21-Feb-2018	0449981652-001	Westcoast Energy Inc.	23-Feb-2018		From: NTS: D 077-G/093-O-09 To: NTS: A 047-F/093-P-12	Yes	Truck	Passed Inspection (Complete)	23-Feb-2018	22-Feb-2018	Routine	Inspection conducted on new pipeline construction. Multiple areas were inspected. Archeology: Although not specified on the permit this site has been protected with snow fencing to ensure that it was easily identifiable and no work was done within the site. This site was identified by the archeology crew after clearing had already been completed. Snow fencing was placed by landsong to protect the site and no further disturbance has occurred. This site was identified on the permit for it to be avoided by construction. The site was avoided, it is clearly marked with ribbon, snow fencing and has a sign indicating the site identification. No disturbance has occurred within the site. This site was identified on the permit for it to be avoided by construction. The site was avoided, no disturbance has occurred within the site. Snow fencing was erected around the site as well as ribbons and a sign. This site was identified on the permit for it to be avoided by construction. The right of way was adjusted in this location for added protection, the site is now a minimum of 15m into the timber and completely protected from construction activities. It was clearly marked with snow fencing and ribbons. Log decks were inspected and all were found to be within acceptable size according to the permit. The logs decks themselves were not clearly marked with the timber mark. This was discussed during the inspection and the log decks were marked with the timber mark before the end of the day. Stream crossings: It was noticed at 1+425 that there was a steep gulley with a possible creek at the bottom. I was informed that this area did not have a creek, it was identified as no watercourse. Even though it has this determination by qualified field staff, the slopes must be protected against erosion with a proper mitigation plan. 2+200 - P2 - Fur Thief Creek - Actively pumping around at this location. All equipment is in good condition and sitting on adequate containment. Foam diversion trenches were being established for long term erosion protection on the slopes leading down to the creek. The pump around is effective with no leakage at the dam site, pumps are adequately sized and a back up pump is on site for emergency use. The discharge location looks good, no issues. P15 - Rocket Creek - The area has been mostly prepped for construction although construction has not yet began. Currently there is a temporary bridge over the creek which has been well placed with adequate protection for the water course. The rip rap that will be placed at this location will be tied in to the existing rip rap on the older existing right of way.						South			Pipeline, Well

22-Feb-2018	0450482889-001	NorthRiver Midstream Energy Limited	26-Feb-2018		NTS: B 019-A/094-G-08	Yes	Truck	Deficiencies Corrected	3-Apr-2018	22-Feb-2018	Planned	b-19-A/94-G-8 Acid Gas Disposal Well Inspection Meet with Enbridge operators. Review documentation for the maintenance of critical shutdown safety protection equipment associated with acid gas disposal to b-19-A/94-G-8. Found that on the last calibration report, Aug 17, 2015 for PSHH 3008 and PSHH 0103 the settings were set at 10,500 Kpa increasing. PSHH 3008 setting was above the Enbridge approved max wellhead injection pressure of 9600 Kpa. and PSHH 0103 setting was above the Progress Energy max wellhead injection pressure of 9800 Kpa. Found that there was no high high wellhead tubing pressure shutdown programmed into the Fisher ROC on site. Found that the transmitters for the acid gas injection meter runs at the Jedney plant FE 1700, FE 3000, FE 3700, were recently calibrated, but FE 1700 orifice place was not inspected, due to sealing issues with the senior orifice changer. Witness a wellhead ESD test initiated from the Jedney plant control room. The well head ESDV was slow to close, and after actuation there was sour gas detected leaking from the ESDV packing. LEL level was detected using a 4-way monitor on the well surface casing. The last SCVF test done Feb 20, 2017 indicated NIL. The last packer isolation test was done Jan 12 -13, 2017. Action Items: 1. FE-1700 orifice changer not sealing. Schedule maintenance for the next plant Turn-around in 2019. Submit the SAP schedule. Inspect the meter run internal pipe bore and clean the orifice plate. 2. Pent Turn-around 2019- Inspect the internal pipe bore of meter runs FE 3000 and FE 3700. 3.Submit the most recent cathodic inspection reports for the b-19-A acid gas pipeline integrity. Demonstrate that it is being done at regular intervals. 4. Assess the settings and calibrate the High High shutdown set points for PSHH- 3008 and PSHH- 0103 for Enbridge and Progress Energy acid gas disposal wells. 5. Conduct the 2018 annual packer isolation test. Please respond to OGC concerning the above action items and through the KERMIT system for the attached deficiencies.						Central		00464	Pipeline, Well

27-Feb-2018	0452216140-001	Canlin Energy Corporation	2-Mar-2018		NTS: C 012-L/094-H-05	Yes	Truck	Passed Inspection (Complete)	2-Mar-2018	1-Mar-2018	Incident	This inspection is related to the Canlin Energy incident at c-12-L 94-H-5 and the uncontrolled surface casing vent flow. There was a road block set up at the junction of the c-12-L access and Tommy Lakes Road and then a manned road block before the access to the well. Thanks to Troy Lock, Heath Nicholson and Drew Heynen for answering our questions. There were no odours detected on the Tommy Lakes Road. The area is a distance away from any residence. It appears that the plan of action is reasonable and consideration of how to handle any liquids is addressed. A follow up inspection was completed the day after the incident and that will be on a different inspection. OGC Emergency Officer is also the field engineering supervisor and will be following up on any additional requirements such as a repair plan and a post incident report. 28-Feb-2018	044005634-001	ConocoPhillips Canada Resources Corp.	1-Mar-2018			No	Truck	Passed Inspection (Complete)	1-Mar-2018	26-Jan-2018	Routine	This is an inspection for the newly constructed road (#04761) to well site 13-22-88-25. I had the opportunity to talk to the Brandl foreman and ConocoPhillips representative. Thanks to those 2 individuals for our conversation. The road was still being worked on at the time of inspection. Only the new road was inspected and not the lease as it was very busy and we had time constraints. The lease will be inspected at a later date. It is anticipated the km markers for the road will be installed in the near future. Just monitor the road and address any water management issues (especially the two S6 streams that the road crosses) during times of thaw. They had mentioned that the road would be monitored and due to a higher amount of frost in the ground he is anticipating coming back to address any issues that may arise from working with that much frost in the ground. No concerns noted at the time of inspection.						Central			Facility - Inactive
28-Feb-2018	045138115-001	Plateau Pipe Line Ltd.	28-Feb-2018		DLS: 10-19-088-23	Yes	Truck	Passed Inspection (Complete)	28-Feb-2018	28-Feb-2018	Planned	Truck Offloading Station Inspection Met with rep at site and receive orientation. Inspect the two new dual risers for C3 and C5. Flanges had torque tags and electrical was marked as completed for seals. Inspect the VRU and met with operator and confirm readings for fire and gas back to HMI along with meters. Received carseal list, SD key and fire and gas cal reports. Action Items: 1.) Submit meter calibrations and configs 2.) Submit before and after screen shots of ESD status 3.) Submit completed TCCC. Please reply to OGC for above action items. 28-Feb-2018	0451944481-001	Westcoast Energy Inc.	1-Mar-2018			Yes	Truck	Passed Inspection (Complete)	1-Mar-2018	1-Mar-2018	Routine	Multiple locations inspected Changes in and about a stream: 3936-9 / P2 Fur Thief - Pipe has been installed, rip rap and stream bed material has been placed. Creek is now being opened back up, turbidity is up a little but well within limits and is being constantly monitored by Triton. East slope is being worked on with two more foam barriers to be installed. The soil is very sandy at this location with steep slopes. Ongoing monitoring must be in place to watch for slope failure. 3936-11 / P3 - Fur Thief - Open trenching in progress during inspection. Obvious locations on west slope as to where foam breakers will be installed. Good pump location and secondary containment. Blasting occurred adjacent to and within the stream area, clean up has been well done. There very low to no flow in this stream at this time. The pipe trench will be lined with washed gravel (on location) and coarser material on top to maintain cover. 3936-140 / KP 25.5 - Wetland W2 - each end of wetland has been isolated in the pipeline trench with a bentonite clay plug. Slopes leading to wetland area on the east side will have foam breakers installed to mitigate erosion and add additional protection. 3936-150 / P4D - Commotion Creek - Pumps are in good condition, have asked that back up pumps be tested on a regular basis. The turbid water discharge is currently uphill from the crossing location behind a snow berm. There is potential for the water to breach this and run onto the working area. I have asked that this location be closely monitored and that there be serious consideration of changing the discharge location. The ice on the creek was removed with a long stick hoe and by hand on the 27th and fish salvage was completed. 97 rainbow trout were removed from the isolated section of the creek and released downstream of the crossing location. The upstream dam location was well selected, properly installed and constantly monitored by Triton during the day and properly trained construction employees during night shift with an adequate communication plan and procedures in place. The sub surface water flow is being managed properly aprox 4 meters downstream of the dam location and at the trench location. Both locations have back up pumps at the ready. Clean water discharge location is well set up with a mini flume and dissipation system and constantly monitored. Turbidity levels downstream are monitored every 10 minutes by the logging equipment and on an hourly basis by Triton. Deck sites: 167747 (close to Diamond willow relocation) - proper location and size 167742 (P3/Fur Thief) - proper location and proper size						South				Pipeline, Well

28-Feb-2018	0453113878-001	Pavilion Energy Corp.	6-Mar-2018		DLS: 04-24-086-20	Yes	Truck	Passed Inspection (Complete)	6-Mar-2018	28-Feb-2018	Planned	Inspection to Remove General Order # 2018-001 Meet the operator, mechanic, and Pimms Production Instrument/Electrical technician on site. The Pimms technician that repaired and function tested the safety systems prior commented that he found a number of Fisher ROC Function Sequence Tables (FSTs) connected to safety system logic that were disabled. It was noted at the time of inspection that there was no security on the Fisher ROC terminal to prevent access to unauthorized persons. The dehy re-boiler/pump building was not inspected at this time as LEL was found in the building when using entry procedure. Verify that the facility safety systems were repaired and were functional. Witnessed two satisfactory facility Mode 1 ESD function tests. One when the compressor north side manual ESD push button was pressed and the other when a fire-eye in the compressor was triggered with a LVVR test lamp. The inlet and outlet valves closed and the blowdown valve opened. Found that annunciation was not available for the compressor fire detection. Witnessed a satisfactory Mode 2 ESD test when the flare KO tank high high level switch was triggered using a magnet.The inlet and outlet valves closed, the blowdown remained closed in a block and hold. Noted that the indication lamp on the control panel did not light to show the flare KO tank high high level. It was discovered that the produced water tank was connected to the flare system. This was brought to Pavilion's attention. Pavilion opted to disconnect the tank vent piping to the flare system, vent the tank to atmosphere, and operate the flare system without purge gas. This decision was based on a gas analysis provided that there is 0.000% H2S in the inlet streams. On Monday March 5, 2018 the decision was to lift General Order 2018-001. Action Items: 1. Update the sales EFM with the new gas analysis. 2. Provide a list of all wells and facilities linked to the 4-24 compressor. Indicate whether they are active, inactive, or suspended. 3. Provide operations with a log sheet to record facility and compressor blowdowns as per D&PR 43(3). 4. Provide operations with a means to calculate facility inlet, outlet, and compressor piping volumes, for flared volume reporting on the BC-S2 form(box c11). Provide the calculations to the OGC. 5. Determine the flare pilot gas volume (monthly volume) from the pilot gas regulator manufactures data to report flared volume on the BC-S2 (box c11). Provide a calculation of the monthly pilot gas estimate to the OGC. 6. Repair gas leaks in the dehy re-boiler/pump building. 7. Annunciate on compressor fire detection activation. 8. Repair flare KO high high level lamp on the control panel. Not lighting up to indicate flare KO tank high level.						Central	00000262		Facility, Pipeline, Well

2-Mar-2018	0452416113-001	Painted Pony Energy Ltd.	2-Mar-2018			No	Truck	Passed Inspection (Complete)	2-Mar-2018	2-Mar-2018	Routine	This inspection is to bring awareness to Painted Pony Energy of some of the construction and maintenance issues related to the Mile 132 road, also known as PDR 165. There were some issues that were not completely resolved prior to Painted Pony Energy becoming the new tenure holder. Water and sediment management concerns can be found at various places along the road and present themselves when a thaw occurs or during a rain event. These need to be monitored and action taken when and where needed. Of particular concern for water and sediment control is the fish bearing stream at approximately km 4.5. The Oil and Gas Commission has prior enforcement files on the sediment impacts to this stream. It is critical that Painted Pony Energy be aware of this issue and to monitor conditions and enact water and sediment management techniques when any thaw events occur. Preventative actions could include plowing snow well off the road and ensuring culverts and take off ditches are functioning so that water and sediment are not directed towards the stream. Other items could include ensuring there is a crown to the road so that water is shed before it travels any distance. Due to the history of this section of road, inspections well be conducted to ensure the stream is not impacted. I am also willing to conduct a joint inspection of the Mile 132 road to discuss issues and concerns.						Central			Pipeline, Road

7-Mar-2018	0453323340-001	Ovintiv Canada ULC	7-Mar-2018		DLS: A 16-06-081-17	Yes	Truck	Passed Inspection (Complete)	7-Mar-2018	7-Mar-2018	Planned	A16-6-81-17 Disposal Well and Pump Building Order # 17-02-017 Amendment #1 Meet with EnCana water plant operators. Inspect the on-site SCADA panel. Verify that pump alarms and shutdowns were programmed into the SCADA as not to exceed permit conditions. Found the wellhead casing pressure HH shutdown setpoint programmed high @ 17,870 Kpa. EnCana should consider lowering it to be approx. 1000 Kpa above normal operating pressure. Inspect the pump building and wellhead. Noted that the surface casing vent piping only extended a few inches outside of the wellhead enclosure and was not directed downward. Found a slight surface casing vent leak. The vent leak slowly and partially inflated a rubber glove. Action Items: 1. Submit the Site Acceptance Test (SAT) for the pump building equipment and the disposal well control logic. 2. Submit a recent surface casing vent flow or bubble test for the A16-6-81-17 disposal well. 3. Submit an updated car seal list. 4. FIT-8000 - Disposal Meter- Submit the initial calibration/verification Report . This could be a Self-diagnostic Report . Please leave the report in a pouch with the meter for future inspection. 5. Submit wellhead tubing and casing transmitter calibration reports. 6. Submit a density analysis of the disposal water. 7. Extend the wellhead surface casing vent further away from the wellhead enclosure and direct flow downwards. 8. Examine if the wellhead casing transmitter HH shutdown could be lowered to a value approx. 1000 kpa above normal operating pressure. Please reply to OGC concerning the above action items. Thank you,						South		32483	Pipeline, Well

8-Mar-2018	0454119624-001	Suncor Energy Inc.	12-Mar-2018		NTS: A 087-G/094-B-09	Yes	Truck	Passed Inspection (Complete)	12-Mar-2018	12-Mar-2018	Incident	I met Suncor Operator on site while he was doing some other tasks. Thanks for explaining what happened and the clean up that has occurred so far. With the spill having gone off location and the depth of snow involved there will be a requirement to do some testing after the snow has gone to ensure any impacts from the spill are addressed. It is not known how much produced water was absorbed into the ground and how much flowed downhill with little to no absorption. With the recent merger between Suncor and Canbriam there is concern that a final assesment and any additional clean up may be missed with the transfer of operations. How will you ensure that any further clean up operations are carried out? There will be a follow up inspection done later in the summer to see if there are any visible impacts. This inspection will show as a PASS however, there is some concern that any additional clean up requirements may be missed in the transfer of operations between Suncor and Canbriam. Also, all of the signs have a sour symbol on them, but because you have not submitted a gas analysis to the OGC, also required by regulation, I am not sure if a sour symbol is required. If the gas is greater then 10ppm H2S, a sour symbol is required. -the methanol/chemical tank at the pumpjack is not grounded properly. The ground cable is only attached to the tank stand, and because the tank is plastic, and only lying in the tank stands painted saddles, this does not create a proper bond. The ground must be attached to the tank itself or tank spout. The ground cable that is provided by the tank manufacturer is coiled up at the top of the tank not being used. Please check all tank grounding to ensure it is proper, as the methanol tank is not.						Central	00017843, 00018147, 00025370	27810	Facility, Pipeline, Well

8-Mar-2018	0453618595-001	Suncor Energy Inc.	16-Mar-2018			No	Truck	Passed Inspection (Complete)	16-Mar-2018	16-Mar-2018	Routine	This inspection is for the Harold Ellis Road (road #277). The snow has been plowed well back of the running surface of the road resulting in a much dryer road bed. Monitor the road and there will come a time when culverts will need to be opened up to capture the water and removed it away from the road. Particular emphasis at this time of year is to greatly minimize any sediment going into streams. The unstable area, delineated by concrete blocks, at about km 0.2 needs to be monitored especially at this time of year for movement and take corrective action if required . No concerns were found on the day of inspection. The road was in good condition with good plowing/grading techniques and adequate sand/gravel where required.						Central			Pipeline, Well

