(a) prevent spillage, and	LEL's in Meter building, activated personal monitor
28-Nov-2022	2022-0020	OGAA	DRPR	49(1)(a)	(a) the purpose of the bypass or disablement is to carry out maintenance or commissioning of the well or facility,	AMOT in the override(latched) position
29-Nov-2022	2022-0074	OGAA		37(1)(a)	(a) prevent spillage, and	Gas leak from wellhead valve.
29-Nov-2022	2022-0074	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	Secondary containment for SCV is almost full and has spilled onto the ground.
29-Nov-2022	2022-0054	OGAA		37(1)(a)	(a) prevent spillage, and	High pressure vent at b-74-K/94-I-11 is venting constantly.
29-Nov-2022	2022-0043	OGAA	DRPR	52.07(1)(b)	(b) flared in accordance with sections 42 to 44, if the facility includes a flaring system to which the compressor starter can be connected.	Found that the compressor starter gas discharge was not connected to the flare system.
29-Nov-2022	2022-0043	OGAA	DRPR	53(b)(iii)	(iii) production accounting purposes, and	d-35-A/94-H-16 forms part of the c-81-I/94-H-9 BC1 Battery (Petrinex BCBT0009073) and has a lit flare stack. October 2022 Petrinex reporting for BCBT 0009073 has the VME0035 Message: Venting volume exceeds the acceptable tolerance for the month. Details: Total volume for Vent is greater than 30 103m3. and was found not to be reporting any flared gas.
29-Nov-2022	2022-0027	OGAA	DRPR	49(1)(a)	(a) the purpose of the bypass or disablement is to carry out maintenance or commissioning of the well or facility,	AMOT in the override (latched) position in the meter building.
30-Nov-2022	2022-0072	OGAA		37(1)(a)	(a) prevent spillage, and	Vent outside meter skid is venting constantly.
30-Nov-2022	2022-0072	OGAA	DRPR	18(9)(a)	(a) the surface casing annulus can freely vent,	SCV closed.
30-Nov-2022	2022-0069	OGAA		37(1)(a)	(a) prevent spillage, and	Gas leak from wellhead valve.
30-Nov-2022	2022-0063	OGAA		37(1)(a)	(a) prevent spillage, and	High pressure vent at c-24-J/94-I-13 is venting constantly.

1-Dec-2022	2022-0075	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Found: 1. Compressor discharge valve - the differential gauge installation on the up and downstream side of the compressor discharge ESDV on the compressor discharge line creates an ESDV bypass. 2. Group Inlet Separator high level shutdown - main lower-level bridal isolation valve was not locked, or car sealed open.
1-Dec-2022	2022-0075	OGAA	DRPR	52.07(1)(b)	(b) flared in accordance with sections 42 to 44, if the facility includes a flaring system to which the compressor starter can be connected.	Found: 1. The compressor starter gas discharge was not connected to the flare system.
1-Dec-2022	2022-0075	OGAA	DRPR	44(b)	(b) that unsupervised flare stacks where flaring may occur are equipped with an adequate auto-ignition system;	Found: 1. The flare stack auto-ignition system was not functional.
1-Dec-2022	2022-0075	OGAA		37(1)(a)	(a) prevent spillage, and	Found: 1. The flare stack was not lit.
5-Dec-2022	2022-0092	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	The chemical pump thrust rod cover was off while equipment was functioning. Please re-install guard.
6-Dec-2022	2022-0111	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Found: 1. Dehy auto blowdown valve upstream and downstream isolation valves were not locked, or car sealed open.
6-Dec-2022	2022-0111	OGAA	DRPR	44(b)	(b) that unsupervised flare stacks where flaring may occur are equipped with an adequate auto-ignition system;	Found: 1. The flare stack auto-ignitor was wound down, at the base of the flare stack, and was not functioning.
6-Dec-2022	2022-0111	OGAA	DRPR	52.07(1)(b)	(b) flared in accordance with sections 42 to 44, if the facility includes a flaring system to which the compressor starter can be connected.	Found: 1. The compressor starter gas discharge was not connected into the flare system.
7-Dec-2022	2022-0093	OGAA	DRPR	18(9)(a)	(a) the surface casing annulus can freely vent,	SCV at b-A69-J/94-I-11 closed.
8-Dec-2022	2022-0154	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Sign at well shows as Imperial, with Imperial Emerg. Contact information.
8-Dec-2022	2022-0154	OGAA		37(1)(a)	(a) prevent spillage, and	Bullplug missing from valve on wellhead crown.
8-Dec-2022	2022-0122	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LEL'S IN METER BUILDING ALARMED PERSONAL MONITOR (BCOGC BUILDING ENTRY PROCEDURE)
8-Dec-2022	2022-0116	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LEL'S IN METER BUILDING SET OFF PERSONAL MONITOR (USING BCOGC BUILDING ENTRY PROCEDURE)
8-Dec-2022	2022-0106	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Well sign shows as Imperial, with Imperial Emerg. Contact Information.
9-Dec-2022	2022-0145	OGAA		37(1)(a)	(a) prevent spillage, and	personal monitor alarmed for LEL present in meter cupboard, could also smell it. Check for leaks
9-Dec-2022	2022-0135	OGAA		37(1)(a)	(a) prevent spillage, and	High pressure vent is venting constantly.
9-Dec-2022	2022-0134	OGAA		37(1)(a)	(a) prevent spillage, and	Leak from pumps and saturated soaker pads inside meter skid.
13-Dec-2022	2022-0187	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LELs detected in separator shack.
13-Dec-2022	2022-0173	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	No well signs at a-C86, a-E86, a-F86 or a-G86. All elements of DPR section 15 are required.
13-Dec-2022	2022-0170	OGAA		37(1)(a)	(a) prevent spillage, and	High pressure vent at b-A49-K/94-P-12 is venting constantly.
14-Dec-2022	2022-0190	OGAA		37(1)(a)	(a) prevent spillage, and	LEL was detected on personal monitor upon building entry procedures. I was not able to determine where the leak is from, but there is quite a few open ended tubing lines that need to be plugged. Some tubing lines were disconnected, but some looked to still be attached, but open-ended.
14-Dec-2022	2022-0185	OGAA	DRPR	25(5)(b)	(b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means.	Flow line at d-E64-G/94-P-10 is still connected. Wellhead not chained and locked.
14-Dec-2022	2022-0181	OGAA		37(1)(a)	(a) prevent spillage, and	Open port on ball valve on produced water bypass line inside well building.
14-Dec-2022	2022-0181	OGAA		37(1)(a)	(a) prevent spillage, and	Open port on valve for Separator HP shutdown inside well building.

14-Dec-2022	2022-0179	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Carseal on valve for wellhead ESD high/low pressure switch is not effective in securing the valve open.
14-Dec-2022	2022-0179	OGAA		37(1)(a)	(a) prevent spillage, and	Open port on flare line valve near pig barrel.
14-Dec-2022	2022-0179	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	No Flammable symbol on sign at wellhead or at building.
14-Dec-2022	2022-0178	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Hi/Low pressure switch for wellhead ESD not locked or carsealed open.
14-Dec-2022	2022-0178	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Gas leak from flange on wellhead casing line.
14-Dec-2022	2022-0178	OGAA		37(1)(a)	(a) prevent spillage, and	No cap on open tubing at wellhead ESD high/low pressure switch.
14-Dec-2022	2022-0177	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Regulator on catadyne inside instrument air building not vented out.
14-Dec-2022	2022-0163	OGAA	OGRR	11.1(b)(i)	(i) conserve soil in the area, and	Re-issued in CMIS. please ask for an extension to July 31, 2023 as originally requested.
14-Dec-2022	2022-0162	OGAA	EPMR	17(a)	(a) not cause the soil of the area to become unstable, and	Change in data base from Kermit to CMIS requires this deficiency to be reissued. The deficiency has been extended to October 31, 2023. Please re-submit the extension request as the extension is not transferable from Kermit to CMIS. The original comment enclosed below. At approximately KP 145+700, a slide occurred while Grade and blasting crews were actively working on the ROW. The slide material went approximately 75 meters down a 50 - 60% grade and stopped before entering the Little Anzac River an S2 water course. The material went off ROW and into the riparian area of the water course.
15-Dec-2022	2022-0225	OGAA		37(1)(a)	(a) prevent spillage, and	There was LEL in the separator/meter skid for d-a-8-F. Shannon went in and tightened a needle valve so that may have corrected the issue.
15-Dec-2022	2022-0224	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	The isolation valve for the pressure sensor /ESD is not locked in the open position.
15-Dec-2022	2022-0224	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	The isolation valve for the pressure sensor/ ESD is not locked in the open position.
15-Dec-2022	2022-0224	OGAA	DRPR	78(1.1)	78 (1.1) A facility permit holder must ensure that all tools and equipment used in facility operations are installed and operated in accordance with the manufacturer's specifications or sound engineering practices.	The regulator the the ESD is passing air and could be the gasket.
15-Dec-2022	2022-0224	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	The isolation valve for the for the ESD pilot is not locked in the open position. Please car seal or lock.
15-Dec-2022	2022-0224	OGAA	OGRR	15.3(2)(a)	(a) there is no road permit holder for the road,	Please apply for a road permit to this newly expanded lease. It is understood this will take some some to get a permit application thru the process. Thank you.
15-Dec-2022	2022-0182	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	Water leak from upper wing valve onto snow.
16-Dec-2022	2022-0214	OGAA	DRPR	53(b)(iii)	(iii) production accounting purposes, and	Found: 1. No proration factors are being reported in Petrinex for B-94-J/94-H-5 battery (BCBT 00004557- subtype 393). 2. The joint venture partner (Tourmaline/CNRL) well dA-76-J/94-H-5 oil well was found to have no measurement equipment and production was not being kept whole.
16-Dec-2022	2022-0214	OGAA	DRPR	78(1.1)	78 (1.1) A facility permit holder must ensure that all tools and equipment used in facility operations are installed and operated in accordance with the manufacturer's specifications or sound engineering practices.	Found: 1. generator fire detector in fault- rapid blinking red light. 2. compressor #1 H2S detection fault- negative drift.

16-Dec-2022	2022-0214	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	Found: 1. Compressor # 3 - high CO level inside the building.
16-Dec-2022	2022-0214	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Found: 1. Fisher 912 regulator in the Test Separator Building was not safely vented to atmosphere. 2. Fisher 912 regulator in compressor # 2 was missing the black spring casing cap and therefore was not safely vented to atmosphere.
16-Dec-2022	2022-0214	OGAA	DRPR	49(1)(a)	(a) the purpose of the bypass or disablement is to carry out maintenance or commissioning of the well or facility,	Found: 1. The ESD valve on the facility black start fuel gas supply from c-82-J/94-H-5 was non- functional. The actuator was removed from the ESD valve and the ESD valve was in the open position.
16-Dec-2022	2022-0214	OGAA	DRPR	53(a)(iii)	(iii) any fluid injection or pressure measurement required by this Part;	Found: 1. The battery sales meter was not calibrated in accordance with the BC Measurement Guideline Table 2.5-1 Gas Meter Maintenance Frequency - last calibration July 26,2021. 2. The battery fuel gas meter was not calibrated in accordance with the BC Measurement Guideline 2.5-1 Gas Meter Maintenance Frequency - last calibration July 26,2021.
16-Dec-2022	2022-0214	OGAA	DRPR	52.07(1)(b)	(b) flared in accordance with sections 42 to 44, if the facility includes a flaring system to which the compressor starter can be connected.	Found: 1. Compressor # 1 compressor starter gas discharge not connected to the flare system. 2. Compressor # 2 compressor starter gas discharge not connected to the flare system. 3. Compressor # 3 compressor starter gas discharge not connected to the flare system.
29-Dec-2022	2022-0247	OGAA		21(b)(ii)	(ii) a permit issued to the person, if any, and	This deficiency was initially issued in KERMIT inspection # 075499245. That inspection will be satisfied due to the system changeover and replaced by this CMIS inspection. "This sump is located at approximately km 1 on the 8.5 road off Mile 120/Gundy Road. The temporary use permit for this sump was issued on August 26, 2013 and expired on August 26, 2015. The sump needs to follow the process for closure with the end result being fully restored with the strippings and topsoil spread, the fence removed along with any culvert on the access. A sign is not necessary." Petronas had requested an extension on this deficiency until December 31, 2024. The extension time was reduced to September 30, 2022 partly due to a new inspection system being implemented. A continued extension request to December 31, 2024 was submitted on September 22 , 2022. Upon review of the history of Petronas' non-compliant sumps in my inspection area over the last 10 plus years the extension is reduced to July 4, 2023 to allow for works during the snow free season. Petronas restored a sump 1 km down the road from this one after a deficiency was given. This sump should have been restored at the same time. Unfortunately, due to delays this site will see more than 7 years of vegetation growth destroyed and a new disturbance will have been initiated. In order to have a smooth transition over to CMIS please respond with an extension request for July 4th 2023 and it will be approved, Thank you.
30-Dec-2022	2023-0032	OGAA	EPMR	19(1)(d)(i)	(i) promote the restoration of the wildlife habitat that existed on the area before the oil and gas activity was begun, and	This former campsite is heavily seeded with grass and there is no other plant species within the grassed area. The density of the grass as well and the thick mat is provides has resulted in the lack of native species growth. The evidence of any trajectory towards the establishment of wildlife habitat has been observed since the former camp site was first grass seeded.

3-Jan-2023	2023-0025	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LELs detected in E16-7-80-17 separator shack.
3-Jan-2023	2023-0024	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LELs detected in separator building.
4-Jan-2023	2023-0057	OGAA		37(1)(a)	(a) prevent spillage, and	There is produced water weeping out of the grease fittings on the d-N-2-J wellhead.
4-Jan-2023	2023-0057	OGAA	DRPR	16(1)(a)	(a) that all tools and equipment used in well operations, production, injection or disposal are installed and operated in accordance with the manufacturer's specifications or sound engineering practices,	d-f-2-J sand filter skid-the PSV on the chemical pump is not sealed.
4-Jan-2023	2023-0057	OGAA		37(1)(a)	(a) prevent spillage, and	There is a consistent gas odour coming from the d-e-2-J well head.
4-Jan-2023	2023-0015	OGAA		37(1)(a)	(a) prevent spillage, and	Leak below cabinet.
4-Jan-2023	2023-0014	OGAA		37(1)(a)	(a) prevent spillage, and	Leak inside and below cabinet.
4-Jan-2023	2023-0013	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Shanghai.
4-Jan-2023	2023-0012	OGAA		37(1)(a)	(a) prevent spillage, and	Leak inside and below cabinet.
5-Jan-2023	2023-0038	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	Leak from wellhead to ground.
5-Jan-2023	2023-0038	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	Leak from wellhead onto snow.
6-Jan-2023	2023-0048	OGAA	DRPR	79(2)(b)	(b) immediately notify the commission if the suspension continues for more than 12 consecutive months.	Facility shows as Active in OGC systems. Last gas production from WA02176 was 2019-04. Well status in OGC systems correctly shows as Suspended. Sales line is disconnected with blinds installed. Building and sales meter are isolated.
6-Jan-2023	2023-0037	OGAA		37(1)(a)	(a) prevent spillage, and	Serious gas leak at d-A62-F/94-P-1.
10-Jan-2023	2023-0122	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	Fluid leak to ground from flange near c-D4-C wellhead.
10-Jan-2023	2023-0120	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	Chemical or water leak from MasterFlow valve near b-A6-H wellhead onto snow.
10-Jan-2023	2023-0102	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Regulator for fuel gas scrubber in pumpjack building is to be vented outside.
10-Jan-2023	2023-0077	OGAA	PREG	3(1)(a)	(a) the pipeline that is the subject of the permit;	Chain not attached on pig barrel PAV.
10-Jan-2023	2023-0077	OGAA	DRPR	78(1.1)	78 (1.1) A facility permit holder must ensure that all tools and equipment used in facility operations are installed and operated in accordance with the manufacturer's specifications or sound engineering practices.	Ground cable for FOAMER tank not attached.
10-Jan-2023	2023-0056	OGAA		37(3)	37 (3) A person who is aware that spillage is occurring or likely to occur must make reasonable efforts to prevent or assist in containing or preventing spillage.	The bull plug is missing on the chemical tank located between the d-I-7 and d-H-7 sand filter skids.
10-Jan-2023	2023-0056	OGAA	PREG	3(1)(a)	(a) the pipeline that is the subject of the permit;	The pigging barrel chain is not connected to the pressure alert valve (PAV).
11-Jan-2023	2023-0171	OGAA		37(1)(a)	(a) prevent spillage, and	The wing valve is weeping produced water.
11-Jan-2023	2023-0171	OGAA		37(1)(a)	(a) prevent spillage, and	The wing valve is weeping produced water.
11-Jan-2023	2023-0165	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	No location signage visible anywhere.
11-Jan-2023	2023-0097	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	Chem leak from sight glass fitting onto floor and into building containment.
11-Jan-2023	2023-0088	OGAA		37(1)(a)	(a) prevent spillage, and	High pressure vent is venting constantly.
11-Jan-2023	2023-0088	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Shanghai.
11-Jan-2023	2023-0071	OGAA	DRPR	78(1.1)	78 (1.1) A facility permit holder must ensure that all tools and equipment used in facility operations are installed and operated in accordance with the manufacturer's specifications or sound engineering practices.	Needle valve on wellhead missing bullplug
11-Jan-2023	2023-0070	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Gas in meter enclosure