The signs should not be reading "DIRECT ENERGY" anymore. All information on the signage needs to be updated and correct, including emergency numbers. After this initial comment is made, beyond this it will be deficiencies added to the inspections, as Canlin has had ownership of this property since October 2017. - As per the Drilling and Production Regulations, section 67(2) a gas analysis must be submitted to the OGC. The OGC does not have a gas analysis on file for this well. Please submit to esubmission asap. If the gas does not contain more then 10ppm H2S, a sour symbol is not required on the signage, but without me knowing what the H2S content is, I am not sure that a sour symbol is required. 14-Mar-2018	045585866-001	ConocoPhillips Canada Operations ULC	15-Mar-2018			Yes	Truck	Passed Inspection (Complete)	15-Mar-2018	15-Mar-2018	OGC Requested	Inspection conducted on 2018-03-13 and 2018-03-14. 2018-03-13: Temporary Access was inspected from the Kiskatinaw Road to the A-43 D/93 P 1 well pad. No issues were observed at the Crossing 2 location identified in the Eco-Web Fish and Fish Habitat Assessment. Limited erosion starting down steeper segments of the access road, no ruts present but vegetation has been removed from the travelled portion of the road. Informed 2018-03-14 by a Cenovus representative that water bars had been placed on the portion of the access road south of the Kiskatinaw crossing (Crossing 1) on 2018-03-13 in such a manner as to draw water travelling downslope away from the stream at the Crossing 2 location. 2018-03-14: Observed bridge removal and over-ice stream crossing of excavator at Crossing 1 location (Kiskatinaw River). QEP on site. Bridge removal and excavator crossing occurred without issue. South bank of Crossing 1 location contoured, track set and trench placed for sediment fencing while on site. Sediment fence to be installed on both banks at Crossing 1 on 2018-03-15. Additional erosion and sediment controls to be installed in the coming week(s) as snow dissipates and seeding to occur in April.						South			Pipeline, Road

19-Mar-2018	0457059926-001	Pacific Canbriam Energy Limited	20-Mar-2018		NTS: D 076-H/094-B-08	Yes	Truck	Passed Inspection (Complete)	20-Mar-2018	19-Mar-2018	OGC Requested	Meet with the facility construction manager, SCADA system programmer, E+I technicians, and Canbriam operations staff. Inspect the disposal well, pump building, diesel generator, SCADA system and RTU building, (4) produced water tanks, and associated piping. Review piping torque reports. Found that the wellhead tubing and casing pressure high shutdown set points were initially set at 17,100 Kpa and the pump high discharge shutdown setpoint was set at 15,500 Kpa. Request that Canbriam lower these settings as not to exceed the permitted maximum wellhead tubing injection pressure of 12,020 Kpa. Witness a function test of the disposal water meter pulsed back to the SCADA. Confirmed that the indicated water volumes in the SCADA system were correct. Witness a generator remote shutdown when the smoke detection in the RTU was triggered. Witness the facility inlet ESDV close when a manual ESD push button outside of the RTU building was pressed. The HMI site data overview and remote shutdown screens on the b-24-h gas plant and the c-62-h water hub were not installed. The site remote ESD could not be function tested at the time of inspection. Verify there was a seismic accelerometer installed at the lease edge. Action items: 1. Complete SCADA system programming for HMI site data overview screens at b-24-h gas plant and at the c-62-h water hub. Function test the d-76-h remote shutdown from these HMI screens. Document the function test in site SCADA system commissioning report. 2. Submit SCADA system commissioning documentation. 3. Submit an updated site SCADA system shutdown key. 4. Submit confirmation from Wajax that the diesel generator punch list items. (installation of 50% & 90% level switches on the fuel tank) are installed and function tested. 5. Install WHMIS identification labels on the produced water storage tanks. Please respond to OGC concerning the above action items. Thank you,							Central	00026621, 00026622	31916	Facility, Pipeline, Well

27-Mar-2018	046018135-001	Saguaro Resources Ltd.	3-Apr-2018		NTS: B-A 056-H/094-G-08	No	Truck	Passed Inspection (Complete)	3-Apr-2018	27-Mar-2018	Planned	COMMENTS: -The pumpjack is still connected to the polish rod, which is still in place in well. -This well is showing as inactive (no production for 32 months) in the OGC database, but should be suspended (after 12 consecutive months of no production), possibly due to the proper paperwork not being submitted to the OGC. In order to meet the minimum OGC requirements for suspension, the wellhead valves must be chained and locked and the flowline be disconnected and blinded at the wellhead. Due to the amount of snow around the wellhead and plastic and insulation covering the wellhead, I was not able to firmly determine if the wellhead valves are chained and locked and flowline disconnected. Please bring this well into compliance asap, as this is considered a deficiency otherwise. Please email me or call me when this item has been dealt with. Thank you						Central	00006503	16377	Facility, Pipeline, Well

27-Mar-2018	046044143-001	Saguaro Resources Ltd.	4-Apr-2018		NTS: C 025-H/094-G-08	No	Truck	Passed Inspection (Complete)	4-Apr-2018	27-Mar-2018	Planned	COMMENTS: - The c-A25-H (WA# 18453) is active at this location, but it looks as though the ESD has been removed and the hi/low sensing point has been disconnected. WHY? -The c-25-H well is chained and locked and the flowline is disconnected, but it still shows as 'inactive' in the OGC database, meaning most likely, Saguaro has not submitted the proper paperwork to the OGC to meet the suspension requirements. This well has been inactive for over 122 months, which is 9 years overdue for the suspension paperwork to the OGC.						Central	00010627	16062, 18453	Facility, Pipeline, Well

29-Mar-2018	045940215-001	Catapult Environmental Inc.	29-Mar-2018		DLS: 09-28-083-17	Yes	Truck	Passed Inspection (Complete)	29-Mar-2018	29-Mar-2018	Planned	Disposal Facility and Disposal Well Inspection Order # 17-02-016 Meet with Catapult Environment and Regulatory Planner, and operations staff. Review the disposal well approval conditions. Inspect the disposal facility SCADA HMI. Inspect the disposal facility safety systems, equipment and the 9-28 disposal well. Witness a test of the beacons and alarm horns. Action Items: 1. SCADA HMI display readings for the pump discharge, the wellhead tubing, wellhead casing, and the pipeline pressures were found to be in PSI. Reservoir Engineering would like these reading to be displayed in Kpa. 2. The HMI SCADA ranges for the wellhead tubing and casing transmitters were set at -14.5 to 3771.0 PSI. These ranges do not match the transmitter ranges 0-4000 PSI as written on the calibration tags. The ranges are quite high considering the max wellhead injection pressure is 10,885 Kpa or 1579.8 PSI. Choose appropriate transmitter ranges. Ensure the transmitter ranges match the SCADA HMI ranges. Verify that the transmitter output are displayed correctly through the entire SCADA system. Check that the pump discharge, and the pipeline transmitters for similar issues. 3. Ensure that all shutdown set-points and SCADA HMI trending for those transmitters above are in Kpa. 4. Submit Reports for the commissioning and set-up for the above transmitters. Ensure that the technician's comments include that the transmitter reading were verified through the entire SCADA system. 5. Consider incorporating an operation procedure to dead weight wellhead pressure transmitters and to verify displayed pressures on the wellhead transmitters match the value displayed on the SCADA HMI. 6. Found that there were some electrical seals for devices in hazardous locations that were not packed and poured. Perform an inspection(electrical Q/A) and document (signed and dated) that all electrical seals have been inspected and that they are packed and poured. 7. lock/seal open pressure sensing isolation valves for critical ESD function on the pump discharge, the wellhead tubing, the wellhead casing, pipeline pressure transmitters. 8. Vent the Cata-dyne heater outside of the wellhead enclosure. Vent the Fisher 912 regulator on the wellhead Cata-dyne heater outside of the enclosure. 9. Re-pipe the wellhead surface casing vent higher outside of the wellhead enclosure, and 90 downwards to prevent snow and ice from entering the vent piping. 10. Submit the initial proving report for disposal meter FIT-3816. The meter output was found to be set at 1 pulse /100 litrs, Set the meter output K-factor and SCADA input for better resolution. (100 pp/m3 or 1000 pp/m3). Please reply to OGC concerning the above action items.						South	00026374, 00026556	20897	Facility, Pipeline, Well

3-Apr-2018	046112896-001	Painted Pony Energy Ltd.	9-Apr-2018		NTS: C 089-G/094-B-09	Yes	Truck	Deficiencies Corrected	23-Apr-2018	9-Apr-2018	Planned	This inspection replaces original inspection #046079562-001. Operator pointed out that the location referenced in this inspection was incorrectly stated as a-92-F/ 94-B-16 and not c-89-G / 94-B-09 as intended. I met Painted Pony Operator on site. Thanksfor coming on the inspection, our discussions and taking action item notes on the results of the inspection. It is anticipated the signage changeover will occur when the snow is gone. The road needs to have tenure and according to our database only the workspace along the edge of the road is tenured. Pleas follow up on this and correct. Not all chemical pump pov's are carsealed and this needs to be in place. There was a notable level of LEL in the sand filter skid for the c-a-89-G well. It is possible the packing for the brown coloured Flow Control choke needs maintenance. There is a crusty precipitate on the wing valve on the c-b-89-G. There is nom leak or crust that has gone to the ground but some maintenance is needed. The load box on the produced water tank needs to be grounded properly. Jack is aware of what is required. For the pipeline, only the pigging barrel and related equipment on site was inspected.						Central	00018200, 00026050, 00026077, 00026078	30086, 30277, 30287	Facility, Pipeline, Well

4-Apr-2018	0460715B0-001	PETRONAS Energy Canada Ltd.	5-Apr-2018		NTS: A 011-H/094-B-16	No	Truck	Passed Inspection (Complete)	5-Apr-2018	5-Apr-2018	Planned	The access to these wells was well maintained on the day of inspection. Just a friendly seasonal reminder to monitor your roads and ensure ditches and culverts are functioning properly for the thaw events. Added attention should be on curtailing sediment and its movement into streams. Road inspections will be a focus on all companies. The PSVs on the chemical pumps need to be carsealed. Only 1 out of 3 wells has the needle valve clam shelled for the sand filter pressure transmitter. If this transmitter serves as an ESD function then it needs to have the needle valve locked in the open position. I am starting to find that this is inconsistently being applied in the field. 17-Apr-2018	046296743-001	Westcoast Energy Inc.	20-Apr-2018			Yes	ATV/Snow Machine	Passed Inspection (Complete)	20-Apr-2018	20-Apr-2018	OGC Requested	Met with reps prior to inspecting the site. I explained the role of the Commission and where the OGC jurisdiction starts and ends in relation to this project. Met on site with operator and conducted an inspection from the start to the end of the road clearing. The right of way widths and workspace sizes were adequately sized with no indications of work being conducted outside of the permitted area. Burning of slash/debris piles was being done in an appropriate manner, on mineral soil with a good plan for monitoring the piles while they were burning and ensuring that the piles are fully extinguished before leaving the site. Timber has been processed and decked although it was not timber marked at the time of inspection. I was assured that the timber decks will be timber marked by the end of the day when the processor has completed working on the last pile of timber. I spoke with Triton environmental while I was on site. They have been conducting transects throughout the area looking for nesting birds and any evidence of badger. Neither have been observed to date.						South			Pipeline, Well
17-Apr-2018	046327694-001	PETRONAS Energy Canada Ltd.	23-Apr-2018			No	Truck	Passed Inspection (Complete)	23-Apr-2018	23-Apr-2018	Routine	I stopped by this freshwater storage site located at about km 2.5 on the km 8.5 road of Mile 120/Gundy Rd and spoke to a couple of staff from Butler Ridge Energy Services. They were pumping water out of the freshwater storage site in anticipation of the volumes of water that will be entering the site with spring freshet. They had a list of other storage sites and volumes of water to pump off. Please keep in mind that water removal must not result in erosion of the ground where the water is being pumped to. 20-Apr-2018	0463025575-001	Primavera Resources Corp.	20-Apr-2018		DLS: 12-19-084-20	Yes	Truck	Passed Inspection (Complete)	20-Apr-2018	20-Apr-2018	Planned	Start-up Inspection for New Pump Jack and Separator AD # 10010418d Meet Primavera Resources On-site Supervisor. Ace Instruments was on site also. Inspect the EFM gas meter run construction, configuration, and transmitter calibrations. Inspect the separator oil and water meter run installations. Witnessed a pulse test from the (2) meters back to the Fisher ROC. Noted that the proving taps were on the downstream side of the dump valve and they were reduced from 2 in to 1 in. agreed that they should be the same size as the dump line and will have pipe fitters install 2 inch proving taps. Prior to proving these meters please familiarize with sections 2.6.1.3 and 2.8 of the OGC Measurement Guideline. Witnessed pump jack and wellhead ESDV shutdown function tests, first when a sample of H2S was applied to the sensor in the separator building, and then when the separator high level switch was tripped. Reviewed mechanical Bolt-up Torque Record. Made note that the pump jack exhaust was loud, and mentioned that this area in the past has received numerous noise complaints. Recommend that the pump jack noise issue be addressed. Thank you,						Central	00026596		Facility, Pipeline, Well

8-May-2018	0467204469-001	PETRONAS Energy Canada Ltd.	9-May-2018		NTS: A-A 032-H/094-G-02	Yes	Truck	Deficiencies Corrected	17-May-2018	8-May-2018	Planned	Disposal Well Inspection- Order # 13-02-002 Amend # 1 Meet plant operations staff at a-29-J/94-G-2 plant. Inspection the plant host PLC HMI display for the disposal well operations data. Found that the well tubing and casing pressure transmitters normally operate at vacuum pressure, but the host inputs for those values were not scaled to indicate negative pressures. Found there was not a copy of the disposal well approval on site. A copy was downloaded from the BCOGC web site and printed. Reviewed key conditions and verified that the maximum wellhead injection pressure (MWIP) shutdown was set below the permitted value of 23,600 Kpa. Found that the wellhead casing high pressure shutdown was set at 13,785 Kpa. Trends show on April 12, 2018, at approx. 6:44 pm there was a casing pressure rise to approx. 6107 Kpa, indicating a loss of hydraulic isolation. Disposal operations continued for approx. 14.5 hours until April 13, 2018 at 9:22 am, when operations staff shutdown injection. The Commission was notified on April 25, 2018, 12 days later, that hydraulic isolation was lost, and that water injection was ceased immediately. Progress Energy is reminded that Condition 2(e) states " Cease injection and notify the Commission immediately if hydraulic isolation is lost in the wellbore or formation." Inspect the facility equipment and maintenance records. Found that maintenance was conducted as scheduled and at regular intervals. Verified that the disposal meter was proved on Oct 30, 2017. Inspected the wellhead enclosure. Found the wellhead surface casing vent was piped outside of the enclosure close to the ground, were snow and ice in winter operation could plug off the piping. Found that a connecting union on the fuel gas supply to the wellhead enclosure Cata-dyne heater was not done up. Action items: 1. Terminate the wellhead surface casing vent piping outside of the wellhead enclosure at a higher level from the ground to prevent snow or ice plugging. 2. Repair the Cata-dyne heater fuel gas supply connection inside the wellhead enclosure. 3. Consider implementing negative range for the a 29-J/94-G-2 plant disposal well tubing and casing pressure displays. 4. Consider lowering the wellhead casing pressure shutdown from 13,785 Kpa to an appropriate valve set for early detection of loss of hydraulic isolation. Recommend 1000 Kpa above normal operating pressure.						Central		23212	Well

10-May-2018	046799624-001	Canlin Energy Corporation	11-May-2018		DLS: 06-29-081-15	Yes	Truck	Deficiencies Corrected	25-May-2018	10-May-2018	Planned	Gas Plant Inspection Meet Canlin Energy operations, and Canlin Energy E+I staff. Walk through the plant to check accounting meter equipment installation. Find that the produced water and condensate tank level measurement is done with differential pressure transmitters. The produced water and condensate tanks are on a blanket pressurized system. The differential transmitters do not have a compensation leg to account for the effect of the blanket gas pressure on the level measurement. Find that there were a lot of isolation valves that could bypass an emergency shutdown device that were not locked or car sealed open. Reviewed the plant shutdown key with operator and identified these critical isolation valves. Please arrange for a follow-up inspection after plant turn-around. Thank you,						South	00000317		Facility, Pipeline, Well

10-May-2018	046818878-001	Canlin Energy Corporation	11-May-2018		DLS: 15-17-081-15	Yes	Truck	Deficiencies Corrected	25-May-2018	10-May-2018	Planned	15-17-81-15 Acid Gas Injection Well Inspection Approval 01-16-001 Amendment # 2 Meet Canlin Energy operations staff. Review the acid gas well approval conditions. Inspect maintenance reports. Confirm that maintenance is being conducted at regular intervals. Inspect the well site. Found the Haliburton Subsurface Safety Valve (SSSV) panel selector switch was in the Manual Override position, effectively disabling the ESD loop, bypassing the subsurface check valve function. The operator, who was present, switched the selector to the Pilot Control position , and enabled the ESD loop and subsurface check valve function on the hydraulic panel. Recommend installing a clam-shell and lock on the selector switch to ensure it stays in the Pilot Control position and does not accidently get left in the Manual Override position. Found that locks or car seals on pressure transmitter isolation valves back to the Fisher ROC, for ESD function, were not installed. Noted there was no temperature RTD to record average daily temperature values on the tubing at the wellhead. Noted that a flowline ESDV was not present. The pipeline pressure control valve would close on a well ESD.						South		07979	Pipeline, Well