11-Jan-2023	2023-0066	OGAA		37(1)(a)	(a) prevent spillage, and	
12-Jan-2023	2023-0177	OGAA	OGRR	23(1)(a)	(a) the commission;	Please submit a Notice of Intent to the BCER as well as a copy of the written notice sent to local Indigenous nations, users of the road and the Peace Forest District Office. Please send copies. Thank you.
12-Jan-2023	2023-0177	OGAA	OGRR	27(1)(a)	(a) section 24, and	This deficiency also applies to Section 19 of the Environmental Protection and Management Regulation.
12-Jan-2023	2023-0176	OGAA	OGRR	23(1)(a)	(a) the commission;	Aside from the OGC please provide the notifications sent to Indigenous Nations and the Peace District Forest Office and if there were any concerns or comments received.
12-Jan-2023	2023-0176	OGAA	OGRR	27(2)(a)	(a) be signed by the road permit holder or a director or officer of the road permit holder, and	The OGC did not receive any signed statement stating the road permit has complied with the requirements.
13-Jan-2023	2023-0130	OGAA	DRPR	15(1)(b)	(b) current emergency notification information, including a telephone number;	Well sign requires Emerg Contact Number. Also, Flammable symbol is weathered.
13-Jan-2023	2023-0123	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	Wellhead valves not chained and locked or removed at this Suspended well.
16-Jan-2023	2023-0197	OGAA		37(1)(a)	(a) prevent spillage, and	Some clean up needed beside meter building.
16-Jan-2023	2023-0191	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Regulator off fuel gas scrubber to be vented outside building.
16-Jan-2023	2023-0191	OGAA		37(1)(a)	(a) prevent spillage, and	Some clean up is needed around meter cabinet.
16-Jan-2023	2023-0131	OGAA	DRPR	15(1)(b)	(b) current emergency notification information, including a telephone number;	No Emergency Contact number on the well sign.
17-Jan-2023	2023-0218	OGAA		37(1)(a)	(a) prevent spillage, and	Constant venting of tubing to outside wellhead shack.
17-Jan-2023	2023-0208	OGAA		37(1)(a)	(a) prevent spillage, and	Master valve leaking.
18-Jan-2023	2023-0239	OGAA		37(1)(a)	(a) prevent spillage, and	Tubing line off fuel gas line to be capped.
18-Jan-2023	2023-0224	OGAA	DRPR	25(5)(b)	(b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means.	This well has not produced since 2015.
20-Jan-2023	2023-0215	OGAA	DRPR	50(1)	50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes.	
23-Jan-2023	2023-0231	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	Polish rod/rod string still in the well
24-Jan-2023	2023-0286	OGAA	DRPR	18(9)(a)	(a) the surface casing annulus can freely vent,	

24-Jan-2023	2023-0243	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Found: 1. Fuel gas BDV - 4001- downstream isolation to flare not locked or car sealed open. 2. Inlet BDV-901- car seal loosely installed- could close the valve without removing the car seal. 3. Dehy #1 BDV -3100 - upstream isolation to flare was not locked or car sealed open. 4. Generator Fuel Gas ESDV bypass valve - car seal was stretched and did not prevent the valve from being partially opened. 5. Compressor - BDV downstream isolation valve to flare did not prevent the valve from being closed. 6. Compressor - Skid edge isolation valve to flare was not locked or car sealed open.
24-Jan-2023	2023-0243	OGAA	DRPR	49(1)(a)	(a) the purpose of the bypass or disablement is to carry out maintenance or commissioning of the well or facility,	Found : 1. XSV-4000 - Fuel Gas ESDV bypass valve partially open.
25-Jan-2023	2023-0315	OGAA	DRPR	18(9)(c)	(c) the surface casing is equipped with an open valve.	No surface casing vent visible. Unable to confirm if a SCV exists or if there is an open valve on the SCV.
25-Jan-2023	2023-0269	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Fuel gas scrubber psv in pumpjack building to be vented outside. Regulators for fuel gas in pumpjack building to be vented outside. Catadyne heater regulator in pumpjack building to be vented outside.
25-Jan-2023	2023-0269	OGAA		37(1)(a)	(a) prevent spillage, and	Bullplug missing on casing line at wellhead.
25-Jan-2023	2023-0261	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Shanghai.
25-Jan-2023	2023-0260	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Shanghai.
25-Jan-2023	2023-0260	OGAA		37(1)(a)	(a) prevent spillage, and	Spill inside meter skid with some open tubing.
25-Jan-2023	2023-0259	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Shanghai.
25-Jan-2023	2023-0258	OGAA		37(1)(a)	(a) prevent spillage, and	Leak from pump inside meter skid.
25-Jan-2023	2023-0258	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Shanghai.
26-Jan-2023	2023-0423	OGAA	DRPR	53(a)(ii)	(ii) each product stream used for reporting purposes at a facility, and	1. the actual production from each product stream used for reporting purposes at a facility, was not being met, as the actual the B-88-I/94-B-1 (BCGP 0007778) gas plant inlet gas receipt, and the actual gas plant gas disposition product stream were not being reported. The Nov 2022 Petrinex reporting indicated: 1. that the permit holder was using meter (MS 0009207) to measure and report a total of both the c-77-F/94-B-8 (BCGS 0009207) gas and the B-88-I/94-B-1 gas plant (BCGP 0007778) gas disposition. The November 2022 Petrinex volumetric reporting also showed that the c-77-F/94-B-8 (BCGS 0009207) gas was being reported as a disposition (DISP) to B-88-I/94-B-1 gas plant (BCGP 0007778), when in actuality the c-77-F/94-B-8 (BCGS 0009207) gas was being disposed to the (MS 0009207), and was not being disposed to, and processed by, the B-88-I/94-B-1 gas plant (BCGP 0007778).

26-Jan-2023	2023-0312	OGAA	DRPR	53(a)(ii)	(ii) each product stream used for reporting purposes at a facility, and	The Drilling Production Regulation 53 is clear that the measurement equipment used for reporting purpose must be for which the permit holder is responsible. Found: 1. that the Enbridge meter (BC MS 0009207) was being used for the B-88-I/94-B-1 (BCGP 0007778) gas plant gas disposition reporting purpose. CNRL is not responsible for the Enbridge meter. The Enbridge meter is a trade transaction (custody transfer) meter, regulated by CER and Measurement Canada. 2. the actual production from each product stream used for reporting purposes at a facility, was not being met, as the actual the B-88-I/94-B-1 (BCGP 0007778) gas plant inlet gas receipt, and the actual gas plant gas disposition product stream were not being reported. The Nov 2022 Petrinex reporting indicated: 1. that the permit holder was using Enbridge 's meter (MS 0009207) to measure and report a total of both the c-77-F/94-B-8 (BCGS 0009207) gas and the B-88-I/94-B-1 gas plant (BCGP 0007778) gas disposition. The November 2022 Petrinex volumetric reporting also showed that the c-77-F/94-B-8 (BCGS 0009207) gas was being reported as a disposition (DISP) to B-88-I/94-B-1 gas plant (BCGP 0007778), when in actuality the c-77-F/94-B-8 (BCGS 0009207) gas was being disposed to the Enbridge (MS 0009207), and was not being disposed to, and processed by, the B-88-I/94-B-1 gas plant (BCGP 0007778). 2. the b-88-I/94-B-1 South Gas Plant refrigeration sales meters FE-059100 and
26-Jan-2023	2023-0312	OGAA	DRPR	78(1)	78 (1) A facility permit holder must maintain up-to-date and detailed flow diagrams, metering schematics and gathering schematics for all wells, groups of wells, facilities and gathering systems.	CNRL Facility Metering Schematic FARRELL CREEK B-088-I/094-B-01 CNQ-IHS-BC-BT-7778 Found: 1. S-4900 Refridge Unit sales gas meter FE-4900 is identified as reference meter when it must be identified as a reporting meter. 2. S- 5900 refridge Unit sales gas meter FE- 5900 is identified as reference meter when it must be identified as a reporting meter. 3. the c-77-f /94-b-8 separator gas, condensate, and produced water meters have no identification tag FE-# to indicate they are reporting meters.
26-Jan-2023	2023-0309	OGAA	DRPR	16(1)(a)	(a) that all tools and equipment used in well operations, production, injection or disposal are installed and operated in accordance with the manufacturer's specifications or sound engineering practices,	Pig barrel chain is not attached
26-Jan-2023	2023-0280	OGAA		37(1)(a)	(a) prevent spillage, and	Needle valve on “T” before fuel gas scrubber to be capped.
26-Jan-2023	2023-0268	OGAA	DRPR	49(1)(a)	(a) the purpose of the bypass or disablement is to carry out maintenance or commissioning of the well or facility,	Toggle for ESD valve was found in latched position for several wells.
27-Jan-2023	2023-0326	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	No sign visible at this well. Please see DPR 15 (a) to (f).
27-Jan-2023	2023-0299	OGAA		37(1)(a)	(a) prevent spillage, and	The pump jack engine is leaking oil. The absorbent pads have not been changed out. The oil is seeping under the building wall and onto the ground. The engine needs repairs to stop the leak.
27-Jan-2023	2023-0299	OGAA		37(3)	37 (3) A person who is aware that spillage is occurring or likely to occur must make reasonable efforts to prevent or assist in containing or preventing spillage.	The site glass on the separator is missing a bull plug on the bottom side of the valve.
27-Jan-2023	2023-0299	OGAA		37(1)(a)	(a) prevent spillage, and	The emulsion dump valve and meter are leaking as evident by product on the floor and a bucket under the meter.
27-Jan-2023	2023-0299	OGAA		37(1)(a)	(a) prevent spillage, and	The stuffing box is leaking and oil is weeping down the wellhead. There may be options available to contain any future leaks after the stuffing box has been repaired.
27-Jan-2023	2023-0272	OGAA	DRPR	16(1)(a)	(a) that all tools and equipment used in well operations, production, injection or disposal are installed and operated in accordance with the manufacturer's specifications or sound engineering practices,	Catadyne safety shut off valve zip tied bypassing safety device.

30-Jan-2023	2023-0348	OGAA		37(1)(a)	(a) prevent spillage, and	Valve before pig barrel is leaking.
31-Jan-2023	2023-0363	OGAA		37(1)(a)	(a) prevent spillage, and	
31-Jan-2023	2023-0336	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Gas leak inside well building. High LEL detected. Vented and entered.
31-Jan-2023	2023-0328	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	No sign observed on location. See DPR 15(1)(a) to (f).
31-Jan-2023	2023-0320	OGAA	DRPR	50(1)	50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes.	LEL's in building caused personal monitor to alarm. Did not enter building.
1-Feb-2023	2023-0368	OGAA	DRPR	25(5)(b)	(b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means.	This well has not produced since 2015.
1-Feb-2023	2023-0335	OGAA		37(1)(a)	(a) prevent spillage, and	Gas leak inside cabinet.
1-Feb-2023	2023-0333	OGAA	DRPR	79(2)(b)	(b) immediately notify the commission if the suspension continues for more than 12 consecutive months.	The facility permit holder of an inactive facility must (a) within 12 consecutive months of the facility becoming an inactive facility, suspend the facility in a manner that ensures its ongoing safety and integrity, and (b) within 60 days of the suspension of the facility, notify the commission of the suspension. Found: 1. Petrinex records indicated no production or tank inventory changes from 2020-08 through to 2022-12. The Commission confirmed with Petronas Regulatory that the license status “active” was non-compliant and the facility suspension process was not fully completed.
2-Feb-2023	2023-0385	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	The isolation valve for ESD pressure sensing device is not locked in the open position. The wire has been cut and needs to be replaced.
2-Feb-2023	2023-0382	OGAA		37(1)(a)	(a) prevent spillage, and	The facility for the c-58-J well there is a methanol leak at the stainless steel connection with the solar powered chemical pump
2-Feb-2023	2023-0382	OGAA		37(1)(a)	(a) prevent spillage, and	There is LEL in the sand filter skid for well b-a-58-J.
2-Feb-2023	2023-0382	OGAA		37(1)(a)	(a) prevent spillage, and	The top of the wellhead is weeping produced water.
2-Feb-2023	2023-0370	OGAA		37(1)(a)	(a) prevent spillage, and	Then bottom hole assembly on top of the wellhead is weeping produced water.
2-Feb-2023	2023-0370	OGAA		37(1)(a)	(a) prevent spillage, and	The chemical tank is weeping methanol from the outlet. This has been weeping for quite a while based on the size and depth of hole in the snow.
7-Feb-2023	2023-0424	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Found: 1. Compressor c-400 - 1st, 2nd, and 3 rd stage discharge PSV pilots were not vented safety to atmosphere.
7-Feb-2023	2023-0424	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Found: 1. Bypass valve around the Generator fuel gas ESDV was not locked or car sealed closed. 2. Inlet Separator # 1 level column isolation valves for the high level shutdown - car sealed improperly installed - did not prevent the valve from being operated closed without removing the car seal. 3. Inlet Separator # 2 level column isolation valves for the high level shutdown - car sealed improperly installed - did not prevent the valve from being operated closed without removing the car seal.
7-Feb-2023	2023-0408	OGAA	DRPR	15(1)(c)	(c) the location of the surface site of the well as specified in the well permit;	Surface hole location is illegible on D-a90-B well head signage.