Review prepared quality assurance and quality control documentation and assess readiness to start. Inspect that Mechanical Torque Reports were signed -off, and the electrical QA was complete. Inspect production accounting meter configuration, calibration, and construction. Inspect the battery PLC HMI display screens and verify that there were no faults present on fire and gas detection equipment. Inspect the facility piping, equipment, and process buildings. Verify lock/car seals were in place. Witness (2) satisfactory mode 1 ESD function tests, one initiated by triggering a fire-eye in compressor K-100, and the second by pushing a manual ESD push button at the Control Room door. The site is deemed to be complete, and ready for start-up. Action Items: 1.Submit a revised measurement schematic for the 14-16 reporting battery. Identify production "accounting" and "non- accounting" meters. 2. Submit confirmation with the Ministry of Finance, that the battery production accounting and metering configuration is acceptable for reporting on the BCS2 for produced oil and water opening and closing inventories. 3. Submit transmitter configuration, ROC screen shots, any tertiary calibration reports, and initial proving reports for the battery produced water and oil disposition meters. 4. Battery gas meters- within (2) weeks update the gas analysis, perform, and submit a performance evaluation,"Flow Check" - 5. Submit final commissioning reports for produced oil and water tanks guided wave radar level transmitters. Incorporate meter verification into annual PM program to perform diagnostic of meter health and generated a printed report. 6. Lock or car seal open level sensing bridals on vessels were level transmitters have ESD function associated. 7. Submit an updated valve lock/ car seal list within (2) weeks of operation. 8. Submit updated battery shutdown key with the PID as-built drawings within 90 days. Please respond to OGC concerning the above action items, Thank you,						South	00026354		Facility, Pipeline, Well

29-May-2018	047375414-001	Primavera Resources Corp.	5-Jun-2018		DLS: A 13-03-085-21	Yes	Truck	Passed Inspection (Complete)	5-Jun-2018	4-Jun-2018	Operator Requested	Inspection requested by Primavera as per Section m) of the Order 00-09-003 Amendment #4. Section m) Complete an inspection, satisfactory to the Commission, within 4 weeks of re-commencement of water injection operations. Operator reported that the Packer Isolation Test completed on May 28, 2018 passed but then it was observed after it was restarted that there was communication so it was shut back in and the rig was put on there to make the necessary repairs. A packer isolation test will be completed following the repairs and submitted to the Commission. Wellhead casing and tubing is continually measured with recorders - acceptable as per email from Petra (attached via Communication Log). Primavera operator reported that a SCADA system will be installed in the near future (~2 weeks). April injection volumes are in IRIS. Confirmed June 5, 2018. Fluid density of most recent fluid disposed has not been submitted to the Commission. Please address and send to OGC by June 7, 2018. Surface casing vent assembly is equipped with a soft hose extension out of the building. Tech Advisor requested the extension be hard piped.						Central		11563	Pipeline, Well

30-May-2018	047326614-001	Albright Flush Systems Ltd.	30-May-2018	14-Jun-2018	DLS: A 10-09-087-21	Yes	Truck	Deficiencies Corrected	19-Jun-2018	30-May-2018	Planned	Disposal Well Inspection Meet with operations staff. Review disposal well permit conditions, leave copy on site. Inspect facility maintenance reports. Positive note: Maintenance of safety systems and shutdowns are being conducted at regular intervals. After reviewing records, found that the disposal pump high discharge setting was set above the disposal pump PSV setting. There may be a possibility that the disposal pump PSV could release and reset continuously and not shut the pump down if the high discharge pressure switch setting is not reached. Recommend reversing the settings so the high discharge pressure switch is set below the pump discharge PSV. Inspect the new SCADA system. Made note that the SCADA system and wellhead tubing and casing transmitters were not ranged to indicate negative values. The well tubing and casing pressures can go on vacuum, and not be trended on SCADA, technically this wouldn't be continuous monitoring. Inspected the new solids pad, det tank, shaker, transfer pump building, new tanks, new boiler, existing pump building, water tanks, diesel storage tanks, disposal well, and general condition of the lease. Action items: 1. Ground the (2) diesel tanks. 2. Install truck load procedure sign for the produced water truck load in. 3. Order # 14-02-013 Amend # 1 Condition 2d- Install negative range wellhead tubing and casing pressure transmitters, and Son CADA system inputs and trending, to continually measure and record electronically. 4. Order # 14-02-013 Amend # 1 Condition 2e- Recommend installing a SCADA alarm and pump shutdown, set at an appropriate value, on the wellhead casing pressure to indicate and shutdown the pump if hydraulic isolation is lost. 5. Recommend connecting the disposal meter to the SCADA system to automatically record disposal volumes for reporting purpose. 6. Recommend SCADA system high alarms and shutdowns to remote s/d the pump. 7. Det tank- install scrubber on the tank vent. 8. Shaker- install goose neck, evaluate possibility of H2S release. If so, then a scrubber would be recommended. Please respond to OGC concerning the above action items and through KERMIT for the attached deficiencies.						Central		14095	Well

6-Jun-2018	047495849-001	ARC Resources Ltd.	7-Jun-2018		DLS: 04-08-081-16	Yes	Truck	Passed Inspection (Complete)	7-Jun-2018	6-Jun-2018	Planned	Disposal Well Inspection Meet with the operator. Inspect the Clear SCADA display for the disposal well. Verify that the well passed the last Packer Isolation Test (PIT), Dec 20, 2017. Found that annual wellhead tubing and casing pressure transmitter calibrations are due. They were last done May 6, 2017. Inspect the well site. The disposal flow meter was recently proved, May 8, 2018. Found that the casing pressure is operating on vacuum, at - 28 Kpa displayed on SCADA. Note that the tubing and casing transmitters and SCADA inputs were not negative ranged to (-100 Kpa). The current output of the transmitters would go below 4 milli-amps for the SCADA to indicate negative pressure (vacuum) which is not 100% correct, as the current output of the transmitter may not be stable or reliable at values below 4 milli-amps. The correct way to measure and record negative pressures would be to set the range of the transmitters and the SCADA eg. to (-100 Kpa to 15,000 Kpa). Inspect the 3-9-81-16 gas plant pipeline pressure transmitter PIT 010506. Find that the transmitter had not been annually calibrated. Question whether it was included in Annual PM program. A Technician was available, and performed a calibration on the transmitter and verified the reading back to the plant PLC input. Action Items: 1. Re-range the tubing and casing pressure transmitters and SCADA for negative pressure readings. 2. Verify readings through the entire SCADA system that transmitter readings and SCADA readings match. 3. Submit the tubing and casing pressure transmitter calibration reports to the OGC. 4. Check if the disposal pipeline transmitters at 3-9-81-16 plant are on an Annual PM. If not please include in annual PM. On the PM description include verification/calibration of SCADA or PLC inputs, as well as verify/calibrate the transmitter.						South		22362	Pipeline, Well
6-Jun-2018	047514868-001	Plateau Pipe Line Ltd.	8-Jun-2018		From: NTS: B 028-K/094-A-12 To: DLS: 11-29-088-23	No	Truck	Deficiencies Corrected	17-Sep-2018	7-Jun-2018	Planned	This inspection is related to Pembina/Plateau Pipeline Corporation level 1 incident #047483069-001. The incident is a land slide on the new pipeline which has entered water course crossing #61 as per the pipeline survey plan. This slide was noticed by the OGC last week on a helicopter flight and a site visit was planned. The slide at that time had not flowed into the stream and was several meters from doing so. I walked to the slide area with Pembina/Plateau environmental representative and took some notes and pictures. We talked about some of the process items that need to be done and timing. As far as working in the stream I mentioned to rep that the OGC can process that paperwork and in the application to show some pictures, that a clean up is required in response to the incident and that an Operations Officer has been to the site with a Plateau representative. A post incident report is required for this incident including a cause and a remediation plan and is due within 60 days of June 6 2018. Work on remediating the area can begin as soon as ground conditions permit and any required permits such as works in and about a stream are issued. Since the slide has entered a stream this will be referred onto the OGC Enforcement Section for their investigation.						Central			Well

6-Jun-2018	047650422-001	ARC Resources Ltd.	13-Jun-2018	14-Jul-2018	DLS: 07-09-081-16	Yes	Truck	Deficiencies Corrected	27-Sep-2018	6-Jun-2018	Planned	Disposal Well Inspection Meet with the operator. Verify SCADA system readings. Noticed that the operator was blowing down the casing through a line into a catchment for liquids. This was being done each day. After investigation it was found that Arc Resources reported that there is a slight leak in the packer. The leak was reported to seal itself after awhile when the casing pressure was high enough to counter act the pressure of the leak. Spoke with rep concerning the usage of the lease as a storage site for unused equipment and piping. The 7-9 lease permitted activity is for the operation of a disposal well. If Arc Resources wishes to store unused equipment, an application for a new lease, solely for the purpose of equipment storage, would have to be submitted and approved by the OGC. Action items: 1. Cease blowing down the casing daily. Allow the casing pressure to stabilize. Continue to monitor the casing pressure. If the casing pressure does not stabilize and continues to increase cease disposal operations and repair the packer. 2. Calibrate the wellhead tubing and pressure transmitters, and verify that readings are correct through the entire SCADA system. Ensure the transmitter calibration and SCADA reading verification is included in annual PM program. Please reply to OGC concerning the above action items and to the listed deficiency through the KERMIT system. Engineering is aware of the packer leak and has approved the operation of this well, contingent that Arc Resources continues to monitor operations.						South		22580	Pipeline, Well
6-Jun-2018	047679805-001	ARC Resources Ltd.	13-Jun-2018		DLS: 12-20-081-16	Yes	Truck	Passed Inspection (Complete)	13-Jun-2018	6-Jun-2018	Routine	Disposal Well Inspection Meet with the operator. Verify SCADA readings. Noted that the casing pressure was reading negative, but the casing transmitter and SCADA was not ranged negative. The wellhead enclosure was removed for well acid flush. Noted exposed armor on the casing transmitter electrical Tech cable connection. Action items 1. Re-range the tubing and casing pressure transmitters and SCADA for negative pressure readings. 2. Re-install wellhead enclosure and ensure the surface casing vent is piped outside of the enclosure. Ensure the Cata-dyne heater and the fuel gas supply regulator are vented outside of the enclosure. 3. Repair electrical Tech cable to the casing pressure transmitter. Ensure all other Tech cable installations to devices (eg flow meter) are in good condition.						South		13033	Pipeline, Well
6-Jun-2018	047742325-001	Shanghai Energy Corporation	18-Jun-2018		From: NTS: C 069-B/094-P-04 To: NTS: B 068-B/094-P-04	Yes	Truck	Passed Inspection (Complete)	18-Jun-2018	6-Jun-2018	OGC Requested	OGC inspector followed up on a pipeline break on the edge of the lease at Shanghai c-69-B/94-P-4. Met rep from Shanghai at the plant who escorted the inspector to the site. Leak was contained in a depression and did not migrate along roadway or pipeline R.O.W. Consultant and contractor were on site and excavating the possible location of the pipeline break. (Long Bow) The line and wells were shut in when leak was discovered. Line locating was done prior to any excavation. 4" Line was pigged prior to any excavation. Shanghai sent 200L of produced water/chemical mix to disposal. Also 3 or 4 cubic meters of soil were sent to disposal. Hole in pipe was discovered while inspector was on site. Took several pictures. Shanghai indicated that the pipeline would be repaired today. There are no environmental issues associated with this pipeline break. Clean-up was complete and thorough. Repairs were done in a timely manner.						North			Pipeline Project
6-Jun-2018	048227164-001	ConocoPhillips Canada Resources Corp.	10-Jul-2018	10-Aug-2018	NTS: D 068-K/094-A-12	No	Truck	Deficiencies Corrected	15-Aug-2018	10-Jul-2018	Planned	This inspection replaces inspection # 047502758 which was cancelled due to the unclear surface requirements for well suspension. The deficiency for this was withdrawn and therefore the inspection needed to be cancelled. It is understood that the two deficiencies on this inspection have already been addressed so this inspection is just to record those deficiencies and that they have been corrected. 14-Jun-2018	047881300-001	FortisBC Energy Inc.	22-Jun-2018		From: NTS: A 040-B/082-E-13 To: NTS: A 040-B/082-E-13	No	Truck	Passed Inspection (Complete)	22-Jun-2018	22-Jun-2018	Follow Up	Inspection conducted at landslide area in Summerland on the segment known as FID 12204 - WES LTL 114. As Fortis has previously indicated, the landslide has not had an impact on the pipeline however to protect the pipeline and the right of way going forward there will need to be some work done on the downslope section where the slide occurred. I have been informed that Fortis is formulating a plan for this. Slope stabilization is underway. I spoke with the landowner who's land is being used as the staging area by the company. He is very pleased with how Fortis has dealt with him and how the company doing the work is dealing with him. The work being completed appears to be going well with a small a footprint as possible.						South			Pipeline Project

20-Jun-2018	047914518-001	PETRONAS Energy Canada Ltd.	26-Jun-2018		NTS: B 074-D/094-G-01	No	Truck	Passed Inspection (Complete)	26-Jun-2018	20-Jun-2018	Planned	COMMENTS: -As this access road was constructed to facilitate a primary Oil and Gas activity (well drilled & water hut/piping/pipeline), and there are no other oil and gas activities down this road, PROGRESS needs to submit a new 'Road Application for a Non-status road'. Once the permit is received, this access road needs to be repaired. There is a large washout near the lease access where approx. 90% of road surface is missing. Tire tracks indicate people driving around the washout. A culvert approx. 30 feet from the washout is not placed well as indicated by the water running over the road and causing the washout. In fact, there are a lot of erosion channels on the running surface of road slope due to improper culvert placements and insufficient ditching. -during my inspection, I tested the Surface casing vent for flow with a rubber glove. The glove barely inflated, but LEL was detected to be coming from the SCV. Please have this tested and submit findings to OGC - I do not see anything in our database to indicate the Water Hut being added to the site. Has this been permitted and if so, can you provide me with the permit #.						Central		26356	Well, Road

28-Jun-2018	048128685-001	Tourmaline Oil Corp.	5-Jul-2018		DLS: 10-18-085-21	No	Truck	Passed Inspection (Complete)	5-Jul-2018	5-Jul-2018	Planned	Bare wet depression approximately 45 m west of the wellhead. Records show a historical flare pit is located in this area. Animal activity in and around the depression. Please establish a means to prevent access to the entire impacted area identified. Please provide confirmation that the access has been restricted to the OGC by July 9, 2018. The Commission requires the permit holder to complete a limited site investigation in and around the bare wet depression. The limited site investigation is to confirm soil, groundwater and surface water quality in and around the depression. Please submit the report to the OGC by September 3, 2018. Pressure indicator on wellhead. Bull plugs or blind flanges with needle valves must be installed on all outlets except the surface casing vent. Wellhead is chained and locked. SCV open and clear. Wellhead is fenced (cattle fence). Comment used for PI. All other surface suspension requirements in compliance. Records show the well is physically suspended downhole. Pipeline (Project 23687) is abandoned. Completed file review. Historical flare pit in area noted. Flare pit was filled in and leveled in the 1980's. Records show that the soil is "severely contaminated with salinity".						Central		04157	Pipeline Project, Well

Inspect the well testing equipment set-up using IRP 4- Well Testing and Fluid Handling Testing Services Inspection Checklist. Inspect that all meters are being maintained on an annual calibration/proving frequency. Action Items: 1. HP Separator - Calibration/proving required for the condensate meter - last done June 30, 2017. 2. IRP- 4 - Minimum of (3) ESD stations required. Install (1) ESD Station at the separator skid and (1) at the choke skid. 3. IRP- 4 - Bond tanks to wellhead under test. 4. HP separator - Repair Fisher 4150 back pressure controller- Replace door seal, venting gas into the separator package. 5. HP Separator- Vent all instrument regulators outdoors. 6. LP separator- Install a vented spring casing on the Fisher 67 CFR fuel gas regulator. 7. Temperature Measurement - Not in accordance with the Measurement Guideline for Upstream Oil and Gas Operations Section 4.4.1 (16)(2) That is, the operator cannot use the surface temperature of the piping or use a thermowell location where there is normally no flow. A meter equipped with a temperature compensation device is considered to have continuous temperature measurement. Section 4.4.2 (6) Temperature measurement equipment must be installed according to AGA3 specifications and the temperature must be determined as per item 15 below. Important - The temperature device must be traceable to a standard of (+/- 1 dec C) by using a serial number, manufacturer specification, and calibration. Non traceable, disposable temperature indicators (TIs) will not be permitted for temperature measurement.						South		35068	Pipeline, Well