7-Feb-2023	2023-0406	OGAA	DRPR	15(1)(c)	(c) the location of the surface site of the well as specified in the well permit;	No wellhead sign
7-Feb-2023	2023-0405	OGAA		37(1)(a)	(a) prevent spillage, and	bull plug missing from needle valve off wing valve on well head.
7-Feb-2023	2023-0403	OGAA	DRPR	16(1)(a)	(a) that all tools and equipment used in well operations, production, injection or disposal are installed and operated in accordance with the manufacturer's specifications or sound engineering practices,	There is no car seal on the chemical pump PSV.
7-Feb-2023	2023-0403	OGAA	DRPR	53(e)(i)	(i) the meter is maintained in good operating condition, and	According to the documentation in the meter skid, the meter run and orfice plate have not been serviced since 2019.
7-Feb-2023	2023-0401	OGAA		37(1)(a)	(a) prevent spillage, and	Group Separator---The methanol pump is leaking from the manifold. It is not overflowing now but there has been a larger leak as evident by the extent of the liquid and stain on the floor by the back wall. This needs to be cleaned up. There is a strong odour of methanol.
7-Feb-2023	2023-0401	OGAA		37(1)(a)	(a) prevent spillage, and	d-d-63-K sand filter skid- the MasterFlo choke is weeping produced water from the grease fitting.
7-Feb-2023	2023-0401	OGAA		37(1)(a)	(a) prevent spillage, and	The weld-o-let and threaded piping for the P/L high pressure transmitter is weeping produced water as evident by the long salt crystals.
9-Feb-2023	2023-0433	OGAA		37(1)(a)	(a) prevent spillage, and	
9-Feb-2023	2023-0433	OGAA		37(1)(a)	(a) prevent spillage, and	There is LEL in the sand filter skid. While it is evident there is a leak that needs to be fixed, there is also no air circulation as both cold air and exhaust vents are closed.
9-Feb-2023	2023-0433	OGAA		37(1)(a)	(a) prevent spillage, and	There is LEL in the sand filter skid. While it is evident there is a leak that needs to be fixed, there is also no air circulation as both cold air and exhaust vents are closed.
9-Feb-2023	2023-0433	OGAA		37(1)(a)	(a) prevent spillage, and	There is LEL in the sand filter skid. While it is evident there is a leak that needs to be fixed, there is also no air circulation as both cold air and exhaust vents are closed.
9-Feb-2023	2023-0433	OGAA		37(1)(a)	(a) prevent spillage, and	The flow line choke is weeping produced water. A bull plug on the under side of a flange at the inlet of the sand filter is also weeping produced water
9-Feb-2023	2023-0433	OGAA		37(1)(a)	(a) prevent spillage, and	The plate changer on the meter run for well d-c-2-B is weeping produced water. Check the d-2-B and d-a-2 meter run plate changers as they have a minor amount of weeping.
13-Feb-2023	2023-0470	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	This well has not produced since 2018. Wellhead is to be disconnected from flowline and wellhead valves secured.
14-Feb-2023	2023-0454	OGAA		37(1)(a)	(a) prevent spillage, and	Leak on end of ESD Actuator
15-Feb-2023	2023-0524	OGAA		37(1)(a)	(a) prevent spillage, and	Intermittent sound and odour from lower needle valve on well head assembly.
15-Feb-2023	2023-0487	OGAA		37(1)(a)	(a) prevent spillage, and	Small leaks on vertical fuel gas line adjacent to pressure gauge.
16-Feb-2023	2023-0512	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Found: 1. Compressor A blowdown valve (BDV) - (2) isolation valves on the BDV were not locked or car sealed open. 2. Compressor B blowdown valve (BDV) - (1) isolation valve on the BDV was not locked or sealed open.
16-Feb-2023	2023-0501	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Note: Personal monitor alarmed due to LEL's in building. Not inspected.
16-Feb-2023	2023-0489	OGAA		37(1)(a)	(a) prevent spillage, and	Meter appears to be leaking, evidence on the meter and floor of well building
16-Feb-2023	2023-0461	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Actively leaking pollution prevention - impacting ground surrounding wellhead. Please remediate as soon as posssible.
16-Feb-2023	2023-0461	OGAA		37(1)(a)	(a) prevent spillage, and	Pollution prevention missing lid and leaking at base. Bull plug missing from drain. 400bbl tank on location requires secondary containment approx. 38 cu of unknown liquid in tank.
16-Feb-2023	2023-0461	OGAA	DRPR	50(3)	50 (3) A well permit holder must take every reasonable precaution to protect wells, whether connected to flow lines or not, against damage or interference from unauthorized persons or activities.	No wellhead protection in place.
17-Feb-2023	2023-0523	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	All critical shutdowns must be locked/carsealed open - no locks on PIT for well ESD's.

21-Feb-2023	2023-0530	OGAA	DRPR	53(b)(iii)	(iii) production accounting purposes, and	Found: 1. Fuel gas meter- report indicated the last meter maintenance was conducted - Aug 13/18.
21-Feb-2023	2023-0530	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Found: 1. Fuel gas scrubber PSV pilot was not safely vented to atmosphere.
21-Feb-2023	2023-0530	OGAA	DRPR	52.07(1)(b)	(b) flared in accordance with sections 42 to 44, if the facility includes a flaring system to which the compressor starter can be connected.	Found: 1. C-700 compressor starter gas discharge was not connected to the flare system and flared in accordance D&PR sections 42 to 44. 2. C-900 compressor starter gas discharge was not connected to the flare system and flared in accordance D&PR sections 42 to 44.
21-Feb-2023	2023-0530	OGAA		37(1)(a)	(a) prevent spillage, and	Found: 1. C-700 compressor - Aux and JW expansion tank sight glasses were missing sight glass guards.
21-Feb-2023	2023-0530	OGAA	DRPR	78(3.1)	78 (3.1) A facility permit holder referred to in subsection (3) must operate and maintain in accordance with the standard referred to in subsection (3) (b) any portions of the piping facility designed and constructed in accordance with that standard.	Found: 1. The inlet separator and compressor suction header does not automatically blow down in the event of a station emergency shutdown. This does not meet the design requirements in CSA Z662 for Compressor Design of Compressor Stations over 750 kW. CSA Z662- 19 4.14.2.4 Compressor stations shall have emergency shutdown systems that meet the following requireents: a) such systems shall provide a means to isolate the station and blowdown the station piping, except that gas supplies to essential station auxiliaries may be maintained.
22-Feb-2023	2023-0533	OGAA		37(1)(a)	(a) prevent spillage, and	LEL'S in well building set of personal alarm Contacted company rep. to inform of the LEL's
24-Feb-2023	2023-0561	OGAA		37(1)(a)	(a) prevent spillage, and	Leak at wellhead. Chemical tank has a drip.
24-Feb-2023	2023-0559	OGAA	DRPR	18(9)(a)	(a) the surface casing annulus can freely vent,	Surface casing vent valve was closed.
24-Feb-2023	2023-0553	OGAA	DRPR	25(5)(b)	(b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means.	Flow line still connected.
24-Feb-2023	2023-0553	OGAA	DRPR	15(1)(b)	(b) current emergency notification information, including a telephone number;	Incorrect signage.
24-Feb-2023	2023-0553	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Garbage /insulation on lease.
24-Feb-2023	2023-0552	OGAA	DRPR	16(1)(a)	(a) that all tools and equipment used in well operations, production, injection or disposal are installed and operated in accordance with the manufacturer's specifications or sound engineering practices,	Ignition switch on catadyne heater zip-tied.
24-Feb-2023	2023-0548	OGAA		37(1)(a)	(a) prevent spillage, and	Gas leak inside cabinet at b-96-K/94-I-12.
24-Feb-2023	2023-0547	OGAA		37(1)(a)	(a) prevent spillage, and	High pressure vent is venting constantly.
24-Feb-2023	2023-0547	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Shanghai.
24-Feb-2023	2023-0546	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Shanghai.
24-Feb-2023	2023-0545	OGAA		37(1)(a)	(a) prevent spillage, and	High pressure vent at a-A55-K/94-I-12 is venting constantly. Can see vapors.
28-Feb-2023	2023-0658	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	The electrical fixture that joins the catadyne heater wires to the vehicle battery cable had a loose cap. Upon inspection the wiring in the fixture is not sealed.

28-Feb-2023	2023-0658	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	The electrical fixture that joins the catadyne heater wires to the vehicle battery cable had a loose cap. Upon inspection the wiring in the fixture is not sealed.
28-Feb-2023	2023-0658	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	The electrical fixture that joins the catadyne heater wires to the vehicle battery cable had a loose cap. Upon inspection the wiring in the fixture is not sealed.
28-Feb-2023	2023-0658	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	The electrical fixture that joins the catadyne heater wires to the vehicle battery cable had a loose cap. Upon inspection the wiring in the fixture is not sealed.
28-Feb-2023	2023-0658	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	The electrical fixture that joins the catadyne heater wires to the vehicle battery cable had a loose cap. Upon inspection the wiring in the fixture is not sealed.
28-Feb-2023	2023-0658	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	The electrical fixture that joins the catadyne heater wires to the vehicle battery cable had a loose cap. Upon inspection the wiring in the fixture is not sealed.
28-Feb-2023	2023-0658	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	The electrical fixture that joins the catadyne heater wires to the vehicle battery cable had a loose cap. Upon inspection the wiring in the fixture is not sealed.
28-Feb-2023	2023-0658	OGAA		37(1)(a)	(a) prevent spillage, and	The stainless steel tubing on the ESD sensing point inside of the meter skid is leaking hydraulic fluid. This is PSHL-0400-I.
28-Feb-2023	2023-0603	OGAA	DRPR	15(1)(c)	(c) the location of the surface site of the well as specified in the well permit;	No well identifier sign visible on A-12-J
28-Feb-2023	2023-0587	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Catadyne heater regulator to be vented outside.
28-Feb-2023	2023-0584	OGAA		37(1)(a)	(a) prevent spillage, and	Leak at wellhead. Repair any small minor leaks in building.
28-Feb-2023	2023-0578	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Regulator on fuel gas line to be vented outside.
28-Feb-2023	2023-0578	OGAA		37(1)(a)	(a) prevent spillage, and	Small scrubber on fuel gas line leaking.
28-Feb-2023	2023-0577	OGAA		37(1)(a)	(a) prevent spillage, and	In the group separator building there is a liquid leak at the HSLD-1100 outlet of the actual separator.
28-Feb-2023	2023-0571	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Storm.
1-Mar-2023	2023-0595	OGAA		37(1)(a)	(a) prevent spillage, and	Found: 1. T2B Inlet/Sales Building - Train 1 Raw Gas Makeup - drain valve - gas leaking from valve body.
7-Mar-2023	2023-0714	OGAA	DRPR	77(2)	(2) A permit holder must not post warning symbols where no hazard exists.	Found: 1. The a-40-k/94-G-7 facility signage is displaying the H2S poisonous gas symbol when the sales gas H2S concentration is below 10 PPM.
7-Mar-2023	2023-0712	OGAA	DRPR	77(2)	(2) A permit holder must not post warning symbols where no hazard exists.	Found: 1. Facility signage is displaying the poisonous gas symbol from Schedule 1 when the inlet gas H2S concentration is less than 10 PPM.
7-Mar-2023	2023-0712	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Found: 1. Generator fuel gas ESDV (XSV-4500) bypass valve car seal was incorrectly installed. The car seal did not prevent the bypass valve from being opened.
7-Mar-2023	2023-0687	OGAA		37(1)(a)	(a) prevent spillage, and	Heater PSV in wellhead building dripping.
8-Mar-2023	2023-0741	OGAA		21(b)(ii)	(ii) a permit issued to the person, if any, and	AD 100082292, condition 52 (f) Fish screen on the box containing the intake of the upstream equilibrium pump on water course J209.99 (fish bearing) had an opening greater than the allowable 2.54 mm as required by permit condition 52 (f).
8-Mar-2023	2023-0682	OGAA		37(1)(a)	(a) prevent spillage, and	Gas leak inside cabinet.
8-Mar-2023	2023-0673	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Shanghai.
8-Mar-2023	2023-0672	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Shanghai. Sign faded.
8-Mar-2023	2023-0671	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Shanghai.
8-Mar-2023	2023-0671	OGAA		37(1)(a)	(a) prevent spillage, and	High pressure vent is venting constantly. Cap missing on secondary containment for single-walled tanks.
8-Mar-2023	2023-0669	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Shanghai and is faded.
8-Mar-2023	2023-0668	OGAA		37(1)(a)	(a) prevent spillage, and	Gas leak from well at c-6-L/94-I-5.
8-Mar-2023	2023-0668	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Signage says Shanghai.

8-Mar-2023	2023-0667	OGAA		37(1)(a)	(a) prevent spillage, and	Gas leak inside cabinet.
9-Mar-2023	2023-0720	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	
9-Mar-2023	2023-0692	OGAA		37(1)(a)	(a) prevent spillage, and	Evidence of leak on meter valve stem back side of meter right side facing meter.
9-Mar-2023	2023-0692	OGAA		37(1)(a)	(a) prevent spillage, and	Meter showing evidence of leaking
9-Mar-2023	2023-0686	OGAA	DRPR	49(1)(a)	(a) the purpose of the bypass or disablement is to carry out maintenance or commissioning of the well or facility,	AMOT at Fisher Hi-Lo in the override state.
14-Mar-2023	2023-1422	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Lock, carseal or clamshell required on Genset discharge sensing line and blowdown ESD valve.
14-Mar-2023	2023-1422	OGAA		37(1)(a)	(a) prevent spillage, and	Reboiler PSV outside Dehy building requires containment.
14-Mar-2023	2023-1422	OGAA	DRPR	78(6)(b)	(b) the facility site is clean and free of garbage, debris and derelict equipment.	3 full metal bins, full RBW bins, and corroded glycol storage tank outside Dehy to be removed from location please.
14-Mar-2023	2023-0847	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	2 Empty barrels and 2 Dowtherm barrels to be removed please (Line Heater is not in service, is not serviceable, and will remain out-of-service).
14-Mar-2023	2023-0847	OGAA	PREG	3(1)(a)	(a) the pipeline that is the subject of the permit;	Pig barrel chain not connected to Pressure Assist Valve as prescribed.
14-Mar-2023	2023-0845	OGAA		37(1)(a)	(a) prevent spillage, and	Open port on ball valve at wellhead (may have been addressed by Shane at time of inspection).
14-Mar-2023	2023-0845	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	2 empty steel barrels and 3 full Dowtherm barrels to be removed. (Line heater is not serviceable and will remain out of service).
14-Mar-2023	2023-0839	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	2 barrels to be removed please.
14-Mar-2023	2023-0839	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	Last gas production March 2017. Please suspend the well. See all of DPR 25(5), and recommendations in section 9.3.2 “Well Suspension Requirements” of Oil and Gas Activity Operations manual.
14-Mar-2023	2023-0838	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	No well sign visible. All parts of DPR section 15 are required on the sign please.

14-Mar-2023	2023-0838	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	Last gas production March 2017. Well suspension is required. All parts of DPR 25(5) apply. For guidance, also see well suspension requirements in Chapter 9 of the Oil and Gas Activity Manual, specifically section 9.3.2.
14-Mar-2023	2023-0837	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	Last disposal at this well was 2016. Well suspension required. See both parts of DPR section 25 (5), and also Chapter 9 of the Oil and Gas Activity Operations Manual, specifically section 9.3.2.
14-Mar-2023	2023-0837	OGAA		37(1)(a)	(a) prevent spillage, and	Open port on needle valve at wellhead.
14-Mar-2023	2023-0808	OGAA		37(1)(a)	(a) prevent spillage, and	Ball valve on flowline near wellhead is closed, but missing bullplug.
14-Mar-2023	2023-0769	OGAA		37(3)	37 (3) A person who is aware that spillage is occurring or likely to occur must make reasonable efforts to prevent or assist in containing or preventing spillage.	Injection pump catch container full to the point of spilling over.
14-Mar-2023	2023-0743	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	
15-Mar-2023	2023-0860	OGAA	DRPR	16(1)(a)	(a) that all tools and equipment used in well operations, production, injection or disposal are installed and operated in accordance with the manufacturer's specifications or sound engineering practices,	One of the chem tanks is missing a ground cable.
15-Mar-2023	2023-0768	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Found: 1. Methane gas leakage detected Jan 9, 2023 on VRU stage 2 mechanical seal.
15-Mar-2023	2023-0768	OGAA	DRPR	77(2)	(2) A permit holder must not post warning symbols where no hazard exists.	Found: 1. The facility signage is displaying a poisonous gas symbol from Schedule 1. The facility is not handling gas containing 10 ppm or greater of hydrogen sulphide.
15-Mar-2023	2023-0768	OGAA	DRPR	78(1.1)	78 (1.1) A facility permit holder must ensure that all tools and equipment used in facility operations are installed and operated in accordance with the manufacturer's specifications or sound engineering practices.	Found: 1. AIT 4603- Condensate Stabilizer Tower/VRU Building methane gas detection in fault and reading -12.48 % LEL.
15-Mar-2023	2023-0768	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Found: 1. PSLL 8271 - facility low instrument air shutdown- Dry Air Receiver- (2) isolation valves not sealed open.
15-Mar-2023	2023-0750	OGAA		37(1)(a)	(a) prevent spillage, and	All meter buildings on location have LEL's present, set off personal monitor using port hole in entrance door.
15-Mar-2023	2023-0750	OGAA	PREG	3(1)(a)	(a) the pipeline that is the subject of the permit;	Pressure Alert Safety Chain on pigging cap detached from relief valve located behind MCC/RTU building. Pressure Alert Safety Chain clasp on relief valve stretched rendering inadequate. Pipeline riser southeast of wells on 8 inch fromm 11-09.
16-Mar-2023	2023-0873	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	
16-Mar-2023	2023-0848	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	