11-Jul-2018	048262068-001	Painted Pony Energy Ltd.	11-Jul-2018		NTS: D-F 057-H/094-B-09	No	Truck	Deficiencies Corrected	13-Aug-2018	11-Jul-2018	Planned	Production Testing Services Inspection- Colter Energy Ltd- F Well Under Test Meet with Viking Consulting LTD, and Colter Energy, the well tester. Inspect that a flare permit was in place for testing of the F-well. Review Drilling and Completions (DACC) IRP-4 Production Testing Services Check List. Inspect that the inline testing set-up and equipment met the IRP-4 Check List. Inspect that all instrumentation equipment running on fuel gas in the HP test separator package is vented safely outdoors. Found some instrumentation equipment in the HP separator package not vented outdoors. Inspect that test meters, and measurement equipment, are being maintained/calibrated/proved as per the Measurement Guideline for Upstream Oil and Gas Operations Manual. Found that the main inline gas volume was being calculated by " Petro Class" software program using a temperature determined by a thermometer, which had no documentation, and was not traceable back to a measurement standard. The temperature measuring device also was not held in place so that it bottomed tightly in the meter run thermo-well. Action Items: 1. Production accounting - Submit a confirmation that Painted Pony Production Accounting Dept. has been contacted and confirm that the flare pilot gas, and vented gas from instrumentation equipment in well testers package is being reported to the Ministry of Finace. Please reply to OGCconcerning the above action item and through KERMIT for the listed deficiencies.						Central		33349	Well

11-Jul-2018	048364609-001	Painted Pony Energy Ltd.	17-Jul-2018			No	Truck	Passed Inspection (Complete)	17-Jul-2018	17-Jul-2018	Routine	This inspection is for the Mile 132 road, known as PDR 165. It is an inspection to assess the work Painted pony Energy has completed on the road to address some long standing issues prior to them becoming the permit holder. The work that has been done past the km 4.3 bridge is good. This inspection only covers kms 0- 8 due to timing constraints. The ditch line and silt fences have been re-established in many areas which will help with water and sediment issues. There has been some ROW brushing to increase sight lines around km 5. One recommendation is to assess the water and sediment management structures from the km 3-4 hill as historically this is where most of the issues originate from. There are culvert inlets that have a sediment load build up as well as takeoffs on the up hill and down hill sides of the road that need to have the inlets re-established. Although the uphill take offs are different, they have been found to reduce water velocity and sediment transfer. Grading operations are critical on this hill as they can create a berm that doesn't allow the water and sediment to flow off the road and instead continues on towards the stream.						Central			Road

Not Present: Progress Energy Shift Operator 1. Background: July 7, 2018 the facility was shut-in (9:00 am) and bled down for tie-in work to install new sweetening equipment. The facility was started back-up July 9 th. On July 10 th the facility was shutdown to pull blinds. The flare went out . The shutdown was brief (9:51 am- 10:04 am) When the site was re-pressurized the flare was not lit. The flare auto-ignitor failed to operate. Gas volumes recorded on the flare Log for July 10 th. and 11 th. indicate that the HP/ LP purge and pilot gas to the flare were not shut-off. July 11- The flare stack issue was mentioned to the new cross shift operator 2 when he arrived. At about 11 am, the cross shift operator tried to re-light the flare. He contacted a Technmation Controls Technician who came out to trouble shoot the problem. The Technician diagnosed the problem to be a faulty auto-ignitor solenoid. The cross shift operator manually lit the flare by winding down the pilot, lighting it, and winding it back up on July 11 th at about 5:40 pm. It is has not been determined if the first operator , followed lockout-tag out (LOTO) and locked the purge and pilot gas valves closed on the July 10 th once becoming aware the flare was out, and couldn't be re-lit. The Operations Flared Gas Logs indicate purge and pilot gas volumes, which suggest the gas was not shut-off. Action Items: 1. Determine what the actual time period was that the flare was out and gas was vented to atmosphere. 2. July 10 th- Determine if the operator notified Progress Energy supervisory staff of the issue with the flare stack. 3. July 10 th- Determine if the HP/ LP purge, and flare pilot gas was shut-off, a LOTO procedure followed, and the purge and pilot gas valves locked closed, once the operator became aware that the flare was not lit after restarting the facility. 4. Complete a Minor Incident Report Form with more detail, timelines, and corrective actions.							Central	00007976			Facility, Pipeline, Well

19-Jul-2018	048467429-001	Canadian Natural Resources Limited	1-Aug-2018	16-Aug-2018		No	Truck	Deficiencies Corrected	4-Dec-2018	20-Jul-2018	Routine	This inspection is for the Mile 156 road, known as PDR 101 and South Sikanni Rd. It was noted that new decking and delineators were installed where required on the bridges along the road. This road was initially constructed to a low grade standard and as a result still has issues when it is wet. The ditch line from about km 13 t0 17 is at or below the surface of the road and needs to be re-established so that water doesn't flow onto the road contributing to the rutting. The scentless chamomile plants that were picked in the last 2 years at approximately km 20.2 are back in greater numbers. The OGC and Peace River Regional District have identified scentless chamomile as a noxious weed.							Central				CIAS, Pipeline

There is a pile of dirt on the north side of the lease and I am wondering what the status of this is? Good job of spreading course woody debris around the lease to help promote a return to a natural environment.						Central		03833	Well

24-Jul-2018	048888659-001	FortisBC Energy Inc.	2-Aug-2018		From: UTM: 11-259607E, 5617908N To: UTM: 11-288662E, 56	Yes	Walk	Passed Inspection (Complete)	2-Aug-2018	2-Aug-2018	Routine	Inspection conducted on in stream works that occurred at the location (from Fortis) described as: FortisBC hereby provides notice of maintenance activities being conducted in and about a stream that crosses FortisBC's transmission pressure pipeline permitted under AD# 100003030, Project # 1019, segment 004. The maintenance work is part of an integrity management investigative dig to field assess an area of the pipeline that an in-line-inspection identified as an area impacted by corrosion. The scope of the maintenance/integrity works' Risk Rating Level is Level 1. The integrity dig will be conducted on Saturday July 7, 2018, located just east of Kamloops at approximate coordinate; Lat. 50.654172°, Long. -120.177675°. The stream is classified as a first order, ephemeral, S6 stream, non-fish bearing. A site specific Environmental Management Plan is being developed for the works, and a Qualified Environmental Professional will be overseeing the field works. ---------- All work appeared to be conducted according to permit conditions. Stream was rehabilitated appropriately and appears to be well protected against future environmental conditions. Environmental monitors were on site during the work and performed the damming of the stream and pump around of the stream. Seeding of the site was evident as well as good use of silt fencing on both sides of the stream through the effected area.						South				Pipeline, Well

In that inspection I noted in the comments that there was bubbling around the wellhead in the cellar full of water and that I wanted the company to contact me when they addressed the bubbling and open cellar hazard. I also entered a deficiency for insufficient location signage in the same inspection. When the company responded to the signage deficiency, I asked what was found with the bubbling. The company representative responded on December 22, 2016 by saying..."hit talked to the field and they are planning on sending a crew in tomorrow to pump the water out and put gravel around the wellhead. They believe the bubbling is from swamp gas and we will confirm with a GM test in the spring once the ground thaws. I will confirm the gravel work is done Thank you". To date I did not get any more responses or updates.						Central		16307	Well

2-Aug-2018	048932037-001	ConocoPhillips Canada Resources Corp.	3-Aug-2018		NTS: B-A 046-L/094-A-12	No	Truck	Deficiencies Corrected	22-Aug-2018	3-Aug-2018	Follow Up	This inspection is a follow up on a minor spill that ConocoPhillips noticed on July 30, 2018. I visited the site on August 2, 2018 and again the 3rd. Most of the free liquid had been removed in the initial spill response as evident by the drag marks of the vac hose. The only remaining free liquid was in the small 10 inch bell holes. The area smelled of hydrocarbon and the stain covered a large area. Some of the spill appears to have found a subsurface pathway in the shale and surfaced in somewhat isolated staining. The distance the spill had travelled from the wellhead area was paced at 17 meters. I am requesting that ConocoPhillips Canada Resources Corp. submit a FORM D Post Incident Report within 60 days of the date of the spill discovery (July 30, 2018) and the due date would be 12:00 noon, Sept 28, 2018. The form is available on our website.						Central	00025418, 00025471	28056	Facility, Pipeline, Well

3-Aug-2018	0489331373-001	Canadian Natural Resources Limited	3-Aug-2018		DLS: 06-27-084-18	No	Truck	Passed Inspection (Complete)	3-Aug-2018	3-Aug-2018	Complaint	This inspection is the result of people in the area complaining of offsite odours. Due to my own time constraints, I was not able to meet with the operator who at the time was supervising a vac truck operator at another site. At the time of this inspection, there were what appeared to be onsite exhaust odours probably associated with the compressor. It was noted is the auto ignitor on the flare stack was in the "off" position. The flare itself appears to be inconsistent and some times it shrinks in size to the point where it could be possible for the wind to remove the flame off of the stack. The winds on this day were light. The questions I have are; -why is the auto ignitor in the "off" position? -is there a problem with the flare stack auto ignitor? -is there a problem with the flare stack itself? -would adding more fuel gas to the flare be part of the solution if the flame is being carried away from the top of the stack? -if the flare goes out, what is the current process to get it lit again? I would appreciate a response to the above questions by 12:00 noon August 10, 2018. Thank you This inspection will show as a PASS as there were no off site odours at the time of inspection. Access to well looks to be down a pipeline ROW?? I did not make it to the wellsite. As the condition of the equipment inside of the building is in bad condition (separator and piping has major corrosion and is coming apart in layers of rusted metal) and does not look to be able to re-use. Therefore, this needs to be removed and a plan for clean-up put in place. Please contact me to discuss. -The OGC has no gas analysis on file for this well. As this well had produced since 2004, and a gas analysis is supposed to be submitted within 6 months of production, an analysis needs to be submitted by esubmission to the OGC. 16-Aug-2018	049224775-001	Canadian Natural Resources Limited	17-Aug-2018		DLS: 07-21-087-21	Yes	Truck	Passed Inspection (Complete)	17-Aug-2018	16-Aug-2018	Planned	Water Disposal Well Inspection Meet with CNRL, and Kelt operations staff. Inspect the disposal well and new equipment installation. Verify that all shutdown set-points were set below the max wellhead injection pressure of 12,170 Kpa. Verified the meter K-factor was entered into the disposal meter and that the disposal meter connected to Fisher ROC SCADA pulsed back and read correctly. Action Items: 1. Re-range the wellhead tubing and casing pressure transmitters for negative range (-100 Kpa) as the well can go on vacuum. 2. Set the casing pressure Hi alarm at 500 Kpa, and the casing pressure Hi Hi shutdown at 1000 Kpa for detection and SD on loss of hydraulic isolation. 3. Complete SCADA programming to display a value of the maximum injection pressure for Kelt operations staff to report on the monthly BC-51B. 4. Add a well ESDV remote SD button on the injection pump building HMI panel at 9-28-87-21 Kelt facility. 5. Revise programming for the pipeline leak detection shutdown. Tighten up the SD. Monitor a continuous % meter difference between the flow meter at the injection pump building and the flow meter at the wellhead. Alarm @ 5 % difference, and SD @ 10 % difference. 6. Submit revised shutdown report from Ace Instruments. 7. Submit a BC-11 to change the well status from " Suspended" to an " Active " Waste Disposal Well. Please respond to OGC concerning the above action items. Thank you,						Central		10743	Well

4-Sep-2018	049718423-001	ConocoPhillips Canada Operations ULC	6-Sep-2018		DLS: 06-14-084-17	No	Truck	Passed Inspection (Complete)	6-Sep-2018	6-Sep-2018	Complaint	This inspection came as the result of concerns brought to the OGC regarding continued subsidence on a reclaimed well site at 6-14-84-17, WA 6093, off the end of the 247 road near Cecil Lake. Over the years the property owner and family have been filling in the subsided areas where this well was located. Recently while taking the fescue crop off the operator of the tractor sank into a few holes and one big enough they hit their head on the roof of the tractor. The one hole is estimated to be at least 1.5 m deep. The operator noted there were more places where the tractor was breaking thru the ground. These subsided areas are linear in fashion and correspond with what the family stated happened when the site was reclaimed. Would you please follow up with OPERATOR to address the concerns about the state of the abandoned well site. Could you please follow up with me by e-mail as to the resolution. This inspection will show as a PASS but there are concerns with the subsidence of the site. Thank you.						Central		06093	Well

17-Sep-2018	0500577196-001	ARC Resources Ltd.	19-Sep-2018		DLS: 13-36-078-18	Yes	Truck	Passed Inspection (Complete)	19-Sep-2018	17-Sep-2018	Planned	Disposal Well Inspection. Meet with operators. Inspect the tubing and casing high pressure shutdown set-points. The tubing high high shutdown was set ok in the plant HMI, below the max wellhead injection pressure. The casing high high pressure shutdown was set at 13,400 Kpa which would not give an early indication if hydraulic isolation was lost between the tubing and the casing. Arc Resources agreed this was a concern and lowered the casing high high pressure shutdown set-point to 1000 Kpa rising. The annual disposal meter proving due at the end of June had been overlooked. Arc Resources made arrangements and the meter was proved at the time of inspection. Thank you for addressing these concerns,						South		27024	Wellsite - Active
17-Sep-2018	0500789398-001	ARC Resources Ltd.	19-Sep-2018		DLS: 02-25-078-18	Yes	Truck	Passed Inspection (Complete)	19-Sep-2018	17-Sep-2018	Planned	Disposal Well Inspection Meet with operators. Inspect the tubing and casing high pressure shutdown set-points. The tubing pressure high high pressure shutdown was set right at the maximum wellhead injection pressure of 13,400Kpa. Arc Resources can choose to set the shutdown set point right at the max wellhead injection pressure, but it leaves no room for error. Recommend 100 Kpa below the max wellhead injection pressure of 13,400 Kpa. It was found that there was no high high casing pressure shutdown programmed into to the local SCADA, to close the wellhead ESDV and cease injection on loss of hydraulic isolation between the tubing and the casing. Arc Resources agreed this was a concern and a high high casing casing pressure shutdown was programmed in the local SCADA. The tubing and casing transmitters were re-calibrated and verified reading correct through the entire SCADA the next day, Sept 18. Thank you for addressing these concerns,						South		24139	Wellsite - Active

Review mechanical QA documentation for components vs. OGC QA Audit List. Noted at the time that Welder Log Sheets were not kept current throughout the project to ensure the welders were qualified to the WPS, with no breaks in welding under that procedure greater than 6 months. MVP was very well organized, and tracked non-conformances and repairs through the use of NDE and Repair Log. Overall evaluation- very good. Request mechanical QA samples for (5) segments of process piping be prepared for OGC file. The following Action Items were received and accepted at the time of the Sept 21 2018 Phase 2 Sour Gas Expansion Leave -to- Open Inspection. 1. Updated Welder Log Sheets for this project. 2. Mechanical QA for (5) process piping sections as selected. No further response to this inspection is required. Thank you,						South	00026229		Facility, Pipeline, Well

20-Sep-2018	0502345500-001	Storm Resources Ltd.	27-Sep-2018		NTS: A-A 048-D/094-H-03	Yes	Truck	Passed Inspection (Complete)	27-Sep-2018	27-Sep-2018	Routine	At time of inspection, produced water was being piped from c-39-D/94-H-3 to a-A4B-D/94-H-3 bypassing the observation well and circulating through to three 400 bbl tanks and then in to a c-ring. To avoid inadvertent opening of wellhead valves or valves passing, consider installing a blind flange at wellhead. Ensure daily inspections of the two c-rings on this site are documented. There is some slumping of soils over the pipeline on the pipeline right of way that runs along side the access road. Ensure this is stabilized as per Pipeline Regulation Section 5 (2) and (3). The fluid from c-39-D (treated at c-39-D) comes to building on above piping, through the ESD, drops down before the yellow check valve, through the open valve then out the door to three 400 bbl tanks. Circulates through those. The last tank is connect to the c-ring where water was observed entering c-ring.						Central		29012	Pipeline Project, Well

Review the tank levels and tank T-6010F transmitter not working for level reading. Calibrations for gas meters and fluid meters are being kept up. Process Heat Medium BU 8310 has old spill which operations is working on cleaning up. Still staining below that needs more attention. Inspect phase 1 and phase 2. 4200 e3m3 gas, 250 m3 condy, 270 m3 H2O 4 compressors electric 3 stage - 2 refridge plants - process and utility heat medium - 2 condensate stabilizers OH comp - VRU - 2 inlet seps and slug catchers - 2 cyclone seps water disposal - 4 bullets, 8 750 BBL condy tanks and 8 750 BBL water tanks - Pembina pump and two truck loading sites Action Items: 1.) PSV in Condensate Stabilizer BU 5050 appears to be leaking from body. 2.) Grounding required for the two vent tanks off K1050 and K2050 compressors. 3.) Temporary 100 BBL tank off expansion chamber on Process Heat Medium BU 8310 is single wall. Containment needed or double wall. Please reply to OGC for above action items. Plant is being kept in good shape by operations.						South	00007806		Facility, Pipeline, Well
21-Sep-2018	0501459992-001	Tourmaline Oil Corp.	21-Sep-2018		DLS: 02-11-080-16	Yes	Truck	Passed Inspection (Complete)	21-Sep-2018	21-Sep-2018	Planned	Phase 2 Sour Gas Expansion Leave-to-Open Inspection (LTO) Meet with Tourmaline Oil Operations and the Site Construction Manager, and CDN Controls E+I and QA staff. Review that a Torque Declaration for process piping bolt-up was complete and a declaration of conformance to ASME Code for pressure piping was signed and dated by the Engineer of Record. Review electrical QA documentation for electrical seal inspection, grounding conformance, and that all A- punches were complete. Inspect phase 2 plant accounting meter construction, configuration, and calibration, Find that the sour inlet separator drive gas meter and the dilution gas meter (acid gas to flare) were tagged as non-accounting and sample points were not identified. Receive and accept from MVP Oil Field Services a USB drive and binder with process piping mechanical QA for (5) selected sections of process piping. Perform a walkdown of all new process equipment and buildings. Inspect that locks and or car seals on critical valves were in place as required. Witness (2) satisfactory ESD function tests when AT- 2211 Fire-eye was triggered in K2200 and when an ESD push button on the new MCC building was pressed. BDVs opened as programmed, inlet and sales valves closed, as programmed. Confirmed that an ERP was on site in the control room with a digital version also available. Action Items: 1. Submit the phase 2 signed and stamped plant shutdown key (SDK). 2. Submit confirmation that all PLC commissioning bypasses have been removed prior to introducing gas into the new process piping and equipment. 3. Submit the most recent inlet gas. 4. Submit vendor commissioning reports and PDF configuration for the LP acid gas meter. 5. Submit vendor commissioning reports for the acid gas incinerator controls with low fire (stack temp) shutdown set-point. 6. Submit vendor commissioning report for the VRU. 7. Submit final commissioning documentation- Site Acceptance Testing for Controls (VRU, Heat Medium, and Incinerator) from plant PLC, HMI programmer, Bro-Tek Controls. 8. Ensure that Production Accounting (PA) is aware the dilution gas meter FE 4550-2 is to be deemed as production accounting, reported and added to main plant fuel gas meter monthly volume and that the monthly HP flare meter volume is adjusted by subtracting the dilution gas added when the incinerator goes down. 9. Ensure the sour inlet separator drive gas meter is deemed to be production accounting. The monthly sour inlet separator metered volumes are to be corrected by subtracting monthly separator drive gas volumes. 10. Submit a revised plant car seal list to include revisions, such as locking inlet bypasses closed. 11. Install guards on aux coolant expansion tank sight glass on K-2000-2. 24-Sep-2018	0501585576-001	Pacific Canbriam Energy Limited	25-Sep-2018		DLS: F 15-01-085-26	Yes	Truck	Passed Inspection (Complete)	25-Sep-2018	25-Sep-2018	Planned	One cord on main plug board needs repaired. Berm needs repaired. Company man to have repaired. All else looks good. Rig is clean.						Central		31817	Well

24-Sep-2018	0501070623-001	NorthRiver Midstream G and P Canada Inc.	25-Sep-2018		NTS: A G21-B/093-P-09	Yes	Truck	Deficiencies Corrected	10-Oct-2018	24-Sep-2018	Planned	Routine Gas Plant Inspection Meet with Enbridge Staff. Inspect that plant safety systems were being maintained, and there were no faults on the fire and gas detection screens on the plant HMI. Noted that the fire detection display units were mA and read 0. These units most likely should be ¾ then the readings would make sense , as 0 mA would be a fault. Inspect that plant accounting meters were being maintained. Found that the production tank level transmitters (Rosemount 5300 Radar Master guided wave radar level transmitters) were not deemed to be production accounting. These meters would be production accounting and used to report month open and closing inventories of condensate and produced H2O. Request Enbridge develop a PM to assess the meter health, through software diagnostics,and keep annual records of the inspections, as done with all accounting meters. Field fuel gas meter FIT 5342 is due for calibration. Found that FE- 9210 - source water for amine make-up proving was overdue- last done Feb 14/17.Confirmed the water injection meter had recent prove - last done Feb 21/18. Perform a walk-down of the plant process equipment. Found that FV- 0203 (blowdown valve) was blocked in, due to high sales pressure lifting the valve plug off of the valve seat. There was another BDV on the same line with a check valve in between, but with smaller valve trim (1/2 in). This would limit the speed which the discharge piping would blowdown, and leave some pressure trapped behind a check valve (check valve cracking pressure). Action Items: 1. Designate the plant production tank level transmitters as " accounting". Incorporate inspection into annual PM, and keep record of inspections. 2. Repair issue with FV-0203 and put back in service. 3. Emergency Generator- tighten ground where it attaches to the generator frame. 4. Emergency Generator- Ground the diesel day tank to the ground lug on the tank as per the manufacturer. 5. Repair leaking PVRV on the Refrigeration #1 BTEX tank. 6. VRU #1 Condensate stabilizer- Replace broken seal on Sulpher-Ox divert control valve iso. to flare. BDV-8420- Replace missing nut on valve to hold the handle on. 7. Produced H2O Load-out - 3/8 SS tubing plug missing on piping. 8. Fire detection screens- Plant HMI - Change engineering units from mA to % (percent). 9. Prove FE-9210 amine make-up H2O. 10. Calibrate the field fuel gas meter. 11. Separator # 2- EYS seal missing bull plug on high level switch electrical.							South	00007676		Facility, Pipeline, Well

26-Sep-2018	0502331662-001	NorthRiver Midstream G and P Canada Inc.	26-Sep-2018		DLS: 05-01-077-17	Yes	Truck	Deficiencies Corrected	10-Oct-2018	26-Sep-2018	Planned	Gas Plant Inspection Meet with plant operations staff, contract E+ I staff, the production foreman, E+I Coordinator. Inspect that there were no faults on plant fire and gas detection systems, HMI screens, and that routine calibrations were being done to maintain these systems. Inspect gas plant accounting meter calibrations. With the new ownership taken over from Murphy Oil and Gas some questions came up as to whether or not the new owner was using the inlet separator liquids and gas meters as production accounting, reporting, or custody transfer/pay meters. The operator mentioned the inlet separator condensate meters are shut in and no longer go to the stabilizer feed flash vessel. The same question came up concerning the plant disposition, truck-out, pipeline water to Murphy Oil, truck-out condensate, and truck-out slop meters. Spoke with rep concerning this. Requested that they have a discussion with the production accountants to verify the identification/designation of meters, and to update the plant measurement schematic, metering table, and field identification tags. Inspect plant process buildings, equipment, and the generator building. Action Items: 1. Review all plant metering identification/designations. The OGC designates meters used for production reporting to the Ministry of Finance as ' accounting". Update meter field identification tagging, submit a revised plant measurement schematic, and metering table. 2. Found water meter to Murphy Oil Header at 16-1 last proved July 9, 2015. If this meter is 'accounting" it is over due for meter proving. Inform of designation, and prove if required. 3. Replace broken car seal on PIT 1133BA- Central West Fuel Gas. 4. Replace missing designation tag on the plant dilution gas meter FE-10535. Please respond to OGC concerning the above action items and to the attached deficiencies through the KERMIT system. Thank you,							South	00007808		Facility, Pipeline, Well

28-Sep-2018	0502281246-001	Tourmaline Oil Corp.	28-Sep-2018			DLS: 02-11-080-16	Yes	Truck	Passed Inspection (Complete)	28-Sep-2018	28-Sep-2018	Planned	Phase 2 - Transfer Pump Building Inspection BU-9300-2 Meet with Tourmaline Lead Operator, Phase 2 PLC programmer and CDN Controls. Inspect that the LEL and H2S gas detection in the Transfer Pump Building were reading live values and were functional. It was disclosed that there was still an electrical jumper installed on the PLC input for the building manual ESD push buttons which would be removed before commissioning the pumps with product. Inspect the building and equipment installation. Found that the electrical pressure switches for condensate pump P-9250-2 shutdowns located on the suction and the discharge piping were getting very tall, due to choice of nipples, isolation valves, and manifolds. There is a concern that pump vibration and the mechanical moment of inertia, caused by the weight and height of the pressure switch installation, would cause the nipple threaded into the weld-o-lets to crack (fail) over time. CDN Controls, Troy Walker agreed, and will re-build the pressure switch installations with shorter, extra-heavy wall nipples. Action Items: 1. Prior to commissioning with live product- remove the electrical jumper to the plant PLC input for the manual ESD push buttons on BU- 9300-2. 2. Were isolation valves for transfer pump shutdown pressure switches have been car sealed by wrapping the car seal around a valve handle, replace with clam-shell and car seal closed. 3. Condensate Pump P- 9250-2 suction and discharge shutdowns- Re-build/shorten the pressure switch installation height by using shorter pipe nipples. Ensure extra heavy nipples are used. 4. Submit PLC programing commissioning documentation for the new Transfer Pump Building BU-9300-2 once final commissioning is complete. Please reply to OGC concerning the above action items. Thank you,						South	00026229		Facility, Pipeline, Well
1-Oct-2018	0503356106-001	Pavilion Energy Corp.	1-Oct-2018	2-Nov-2018		DLS: 06-21-085-19	Yes	Truck	Deficiencies Corrected	2-Nov-2018	1-Oct-2018	Planned	This inspection is in response to an incident where the flare stack flame failure did not close the separator ESD valve. LELs were detected in the separator building. The 4-way personal monitor high LEL alarm activated when using an entry procedure into the separator building. The separator dump valve stem packing was leaking oil on to the separator floor and LELs were detected coming from the separator back pressure controller and level controller. Found an electrical seal on the Altronic Panel packed, but not poured. An electrical seal was not installed on the Cata-dyne heater in the flare KO tank enclosure. The ASCO solenoid for the separator ESD valve may be a low power model. We will need this checked. Some oil and gas operators have reported problems with these low power solenoids, as they do not reliably vent and drop out ESD equipment. There may be an issue with the ESD solenoid not venting properly as the 3/8 SS tubing that normally terminated outside the building had been removed. Action items: 1. Set pump jack rod rotator cable length to rotate the pump jack rod. 2. Install ground clamp on the truck load strap for the produced oil truck load-out. 3. Install a ground strap/clamp - POP Tank truck load-out. 4. Ground the flare KO Tank Load line. 5. Ground the propane tank. 6. Check if the Separator ESD valve solenoid is ASCO low power model. If so, replace as the OGC has received reports from operators of poor venting performance in ESD loops. 7. Calibrate the separator dry flow meter- last done Sept 1, 2017. Please respond to OGC concerning the above action items and to the attached deficiencies through the KERMIT process. Thank you,						Central	00018803		Facility, Pipeline, Well

23-Oct-2018	0509543 67-001	Polar Star Canadian Oil and Gas, Inc.	6-Nov-2018		NTS: B 048-C/094-H-12	No	Truck	Deficiencies Corrected	16-Nov-2018	23-Oct-2018	Routine	COMMENTS: - This site has two wells on it. Both location well signs are at the lease entrance, but the wells are both signed as b-48-C/94-H-12. In order to meet the regulations, both wells must be signed with all pertinent information. Maybe move the b-A48-C location sign from the lease entrance, to the proper well. This would then meet the regulations and be sufficient. -Also, the location signage at the lease entrance has trees growing all around it, therefore, it is not legible and conspicuous as the D&P Regulaion requires. -There is a water pit on the access road to the lease that has all the orange snow fencing fallen down. This needs to be corrected and the fencing put back up. **Please contact me when this has been completed						Central	00021329, 00022185	19693, 21360	Facility, Pipeline, Well

Inspect plant HMI, LEL and fire detection screens. Found AIT-049195 Refg Propane LEL in fault. The fault was immediately looked at and was repaired by the end of the inspection. Found the fire and gas detection bypass timer in the HMI programmed to 1440 minutes. Requested to review Progress corporate bypass policy and change the bypass timer value if found not to be consistent with corporate policy. Checked into this issue and confirmed the max bypass timer value should be set at 120 min. Perform a walkdown of process equipment and piping. One car seal was found missing on glycol flash tank off of the LTS -Press. Switch HI HI - 59280. Operations staff agreed as it closed ESDV-220, and a car seal was immediately installed sealing the pressure sensing valve open. As the plant inspection was split into (2)parts, and a deficiency had been issued for missing locks or car seals for the North Plant inspection # 50536554-001, it is at the Commission's discretion not to issue a second deficiency. The same discretion was used concerning measurement deficiencies for South plant accounting meters requiring calibration. The measurement items have been addressed in the North Plant inspection response. Action Items: 1. Plant HMI - Fire and gas detection bypass timer value. Change bypass timer value from 1440 minutes to 120 minutes. 2. Generator Building- Some Generators have local Emergency shutdown push buttons, some ESD push buttons have been removed. The operation staff commented that these push buttons are not functional. Recommend that non functioning local ESD push buttons be removed as not to give false sense that they should work in the event of an emergency. 3. Inlet Building V-100 - car seals on BDV should be tamper proof and not be able to slip off to allow the valve to be closed without breaking the seal. 4. LP Flare KO- FG 2116 does not appear to be powered up. If not in service, remove or tag "out of service". 5. Instrument Air System- Check when the last time mini-PSVs were changed out on the air compressor and air dryers. Check and ensure that the air system mini-PSVs are included in MAXIMO PM . Please respond to OGC concerning the above action items. Thank you,						Central	00007778		Facility, Pipeline, Well

26-Oct-2018	050738632-001	Primavera Resources Corp.	26-Oct-2018		DLS: 14-13-084-21	Yes	Truck	Passed Inspection (Complete)	26-Oct-2018	26-Oct-2018	Complaint	There was a complaint regarding H2S odours coming off this location. Randy from Watts service was on site supervising clean up of some unused equipment as well as steaming out pigging barrel and oil catchment bins. It was probably the cleaning out of these containers that caused some odours. There were only motor oil like odours when I was on site. The cleaning of the bins is complete. There is a slight gas odour coming off the 3 large metal bins containing removed equipment and Randy was going to call and get these removed asap. This inspection will show as a pass but there was a complaint called in and no odours were present at the time of inspection and the ones that resulted in the complaint were short in duration. 30-Oct-2018	050913095-001	Catapult Environmental Inc.	2-Nov-2018		DLS: 13-26-081-17	Yes	Truck	Passed Inspection (Complete)	2-Nov-2018	30-Oct-2018	Planned	Disposal Well Inspection Meet Catapult Environment & Regulatory Planner, and Catapult Lead Operations Professional on site. Inspect the disposal well and general site condition. Found the disposal meter not functioning. Operations is explained that the meter is not sized properly to measure the current disposal rate of 6-8 m3 /hour. A calculation based on fluid intake from Crew Energy and opening and closing tank volumes is being used to report daily disposed volume. There is unused equipment such as (2) separator skids, old piping and valves, utilidor or building wall panels on site that need to be removed. At present the injection rate is low 6-8 m3/hour. The max pipeline operating pressure is limiting disposal rate. Catapult plans to bring a pump unit and perform an injectivity test at higher pressure to evaluate the wells performance to determine if it is economical to pull in a higher pressure flex pipeline. Inspect the SCADA system HMI and shutdown set points off of the tubing and casing pressure transmitters. Found the tubing pressure Hi Hi shutdown set right at 17,650 Kpa leaving no room for error. Found the casing Hi Hi shutdown set at 14,450 kpa, Recommend lowering the setting to 1000 kpa above normal operating pressure to detect a loss of hydraulic isolation sooner to initiate a shutdown. Action Items 1. Remove unused equipment. 2. Repair or replace the disposal meter 3. Evaluate SCADA HMI tubing and casing shutdown set points. Recommend lowering both. Please respond to OGC concerning the above action items. Thank you,						South		20155	Pipeline, Well

30-Oct-2018	050919017-001	Ovintiv Canada ULC	2-Nov-2018		DLS: 03-07-081-17	Yes	Truck	Passed Inspection (Complete)	2-Nov-2018	30-Oct-2018	Planned	Temporary C-Ring Installation Meet with Encana c-ring installation specialist. Review prepared c-ring QA documentation. Use the Drilling and Production Regulation 51 (6) as a check list and ensure compliance with the regulation. Request a inspection sheet be developed to record c-ring inspections. Inspect the installation of (3) 6500 m3, and (1) 2900 m3 c-rings that are being used to store frack return and produced water. Found that the c-rings were not grounded and bonded to the Frack Pump building where the fluid transfer line was connected. Call for an Engineering Assessment on grounding and bonding. Encana replied by email " I have just met with one of our EnCana Electricians and have done a walk through of the site. We will install a ground anchor near each c-ring (tank) and ground each tank separately with 6 Gauge wire. We will bond every item (stairs, suction manifolds, candy canes) to clean bare metal on the tank. The pump we are using will also be grounded to a ground anchor. Max will stop by the site and verify the grounds and bonds after completion. This satisfies the Canadian Electrical Code and EnCana Standards." Please arrange for an inspection once the remaining c-rings are installed. Thank you,						South	00018136		Facility, Pipeline, Well