16-Mar-2023	2023-0751	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Isolation valve at sensing point for ESD valve should be locked open.
20-Mar-2023	2023-0835	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	H2S in building
20-Mar-2023	2023-0830	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Catadyne regulator not vented
22-Mar-2023	2023-0902	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	The isolation ball valve for the fuel gas ESD needs to be locked in the open position. It has a car seal that has been cut and laying some piping.
22-Mar-2023	2023-0902	OGAA	DRPR	16(1)(a)	(a) that all tools and equipment used in well operations, production, injection or disposal are installed and operated in accordance with the manufacturer's specifications or sound engineering practices,	The portable chemical skid beside the d-a-52-F well is bonded but not grounded. A lug was found on the skid but no ground wire to a piling or grounding rod.
22-Mar-2023	2023-0871	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	Production tanks vent to atmosphere near head level and are a safety hazard to anyone having to enter berm area of tanks to manipulate valves or in near vicinity of vent. There are strong odors onsite. The vents off these tanks are to be directed to a scrubber or by some other acceptable means to mitigate hazards and odors.
22-Mar-2023	2023-0871	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	High H2S was detected with personal monitor in separator building. No entry in to building. There appear to be multiple vents not vented outside of building. Please refrain from using sour fuel gas.
22-Mar-2023	2023-0871	OGAA		37(1)(a)	(a) prevent spillage, and	A guard should be placed around the inlet scrubber sight glass in compressor building.
22-Mar-2023	2023-0871	OGAA	DRPR	16(1)(a)	(a) that all tools and equipment used in well operations, production, injection or disposal are installed and operated in accordance with the manufacturer's specifications or sound engineering practices,	The tank the compressor PSVs are tied in to should be grounded.
22-Mar-2023	2023-0868	OGAA	DRPR	49(1)(a)	(a) the purpose of the bypass or disablement is to carry out maintenance or commissioning of the well or facility,	AMOTin the override position
22-Mar-2023	2023-0868	OGAA		37(1)(a)	(a) prevent spillage, and	Evidence of a leak in building marked 0008 inside the North East door (opposite side of the 0008) from valve/fitting or bull plug
23-Mar-2023	2023-0899	OGAA	DRPR	50(1)	50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes.	LEL's in 2nd building caused personal monitor to alarm. Inspection not completed.
23-Mar-2023	2023-0895	OGAA	DRPR	15(1)(c)	(c) the location of the surface site of the well as specified in the well permit;	Well head identifier signs missing from both B-73 and B-A73 wells. may be buried under the snow?
23-Mar-2023	2023-0889	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Annulus to needle valve/gauge leaking
23-Mar-2023	2023-0880	OGAA	DRPR	49(1)(a)	(a) the purpose of the bypass or disablement is to carry out maintenance or commissioning of the well or facility,	AMOT in override position ESD actuator in open position.
24-Mar-2023	2023-0923	OGAA	OEMR	8(1)(a)	(a) at least once a year,	ERP binder in Facility Office dated December 2014. Telephone Lists in ERP dated 2013/14.
27-Mar-2023	2023-0984	OGAA		37(1)(a)	(a) prevent spillage, and	Header building-the orfice plate changer for the c-F-2-J meter run is leaking produced water at the sliding block.
27-Mar-2023	2023-0984	OGAA		37(1)(a)	(a) prevent spillage, and	Group separator-There is a LEL leak coming from the chemical pump.
27-Mar-2023	2023-0984	OGAA		37(1)(a)	(a) prevent spillage, and	Test separator building-LEL in building.
27-Mar-2023	2023-0982	OGAA		37(1)(a)	(a) prevent spillage, and	d-G-72 well head-there are produced water salt crystals forming from a few grease fittings.

28-Mar-2023	2023-0935	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	Found: 1. A hazardous condition could be present and there would be no audible alarm warning. Operations staff reported the facility alarm horns were not functional and required repair.
28-Mar-2023	2023-0935	OGAA	DRPR	77(2)	(2) A permit holder must not post warning symbols where no hazard exists.	Found: 1. Facility signage displaying the poisonous gas symbol from Schedule 1 when the facility is not handling gas containing 10 ppm or greater of hydrogen sulphide.
28-Mar-2023	2023-0935	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Found: 1. Dehy 420 skid edge flare line isolation valve was not carsealed open.
28-Mar-2023	2023-0931	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	Wellhead requires valves to be secured with chain and lock.
29-Mar-2023	2023-0974	OGAA		37(1)(a)	(a) prevent spillage, and	High LEL and low CO detected inside well building at building entry check. Vented and entered.
30-Mar-2023	2023-0983	OGAA	DRPR	78(1.1)	78 (1.1) A facility permit holder must ensure that all tools and equipment used in facility operations are installed and operated in accordance with the manufacturer's specifications or sound engineering practices.	Found: 1. Generator #2 package LEL gas detection controller (AIT 3850) was being operated in fault at -9 LEL. The gas detection controller red LED was rapidly blinking indicating a fault, but the facility PLC control panel indicated the gas detection was normal at -9 LEL.
30-Mar-2023	2023-0983	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Found: 1. Inlet Area- PSHH-800- root valve carseal did not prevent the valve from being closed. 2. Inlet Area- PSHH-810 - root valve carseal did not prevent the valve from being closed. 3. Inlet area- PITX-900- manifold valve not carsealed open.
30-Mar-2023	2023-0983	OGAA	DRPR	77(2)	(2) A permit holder must not post warning symbols where no hazard exists.	Found: 1. The facility signage is displaying a poisonous gas symbol from Schedule 1. when the facility is not handling gas containing 10 ppm or greater of hydrogen sulphide.
30-Mar-2023	2023-0983	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	Found: 1. A hazardous condition could be present and there would be no audible alarm warning. Operations staff reported the facility alarm horns were not functional and required repair.
30-Mar-2023	2023-0968	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Meters in H & I meter/injection units shows evidence of leak. LEL's in seperator buildings #27 and #29 alarmed monitor.
30-Mar-2023	2023-0968	OGAA		37(1)(a)	(a) prevent spillage, and	Bull plug missing and ball valve in open position on flow outside of of meter/injection building
30-Mar-2023	2023-0958	OGAA	DRPR	50(1)	50 (1) A permit holder must take every reasonable precaution to prevent loss or waste of oil, gas or water in drilling, producing and processing operations, and, in storing, piping or distributing, oil or gas must not be used wastefully or allowed to leak or escape from natural reservoirs, wells, tanks, containers or pipes.	LEL level in wellhead building caused personal monitor to alarm. Inspection of wellhead building not completed.
30-Mar-2023	2023-0942	OGAA		37(1)(a)	(a) prevent spillage, and	LEL's in all seperator building 13, 14, 15, 16, 17, alarmed personal monitor
30-Mar-2023	2023-0942	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Meter/injection building showing signs of a leak on outside of unit. (G-well) LEL's alarmed personal montior
31-Mar-2023	2023-0979	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Active salt drip on orifice plate chamber sealing bar A well meter run.
31-Mar-2023	2023-0976	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	8% LELs detected in separator shack.

31-Mar-2023	2023-0975	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Active salt drip from orifice plate chamber sealing bar 00 well meter run.
4-Apr-2023	2023-1033	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Found: 1. Inlet #1 separator - PSV pilot not vented safely to atmosphere. 2. Inlet #2 separator- PSV pilot not vented safely to atmosphere.
4-Apr-2023	2023-1033	OGAA	DRPR	78(3)(b)	(b) CSA Standard Z662.	Found: 1. The (2) inlet separators and the compressor suction header do not automatically blow down in the event of a station emergency shutdown. This does not meet the design requirements in CSA Z662 for Compressor Design of Compressor Stations over 750 kW. CSA Z662- 19 4.14.2.4 Compressor stations shall have emergency shutdown systems that meet the following requirements: a) such systems shall provide a means to isolate the station and blowdown the station piping, except that gas supplies to essential station auxiliaries may be maintained.
4-Apr-2023	2023-1033	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Found: 1. Inlet separator #2 - a gas leak was detected and alarmed 4-way personal monitor. The gas leak was traced to the area around the condensate high level switch.
4-Apr-2023	2023-1033	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	Found: 1. A hazardous condition could be present and there would be no audible alarm warning. The facility alarm horn was not functional and required repair.
5-Apr-2023	2023-1085	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	
5-Apr-2023	2023-1080	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	There are several valves and connections on piping that are leaking.
5-Apr-2023	2023-1073	OGAA		37(1)(a)	(a) prevent spillage, and	A bullplug is missing off a line at wellhead. Ensure the valves on wellhead are locked closed as per D&P Reg 25 (5)(a).
5-Apr-2023	2023-1071	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Valves on piping from psvs in compressor package to tank are to be locked open.
5-Apr-2023	2023-1071	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	Personal monitor alarmed on H2S inside separator building package.
5-Apr-2023	2023-1069	OGAA	DRPR	25(5)(b)	(b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means.	Well shows no production since Oct 2019. This well requires compliance with D&PR 25(5) a,b for a suspended well.
6-Apr-2023	2023-1099	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Evidence of leak off annulus, dripping onto the rocks.
6-Apr-2023	2023-1096	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Leak on the wing valve grease injector
6-Apr-2023	2023-1081	OGAA	DRPR	49(1)(a)	(a) the purpose of the bypass or disablement is to carry out maintenance or commissioning of the well or facility,	AMOT in the override position
12-Apr-2023	2023-1135	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Audible leak at choke controller “C” well, choke controller regulator constantly venting “D” well.
13-Apr-2023	2023-1163	OGAA		37(2)(b)	(b) contain and eliminate the spillage;	There is what appears to be a heavy hydrocarbon stain at the d-b-55-F well head. The staining is on the ground and the substance is flowing away from the wellhead with the melting snow.
13-Apr-2023	2023-1163	OGAA	DRPR	53(e)(i)	(i) the meter is maintained in good operating condition, and	The meter run tag for the b-c-55 well states the last service was 5/4/2021 and is overdue. There are other meter runs that have service dates that are 2 years old.
13-Apr-2023	2023-1162	OGAA	DRPR	53(e)(i)	(i) the meter is maintained in good operating condition, and	The meter for well a-b-91-F according to the tag was last serviced in September 2020. There are other meters with this same date, no exemptions were noted and other meter runs are due soon.

13-Apr-2023	2023-1149	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	The bottom isolation needle valve for the pipeline pressure transmitter needs to be clam shelled in the open position.
13-Apr-2023	2023-1141	OGAA	DRPR	18(9)(c)	(c) the surface casing is equipped with an open valve.	Surface casing vent by valve in closed position. Staff at plant was notified April 13, 2023.
13-Apr-2023	2023-1139	OGAA	DRPR	25(5)(b)	(b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means.	Wells 9-03-82-19 and A9-03 -82-19 flowline not disconnected or by other means.
14-Apr-2023	2023-1152	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	
18-Apr-2023	2023-1207	OGAA	DRPR	18(9)(c)	(c) the surface casing is equipped with an open valve.	Surface casing vent standpipe is at the well and has an open valve but is not connected to the wellhead.
18-Apr-2023	2023-1206	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Group Separator for the b-d, b-e , b-f , b-g and b-h wells-separator sight glass is weeping produced water salts.
18-Apr-2023	2023-1206	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	b-e-14-F meter run- the Daniels plate changer is weeping produced water from its bull plugs.
18-Apr-2023	2023-1206	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	The b-h-14-F well--the off side wing valve has a needle valve that is leaking at the threaded joint. Rep+G4650 was seen attending to this.
18-Apr-2023	2023-1197	OGAA		37(1)(a)	(a) prevent spillage, and	First chemical injection building lel's caused personal monitor to alarm.
19-Apr-2023	2023-1202	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Leak off bull plug/ball valve on piping to condy meter
19-Apr-2023	2023-1199	OGAA		37(1)(a)	(a) prevent spillage, and	Inside the header/test separator building- -LSLL 2080 on separator is weeping produced water salts on the bottom of the liquid level switch. The d-75 meter run bleed line is weeping produced water salts. The fuel gas stainless steel tubing drain line is weeping produced water salts at the first connection.
19-Apr-2023	2023-1196	OGAA	DRPR	52.07(1)(b)	(b) flared in accordance with sections 42 to 44, if the facility includes a flaring system to which the compressor starter can be connected.	Found: 1. The compressor starter gas discharge piping was not connected to the flare system.
19-Apr-2023	2023-1196	OGAA	DRPR	78(3)(b)	(b) CSA Standard Z662.	Found: 1. The inlet piping downstream of the inlet ESDV, the inlet separator, the compressor suction header, and the compressor do not automatically blow down in the event of a station emergency shutdown. This does not meet the design requirements in CSA Z662 for Compressor Design of Compressor Stations over 750 kW. CSA Z662- 19 4.14.2.4 Compressor stations shall have emergency shutdown systems that meet the following requirements: a) such systems shall provide a means to isolate the station and blowdown the station piping, except that gas supplies to essential station auxiliaries may be maintained.
19-Apr-2023	2023-1196	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Found: 1. Sales Meter Building- The Fuel Gas HP SD Pressure Switch (PSHH-3500) isolation valve was not locked or carsealed open.
19-Apr-2023	2023-1181	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Test seperator building 005 show evidence of a leak on a valve off of the sight gauge. Test seperator building 007 shows evidence of a leak off the Fischer easy drive.

21-Apr-2023	2023-1238	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Gas leaking from lower wing valve (frost observed on valve exterior) at d-D70-K. Also, small gas leak fromd-70-K wellhead ESD fitting.
21-Apr-2023	2023-1218	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	Flammable symbol absent from all well signs. Otherwise, signs are ok.
24-Apr-2023	2023-1221	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Evidence of a leak from Y fitting on flow line from seperator
24-Apr-2023	2023-1214	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	KP 177+ 762, WC 187.2F an S4, has sediment laden water entering it from a sub-surface flow at ditch line on the ROW. This sediment laden water is (instream) flowing off ROW. Corrective action is required to prevent the sediment laden water from entering the water course. Follow up is required to delineate the full extent of what receptors the turbid water is entering.
24-Apr-2023	2023-1214	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	KP 178+177, WC 189 an S4, sediment laden water is entering the water course and flowing downstream, the sediment laden water is from a sub-surface flow on the ROW along ditch line. The excess flow has overrun the downstream isolation. Corrective action is required to prevent the turbid water from entering the water course. Follow-up is required to delineate the full extent of the turbid water and determine which receptors it may be entering.
25-Apr-2023	2023-1229	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Leaks at wellhead are to be repaired. Orifice plate changer is leaking and needs repair. Reboiler sight glass needs a guard. Reboiler over pressure vent should be directed to containment. Staining on lease should be cleaned up. 45 gallon barrel on east side of compressor may be leaking.
25-Apr-2023	2023-1227	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	Sediment has been deposited into wetland WL 11609 located at KP 186+200. Discussed with the operator at time of inspection. Cleanup is required when ground conditions will allow. ESC measures preventing sediment from reaching the wet land have been over run and require maintenance. Corrective action is be undertaken immediately on the ESC measures to prevent additional sediment from entering the wetland. The undersigned inspector is to be notified when ESC corrective action is completed.
25-Apr-2023	2023-1227	OGAA	EPMR	17(a)	(a) not cause the soil of the area to become unstable, and	KP 177+500 slope has had slumping and erosion mid and lower slope. Soil movement has impacted WC 187 (S3) and caused sediment and or sediment laden water to enter the water course. Please provide a detailed plan for corrective action and slope repairs including a timeline for completion to the undersigned C&E Officer.
25-Apr-2023	2023-1227	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	The Anzac River was observed to have a sediment plume approximately 150 downstream from the source. The source was traced back to pipeline construction activity and 4 (or more) watercourses from approximately KP 177 to 178. Discussed with operator at the time of the inspection. Water quality monitoring is to be implemented immediately along the path of sediment laden water and in the Anzac River. Please provide a detailed plan for corrective action, including a timeline for completion, to the undersigned C&E Officer.
25-Apr-2023	2023-1226	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	Sediment plume in the Mini Anzac River at KP 147+200 caused by pipeline construction activity. As discussed with the operator at the time of the inspection; operator is to delineate source(s) and begin immediate corrective action. Operator is to establish water quality monitoring along flow path and in the Mini Anzac River. Daily reports of NTU values in the Mini Anzac River are to be reported to the undersigned inspector. Please provide a timeline for corrective action once the source(s) and cause(s) has been determined.