31-Oct-2018	0509271175-001	Ovintiv Canada ULC	2-Nov-2018		DLS: 08-02-080-17	Yes	Truck	Passed Inspection (Complete)	2-Nov-2018	31-Oct-2018	Planned	Pipeline Blended H2S Shutdown Inspection This inspection is to allow Encana to temporary flow above the licensed pipeline H2S level of 990 PPM to gather more data for relicensing the pipeline at a higher H2S level. A blended flow rate shutdown was programmed into Cygnet SCADA system that was to shut down 8-2-80-17 G,&H wells leaving the F well flowing if the combined flow rate from the 8-2-80-17 G,A,B,C,D,E wells dropped below 65 e3m3/day. Work is scheduled to tie (2) local SCADA RTUs on site together, via Ethernet cabling and input programming, to execute the blending shutdown philosophy described. When the test was conducted the Cygnet system shut the flow off to the F, G,H wells, and did not work as intended. Please arrange for a follow-up inspection to test the blended H2S shutdown once the electrical work to connect the (2) local RTUs and programming is complete. Thank you,							South	00018358		Facility, Pipeline Project

Lower master valve and wing valves are chained and locked. Surface casing vent checked, ok. Sign ok. Last production October 1994. One P/L riser on location. All items from last inspection (steel beams, pilings, flare etc) have been removed.							North		07738	Pipeline, Well
31-Oct-2018	0510553024-001	NorthRiver Midstream Energy Holdings Limited	8-Nov-2018			No	Truck	Passed Inspection (Complete)	8-Nov-2018	8-Nov-2018	Routine	This was a routine inspection of PDR 168 in the Pocketknife area, and the bridge at 2.7km. Running surface is rutted over 60% of the road. Some aggregate in places. Road profile is flat, with slight crown over perhaps 10% of the road. Ditches are more or less functional. Bridge at 2.7km: 1) Delineators ok. 2) Bull rails ok. 3) Most silt board section are missing. 4) Wing walls ok, but showing advanced rot on the ends of the planks. 5) Didn't check wear decking due to presence of snow but it appears to be covered heavily with sand and gravel. 6) As observed from the underside of the bridge, some cross ties are badly rotten. This may affect the load rating of the bridge. Photos available from 7) Under the bridge, the end fill behind the upchain ballast wall is eroding during high stream flow due to the absence of planks that normally hold back the fill. Photos available 8) As observed from the underside of the bridge, the subdeck is showing mold. Photos available Please provide copies of the most recent bridge inspection (see Oil and Gas Road Regulation section 14), or if none is available, undertake a detailed bridge inspection by a qualified person (OGRR Section 14 (2)) and provide a copy of the inspection to the OGC							North			Road

6-Nov-2018	050998006-001	Ovintiv Canada ULC	6-Nov-2018		DLS: 08-02-080-17	Yes	Truck	Passed Inspection (Complete)	6-Nov-2018	6-Nov-2018	Planned	Inspection to Temporary Flow for (1) Month Above 990 PPM - Pipeline License . Confirmed the (2) SCADA RTU systems have been linked and local programming made to shut in sour wells G&H, and allow the F well to flow if the 8-2-80-17 (0,A,B,C,D,E) sweet well flow drops below 65 e3m3/day. Witness a successful test of the SCADA system shutdown programming, to allow one month temporary flow above 990 PPM for the purpose of obtaining more data for the re-licensing of the pipeline to 9-27 Saturn. The 8-2-80-17, 0, B, C, D,& E wells flow was remotely shut off and the 8-2-80-17 A well flow was lowered to 53 e3m3/day. The SCADA programming worked as intended and shut off the flow to 8-2-80-17 C and H wells, and left 8-2-80\17 F well flowing. No response is required to this inspection. 7-Nov-2018	051057749-001	ARC Resources Ltd.	8-Nov-2018		DLS: 03-09-081-16	Yes	Truck	Deficiencies Corrected	9-Nov-2018	7-Nov-2018	Planned	Gas Plant Inspection Meet Arc Resources Lead Operator, and Arc Resources Area Foreman. Inspect Phase 1 and Phase 2 Plant HMI displays. Found that the phase 1 M900 and M910, HP and LP Flare Stack Ignitor Status (pilot flame failure) in alarm and the device state in the Plant Host PLC overridden. There was no record that the bypass was authorized and recorded in the Plant Bypass Log. During the inspection an electrician trouble shooting the problem reported damage to a temperature relay, sensing thermocouple voltage, at the top of the flare stack. Found that there were (3) fire detectors in fault status, AT-127044 - GCU -A , AT-042064 Phase 2 BU-4200 Storage Tank VRU, and AT-56044- Booster BU-5600, where the operations staff had to keep refreshing a 480 min. bypass to keep from alarming. Found the Enbridge UPS-trouble, inverter fault-100, high voltage alarm, overridden. The electrician was contacted, and will be in to trouble shoot and repair the problem. Found one of three pilot flame failures on Phase 2 flare stack - BALL- 064601 in fault. Found ESDV 01001 valve in transition on the PLC HMI screen, not showing on closed limit. There were some plant PLC HMI graphical errors- graphic not built to show Parkland 5-9 gas connected to Tower 5-9 gas. Perform a walkdown of phase 2 equipment, process buildings, and piping. Action items: 1. Accounting meters- tank &bullet level transmitters- guided wave radar level transmitters- Include verification and use of self-diagnostics in plant accounting meter PM. Generate an inspection report as a record of maintenance. 2. Submit " accounting meter calibration reports". Plant account meters maintenance frequency - Semi-annual. 3. Submit Phase 1, Phase 2 , and Enbridge Sales building Shutdown Reports. 4. Submit all pressure transmitter calibration records for transmitters connected to ESDV shutdowns. 5. Plant master car seal list - Show date installed. Develop a form to report when a car seal is installed or removed. 6. Repair ground cable into electrical seal on Riser 3 -Truck-out Oil - Scully ground system. 7. Repair phase 2 flare stack pilot failure - Ball - 064601. 8. Repair AT-127044 - GCU-A 9. Repair Enbridge Inverter - 100 fault. Remove plant PLC alarm override bypass. 10. Correct plant phase 1 and 2 PLC graphic errors/ misrepresentations as required. 11. Arrange for a measurement inspection - phase 2 gas assist meter installation. Include gas assist meter on the measurement schematic. Please respond to OGC concerning the above action items and through the KERMIT system for the attached deficiencies.							South	00000743		Facility, Pipeline, Well

7-Nov-2018	051450075-001	Chinook Energy (2010) Inc.	28-Nov-2018		NTS: D 095-D/094-H-06	No	Truck	Passed Inspection (Complete)	28-Nov-2018	7-Nov-2018	Planned	COMMENTS: -large erosion channels on lease access road and the lease. There should be controls in place to prevent water from running down the access or across the lease and creating these large erosion channels, ie ditching or other means. -The injection pump is continuously venting (diaphragm?), and the lid is off of the active injection pump. With moving parts, this is deemed a hazard and the lids should be put back in place to eliminate the hazard. -Low level LEL was detected inside of the building. I did not enter. -The containment for the chemical tanks is deformed. I have noticed, and commented previously, that many of the chemical tank containments in this area are deformed. I am not sure that they can contain 110% of tank volume as required. This is a concern and your company should assess the situation. Maybe a plan to begin to replace some of the containments that do not meet the volume requirements. You can call me to discuss at 250 261 5943 -The location signage at the beginning of the lease road has a 'sour symbol' on it. As per the gas analysis on file, there is NO H2S in this gas stream. This symbol needs to be removed from the signage.							Central	00021456	19928	Facility, Pipeline, Well
7-Nov-2018	051453321-001	Chinook Energy (2010) Inc.	28-Nov-2018		NTS: C 037-E/094-H-06	No	Truck	Passed Inspection (Complete)	28-Nov-2018	7-Nov-2018	Planned	COMMENTS: -The location signage on the building has a badly faded flammable symbol that should be replaced. As well, there is a 'sour' symbol on the location signage posted at the beginning of the lease road, and as per the database, there is no H2S in this gas analysis, therefore, the sour symbol needs to be removed ASAP							Central	00024355	25824	Facility, Pipeline, Well
7-Nov-2018	051457414-001	Chinook Energy (2010) Inc.	28-Nov-2018		NTS: D 039-E/094-H-06	No	ATV/Snow Machine	Passed Inspection (Complete)	28-Nov-2018	7-Nov-2018	Planned	COMMENT: -I was not able to access this wellsite as there is a beaver dam across the access. You will have to contact FLNRO in order to enable the removal of the beaver dam. Otherwise, you cannot remove the beaver dam, which will most likely be causing some sort of damage to your access road.							Central		04309	Well

15-Nov-2018	051174884-001	ARC Resources Ltd.	15-Nov-2018		DLS: 03-09-081-16	Yes	Truck	Deficiencies Corrected	19-Nov-2018	15-Nov-2018	Planned	Phase 1 Gas Plant Inspection Meet Arc Plant Operations Lead. Inspect plant HMI screens - phase 1 and phase 2 fire and gas detection . Found ok, no faults. Inspect the YSPL Sales building. Found (1) Swaglok 1X3/8 fitting with not enough threads engaged in the root valve. Request that the fitting get tightened to at least 5 threads engaged. Walk down phase 1 process buildings, equipment and piping. Verified that rotating equipment, compressor and VRU shutdowns were recently done. Verify that a fugitive leak inspection was completed Nov 10, 2018. Verify critical pressure transmitters connected to shutdowns and ESDVs were recently calibrated. Found that (3) mini-PSVs on the methanol pump discharge in phase 1 GCU were missing seals, identification tags with set pressure, and date. Action Items: 1. YSPL Sales Building - Tighten Swaglok 1x 3/8 fitting on sales line - Ensure 5 threads engaged. 2. GCU Building: Swagtok mini-PSVs on methanol injection. - Set pressure, seal, and tag. 3. K-600- AIT 60003, 60004- tighten conduit bull plugs on Netsafety Controllers. Please reply to OGC concerning the above action items and through the KERMIT system to the attached deficiencies. Thank you,							South	00007743			Facility, Pipeline, Well

"if a well may produce flammable gas, a symbol is required"). SO basically all well location signs need a flammable symbol. Some of your location signs on the buildings/cupboards have a sour symbol and not a flammable symbol. If a gas well does not produce gas with 10ppm or greater H2S, a sour symbol in not required. -Please review all of your location signs to ensure they are meeting the regulations							Central	00026348	31968, 31969, 31970, 31971, 31972, 31973, 31974	Facility, Pipeline, Well

Works have wrapped up for the season and will recommence in the late winter/early spring once conditions allow. Sites are clean and orderly or have been repaved and no further works required. Sloughing in Silver creek tributary was visited during this inspection. This sloughing occurred well away from the stream and no impacts were noted. Fortis is taking temporary measures to stabilize the slope as pipeline construction is to be completed in this area in 2019. Incident IS0949B7-001 DGIR 182688 release site and storm sewer outfall was visited during this inspection. Maps from the city storm sewer system were provided to the OGC by Fortis to confirm outfall location. No further documents required at this time.							South			Pipeline Project
22-Nov-2018	05132513O-001	Canadian Natural Resources Limited	26-Nov-2018		DLS: 06-12-084-18	No	Truck	Passed Inspection (Complete)	26-Nov-2018	22-Nov-2018	Follow Up	Follow up walk through with landowner regarding land sliding issue. The area of greatest concern is along the pipeline ROW south of the well. It crosses close to the residence and the edge of the yard has slumped towards the creek. There is an old road which may have contributed to a weakness in the slope. Let me know what plans CNRL has for the lease and pipe ROW, thanks.							Central		03462	Well

22-Nov-2018	051387386-001	Kelt Exploration (LNG) Ltd.	26-Nov-2018		DLS: 03-28-087-21	Yes	Truck	Deficiencies Corrected	13-Dec-2018	26-Nov-2018	Complaint	OGC received an odor complaint the morning of Nov. 22, 2018. That same day in the afternoon inspector attended site and no odors were found at that time. Inspector returned next morning with FLIR camera. Some odors were noticeable. A scan of liquids side of facility found a produced water tank venting gas from the top. We were unable to tell exactly where it was venting from the top of the tank. This will need to be inspected and repaired. Please respond back to inspector by e-mail when this is completed. Loadlines for production tanks extend out past secondary containment. This is acceptable if the drain line from envirobox back to secondary containment is of substantial size that in the event of a failure of the load line valve, the box (lid door) would stay closed, and the drain line would be able to adequately flow the fluid without pushing the load box door open. Drain line will have to be maintained to ensure it does not become restricted with either residue or freezing. Complaint #51355303 Gas side of facility was down due to CNRL had high line pressure as per operator. Gas side was not inspected. No buildings were entered. Solution gas off tanks was going to flare.						Central	00002826		Facility, Pipeline, Well

SCADA programming changes have been made to limit the maximum pipeline H2S to 990 PPM . If the CS-02-80-17 well flow drops below 67 e3m3/day the S-02-80-17 well shuts in; if the CS-02 well flow drops below 40 e3m3/day the AS-02 shuts in; if the CS-02 well flow drops below 20 e3m3/day then the BS-02 shuts in. At the time of the inspection, the CS-02 well was flowing at 61 e3m3/day, and the S-02 well flow was zero. Witness the AS-02 shut in when the CS-02 flow was lowered to 38 e3m3/day. Witness the BS-02 well shut in when the CS-02 flow was lowered to 17 e3m3/day. The wells will remain shut-in until a manual reset through Cygnet System is done.						South		33680	Pipeline, Well

29-Nov-2018	051520117-001	NorthRiver Midstream Inc.	30-Nov-2018	9-Jan-2019	NTS: B 036-I/094-B-16	Yes	Truck	Deficiencies Corrected	17-Jan-2019	29-Nov-2018	Planned	Gas Plant Inspection Meet with NorthRiver Midstream, E&I Maintenance Supervisor, E&I Mechanic, and plant operations staff. Inspect that there were no faults on fire and gas detection systems in the plant. Found the fire and gas bypass timer max value set to 999 minutes or 16.65 hours. Request that NorthRiver Midstream determine if the bypass timer value is set to a corporate standard as defined in a Safety System Bypass Policy. Verify that gas and liquid overpressure protection devices were inspected and calibrated in 2018. Very that the acid gas to flare and the plant fuel gas meters were calibrated Feb 27, 2018. Could not verify if routine maintenance verification/calibration was conducted on the HP and LP flare meters. Verify the truck loading meters were recently proved sept 25, 2018. Discuss changes for maintenance frequency of gas plant meters that are used for reporting purpose to the Ministry of Finance (MOF). As of Nov 2018 British Columbia is now harmonized with Alberta and Saskatchewan and gas plant reporting meter calibration/verification is semi-annual. Ask to check with Production Accounting to determine if tank and bullet levels are reported to the MOF as monthly opening and closing inventories. If so then verification of tank and bullet level transmitters would be semi-annual. Noted that the refrigeration, de-ethanizer overheads, and sales compressor panel shutdown checks are coming due in December 2018. Ask if NorthRiver Midstream had a facility integrity management program, and request that to be submitted for review. Found the HP and LP flare KO high level switches were alarm only, no ESD function. Request this be assessed . Request an Engineering Assessment to examine the hazards of not shutting process in on a flare HP or LP flare KO high level, and whether or not shutdown action is required. Action Items: 1. Perform an Engineering Assessment - LP and HP flare KO high level function. 2.Submit Facility Integrity Management Program- Highway Plant. Concern that there may be critical pressure switches or transmitters linked to emergency shutdown devices, that are not being calibrated/verified annually. (eg. PSLL-152 Low Instrument Air Shutdown) . 3. Submit corporate safety system bypass policy- Address concern with fire and gas detection system maximum bypass timer value of 999 minutes, not meeting a standard maximum value (set for all plants) as outlined in corporate policy. 4. Verify the accuracy of meter designations on the plant Measurement Schematic, correct if required, and submit. 5. Ensure SAP PM scheduling is revised for all gas plant reporting meters- now semi-annual. 6. Submit latest calibration/verification reports for HP and LP flare meters, Flow Spitter meters, and sales meters. 7. Sales Gas Compressor 402-A turbine shaft guard- missing (2) nuts and bolts. 8. Refrigeration Compressor 601-A 3rd stage discharge PSV piping support clamp no longer bolted tight.						Central	00002436		Facility, Pipeline, Well