26-Apr-2023	2023-1250	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	Approximately 50m East of J440.01 at KP 575+420 sediment laden water noted leaving ROW, no stream identified in the area. ESC measures adjacent to road have been overwhelmed by ROW run-off. Sediment laden water travelled through culvert on the Shae FSR to S4 stream A7012 and noted entering stream below current WQM. Inspector discovered and deficiency with EPMR Section 12.
26-Apr-2023	2023-1232	OGAA	DRPR	47(h)	(h) a sufficient area beneath and around the flare stack is free of combustible materials and vegetation.	Found: 1. Insufficient area around the flare stack free of vegetation and combustible materials.
26-Apr-2023	2023-1232	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	Found: 1. The well signage missing the flammable gas symbol.
26-Apr-2023	2023-1232	OGAA	DRPR	38(3)	38 (3) The permit holder's accounting methods, practices and record keeping as well as the measurement methods and practices associated with records referred to in subsection (1) must be sufficient to ensure that records of quantities are correct, accurate and complete.	Found: 1. Petrinex 2023-03 and previous production data records for BCBT0017905 are not correct, accurate, and complete. The Petrinex records show proration factors for measured (separated) gas wells. The measured wells on the 13-26-84-24 pad, the wells on the 13-14-84-24 pad, the wells on the 16-16-84-24 pad, and the 4-20-84-24 well, a gas multi-well group battery - type 361, are being reported incorrectly in battery BCBT 0017905 - as a type 362 - gas multi-well effluent measured battery.
26-Apr-2023	2023-1232	OGAA	DRPR	78(1.1)	78 (1.1) A facility permit holder must ensure that all tools and equipment used in facility operations are installed and operated in accordance with the manufacturer's specifications or sound engineering practices.	Found: 1. Low pressure flare KO tank- the purge gas was shut-off- not operated in accordance with sound engineering practices. 2. VRU-250 PSV pilot requires repair as it is continually leaking gas through the vent- the PSV pilot and PSV may not operate at set pressure or fail - the VRU not operated in accordance with sound engineering practices.
26-Apr-2023	2023-1232	OGAA	DRPR	77(1)(d)	(d) if the facility handles flammable gas, a flammable gas symbol from Schedule 1;	Found: 1. The facility signage - missing the flammable gas symbol.
26-Apr-2023	2023-1232	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Found: 1. VRU-K250 - skid edge flare isolation valve was not locked or carsealed open.
26-Apr-2023	2023-1232	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Found: 1. Low pressure flare KO tank sight glass leaking gas.
27-Apr-2023	2023-1239	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	KP 394+000 WC 406 *Maintenance and/or construction occurring adjacent to stream, visible sediment entering stream and leaving ROW. Inspector discovered, deficiency issued under EPMR Section 12. *Follow up with photos and corrective actions once complete.
27-Apr-2023	2023-1239	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	Wetland 418+000 WL 11024 *Turbid water entering wetland. *Deficiency, inspector discovered EPMR Section 12. *Follow up with photos and corrective actions once complete.
27-Apr-2023	2023-1239	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	Wetland 422+400 WL 0884 *Turbid water entering wetland. *Deficiency, inspector discovered EPMR Section 12. *Follow up with photos and corrective actions once complete.
27-Apr-2023	2023-1239	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	Wetland 444+400 WL 0903 and WL 0904. *Turbid water entering wetland. *Deficiency, inspector discovered EPMR Section 12. *Follow up with photos and corrective actions once complete.
27-Apr-2023	2023-1237	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Appears to be a leak between the pipeline and the gauge. This located between signs on pipeline 723752 and to 1-34

27-Apr-2023	2023-1237	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Evidence of leaks, on the wing valves, of the following wells: A4-34-81-20 C4-34-81-20
27-Apr-2023	2023-1235	OGAA	DRPR	49(1)(a)	(a) the purpose of the bypass or disablement is to carry out maintenance or commissioning of the well or facility,	AMOT in override (latched) while the ESD actuator is in the open postion
27-Apr-2023	2023-1233	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	Sediment and sediment laden water is entering J151.03 from the travel lane and flowing under the snow in the direction of the Mini Anzac River. There is a lack of ESC on the travel lane as documented in the inspection. Pump off water is entering watercourse J151.03 through the common ditch that feed the water courses in this area. Corrective action is required to prevent sediment laden water from entering the water course. Please provide a Water Management Plan for the area between KP 146+600 and KP 148+500, the plan is to include all aspects of water management including but not limited to, ESC, pump offs, ditching, sumps and water quality monitoring. Please detail how the plan will prevent sediment and sediment laden water from entering the Mini Anzac River. Please detail how the point of entry will be sampled for water quality monitoring in addition to the upstream and downstream sampling. The water management Plan is to be submitted to the undersigned Compliance and Enforcement officer on or before May 3, 2023.
27-Apr-2023	2023-1231	OGAA	OGRR	14(2)(a)	(a) ensure that a qualified person carries out a detailed inspection of each structure associated with the road, and	A request for bridge inspections was given in 2022 for the 00232 road which goes to a-63-H / 94-G-03 and the inspection was not received. This is another request for the last visual (annual) and 3 year engineered inspection.
28-Apr-2023	2023-1261	OGAA	OGRR	23(1)(a)	(a) the commission;	The BC-ER has not received Notices of Deactivations and Signed Statements for Petronas deactivated roads. This appears not to be limited to this road to c-58-J / 94-G-02. Road 03487, segment #1 to well d-19-E / 94-A-13 is another one and there will probably be more. Please review your list of deactivated roads and send in the notices for each one, what ever number of notices that may be. It must be noted that this submission of notices is separate from the Dormant Site Regulations. Please read Section 23 and Section 27 the Oil and Gas Road Regulations for the details. Please also note that the parties to be notified in the list in Section 23 (1) of the regulations is more than listed in the outdated form. When submitting the form please mention the other parties have been notified. If there were any concern mentioned by the other parties please include those comments. Thank you.
1-May-2023	2023-1269	OGAA		37(1)(a)	(a) prevent spillage, and	Several areas of seepage on wellhead. Maintenance should be done on wellhead and wellhead cleaned up.
1-May-2023	2023-1240	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Slow drip from cap off loadline at production tank into enviro box. Enviro box is leaking at the back in to production tanks secondary containment. Water in containment has contaminants on top. Loadline and enviro box are to be repaired and water and contaminants in secondary containment to be cleaned up. Ensure valve above first flange on test separator gas meter run is not leaking in group inlet building. Repair all leaks inside group inlet building.
2-May-2023	2023-1779	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	Several steel chem tanks behind the Facility have corroded and leaking corrosion inhibitor to the ground.

2-May-2023	2023-1779	OGAA	PREG	9(3)(b)	(b) submit to the commission a plan to deactivate the permitted pipeline or part of the pipeline after the end of that period;	4 segments of Pipeline Project 11464 show as Active despite last fluids through the Pipelines occurred greater than 18 months ago.
2-May-2023	2023-1300	OGAA	EPMR	17(a)	(a) not cause the soil of the area to become unstable, and	KP 186 slope. Durning an April 25th inspection it was observed that that there was sloughing on the slope. During an overflight on May 2nd, it was observed that the sloughing has expanded. A discussion with the operator on May 5th determined that crews will not be able to access for corrective action due to ground conditions and it is expected that the sloughing will continue and worsen while waiting for appropriate ground conditions. Sloughing on the slope has impacted the working surface, making it unstable. Please provide a plan for corrective action that includes a timeline for completion.
2-May-2023	2023-1266	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Audible gas leak from Wellhead, located under insulation wrap.
2-May-2023	2023-1266	OGAA	DRPR	15(3)(a)	(a) that the well site is maintained in a condition so as to minimize hazards, including but not limited to hazards associated with pits, holes, storage of materials and equipment;	Open conductor pipe in cellar adjacent to c-B88-L well.
2-May-2023	2023-1260	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Gas bubbling through water filled cellar from wing valve at two places.
2-May-2023	2023-1260	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	No sign visible on location.
3-May-2023	2023-1286	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Vent line from Catadyne regulator detached in seperator building
4-May-2023	2023-1294	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	Well building signage missing flammable symbol - please update signage.
4-May-2023	2023-1294	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Active leak from Cactus Dryer - in well building - High LEL emitted/detected in building.
4-May-2023	2023-1294	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	Well is not in suspended status, last production recorded is 2019. Chain and lock wellhead valves or remove wellhead handles. Please also see - DPR 25(5)(b); ensure positive isolation on flow line.
4-May-2023	2023-1293	OGAA		37(1)(a)	(a) prevent spillage, and	Missing 3 bull plugs on well head (2) and pig launcher barrel / vent port (1), see attached photos.
4-May-2023	2023-1293	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Active gas leak from inside the Well Head building : Cactus Dryer - venting valve/line, see attached photos.
5-May-2023	2023-1296	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Gas flow observed / heard flowing through gas line leading to Flare stack.
5-May-2023	2023-1296	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	Well is not in suspended status, last production recorded is May 2020. Please also see - DPR 25(5)(b); ensure positive isolation on flow line.

9-May-2023	2023-1345	OGAA	OGRR	8(1)(a)	(a) a reflective marker on each corner of the bridge,	Please see notes details: Road # 00618 and 00617 Approximately 8 bridges have some deficiencies with regard to maintaining reflective markers on each corner of the bridge. Note: In addition, the Patry Mainline bridge at 55 km has non-standard reflective markers installed, these are not standard/prescribed W-55 highway bridge delineators, may also consider replacing these reflective signs with W-55 markers.
9-May-2023	2023-1341	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	sign is completely faded
9-May-2023	2023-1327	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	Polish rod/string still in well
10-May-2023	2023-1386	OGAA		37(2)(b)	(b) contain and eliminate the spillage;	Due to a lack of maintenance, the fence has fallen down in places that has allowed ungulates and cattle to enter the old spill area. The animals need to be excluded from the spill area.
11-May-2023	2023-1357	OGAA	EPMR	17(a)	(a) not cause the soil of the area to become unstable, and	KP 179+800, soil has moved downslope the entire width of the ROW into the tree line and into the road ditch located at approximately 16.5 km on the Crocker FSR. Soil / sediment / sediment laden water has moved approximately 100 meters down the road ditch to culvert 3033A on the Crocker FSR and deposited sediment downstream of the culvert. A vac-truck was working to pull up the ditch soils. Corrective measures are to be completed that will prevent sediment from leaving the ROW at this location, Sediment that is deposited off ROW and downstream of the culvert is to be assessed by a Qualified Professional and a plan for cleanup including a timeline for completion is to be submitted to the BCER on or before May 20, 2023.
11-May-2023	2023-1357	OGAA	EPMR	17(a)	(a) not cause the soil of the area to become unstable, and	KP 177+500 to KP 179+550, several areas of soil movement have occurred in this portion of the ROW. WC 189, both banks have slumped into the water course. WC 189.1T, both banks have slumped into the watercourse. Significant slumping over ditch line has occurred from KP 178+100 to 178+300 including the excavation to daylight the pipe. KP 178+400 has significant soil movement. There are several additional areas of soil movement on ROW in this area. It is anticipated that an extension to the non-compliance will be required. As part of the extension request, please provide a detailed plan for the corrective action from KP 177+500 to KP 179+550, including a timeline for the required work to be completed.
12-May-2023	2023-1371	OGAA	EPMR	17(b)	(b) minimize any alteration to the natural surface drainage patterns on the area.	KP 171+250 to KP 169+000, reclaimed ROW with roll back in place. It was noted that soils put back to the high side bank along the ROW did not blend to the bank contour. It was also noted that several watercourses in this area, the restored channel did not match / align to the upstream portion of the original channel. This resulted in sub surface flows in several restored water courses and erosion channels being formed across the ROW. These were discussed with the operator providing specifics. Corrective action is required to restore the drainage pattern from KP 171+250 to KP 169+000. It is anticipated that an extension will be required for the non-compliance. A plan is to be submitted to the BCER before the due date of the non-compliance containing details of proposed work and a timeline for completion.
15-May-2023	2023-1408	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Audible leak from well head / christmas tree. A-B34-L / 94-G-07
16-May-2023	2023-1419	OGAA		37(1)(a)	(a) prevent spillage, and	missing bull plug on lower line of well head.
16-May-2023	2023-1419	OGAA		37(2)(b)	(b) contain and eliminate the spillage;	Gas leak observed at lower wing valve.
16-May-2023	2023-1418	OGAA	DRPR	25(5)(b)	(b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means.	D-A094-J / 94-I-12 - positive isolation not maintained for a suspended well.
16-May-2023	2023-1411	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Fluid leak from well head, below master valve (casing head).
16-May-2023	2023-1410	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	B-97-J / 94-I-12 - facility - Audible leak - chem pump. continuous venting observed.
16-May-2023	2023-1391	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	A-A64-I building LEL's caused personal monitor to alarm.

16-May-2023	2023-1387	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	Appears to have been a leak at well head, as there is fresh wet substance on ground around the well. Met with operator, returned to location to show area of concern.
17-May-2023	2023-1464	OGAA	DRPR	77(1)(a)	(a) the name of the permit holder;	No signage was observed at the entrance of the closed / gated facility; notifying persons accessing the facility/compound of the location ID, permit holder name, contact information, type of site and any hazards present as detailed within Sec. 77 (1) DPR.
17-May-2023	2023-1462	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	No well signage on site d-B-28-F / 94-O-010 - see attached photo. Permit holder required to maintain signage at well head site.
17-May-2023	2023-1413	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	WC 187.1F, sediment laden water was observed flowing off ROW. the WC was walked and water was leaving the channel mid ROW and flowing sub surface (picking up sediment) and back to surface before flowing off ROW. There was no work underway to correct the issue at the time of the inspection.
17-May-2023	2023-1413	OGAA		21(b)(ii)	(ii) a permit issued to the person, if any, and	AD 100082299, condition 42, "the permit holder must collect and store garbage in a manner that does not attract bears or other wildlife". A paper bag containing food was found on the ROW in proximity to a work crew. Discussion by the CGL representative to explain "bear attractants is a non-compliance" and "proposed solutions" were met with resistance and excuses to justify the non-compliance, including not completing several proposed corrective actions. Quote, "My crew works hard all day long and I don't want to make them carry any additional stuff onto the ROW". Excuses justifying an inability to perform a reasonable corrective action are not acceptable and non-compliance was issued. Corrective action required, CGL is to provide proof that training has been provided to field staff on satisfying the requirements of permit condition 42.
18-May-2023	2023-1416	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	Sediment laden water is entering WC 141 from the workspace adjacent to the watercourse. The sediment laden water is flowing from the travel lane to a sump and through a silt fence to the watercourse. The area EI had informed a work crew in the area the day before and was told they would action that day. NO crew on location during the inspection and no resolve to the issue. WC 141 has been in exceedance for a considerable period of time; there will be no extensions to this non-compliance and the expectation is that exceedances will be resolved on or before the due date.
19-May-2023	2023-1442	OGAA	DRPR	18(9)(c)	(c) the surface casing is equipped with an open valve.	SCV valve was closed at time of inspection.
23-May-2023	2023-1420	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	Well head - is chained but not locked, discussed issue with facility operator.
24-May-2023	2023-1618	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	Missing flammable safety symbol from well building (see attached photos).
24-May-2023	2023-1471	OGAA	EPMR	17(a)	(a) not cause the soil of the area to become unstable, and	
24-May-2023	2023-1450	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Non-compliance status: audible gas leak observed from pig barrel cap (pipeline). Gas leak reported to CNRL Representative: - May 24, 2023. CNRL: Production Foreman - through email (May 26, 2023) provided BCER with a list of wells scheduled for suspended works in 2023; a-77-F/94-P-10 is identified on CNRL's to do list (email attached). CNRL - to provide a status report to BCER FN Compliance & Enforcement staff when suspension activities / gas leak fix for this well site is completed.
24-May-2023	2023-1443	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LELs detected in separator shack.
24-May-2023	2023-1440	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	There are 2 pump of hoses that have been sitting off site for many years. There is a length of flowline that has been left since the well was last inspected.
24-May-2023	2023-1440	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	The lease berm has been breached and needs to be repaired to stop water from flowing off the lease untested.
24-May-2023	2023-1440	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	The earthen berm around the lease has been breached and a small amount of hydrocarbon has been noticed on the ground and beside part of a wetland complex.

24-May-2023	2023-1439	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	DPR Sec. 15(1)(a) - company name “Predator Oil BC” displayed on all well building doors - not “ERIKSON” contact info displayed - see attached photo. Also DPR Sec. 15 (1) (c) - applies as the well buildings were missing flammable safety symbols.
24-May-2023	2023-1439	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Low LEL reading in building, gas leak noted from well building, where continuous venting observed from pump.
24-May-2023	2023-1435	OGAA	PREG	3(1)(a)	(a) the pipeline that is the subject of the permit;	Pig barrel chain not attached fastened to cover - see attached photo.
24-May-2023	2023-1432	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Gas leak in building - elevated LEL note, source of leak unknown.
24-May-2023	2023-1429	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Flammable safety symbol missing on c-69-G/94-P-10 building at site - see attached photos.
24-May-2023	2023-1426	OGAA	DRPR	15(1)(b)	(b) current emergency notification information, including a telephone number;	All information required on location sign is faded and not visible except H2S symbol. Ensure a flammable symbol is on sign.
24-May-2023	2023-1425	OGAA		37(1)(a)	(a) prevent spillage, and	Bullplugged vents leaking at: * last bullplug vent (off platform) on north pig barrel *bullplug off vent on pipeline (2nd from the west) before enters ground *bullplugged vent on line from A5-31 well
25-May-2023	2023-1446	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	00 well has casing valves under water, a small leak at the grease injector on the north casing valve is causing bubbles. A and B wells have slight leaks at the choke controllers.
25-May-2023	2023-1436	OGAA	PREG	3(1)(a)	(a) the pipeline that is the subject of the permit;	Note: Pig barrel chain not attached to cover - see attached photo.
25-May-2023	2023-1430	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Flammable safety signage missing at site, see attached photos of signage currently on site.
25-May-2023	2023-1430	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Cata-Dyne regulator vent missing from building facility.
25-May-2023	2023-1428	OGAA		37(1)(a)	(a) prevent spillage, and	Well head: a-18-J / 94-P-10 Bull plug (1x) missing on top of well head - see attached photo.
25-May-2023	2023-1428	OGAA		37(1)(a)	(a) prevent spillage, and	Building a-A18-J/94-P-10 - Open oil plastic pails/containers (2x) in well building - potential spillage and fluid spill (oil?) in compressor station - see attached photos.
30-May-2023	2023-1623	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	KP 563+300 Wetland 563.5 *ESC measures have failed in this area. Deficiency with EPMR Section 12 issued.
30-May-2023	2023-1496	OGAA		37(1)(a)	(a) prevent spillage, and	Bull plug missing from secondary containment with 500 liters of chemical in primary container.
30-May-2023	2023-1484	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Metal debris across the road from the beginning of access to wellsite is to be removed.
30-May-2023	2023-1482	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Garbage scattered on lease to be cleaned up. At intersection between this location and c-19-B location is more garbage (insulation and insulation pipeline plastics) to be cleaned up.
30-May-2023	2023-1478	OGAA	OGRR	12(c)	(c) the bridges, culverts, fords and other structures and works associated with the road are functional and appropriate for the uses of the road, and	The culvert at km 18.9 on the Mile 156 road has partially washed out/ undermined again. The culvert appears to be a piece of pipeline pipe and is not sized properly. It drains a substantial area. Please comply with all of Section 6 of the Oil and Gas Road Regulations when planning this work. It needs to be determined if this stream is fish bearing or not and that will guide the work that needs to be done.
30-May-2023	2023-1475	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Some garbage scattered around on lease to be picked up.
31-May-2023	2023-1473	OGAA		37(2)(b)	(b) contain and eliminate the spillage;	Chemical tank was leaking. Spillage to be cleaned up.

1-Jun-2023	2023-1632	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	Note: An open hole (safety concern) was observed at the side of the main compressor building (possible hazard) (see attached photo).
1-Jun-2023	2023-1632	OGAA		37(1)(a)	(a) prevent spillage, and	Note: At the compressor station, a bull plug is missing on the fuel gas filter - source of possible spillage (see attached photo).
1-Jun-2023	2023-1632	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	Note: Flammable safety symbol missing form signage at main entrance building (see attached photos).
1-Jun-2023	2023-1632	OGAA	DRPR	47(h)	(h) a sufficient area beneath and around the flare stack is free of combustible materials and vegetation.	Note: There are combustible materials (dead vegetations) at the base of the flare stack (see attached photos).
2-Jun-2023	2023-1506	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	
2-Jun-2023	2023-1504	OGAA	OGRR	8(1)(a)	(a) a reflective marker on each corner of the bridge,	The 6km bridge on CNRL high grade road (#00205) is the missing safety signage; specifically, the corner delineators (3x) are missing on the bridge - see attached photos.
6-Jun-2023	2023-1598	OGAA	EPMR	17(a)	(a) not cause the soil of the area to become unstable, and	At approximately KP 191+690, In 2021 water flow caused by construction activity caused the top of the slope to saturate and slumping on the slope occurred. The slope was cover with a bio-degradable geotextile in 2021. To date no other remediation of this slope has been completed. Slumping is approximately 20m wide x 40m long x 3/4 to 1m deep. bio-degradable geotextile is now starting to breakdown and addition remediation is required. A discussion with the operator was held on location and a plan for remediation including a timeline is to be submitted to the BCER.
6-Jun-2023	2023-1598	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	At approximately KP 213+800, slumping on the row has caused sediment to enter wetland 11575. This was discussed with the operator at the time of inspection. Additional soil movement may have been caused by work being completed in the reclaimed area to construct a travel lane to access WC 239. Please ensure impact to the wetland is mitigated while crews are in the area completing other work.
6-Jun-2023	2023-1574	OGAA	EPMR	11(b)(i)	(i) prevent the movement of fish, nor	In conjunction with the BCER Stewardship Group and First Nations, it was noted that approximately 300 meters from the mile 98 road (on access road to CREW ENERGY a-43-H/94-A-13 Facility and wellsite) there is a stream with two stacked pieces of piping used as culverts. Each piece of piping being used is approximately 30" diameter by 50' in length. As per the Stewardship Group and First Nations, these culverts are impeding fish passage connected to a fish bearing stream. -Also, there is no road permit on this section of road for access to the a-43-H/94-A-13 wellsite and facility.
6-Jun-2023	2023-1516	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	ESD: The ESD bypass valve inlet should be locked. The ESD bypass valve was observed to be a spring valve in the closed position and not locked/car sealed (as legs. requires).
6-Jun-2023	2023-1516	OGAA		37(1)(a)	(a) prevent spillage, and	Cata-dynes are missing regulator vent flows in the dehydrator (not active) /separator (active) building. It was determined that the since the gas dehydrator/separator building was not suspended and still being used for fuel gas by CNRL (active as gas flow was running through the fuel separator flow lines) the cata-dyne vent lines (2x) need to be in place.
6-Jun-2023	2023-1516	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	Flare stack carryover fluid was observed on the flare stack and at the base of the flare stack (on the ground). Carry over fluid was also observed on the scarified ground / soil surrounding of the flare stack and on vegetation found along the boundary of the flare stack clearing (see attached photos).
6-Jun-2023	2023-1516	OGAA	DRPR	44(b)	(b) that unsupervised flare stacks where flaring may occur are equipped with an adequate auto-ignition system;	Flare Stack: No flame was observed on the flare stack and the flare stack pilot gas valve was shut closed, and the electric igniter was in the down position (see attached photos).
7-Jun-2023	2023-1578	OGAA		37(1)(a)	(a) prevent spillage, and	Bull plug missing from secondary containment (with evidence of fluid escape) rendering it ineffective. Primary chemical tank shows 700 liters in sight glass.

7-Jun-2023	2023-1527	OGAA	PREG	3(1)(a)	(a) the pipeline that is the subject of the permit;	Pig barrel cap at "a-41-l " pipeline location is not chained (not attached to valve) and a bull plug is installed in place of PAV (see attached photos).
7-Jun-2023	2023-1527	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Inlet water separator building has an oil / fluid spill on the floor at the main pump (see attached photos).
7-Jun-2023	2023-1527	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Compressor building barrel deck containment section has an oil/fluid spill. The whole steel deck is not level but tilted towards the backside/building (possible from frost heave) of which the oil/fluids in the containment is collecting/spilling on the back side of the barrel deck onto the ground (see attached photos).
8-Jun-2023	2023-1558	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	H2S and LEL's in meter skid set off personal alarm emergency number called to reach a contact from location
12-Jun-2023	2023-1611	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Meter in A 04-18 skid showing evidence of a leak.
14-Jun-2023	2023-1629	OGAA	OGRR	13(1)(a)	(a) ensure that road surface and slope drainage systems, including inlets, drainage structures, ditches, culverts, bridges, road crowning, insloping and outsloping, are functional,	Road 14, RE 980.4.1, In proximity to WC J5220.04, heavy water flow down the road ditch has caused 2 culvert ends to become buried with gravel and sand, obstructing flow. A third culvert end is approximately 70% buried, flow has been altered and some flow appears to be going subsurface. Operator was present at the time of the inspection as is aware of the issues. Please verify with pictures once the work has been completed.
15-Jun-2023	2023-1624	OGAA	DRPR	47(h)	(h) a sufficient area beneath and around the flare stack is free of combustible materials and vegetation.	Area beneath flare stack is to be free of combustible materials and vegetation. Please refer to the Flaring and Venting Reduction Guideline Section 6.4.
15-Jun-2023	2023-1624	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LEL was detected with personal monitor (alarmed) inside separator building.
20-Jun-2023	2023-1655	OGAA	EPMR	17(a)	(a) not cause the soil of the area to become unstable, and	KP 186+500, west side slope on WC 199 and wet land 11609, has become unstable with soil movement that has gone off ROW on the S/W aspect into the tree line and towards the wet land. Please provide a remediation plan for the slope and that delineates the off ROW sediment and includes a time frame for remediation work to be completed.
20-Jun-2023	2023-1655	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	KP 186+500, west side slope on the ROW has become unstable with soil movement that has entered wetland 11609 and with sediment laden water that has entered WC 199. Please provide a remediation plan that delineates the sediment deposit in WL 11609 and NTU levels in WC199. Please include a time frame for completion of the remediation work.
21-Jun-2023	2023-1676	OGAA	DRPR	77(1)(c)	(c) the legal description of the site;	The signage on the gate to the Facility reads "c-60-J/94-A-12". -the location that is in the records/files for this facility is: D-51-K/94-A-12. -I believe the location on the signage to be incorrect as per the BCER database. *I believe Secure Energy needs to be in contact with the BCER in order to get this issue corrected ASAP
21-Jun-2023	2023-1669	OGAA	DRPR	25(5)(b)	(b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means.	There has been no production from this well since 2018. Ensure equipment is emptied of liquids and pipeline is deactivated as per CSA Z662.
22-Jun-2023	2023-1658	OGAA	OGRR	7(2)(c)(i)	(i) correct the defect or deficiency;	Complaint received of significant holes observed in the bridge deck for the bridge at 10.3km on the Tenaka Road. CNRL was made aware of this defect in July 2022 at the time of Incident #77380045 at WA 06343 (c-92-F/094-J-02). Please see Oil and Gas Road Regulation section 7 for options to repair, replace, remove or restrict access. Please also ensure adequate signage is present warning of the hazard.
23-Jun-2023	2023-1712	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	NC: garbage observed site; specifically, pieces of torn pipeline snake wrap/insulation (See attached photos).
23-Jun-2023	2023-1709	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	Well Head: NC: Shanghai listed on signage for A-32-K/9-I-6 (non-compliant: company listed should be NTE info), signage non-compliance (see attached photo).

23-Jun-2023	2023-1709	OGAA	DRPR	18(9)(c)	(c) the surface casing is equipped with an open valve.	NC: surface casing vent valve was observed as closed (see attached photo).
23-Jun-2023	2023-1706	OGAA		37(1)(b)	(b) promptly report to the commission any damage or malfunction likely to cause spillage that could be a risk to public safety or the environment.	Note: bull plug missing on pipeline (see attached photo).
23-Jun-2023	2023-1706	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Flow lines: garbage on site from pipeline insulation/snake wrap on the ground (adjacent to flow /pipelines)(see attached photos)
23-Jun-2023	2023-1702	OGAA	DRPR	18(9)(c)	(c) the surface casing is equipped with an open valve.	NC: Well Head did not have a SCV pipe attached to well head casing, a detached SCV pipe was located/stored in the well building (see attached photos).
23-Jun-2023	2023-1701	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Some pipeline insulation and snake wrapping observed on the ground (see attached photos).
23-Jun-2023	2023-1695	OGAA	DRPR	15(1)(c)	(c) the location of the surface site of the well as specified in the well permit;	Location on sign is faded. All else ok.
23-Jun-2023	2023-1694	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Snake Wrap on ground.
23-Jun-2023	2023-1692	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Snake Wrap observed on ground.
23-Jun-2023	2023-1684	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Snake Wrap on ground.
23-Jun-2023	2023-1683	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Snake Wrap on ground near wellhead and below flowline.
23-Jun-2023	2023-1682	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Snake wrap insulation on ground.
23-Jun-2023	2023-1681	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Snake wrap and other loose insulation on the ground.
23-Jun-2023	2023-1681	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	Excavation of contaminated dirt by animals observed underneath well building (current and historic chem leak on floor in well building) and beneath chem tank containment drain. See attached photos.
23-Jun-2023	2023-1680	OGAA		37(1)(a)	(a) prevent spillage, and	Caps/plug missing off needle and ball valves on the pigging valves
26-Jun-2023	2023-1687	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Snake Wrap on ground.
27-Jun-2023	2023-1723	OGAA		37(1)(a)	(a) prevent spillage, and	Drain plug for secondary containment not installed, sitting on edge of secondary containment.