4-Dec-2018	051641885-001	Kelt Exploration (LNG) Ltd.	5-Dec-2018		DLS: 02-10-088-23	Yes	Truck	Passed Inspection (Complete)	5-Dec-2018	4-Dec-2018	Planned	Partial Fuel Gas LTD Inspection Meet with Kelt Exploration facility construction group. Review mechanical PIDs that showed where facility piping blinds and locked isolation valves were installed to safely bring fuel gas into the new piping, and into the fuel gas building, to commission power generation, and the utility heat medium package. Perform an audit of blind and locked valves using a prepared Engineered isolation list. Found (1) valve on the purge gas supply to the HP flare KO tank that was required to be locked closed, and (2) tubing lines on gas analyzers in the fuel gas building that needed to be locked closed, disconnected, or capped. Found the isolation valve for PSLL 1602 instrument pressure low was not locked or car sealed open. This was taken care of at the time of the inspection. Current state of construction- The Treater and Pump building require manual ESD push buttons to be installed. Fire extinguishers are in the process of being mounted outside building entrances, some were mounted and in place at the time. Verified that fuel gas and HP flare measurement meters were functional. Kelt was informed to record and report all vented volumes. Inspect the facility HMI display screens, and check fire and gas detection for faults. Found that (1) fire detector (AT-0135) in the fuel gas building was intermittently going into fault. There are (2) fire detectors in the fuel gas building, one was functioning. Request that this be immediately repaired and verified to be functioning correct prior to admitting fuel gas into the facility piping. No faults were found on the facility LEL detection. Witness (2) successful ESD function tests, where the fuel gas supply isolated and blowdown valves opened to the HP flare system. Action items: 1. Repair and function test AT-0135 prior to admitting fuel gas into facility piping and the fuel gas building. 2. Complete the installation of ESD push buttons on the Treater and Pump Building prior to admitting fuel gas into these packages. 3. Submit a revised Isolation List with all new locks car seals added, not previously recorded. 4. Submit a PDF version the HP flare meter configuration. 5. Record all fuel gas used, all blowdowns and vented gas, for reporting purpose. 6. Perform periodic checks once the fuel gas system is pressurized that there is no continuous gas venting through the flare system. Please arrange for a final Facility Start-up Inspection once construction is complete,							Central	00026511		Facility, Pipeline, Well

4-Dec-2018	051728394-001	Canlin Energy Corporation	10-Dec-2018		NTS: A 099-E/094-H-05	No	Truck	Deficiencies Corrected	20-Dec-2018	4-Dec-2018	Planned	COMMENTS: -The surface casing vent has a hose attached and is tied into a drum. Why? I see a SCVF test was done on May 10, 2018 that determined there to be a small amount of gas leaking from SCV. So what is the purpose of the drum? -The pipeline associated with this site (NTS: A 099-E/094-H-05 TO: C 078-E/094-H-05 PROJECT #1204 Segment #1) is showing as 'ABANDONED' in our database, yet the well is actively producing gas. Why? Is there something on your end that should be looked into to explain this?							Central		01341	Pipeline, Well

6-Dec-2018	0517749401-001	Tourmaline Oil Corp.	12-Dec-2018		NTS: C 023-I/094-B-09	No	Truck	Deficiencies Corrected	27-Dec-2018	12-Dec-2018	Planned	Thanks to Tourmaline Operator for our discussions and taking notes from my inspections. Carson was going to put the clamshells on his list of items to bring back from town the following day. The meter run for c-g-23-I is starting to develop a crusty precipitate leak and needs to be tightened up. For the c-23-I separator/tank storage skid (formerly Shell and shut in) there is a missing bull plug on the external inlet line just upstream of the check valve. This needs to be replaced in case the skid is used again. . 6-Dec-2018	0518043904-001	Tourmaline Oil Corp.	13-Dec-2018		NTS: A 032-I/094-B-09	No	Truck	Deficiencies Corrected	27-Dec-2018	13-Dec-2018	Planned	Thanks to Tourmaline Operator for our discussions. Although there are some deficiencies to correct, the sites are designed quite well. There are some additional comments/action items for Tourmaline; The rat/mouse hole on the a-c-32 well is starting to slough in and needs a top up of gravel. This can be done with a shovel. There is a crushed and discarded culvert on the road to 23-I and just before the turn off to this well pad that needs to be removed. It may have been a culvert related to logging but was probably impacted by the upgrading of this main access. The following wells were noted to have surface casing vent (SCV) leaks during the inspection; a-32, a-a-32, a-b-32, a-e-32. One well was check in our database to see if there was a report but nothing has been submitted yet. Please conduct the proper SCV tests (build up and flow) and submit them by e-submission. Please e-mail OGC when this has been completed. Thank you						Central	00026439	34034, 34035, 34036, 34037, 34038, 34039	Facility, Pipeline, Well

19-Dec-2018	052008126-001	Calima Energy Inc.	24-Dec-2018		NTS: A 054-C/094-G-09	Yes	Truck	Passed Inspection (Complete)	24-Dec-2018	24-Dec-2018	Complaint	This was an inspection of the a-54-C new winter access road and lease construction, as a result of a complaint regarding two hydraulic oil spills and stripping's being placed outside the lease boundaries, PRRN liaison was in attendance with me. Chief arrived 10 minutes after we arrived. Reports of the two spills have been provided by the Company via email, and interviews were conducted onsite Tsaa-Dunne Construction and E&L Sturt Ventures. Spill cleanup was completed as much as possible using soaker pads and removing contaminated dirt. However, one of the spills occurred continuously during a 12 hour shift (+/- 60 litres), and one occurred as a point-in-time event, but neither event was reported or cleaned up in a timely manner (4 days and 3 days for reporting within the Company, respectively). Its highly likely not all oil or contaminated soil was recovered. The unrecovered amounts are unknown. In addition, the spill reports provided were not complete, and providing contradictory information. Contract HSE and Construction Superintendent onsite have been made aware of the shortcomings in their internal and external spill reporting and cleanup protocols.						North		35478	Pipeline, Well

8-Jan-2019	052474582-001	Painted Pony Energy Ltd.	17-Jan-2019		NTS: D 009-G/094-B-16	Yes	Truck	Deficiencies Corrected	21-Jan-2019	17-Jan-2019	Planned	Thanks to operators for attending this inspection. I appreciated the conversations about components of an OGC inspection as well as discussions on Painted Pony's sand management and inspection program. There was some low LEL and oxygen warnings detected in some buildings due to being buttoned up tightly due to cold weather. Once the intake and exhaust vents were opened further level returned to normal. Just a reminder to ensure there is adequate ventilation in all buildings Some wells were just put into production and signs are going up very soon -after the fracturing valves are removed and height adjustments are made to the flow line. Signs are attached to the flanges that will be adjusted. The pipeline inspection was limited in scope to the m site riser.						Central		32616, 33293, 33294, 33295	Well
8-Jan-2019	052476134-001	Painted Pony Energy Ltd.	17-Jan-2019		NTS: A 013-F/094-B-16	No	Truck	Deficiencies Corrected	21-Jan-2019	17-Jan-2019	Planned	Thanks to operator for attending this inspection. It was a great opportunity for information sharing. Due to cold weather some buildings had a minor build up of LEL that dissipated once the fresh air intake and exhaust vents were adjusted. Please ensure adequate ventilation occurs in the buildings.						Central	00026240	31855, 31856, 31857, 31858, 32291, 32292, 32293	Facility, Pipeline, Well

11-Jan-2019	052379729-001	Catapult Environmental Inc.	11-Jan-2019		DLS: 09-28-083-17	Yes	Truck	Deficiencies Corrected	1-Feb-2019	11-Jan-2019	Planned	Disposal Well Inspection Meet operations staff. Verify that the disposal meter k-factors on the pump discharge and 9-28 meters were programmed correctly into the electronic meter heads and the matched K-factors on the supplied manufacturer certifications. Confirmed that all S/D set points on the pump discharge, pipeline, and tubing pressure transmitters were set @ 15,500 KPa below the max wellhead injection pressure (MWIP) of 16,500 KPa. Verified that the transmitters were reading back correct values through the SCADA system to the plant HMI display screen. When inspecting the disposal well site found that a Fisher 912 regulator on the Cata-dyne heater in the wellhead enclosure was not vented to the outside of the enclosure. 16-Jan-2019	052460512-001	Ovintiv Canada ULC	16-Jan-2019		DLS: 05-02-080-17	Yes	Truck	Passed Inspection (Complete)	16-Jan-2019	16-Jan-2019	Audit	Audit - Measurement Guideline Chapter 6 - Wet Gas Measurement The Audit will focus on the Measurement Guideline Chapter 6 requirements for well testing, sampling, effluent correction factor determination, for volume correction and allocation for reporting purpose. 1. As per Chapter 6 section 6.3.3(3) Submit confirmation (proof) that initial well test data was submitted to the eSubmission Portal as outlined in the "Well Testing and Reporting Requirements Guideline" found at Well Testing and Reporting Requirements Guide. " 2. As per Chapter 6 section 6.3.3(6) Submit records, reports, spread sheets that show each new well must be tested not fewer than once per month with each test being a minimum 12-hour duration. Monthly testing must continue until the difference of the last 3 consecutive ECF tests are within 5%. Upon meeting this condition, the testing period may be extended to once every 6 months as long as the last 3 consecutive ECF tests continue to remain within 5 % and battery/facility group proration targets 0.95000 to 1.05000 are met, else revert back to monthly or more frequent testing. If two consecutive tests indicate that the LGR has dropped below 0.280 m3/e3m3 then the well testing frequency in the Well Testing Decision Tree section 6.3.3 will apply. The methodology for determining the ECF difference is: Average ECF from last 3 tests – Smallest ECF (from last 3 tests) --- Average ECF of the last 3 tests 3. Measurement Guideline section 6.3.3(7) Submit records, reports, that show each well and the group separator must be sampled as outlined in section 8.4 to obtain an analysis of gas and hydrocarbon liquids (condensate). The gas and condensate analysis for individual wells must be used to calculate the well gas and condensate gas equivalent volumes. The group gas and condensate analysis must be used to calculate the group gas and condensate gas equivalent volumes. Please respond to OGC concerning the above items. Thank you. 22-Jan-2019	052586679-001	Kelt Exploration (LNG) Ltd.	23-Jan-2019		DLS: 02-10-088-23	Yes	Truck	Passed Inspection (Complete)	23-Jan-2019	22-Jan-2019	Planned	Start-up Inspection Meet with Kelt operations and construction staff. Inspect commissioning documentation and assess readiness to start. Mechanical work, inspection, and repair was in progress on various compressors (1- 4). The Frack Water Pump Building was not ready for inspection, will request a call back to inspect separately. Confirm the Waste Discharge Permit was in place. Confirm that Kelt has completed an Operation Readiness Review and have a Start-up and Purge Plan in place. Confirm that Ecel Automation have completed the Safety and Control Systems Site Acceptance Testing (SAT). Review the main construction punch list eg. Dehy #1 Tie-in Reboiler PSVs to 500gal tank and resolve issue that caused the Utility Heater expansion tank to overflow on Mode 1 ESD when heat medium pumps shutdown. Review the site process piping mechanical Q/A documentation, confirm all flange bolt-up and torques complete, and that safety systems and shutdowns were commissioned and are functional. Inspect the plant HMI displays, one graphical error found, and that there were no faults on fire and gas detection systems. Inspect plant reporting meter configurations and a low flow cut-off was set for the HP and Lp flare meters in the Fisher R(OC 800. Walk down process equipment and buildings. Noticed smell of natural gas in the Fuel Gas Conditioning Building. Noted that there was no leak detection in the floor of the Liquids Storage Building. Witness a satisfactory Mode 1 ESD function test when Fire-eye AT 1944 was triggered in the Treater Building. Action Items: 1. Complete all " A" punch list items prior to commencing operations. Submit revised list. 2. Fix issue that caused the Utility Heat Medium Expansion Tank to overflow and spill heat medium on the ground on a Mode 1 ESD when the circulation pumps shutdown. 3. Submit a updated Plant Master Car Seal List, prior to commencing operations. Ensure pathways to flare are open, all critical locks or car seals are installed. 4. Submit revised compressor SD key, some revision maybe required for class "A" to class "C" shutdown (eg. low stg (1,2,or 3) suction pressure). 5. Prior to commencing operation of the Frack Water Pump, arrange for an inspection. 6. Perform a HAZOP Analysis as to if leak detection equipment should be installed in the floor of the Liquids Handling Building. Submit the results. 7. Submit the initial "wet" commissioning and proving reports for the Oil Meter 12950-o once the meter is put in service. 8. Repair gas leak in the Fuel Gas Conditioning Building. Please reply to OGC concerning the above action items.						Central	00026511		Facility, Pipeline, Well

23-Jan-2019	052679300-001	Canadian Natural Resources Limited	28-Jan-2019		NTS: D 051-K/094-A-13	No	Truck	Passed Inspection (Complete)	28-Jan-2019	23-Jan-2019	Planned	COMMENTS: -this well has been inactive (no production for 12 consecutive months) for 14.84 months as per our database. Within 60 days of well becoming inactive, must suspend the well to ensure ongoing integrity. A minimum requirement is to chain and lock the wellhead valves, which has been done, and to disconnect the flowline from the wellhead. In this case, there is a flowline 1/4 turn valve that is closed, but that is not sufficient. -The catadyne heater hood vent is completely rusted out and is not connected, but the catadyne does not appear to be active. This needs to be repaired before putting back into service. -The chemical tank onsite, maybe a 50 bbl tank....is it double walled? I do not see any secondary containment for this tank. 25-Jan-2019	052672613-001	Tourmaline Oil Corp.	28-Jan-2019		DLS: 09-03-080-16	Yes	Truck	Deficiencies Corrected	12-Feb-2019	25-Jan-2019	Routine	Haltech Testing - Well Testing Equipment Inspection Review equipment rig in check list. Found that there were check list items that did not include checks as per IRP 4 -Well Testing and Fluid Handling - Appendix B: Production Testing Services Inspection Checklist. Eg: Couldn't find under the Wellhead Check List were the ESD valve and remote ESDs were checked. Confirmed that flaring permits were in place, and that H and F wells were just put into test and were under 400 E3M3 flared gas.Reviewed calibration documentation for the test HP and LP separator packages. Proving documentation was not supplied to indicated a recent prove/calibration was done for the condensate meters in the (2) HP separator test packages. Found a few loose equipment ground connections and that no continuity checks were being performed to ensure good grounding and bonding. Found that the lines to the flare did not have safety slings. Request that Tournaline check with WorkSafe BC to see what the requirement is. Found some instrumentation in the separator packages not vented outdoors. In the LP Package ST-02 found a Fisher 912 regulator on the Cat-a-dyne heater not vented outdoors and an other missing the spring casing cap. In the HP separator package found a Fisher 67 CFR by the ESD latch not vented outdoors, it requires a vented spring casing. Action items: 1. Provide proving reports for the (2) condensate meters in HP separator packages. 2. Review IRP 4 -Well Testing and Fluid Handling - Appendix B: Production Testing Services Inspection Checklist Update Haltech testing Check list with missing items. 3. Check with WorkSafe BC if they require slings on hammer union joints of the flare line piping. Please respond to OGC concerning the above action items and through KERMIT system for the listed deficiency. Thank you,						South	00026640		Facility, Pipeline, Well