28-Jun-2023	2023-1750	OGAA	DRPR	79(2)(b)	(b) immediately notify the commission if the suspension continues for more than 12 consecutive months.	Facility has been removed. In the comments section of the July 2022 inspection for this facility it was noted that the Facility was removed at that time, and a request was made to submit the NOI. The facility currently (still) shows as Active. Please submit NOI .
29-Jun-2023	2023-1746	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Flow Lines: flow lines valves are open- "Active" status. NC: 1) flow line low point drain valve leaking and 2) no bull plug installed (See Attached Photos).
29-Jun-2023	2023-1746	OGAA		37(1)(a)	(a) prevent spillage, and	Well Facility: NC: d-B3-J/94-P-04: suitcase cabinet for the well site has high LEL observed (Altair-5x), there is a plug missing on the chemical valve and also another small leak on another valve (See Attached Photos).
29-Jun-2023	2023-1744	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	NC: signage non-compliant: company "Shanghai" is listed instead of NTE, also no flammable gas symbol / label posted on sign (See Attached Photo). Also NC applicable: DPR Sec. 15(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1.
29-Jun-2023	2023-1743	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	NC: Signage not in compliance: Missing flammable gas symbol and NTE company name (shows "Shanghai") (See Attached Photos). Also note DPR Sec. 15(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1.
29-Jun-2023	2023-1740	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	NC: Signage still showing "Shanghai" it should be identified as NTE, also missing flammable safety symbol (See Attached Photo): DPR Sec. 15(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1.
29-Jun-2023	2023-1737	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	Excavation by animals of contaminated dirt on ground below Argus Pig Sender (produced water, corrosion inhibitor, methanol in soil). Photos and commentary provided to Allsion Burgess by email (see Inspection Notebook).
29-Jun-2023	2023-1734	OGAA		37(1)(a)	(a) prevent spillage, and	Chemical tanks: NC: containment is missing bull plug (only valve).
4-Jul-2023	2023-1858	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	The valves have a slight intermittent odour and it appears they need to be serviced/greased as evident by the old grease weeping onto the ground.
4-Jul-2023	2023-1857	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	The annulus valve on the side with the transmitter is leaking sweet gas as evident by sound and smell.
4-Jul-2023	2023-1757	OGAA	OGRR	12(d)	(d) the road can be used safely by permit holders.	A bridge inspection was finally received 14 months after the initial request. This bridge had not been inspected before and the engineer's report has identified maintenance measures and general comments that need to be done to maintain bridge safety. The engineered standard of inspection has identified the bridge superstructure as a low rating of 2 due to safety concerns of the deck condition. The other issue is the bridge rating is 50 tons yet the sign before the bridge is for 60 tons and greater than the capacity of the bridge.
5-Jul-2023	2023-1831	OGAA	DRPR	25(5)(b)	(b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means.	There has been no production from this well since 2009. Wellhead is still connected to flowline.
6-Jul-2023	2023-1888	OGAA	OGRR	11.2(1)(a)	(a) become established in the roadwork areas for the oil and gas road, or	There are invasive weeds at the staging/ pull over area at approximately km 21 , top of the hill, on the east side of the Moose Lick Creek bridge. There is also a small amount of garbage at the site. Thank you
6-Jul-2023	2023-1875	OGAA	DRPR	78(6)(b)	(b) the facility site is clean and free of garbage, debris and derelict equipment.	In reviewing pictures of the inside of the compressor building from August 2020 there were materials scattered across the floor. I was not able to go inside the buildings on site to determine the extent of the mess as the doors were strapped shut. There was some cleaning up that should have been done when the site was declared suspended and clean by Tidewater in Sept 2020. For this inspection, vandalism is rampant and a site clean up is required. All loose materials need to be removed from the site to deter this activity, prevent hazards and material from leaving the site. Placing the materials in the buildings and strapping the doors won't work any more. I had noticed the strewn materials inside the buildings years ago (2016) and as long as it was inside the buildings there was not a big concern and it was expected the materials would be addressed at the time of proper facility suspension.

6-Jul-2023	2023-1870	OGAA	DRPR	78(6)(b)	(b) the facility site is clean and free of garbage, debris and derelict equipment.	The last inspection completed on July 15th 2021 identified the same issues as this inspection. The work from 2021 was not completed. Please see pictures in the attachments from both years. The response that was made to the deficiency stated the site had been cleaned up to a passable condition, however, nothing was done. False responses are covered under Section 81 of the Oil and Gas Activities Act. The loose materials on the ground around the lease, inside and outside the line heater/ separator building needs to be removed from the lease. It is not going to be acceptable to just put the loose materials back in the building as the building is missing a wall. All that is to remain in this building are those items fixed to the floor or wall. Some of these items were identified in the past inspection. The compressor and line heater/separator building are to be suspended properly. Please see the guidance on our webpage as to what is expected such as removal of oil barrels etc. The legislation change in January 2023 requires proper suspension and a notice to be sent in. The aluminum covering for the line heater has failed again and all insulation, not just the exposed insulation around the line heater, must be removed as it is attracting wildlife and they appear to be ingesting the chalky fibrous insulation. Since deficiency work was not completed last time it is requested that photos of the corrective measures (before and after) accompany the responses.
6-Jul-2023	2023-1870	OGAA		37(2)(c)	(c) remediate any land or body of water affected by the spillage;	The exterior compressor oil tank had an overflow in the drip tray. The oil went to the ground. The stained ground needs to be removed.
6-Jul-2023	2023-1790	OGAA		37(1)(a)	(a) prevent spillage, and	Secondary containment has fluid present and no bull plug. Primary containment also is approx. 1/3 full of chemical.
7-Jul-2023	2023-1918	OGAA	EPMR	17(a)	(a) not cause the soil of the area to become unstable, and	Loss of soil stability has impacted the watercourse.
7-Jul-2023	2023-1848	OGAA	DRPR	25(5)(b)	(b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means.	CNRL's Operational Status (as per CNRL) is SUSPENDED for this well, yet there is no chain and lock on the wellhead valves, and there is no flowline disconnect from the wellhead. The status of this well in the IRIS database is still showing as ACTIVE. Please update your records with the BCER and complete the above noted on location.
7-Jul-2023	2023-1844	OGAA	DRPR	15(1)(c)	(c) the location of the surface site of the well as specified in the well permit;	The location on the signage at the lease entrance is incorrect. The sign reads “b-51-J/94-A-13” This is the only location signage that I found. The correct location is c-51-J/94-A-13
11-Jul-2023	2023-1885	OGAA	DRPR	18(9)(c)	(c) the surface casing is equipped with an open valve.	There is no visible surface casing vent valve. Ensure there is no valve below ground level.
11-Jul-2023	2023-1885	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Leak at wellhead to be repaired.
12-Jul-2023	2023-1920	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	This well has been “INACTIVE” for 29.5 months as per the IRIS database. -The wellhead valves need to be chained and locked or removed to prevent interference, -Also, once suspension has occured, a suspension/inspection report must be submitted.
12-Jul-2023	2023-1916	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Wellhead was covered in hydrocarbons and staining on ground. Staining on ground should be cleaned up. There is a slight movement on stuffing box. Bolts may be backing off.
13-Jul-2023	2023-1926	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Check valve on drain line at pop tank is leaking.
13-Jul-2023	2023-1912	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	NC: Spillage - gas leak noted from Well Head - Wing Valve Packer: Altair-5x meter over range LEL recorded (noted gas leak is a non-compliance).
13-Jul-2023	2023-1912	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	NC: Spillage - fluid, observed a patch of dead grass at base of well head “B”, spillage to be confirmed with client. Request client to respond to spillage/dead grass concerns.
13-Jul-2023	2023-1912	OGAA		37(1)(a)	(a) prevent spillage, and	NC: Chemical containment = non-compliance as containment drain plug missing (rusted away) or ineffective to contain a spill (See Attached Photos).

13-Jul-2023	2023-1912	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	NC: measured high LEL (Altair-5x) from door of well building, Alleged Non-Compliance: gas spillage non-compliance from c-1-d building, inspector did not enter building.
13-Jul-2023	2023-1911	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Well building: NC: gas leak detected/measured as an over range/high LEL (Altair-5x) at entrance/door (no entry). Non-compliance gas spillage was noted, since presence of gas leak no further inspection of the well building was completed.
13-Jul-2023	2023-1905	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	NC: Well building: one catadyne regulator vent line missing (See Attached Photo).
13-Jul-2023	2023-1905	OGAA	PREG	3(1)(a)	(a) the pipeline that is the subject of the permit;	Pig barrel cover chain missing/not attached (See Attached Photos).
13-Jul-2023	2023-1890	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	NC: Well Head: ESD low pressure valve open, not chained or locked. ESD high pressure valve locked (See Attached Photos). Pressure sensor on the well head tubing, valve was also not locked (See Attached Photos).
13-Jul-2023	2023-1889	OGAA	DRPR	25(5)(b)	(b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means.	NC: Flowlines are not disconnected but the flowline valves are closed. KERMIT last production rate recorded for site: 2020-03 (greater than 14 months no production) (See Attached Photos). Well site flowlines should be suspended in the field (blinded/disconnected).
13-Jul-2023	2023-1882	OGAA		37(1)(a)	(a) prevent spillage, and	Cap/plug missing off needle valve on flow line before exiting meter building. Spoke with contractor July 14, 23
13-Jul-2023	2023-1880	OGAA		37(1)(a)	(a) prevent spillage, and	Cap/Plug missing on stainless steel tubing above flowline
13-Jul-2023	2023-1877	OGAA	DRPR	25(5)(b)	(b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means.	Flowlines not diconnected or positon isolation from well.
13-Jul-2023	2023-1877	OGAA		37(1)(a)	(a) prevent spillage, and	Stainless steel tubing from ball valve on flowline, around right side of building to the end of tubing no cap/plug Contacted operator July 15, 23
13-Jul-2023	2023-1872	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LEL's in well building and also a side building off compressor building. Operator contacted from location
17-Jul-2023	2023-1921	OGAA	OGRR	8(1)(a)	(a) a reflective marker on each corner of the bridge,	Safety signage is missing at the bridge (3.8km marker of Road # 00150), located at the following coordinates: 120.8099863°W 59.2396934°N; specifically, reflective markers on each corner of the bridge and a sign indicating narrow structure ahead (both approaches) (See Attached Photos). Also applicable: OGRR 8 (1) A road permit holder must, for each bridge associated with the oil and gas road, place and maintain (b) a sign that indicates there is a narrow structure ahead, and
18-Jul-2023	2023-1971	OGAA		37(1)(a)	(a) prevent spillage, and	Drain plug missing on secondary containment
18-Jul-2023	2023-1970	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LEL's in seperator building set off personal monitor
18-Jul-2023	2023-1956	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	This deficiency is for 14 days but could be extended to match the 30 day timeframe for the scattered materials that need to be removed. The concern for this deficiency is that there are a few floor grates missing which creates a fall/injury hazard. The picture in the NOTEBOOK section show 1 of 3 or so that are missing.
18-Jul-2023	2023-1956	OGAA	DRPR	78(6)(b)	(b) the facility site is clean and free of garbage, debris and derelict equipment.	
18-Jul-2023	2023-1955	OGAA		37(1)(a)	(a) prevent spillage, and	Bullplug missing from valve on overhead Lube Oil tank on tank stand.
19-Jul-2023	2023-2000	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	Sign at Road entrance and sign on well require a flammable label

19-Jul-2023	2023-1995	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	No sign on well, this was identified on a KERMIT inspection 057557615-001, Aug 28, 2019 15. (1) Until the well is abandoned, a well permit holder must ensure that a permanently legible and conspicuous sign is displayed and maintained at each well, and that sign must show all of the following: (a) the name of the well permit holder; (AM) Jun 01/17 (b) current emergency notification information, including a telephone number; (c) the location of the surface site of the well as specified in the well permit; (AM) Aug 13/12 (d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1; (AM) Aug 13/12 (e) if the well may produce gas containing 100 ppm or greater of hydrogen sulphide, a poisonous gas symbol from Schedule 1; (AM) Aug 13/12 (f) after March 1, 2011, if the well may produce gas containing 10 ppm or greater of hydrogen sulphide, a poisonous gas symbol from Schedule 1.
19-Jul-2023	2023-1995	OGAA		37(1)(a)	(a) prevent spillage, and	Ball valve open positon on bttom side of pigging barrel and missing cap/plug
19-Jul-2023	2023-1995	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	All signs on location to to comply with 15(1)(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;
19-Jul-2023	2023-1986	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	25(5) The well permit holder of an inactive well, within 60 days of the well becoming inactive, must do both of the following: (a) suspend the well in a manner that ensures the ongoing integrity of the well; (b) ensure positive isolation between the well and the flowline by disconnecting the well from the flowline or by other means Last production record submitted 2021-07
19-Jul-2023	2023-1985	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	Signage on both wells to meet requirements of D&PR 15 (1) (a) to (f)
19-Jul-2023	2023-1985	OGAA		37(1)(a)	(a) prevent spillage, and	Cap /plug missing on needle valve off annulus.
19-Jul-2023	2023-1965	OGAA	DRPR	15(3)(a)	(a) that the well site is maintained in a condition so as to minimize hazards, including but not limited to hazards associated with pits, holes, storage of materials and equipment;	The well WA 24387 at location a-20-L/94-A-15 has been cancelled since 2010. The lease has been constructed and an open cellar full of water, with no barricade and a pit are on lease. The open cellar is a hazard and needs to be filled in. Please provide a date when restoration on the lease will be started.
20-Jul-2023	2023-2035	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	Parent well: NC: open hole, exposed steel piling (missing cover) (See Attached Photo).
20-Jul-2023	2023-2032	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Well cabinet A: NC: Gas spillage noted on the PSV gas meter valve: vent line has a continuous flow (non-compliance) (see attached photo).
20-Jul-2023	2023-2031	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	NC: Gas spillage noted on the Well Building Facility: Gas Fisher (6-12) fuel gas scrubber line has a continuous flow (non-compliance) (See Attached Photo).
20-Jul-2023	2023-2002	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	the wellhead has a leak. I can hear it and can smell H2S. The leak has already been tagged as leaking and H2S present, therefore I am making this a 24 hour non-compliance due to the leak already being tagged and not being repaired.
20-Jul-2023	2023-1996	OGAA		37(1)(a)	(a) prevent spillage, and	C-B72-F building LEL's caused personal monitor to alarm. Inspection stopped. Bench Creek operator advised on LEL's and signage.
21-Jul-2023	2023-2007	OGAA	DRPR	18(9)(a)	(a) the surface casing annulus can freely vent,	SCV to vent outside of building
25-Jul-2023	2023-2062	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Ball valve below Hi pressure switch for ESD not secured.
25-Jul-2023	2023-2062	OGAA	PREG	3(1)(a)	(a) the pipeline that is the subject of the permit;	Pressure Alert Safety Chain detached from relief valve

26-Jul-2023	2023-2087	OGAA	DRPR	77(1)(d)	(d) if the facility handles flammable gas, a flammable gas symbol from Schedule 1;	On June 21, 2023 I did an inspection at this location. In that inspection, I made comments in regards to the signage on the gate did not have a flammable symbol on it as required. I also noted, that the surface casing vent assembly had come apart and was not being vented outside of the wellhead building, as required. I asked that when this was completed to contact me to let me know, which has not happened as of yet. I drove by there yesterday and noticed that no flammable symbol had been added on the location signage on the gate, as of yet, therefore I am now adding this as a non-compliance.
26-Jul-2023	2023-2085	OGAA	DRPR	47(h)	(h) a sufficient area beneath and around the flare stack is free of combustible materials and vegetation.	A 45 gallon barrel under flarestack is being used to manually drain off vertical fuel gas line up flarestack. Flarestack is on a slope and barrel is on uneven terrain and leaning against flarestack, There is also a concern of barrel tipping over causing a spill.
26-Jul-2023	2023-2085	OGAA	PREG	3(1)(a)	(a) the pipeline that is the subject of the permit;	Pig barrel has had the safety alert valve and safety chain removed. CSA Z662 Section 4.3.13.1
26-Jul-2023	2023-2085	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Overflow line on one of the production tanks is leaking. Cap is on an angle and needs proper insertion. Inlet header building, group/test separator building and treater building all have leaks or weeping on lines. These buildings need to be thoroughly gone through and leaks repaired. Sight glass drains in group/test separator building and treater building should be plugged. Treater high pressure shut down drain should be capped. Fuel gas drain at lineheater should be capped.
26-Jul-2023	2023-2085	OGAA	DRPR	25(5)(a)	(a) suspend the well in a manner that ensures the ongoing integrity of the well;	Casing of wellhead is to be positively isolated from flow line at wellhead. This line is connected to discharge line off booster compressor. Wellhead valves are to be secured. As per Drilling and Production Regulation 25 (2) The well permit holder of an inactive well must submit a report to the commission within 30 days of suspension of a well.
1-Aug-2023	2023-2164	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Spillage: gas leak observed on the chemical stainless-steel line (T-fitting) adjacent to well head (See Attached Photo).
1-Aug-2023	2023-2142	OGAA	DRPR	18(9)(c)	(c) the surface casing is equipped with an open valve.	Surface casing valve appears to be in a closed position, due to the SCV pipe angle against the well head.
1-Aug-2023	2023-2127	OGAA		37(1)(a)	(a) prevent spillage, and	No bull plug in secondary containment of large chemical tank which contains approx. 800 liters of fluid.
1-Aug-2023	2023-2119	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LEL's in meter skid overranged monitor Operator contacted, came to location shut in well, found to be a regulator leaking.
2-Aug-2023	2023-2157	OGAA		37(1)(a)	(a) prevent spillage, and	Cap/plug missing off a regulator, Cap/plug missing off needle valve on flow line
2-Aug-2023	2023-2157	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LEL's in meter skid alarming personal monitor Operators in the area notified.
2-Aug-2023	2023-2145	OGAA		37(1)(a)	(a) prevent spillage, and	Fuel gas tubing at well not capped or plugged
2-Aug-2023	2023-2145	OGAA	DRPR	16(1)(a)	(a) that all tools and equipment used in well operations, production, injection or disposal are installed and operated in accordance with the manufacturer's specifications or sound engineering practices,	Injection pump cover detached from pump
2-Aug-2023	2023-2132	OGAA	DRPR	49(1)(a)	(a) the purpose of the bypass or disablement is to carry out maintenance or commissioning of the well or facility,	4660 Hi Low AMOT is in the over ride position Fuel gas ESD Bypass pad lock not secured

2-Aug-2023	2023-2131	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LEL's in meter building set off personal alarm at low level. Levels were higher at top of entrance door, Building enter as per BCER , no venting or airing of the building prior to montioring.
2-Aug-2023	2023-2130	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LEL's in meter building overranged monitor and with lower levels of O2 Found the levels to be high at the top of the door entrance. Building entry as per BCER procedures, building not vented (aired) out first.
3-Aug-2023	2023-2166	OGAA	OGRR	8(1)(a)	(a) a reflective marker on each corner of the bridge,	Missing reflective sign on bridge corner, see attached photo.
8-Aug-2023	2023-2167	OGAA		37(2)(b)	(b) contain and eliminate the spillage;	Secondary containment for production tank is full of liquids. Liquids appear to be hydrocarbons. Secondary containment is compromised and liquids have been seeping out and pooled in a couple areas around outside of containment. Contaminated liquids have ran under and past building off the north west corner of secondary containment. Surface water/liquids with a sheen has ran to north side of lease. To the east of the production tank are two other containments with multiple 45 gallon barrels in each. Contaminated liquids and sludge from these containments have ran over. The contaminated liquids from one of the containments may have migrated under a pile of concrete. The liquids from the second containment is migrating north in same area as contamination from production tank secondary containment. A garbage bin on east side of lease along fence line is full of miscellaneous garbage and liquids. The liquids are at the top of the garbage bin and has most likely ran over. Along fence line behind the garbage bin there has been a lot of beaver activity and trees have fallen over across fence. This area should be inspected for danger trees. Staining around compressors to be cleaned up. All spillage on this site needs to be contained, existing spill areas delineated and plans forwarded for cleanup of spill and site. All liquids from any equipment, tanks, barrels, bins and containments are to be removed from this facility site and abandoned wellsite area.
10-Aug-2023	2023-2208	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	LELs detected in test separator building.
10-Aug-2023	2023-2207	OGAA	DRPR	49(2)	49 (2) Subject to subsection (1), a permit holder must lock or car seal any valve or device that can bypass or disable safety equipment at a well that is producing, injecting or disposing of fluids, or at a facility.	Car seal or lock required on Streamflow pilot controller valve.
10-Aug-2023	2023-2196	OGAA	DRPR	78(6)(b)	(b) the facility site is clean and free of garbage, debris and derelict equipment.	Derelict equipment, garbage and debris is to be removed from site.
10-Aug-2023	2023-2196	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	Derelict equipment, garbage and debris is to be removed from site.
11-Aug-2023	2023-2202	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Observed bubbles from multiple areas in water where soils have subsided at abandoned well center. Methane was detected at and around water with a methane detector and approximately 1m to northwest from water. As per OGAA 37 (2) If spillage occurs, a permit holder, an authorization holder or person carrying out an oil and gas activity must promptly do all of the following: d)if the spillage is a risk to public safety or the environment, report to the commission (i)the location and severity of the spillage, and (ii)any damage or malfunction causing or contributing to the spillage.

14-Aug-2023	2023-2259	OGAA	DRPR	15(1)(c)	(c) the location of the surface site of the well as specified in the well permit;	Location on a-53-J well sign is unreadable.
14-Aug-2023	2023-2259	OGAA		37(1)(a)	(a) prevent spillage, and	Open port on valve at a-A53-J chemical tank containment drain.
15-Aug-2023	2023-2230	OGAA	DRPR	49(1)(a)	(a) the purpose of the bypass or disablement is to carry out maintenance or commissioning of the well or facility,	The Hi Lo AMOT in the meter/seperator building in the over-ride position.
15-Aug-2023	2023-2225	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Injection tubing coupling leaking outside of building dripping on the ground
17-Aug-2023	2023-2237	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	No sign on at at well, the following required DP&R 15. (1) Until the well is abandoned, a well permit holder must ensure that a permanently legible and conspicuous sign is displayed and maintained at each well, and that sign must show all of the following: (a) the name of the well permit holder; (b) current emergency notification information, including a telephone number; (c) the location of the surface site of the well as specified in the well permit; (d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1; ((e) if the well may produce gas containing 100 ppm or greater of hydrogen sulphide, a poisonous gas symbol from Schedule 1; (f) after March 1, 2011, if the well may produce gas containing 10 ppm or greater of hydrogen sulphide, a poisonous gas symbol from Schedule 1. (2) A well permit holder must not post warning symbols where no hazard exists.
17-Aug-2023	2023-2217	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	Injection regulator not vented to atmosphere
17-Aug-2023	2023-2217	OGAA		37(1)(a)	(a) prevent spillage, and	Needle valve on tree off flow line missing cap/plug Regulator and needle valve to the right of entry door missing cap/plug on both
17-Aug-2023	2023-2217	OGAA	DRPR	49(1)(a)	(a) the purpose of the bypass or disablement is to carry out maintenance or commissioning of the well or facility,	Hydraulic AMOT in over ride position with ESD in open position.
21-Aug-2023	2023-2337	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	NC: Garbage on site, flowline snake wrap materials (wrap/insulation) falling/hanging from flowlines and wrap/insulation distributed onto the ground (See Attached Photos).
21-Aug-2023	2023-2326	OGAA	DRPR	15(3)(b)	(b) that the well site is free of garbage, debris and derelict equipment.	NC: Garbage on site, flowline snake wrap materials (wrap/insulation) falling/hanging from flowlines and wrap/insulation distributed onto the ground (See Attached Photos).
21-Aug-2023	2023-2300	OGAA		37(2)(b)	(b) contain and eliminate the spillage;	NC: Spillage noted at base (on the ground) of pig barrel. Evidence of alleged wildlife digging / excavation noted below pig barrel. Type of alleged spillage (fluid) absorbed into the forest floor became an attractant to wildlife (possible bear) (See Attached Photos). Spillage may have occurred during working / servicing the pig barrel.
21-Aug-2023	2023-2275	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	NC: Signage: Flammable symbol missing/not posted on well building (See Attached Photo).
21-Aug-2023	2023-2274	OGAA		37(2)(b)	(b) contain and eliminate the spillage;	WA#12710_b-76-G/94-P-15: Aug. 21_2023 14:03 hrs. Gas spillage/leak noted on well head: reported occurrence to CNRL. BCER inspectors left area due to possible safety reasons. CNRL responded to notification of leak at 16:39hrs same day, of which repair of leak had been completed.

21-Aug-2023	2023-2273	OGAA	DRPR	47(f)	(f) all vessels and equipment from which ignitable vapours may issue are safely vented to the atmosphere;	NC: Catadyne regulator vent line not connected in well building (See Attached Photo).
21-Aug-2023	2023-2272	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	NC Signage: Flammable symbol required, not posted at location on well building (See Attached Photo).
21-Aug-2023	2023-2271	OGAA	DRPR	15(1)(a)	(a) the name of the well permit holder;	NC Signage: Company information (Name/contact info) and other required information not listed at location on well building (See Attached Photo).
22-Aug-2023	2023-2313	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Appears that the valve stem is leaking on the wellhead. It is stinky with H2S present.
24-Aug-2023	2023-2291	OGAA	PREG	7(3)	7 (3) A pipeline permit holder must not construct or operate a pipeline approved by the permit unless the holder has first prepared a pipeline integrity management program.	
29-Aug-2023	2023-2487	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	Well Head # 18855 = NC: Posted signage is not compliant to standards at well site: 1) missing flammable safety symbol (DPR Sec. 15(1)(d) and 2) company name/formation is outdated (Shanghi list not NTE) (DPR Sec. 15(1)(a)). See attached photos.
29-Aug-2023	2023-2484	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	Well Head # 15835 and 18930 = NC: Posted signage is not compliant to standards on both wells on site: 1) missing flammable safety symbol (DPR Sec. 15(1)(d) and 2) company name/formation is outdated (Shanghi list not NTE) (DPR Sec. 15(1)(a)). See attached photos. Proposed non compliances for two well of the DPR 1Sec. 15(1)(d) and DPR Sec. 15(1)(a) - is being submitted/grouped as one incident. Note: It was determined that Well Head # 15835 flammable symbol posted was not readily visible and portions of the symbol were removed/torn/missing; therefore, not discernable and a non-compliance.
29-Aug-2023	2023-2439	OGAA	PREG	3(1)(a)	(a) the pipeline that is the subject of the permit;	Pipeline Regulation Section 3 also refers to abandonment of pipelines. Please refer to CSA Z662 Section 10.16. Cathodic protection post on pipeline right of way is still in place. Pipeline is exposed at stream crossing on right of way. Please complete a thorough inspection of access and pipeline right of way and assess stability of wellsite. Forward inspection and plan with timeline for remediation by remedial action date. Any works on access or in stream work will require appropriate permits.
29-Aug-2023	2023-2431	OGAA	DRPR	15(1)(c)	(c) the location of the surface site of the well as specified in the well permit;	Signage is not clearly displayed for this well.
29-Aug-2023	2023-2429	OGAA	DRPR	78(6)(a)	(a) the facility is maintained in a condition that minimizes hazards, including hazards associated with pits, holes, equipment and storage of materials;	NC: Non-compliance - two open holes (pilings) were observed (safety Issue) - (See Attached Photos).
29-Aug-2023	2023-2421	OGAA	DRPR	15(1)(e)	(e) if the well may produce gas containing 100 ppm or greater of hydrogen sulphide, a poisonous gas symbol from Schedule 1;	NC: both signages posted for well location are missing flammable symbol and correct/updated company name (Shanghi Energy Corp. listed not NTE) (See Attached Photo). Also Note: Meter calibration date: Jan. 10, 2015 (NTE to provide BCER inspector with status of meter calibration; specifically, confirmation of last meter calibration date performed for the two well authorities # 20432 an 20433).
29-Aug-2023	2023-2408	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	NC: Spill observed below the ARGUS pig barrel, dead grass observed due to fluid spillage on the ground at the time of maintenance (See Attached Photo).
29-Aug-2023	2023-2397	OGAA	OGRR	12(d)	(d) the road can be used safely by permit holders.	The road fill over the culvert has failed again. The warning flagging tape and wood tripod has fallen down and I was just able to see that at the last moment before driving into the washout. This has been repaired in the past and led to a deficiency to get a road permit. The material that was placed in the washed out portion for the repair did not hold in place and a more substantial material should be used.

29-Aug-2023	2023-2365	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	During the boring of Water Course J138.99 located at approximately KP 144+100, a fluid / mud release occurred causing an estimated 40 cubic meters of drill fluid / mud to run down the water course and enter and be deposited into a wetland off right of way. The wetland and channel of J138.99ares to be delineated and mapped to determine the full extent of the fluid / mud release and the documentation is to be provided to the BCER on or before 4:00 PM, September 8, 2023. The wetland is to have a fish and amphibian assessment completed by a qualified professional and the results are to be provided to the BCER on or before 4:00 PM September 8, 2023. A remediation plan is to be developed. The plan will include a timeline for completion of the remediation of the fluid / mud release into the S6 channel and wetland. The plan is to be provided to the BCER on or before 4:00 PM September 8, 2023.
29-Aug-2023	2023-2355	OGAA	DRPR	15(1)(c)	(c) the location of the surface site of the well as specified in the well permit;	Sign on the well has incorrect DLS location. Sign indicates 06-24-79-20 the WA 25454 is attached to 06-24-79-21
29-Aug-2023	2023-2355	OGAA		37(2)(a)	(a) remedy the cause or source of the spillage;	Leak off meter
30-Aug-2023	2023-2475	OGAA	EPMR	12	12 A person who carries out an oil and gas activity on an operating area must ensure that the oil and gas activity does not result in any deleterious materials being deposited into a stream, wetland or lake.	There is a lot of mud that covers the bridge decking and there is evidence that it has made its way into the stream. It was observed from the erosion that sediment laden water coming down both hills flows right onto the bridge decking. A good reference document is from the Forest Practices Guidebooks (Forest Road Engineering) that discuss various water management techniques for removal of road surface water including swales.
30-Aug-2023	2023-2475	OGAA	OGRR	13(1)(a)	(a) ensure that road surface and slope drainage systems, including inlets, drainage structures, ditches, culverts, bridges, road crowning, insloping and outsloping, are functional,	The bridge located 300 m north of the well site CNRL CYPRESS B- 024-L/094-B-15 has a very deep layer of mud on it. There is no drainage and the decking will rot posing a safety hazard. On the north and downstream side of the bridge there is a hole beside the bridge where water has been eroding the fill. Photos will be uploaded into the inspection
30-Aug-2023	2023-2473	OGAA		21(b)(ii)	(ii) a permit issued to the person, if any, and	There are a few seismic lines that the road crosses. One in particular should have had the line of sight barrier installed and it is quite evident when one walks the road. The seismic line leads toward a stream and agricultural land which is a natural attractant and the seismic line a travel corridor for wildlife. This should have been installed at the time of road construction.
30-Aug-2023	2023-2473	OGAA	EPMR	15(c)	(c) if on a well site or a facility area, ensure that invasive plants do not become established on the wellsite or facility area.	Scentless Chamomile has become established on not only parts of the wellsite but isolated patches and individuals on the road. Due to drought and time of year, the plants are shutting down and there is not enough foliage for a spot spray to be effect. The plants have seed heads that are ready to disperse and consideration needs to be given to deal with this seed source and plan for next years treatment when the plants start growing. Not looking for a broadcast spray as there are many benefits to maintain non-invasive plants.
30-Aug-2023	2023-2469	OGAA		37(1)(a)	(a) prevent spillage, and	Bull plug missing from secondary containment with Methanol present in primary tank.
31-Aug-2023	2023-2490	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	Well Head # 20080 = NC: Posted signage is not compliant to standards at well site: missing flammable safety symbol (DPR Sec. 15(1)(d) . See attached photo.
31-Aug-2023	2023-2488	OGAA	DRPR	15(1)(d)	(d) if the well may produce flammable gas, a flammable gas symbol from Schedule 1;	Well Head # 16830 = NC: Posted signage is not compliant to standards at well site: missing flammable safety symbol (DPR Sec. 15(1)(d) . See attached photo.
31-Aug-2023	2023-2392	OGAA		37(1)(a)	(a) prevent spillage, and	Drain valve on steel chem tank containment is open. Bullplug is missing from open drain valve.

31-Aug-2023	2023-2383	OGAA		37(1)(a)	(a) prevent spillage, and	Several items requiring attention under OGAA 37(1)(a) 1. Bullplug missing on 1/4 turn valve at wellhead wing valve. 2. Open tubing from chart recorder (tied to 3 way EFM manifold) and from vertical separator HL S/D. 3. Vertical separator PSV tied to piping that is open to the building atmosphere. 4. (photos available from peter.smith@bc-er.ca)
1-Sep-2023	2023-2411	ERAA		37(1)(a)	(a) prevent spillage, and	Bull plugs are missing on piping manifold inside tank berm.
1-Sep-2023	2023-2411	ERAA	DRPR	15(3)(a)	(a) that the well site is maintained in a condition so as to minimize hazards, including but not limited to hazards associated with pits, holes, storage of materials and equipment;	Unused and damaged chemical pails outside power building and old barrels and other pieces of derelict equipment (old well head and piping) must be cleaned up and removed.
5-Sep-2023	2023-2444	ERAA		37(2)(b)	(b) contain and eliminate the spillage;	Spillage from pipeline break of August 29, 2023 to be contained and eliminated.