31-Jan-2019	052888599-001	Tourmaline Oil Corp.	4-Feb-2019		DLS: 04-06-080-15	Yes	Truck	Passed Inspection (Complete)	4-Feb-2019	31-Jan-2019	Planned	Facility Start-up Inspection - Application Determination # 100104704 Meet with operations and E+I contractor. Review commissioning documentation and MVS calibration reports provided by the third party service provider. The service providers MVS calibration reports were found to have errors - such as : US ID Confirmed to RTU - marked as "Yes" when they weren't. The Fisher ROC 107s on the B,C,D,E,F wells were found to have US IDs that were different than what were recorded on the MVS calibration reports and the ROC internal clocks were not set to the correct date and time. No Flow Checks were provided at the time of inspection. The Permit holders responsibilities are to ensure measurement methods and practices associated with records, eg: that the EFM is configured and programmed correctly, and are to provide an accurate record of quantities of petroleum, natural gas, and hydrocarbon liquids that are produced- D&PR 38(3). While on site the E+I service provider corrected US IDs in the Fisher ROC, set the Fisher ROC internal clocks to the correct date and time, performed a collect data, a write to memory, and provided PDF Fisher ROC EFM Reports. Inspect the Fisher ROC EFM Reports, verify date and time correctly set, and the US IDs on EFM meter runs were now correct. Verify that the K-factors on the sweet and sour test separator water and condensate turbine meters matched s/ns on initial proving reports and were entered in correctly to the electronic meter head- assembly- ok. Inspect facility process piping and equipment. Found (2) Pressure Alert Valve safety chains on pig senders not attached to the pig barrel end cap. Operations staff attached safety chains on same day. Flow Check reports were completed the next day. Measurement issues were resolved. Received Flow Check Reports Feb 4 2019. Good to flow. Action Item: 1. Within one month of operation- prove the sweet and sour test separator condensate meters. Submit the proving reports to the Commission. Please reply to OGC concerning the above action item. Thank you,						South	00026667		Facility, Pipeline, Well
31-Jan-2019	052889805-001	Canadian Natural Resources Limited	4-Feb-2019		NTS: D 004-B/094-H-03	No	Truck	Passed Inspection (Complete)	4-Feb-2019	4-Feb-2019	Routine	Wellhead should be disconnected from flowline. For Information Only Wellhead is secured and still connected to flowline. Pipeline header with 2 pig barrels, flarestack and a line heater (signed out of service) are onsite.						Central		12983	Well
31-Jan-2019	052948217-001	Tourmaline Oil Corp.	6-Feb-2019		DLS: 09-03-080-16	Yes		Passed Inspection (Complete)	6-Feb-2019	31-Jan-2019	Planned	Measurement Inspection for B, C, D, E, F, G, H 9-3-80-16 Wells and Sweet and Sour Separators Verify Fisher ROC 1200 EFM configuration and programming. Review the EFM reports. Found an issue that the ROC event logs for the EFMs were being filled up with a nuisance alarms for a Single Floating Point. This issue was resolved then next day by the third party Instrument/Electrical service provider by disabling Event Logging in the User Data- IO set-up in the ROC 1200s. No further measurement concerns.						South	00026640		Facility, Pipeline, Well
31-Jan-2019	053078200-001	Aitken Creek Gas Storage ULC	11-Feb-2019		NTS: B 041-A/094-G-01	No	Truck	Passed Inspection (Complete)	11-Feb-2019	31-Jan-2019	Planned	COMMENTS: -The b-A41-A well needs to have bullplugs or gauges installed on all open ended needle valves on the wellhead. There are 2 or 3 that are open ended. -At this facility, there is a dehydrator still column that should be tied into flare. This is a health hazard to the environment as well as the people that have to work around it. Before this piece of equipment is put back into service, there should be contact with the OGC engineers to come up with a plan and a timeline. 5-Feb-2019	053337778-001	Coastal GasLink Pipeline Ltd.	28-Feb-2019		From: NTS: C 006-J/093-L-04 To: NTS: A 077-A/103-I-02	Yes		Passed Inspection (Complete)	28-Feb-2019	5-Feb-2019	Routine	Routine inspection of Section 8 pipeline permit 100082430 with as well as associated roads, workspaces and ancillaries specifically in and around the North Hirsch FSR. Clearing activities ongoing within the ancillaries, pipeline corridor and additional workspaces and are within permitted boundaries. Road clearing completed on road 5114 segment 1. Road brushed and cleared for access. Road is frozen and snow covered. Please ensure that road surface and slope drainage systems including inlets, drainage structures, ditches, culverts, road crowning, insloping and outsloping, are functional (OGRR 131(1)(a)) and if snow melt occurs wing back or breach snow berms to facilitate surface drainage in a manner that prevents water flow along the road, and keep roadbed drainage ditches, drainage dips and culverts functional (OGRR 13(2)(g)(i) and (ii)). At time of inspection it was noted that if thaw occurs the water would run directly down the road due to snow and ice burms blocking ditchlines. No Non compliance noted during field inspections. No concerns were noted at the time of inspection.						Central			Pipeline Project
11-Feb-2019	053122147-001	Canadian Natural Resources Limited	14-Feb-2019		NTS: B 078-B/094-H-06	No	Truck	Passed Inspection (Complete)	14-Feb-2019	14-Feb-2019	Planned	Most of your sites in the Wargen winter road are missing a sign about unloading methanol into tanks. If your operators are present at the time of unloading and have a procedure then you are probably okay, if truckers are unloading methanol on their own you may want to consider some signage. If the 5 year exemption for the meter is relevant for well in this well please identify it as such. This does not exclude the inspection of the orifice plate within the meter and that inspection needs to be recorded.						Central		15292	Road, Well
11-Feb-2019	053122739-001	Canadian Natural Resources Limited	15-Feb-2019		NTS: A 077-B/094-H-06	No	Truck	Deficiencies Corrected	13-Mar-2019	14-Feb-2019	Planned	The ESD canister has no hydraulic fluid in it and it appears this has been the case for quite a while. It was noted on a historical inspection that the ESD is no longer used. A tag on the ESD that it is not in service would be a good idea to avoid confusion. With some other indicators noted at other well sites in this field is seems to indicate that ESD usage is perhaps no longer needed and that the flow control valve is the main focus. Indicators include needle valve sensing points for the high /low flow line/pipeline transmitters not all locked in the open position. One site has a clam shell on a sensing point but it is not at the root of the needle valve. There is also a bypass around a green Fisher actuator valve (sometimes an ESD is used) that is not always locked closed. Please check you other sites in the field to ensure that if it is flow control only and not a functioning ESD feature that the sites are more consistent with each other. It would also seem that some items should be locked to provide an accurate flow rate to the necessary devices. Such an example would be the bypass around the flow control valve. 26-Feb-2019	053474876-001	Canadian Natural Resources Limited	6-Mar-2019		NTS: B 010-L/094-G-02	Yes	Truck	Passed Inspection (Complete)	6-Mar-2019	6-Mar-2019	Routine	I meet CNRL rep on location. I was enquiring about the 400 bbl tanks that are labeled as NORMS and he explained the process on how to deal with NORMS and the location where disposal of the tanks would occur if they could not be removed. Thanks for our conversation. Apparently there are some underground tanks that are being left in the ground and apparently they are being cleaned out and left for the reclamation phase and this has occurred in the past. This should be discussed with the Director of C&E as to the rationale as it does not follow industry bulletin regarding unused equipment. The access to this well and facility is under a road permitted to Tidewater Midstream. It is recommended that a snow free site visit of all this winter's equipment removal be conducted to clean up the small pieces of garbage and debris. Thank you						Central	00007364	06235	Facility, Pipeline, Well

The isolation points consisting of needle valves for the pipeline transmitters are not locked open. Check your shutdown key to see if these should be locked in the open position. This is a common theme in this field and is sometimes inconsistent. I met CNRL Operator on the Wargen Winter Road and he mentioned to me if I noticed some of the ESDs had been removed and this has probably contributed to some inconsistencies in the flow control/ESD equipment. Otherwise, no other concerns were noted.							Central		14845	Road, Well
27-Feb-2019	053514826-001	Canadian Natural Resources Limited	7-Mar-2019		NTS: C 016-B/094-H-06	No	Truck	Passed Inspection (Complete)	7-Mar-2019	7-Mar-2019	Planned	This road has a permit number and is in good shape. Good attention paid to keeping the vegetation root mat intact. The sensing points for the pipeline transmitters are not locked in the open position-check your shut down key to see if these are part of an ESD function or flow control that may still need to be locked in the open position to ensure accurate data is being received via SCADA. Meter run service is due.							Central		22345	Road, Well

5-Mar-2019	053737058-001	Coastal GasLink Pipeline Ltd.	20-Mar-2019		NTS: A 077-A/103-I-02	Yes	Truck	Passed Inspection (Complete)	20-Mar-2019	5-Mar-2019	Routine	Routine inspection of pipeline section 8 permit 100084230 and associated roads, ancillaries and the Kitimat Meter Station facility footprint on March 5, 2019. Kitimat meter station has been cleared and was currently being grubbed at time of inspection. The area was an old gravel pit and some old buried materials (drums) were discovered in the back end of the site. The area has been isolated and will be disposed of once it is determined what this area contains. Timber marks were noted on the decked timber. No activities were occurring on ancillary site 100084695 during inspection. Ensure that proper ESC measures are in place in areas of the pipeline right of way that contain exposed soils, these areas were frozen at time of inspection and there was no risk of erosion at that time. Ensure that roads comply with OGRR 13(g)(2) once snowmelt occurs to to facilitate surface drainage in a manner that prevents water flow along the road, and keep roadbed drainage ditches, drainage dips and culverts functional. Roads frozen at time of inspection and there was no risk at that time. Helicopter overflight was noted during inspection and it was requested that CGL provide documentation to ensure that condition 46 of permit 100084230 was being adhered to. This documentation was provided to the OGC.						South	00018343		Facility, Pipeline Project,
5-Mar-2019	053874896-001	PETRONAS Energy Canada Ltd.	27-Mar-2019		From: NTS: C 082-J/094-A-12 To: NTS: B 035-D/094-A-13	No	Truck	Passed Inspection (Complete)	27-Mar-2019	27-Mar-2019	Incident	went to inspect the clean up on the reported pipeline spill into Alexander Creek. No one was on site but the clean up was mostly completed with the exception of something creating a minor odour in the pipeline trench outside of the wetted/frozen stream bed. The stream was frozen to the bottom with no visible hydrocarbon. Although there was a spill the clean up was acceptable and another inspection will be conducted when the abandonment work restarts.						Central			Pipeline, Road

6-Mar-2019	053697258-001	Predator Oil BC Ltd.	19-Mar-2019		NTS: D 051-G/094-P-10	Yes	Truck	Deficiencies Corrected	1-Apr-2019	6-Mar-2019	Planned	After discovering some issues on this site, OGC inspector contacted Lead Operator at the Wildboy plant. then contacted the local operator to meet me on site. Some of the issues included: staining all around the well at d-051-G/94-P-10 (methanol spill), also some open tubing at this same location. Could hear a hissing sound coming from the ESD controller at location d-51-G/94-P-10. A pair of vice grip pliers had been attached to the latch. The well at d-E51-G/94-P-10 had staining around the well and extending some 30 feet away from the well on the snow and it appeared that the operator blew down the well without having proper containment. There are two regulators on catadynes in the separator building that are not vented out. There are two locations in separator building where salt water appears to be leaking. One from a bull plug. One from the bottom of a sight glass. These issues were reviewed with Dave on site. Some of the work was done immediately and some would be done in the next few days. When inspector was able to get to this area there were still odors along that stretch on the Highway. From the direction the wind was blowing it is possible they are originating from the 2-10 facility. There were noticeable odors onsite. Discussed with operators and they were going to have someone check the thief hatches on the production tanks and then get back to inspector with findings. As per the database, there was a burst plate installed, but was removed September 19, 2012. Just want to confirm that no burst plate remains in place. -Tanks not in service, secondary containment is not adequate as the liner is torn and has missing pieces and the corners of the concrete containment have missing pieces/holes. This equipment is not in service, as the well has been suspended.						Central		10537	Well
26-Mar-2019	0538734 82-001	Pacific Canbriam Energy Limited	27-Mar-2019			No	Truck	Passed Inspection (Complete)	27-Mar-2019	27-Mar-2019	Routine	This inspection is for the Harold Ellis Road, road #277. There are a couple of items to monitor and assess. At km 0.100, there are 3 concrete barricades that have subsided about 12 inches over the winter suggesting that the edge of the road may have some stability issues with possible action required. to address. Secondly, the ditches between km 10 -11 should have the takeoffs cleaned out so that not all the water runs down the entire hill side towards the stream at the bottom of the hill. There should also be an assessment to see if more take offs are required.. Other than the above 2 items, the road has been kept in good condition.						Central			Pipeline, Road

26-Mar-2019	0539078 04-001	PETRONAS Energy Canada Ltd.	28-Mar-2019		From: NTS: A 035-D/094-A-13 To: NTS: C 082-L/094-A-12	No	Truck	Passed Inspection (Complete)	28-Mar-2019	28-Mar-2019	Follow Up	This inspection is for the general area of where pipeline work has been done on 2 ROWs and the comments apply to both pipeline ROWs in the area however, only one can be identified on the inspection. Now that more snow has melted, there are some items that need to be addressed; -There are quite a few pieces of black plastic pipe wrap that need to be picked up along the access and pipeline ROW. -If no longer of use the flagging could be removed. -The snow fill crossing needs to be cleaned out better as the high water mark is above where there is still dirt and mulch sitting on snow/ ice. Due to the mulching activity there was quite a bit of dirt and mulch in the stream and generally this takes a bit more effort to remove the debris. - Where the 2 exposed pipelines were removed-perhaps coconut matting with grass seed or something similar could be installed to stabilize the slope and speed up vegetation establishment. The natural stream morphology on the high side of the stream where these pipelines were removed doesn't necessitate the sloping of the bank. It was mentioned with my conversation with rep that gravel may be added but since that was not done then other means could be used. Could you please reply to OGC with the actions you have taken for the above items. Thank you						Central			Pipeline Project

28-Mar-2019	0540244 40-001	Tourmaline Oil Corp.	29-Mar-2019			No	Truck	Passed Inspection (Complete)	29-Mar-2019	29-Mar-2019	Routine	The snow has been plowed/ melted well back of the ditch line and as a result there are no problem areas. There is an excavator at about km 3.8 that has been working on cleaning out the ditch and any issue that existed has been corrected. At this time the road surface is in good condition but will be subject to change when the frost starts to thaw. The section from km 0.5-1.5 that was worked on over the last year or so is working quite well. There is still sediment input from the quarry road and that may require work to clean out culverts etc and should be monitored. There is a dead tree that is leaning over the road at about km 9.8 and should be removed before it falls down. There is a section of black steel pipe (culvert) at about km 3.8 that should either be utilized or removed. Perhaps it could be used where the excavator is presently working. No other concerns were noted.						Central			Pipeline, Well

This is an inspection for the north portion of the road, known as road # 2585. No concerns were noted.						Central			Pipeline, Well
28-Mar-2019	0540491 34-001	PETRONAS Energy Canada Ltd.	29-Mar-2019			No	Truck	Passed Inspection (Complete)	29-Mar-2019	29-Mar-2019	Routine	The culvert at km 11 is plugged and suspected as frozen as it was last year. Monitor the road condition and maintain as needed. There is no main impact at this time. No other concerns as all other drainage features appear to be functioning and the road surface was in good condition at the time of inspection.						Central			Road
28-Mar-2019	0540497 51-001	Painted Pony Energy Ltd.	29-Mar-2019			No	Truck	Passed Inspection (Complete)	29-Mar-2019	29-Mar-2019	Routine	This inspection is for the Mile 132 road (road #165). There are a 3 locations to monitor during the spring thaw. The first is the km 3 hill and although it is in good shape now , that may change when the frost thaws out of the road bed. There are 5 takeoffs on the uphill side of the road (km 3-4) that should be cleaned out and that will aid in slowing down water velocity and sediment transport, especially with rain events. Secondly, at km 8 the culvert to your c-98-F location is frozen or damaged and contributing water to the 132 road. Thirdly, at km 14 there is quite a bit of water coming off the access to the Mile 138 road and is running down the Mile 132 road and across the bridge. This needs to be corrected asap. Other than some corrective measures, the road is maintained in good shape. It was great to see that all the culverts were opened up in preparation of the spring thaw and only one is frozen or plugged (near d-B-F/ 94-B-16) but currently has no consequences to the running surface of the road. When the ditches thaw there will be silt fences to maintain or replace as they have been damaged by the snow plowing activities over the winter. The decking on the km 4.5 bridge is badly worn with timber knots and spikes sticking up 1-2 inches.						Central			Road

1-Apr-2019	054137915-001	Tourmaline Oil Corp.	3-Apr-2019		NTS: A 051-B/094-B-16	No	Truck	Passed Inspection (Complete)	3-Apr-2019	2-Apr-2019	Routine	Observations: All associated sites such as temporary worksspaces have been recontoured and the strippings/top soil spread. These will need to be re-vegetated as per condition #17 of your permit, if seeding is not already done or natural regrowth is not sufficient. The cut slope and fill slope should be visually monitored for movement and erosion issues. The coconut matting and rock filled drainage ditches at the north end of the lease has a variety of rock sizes which will slow down water velocity. The drainage ditch at the south west corner has fewer smaller rocks and the existing rock has larger gaps which may not slow the water down enough to prevent erosion. There is some concern over runoff from the lease flowing onto the Gundy Connector. There is a takeoff down hill from the junction of the Gundy Connector and lease road but this disappears under the snow and strippings/topsoil. This will have to be assessed to make sure that the takeoff is re-established or the Gundy Connector is ditched or a cross drain culvert is installed to take water to the north side of the road. Erosion and sediment control measures were established in the ditch lines along the FSR adjacent to Camp 9A. Erosion and sediment control was being established at the time of the inspection along the perimeter of the site. Archeologist was onsite monitoring this activity. No other activities have occurred on the camp 9A site since works had ceased. Clearing on the right of way has commenced, approximately 700m has been cleared and one temporary crossing was established at time of inspection. Onsite discussions regarding the area and crossing resulted in natural materials being utilized to prevent rutting and reduce potential for erosion and sedimentation. Follow up photos of the area were provided upon request. Helicopter flights were also active at time of inspection and helipads were being established. Helipad locations were also provided upon request. No non compliance noted during inspection.						South			Pipeline Project

12-Apr-2019	054361248-001	Tervita Corporation	15-Apr-2019		NTS: A 098-H/094-O-11	Yes	Truck	Passed Inspection (Complete)	15-Apr-2019	12-Apr-2019	Routine	Joint inspection with TERVITA. First did safety orientation with operator. Indicated that a packer test had been carried out on the disposal well at b-95-H/94-O-11 in February /2019. Facility suspended since approximately 2014. All tanks have been emptied. There are 4 - 1100 barrel production tanks, 1 -1100 barrel fresh water tank and 1 diesel tank in secondary containment. Vessels and buildings have been pressure washed. Pipe has been blinded off. There are 3 inactive loading stations. Removed underground pipe spool connected to tanks and blinded off. Injection line to disposal well disconnected and blinded off. Pipeline # 21992 Segment # 1 to disposal well discontinued in 2015. Purged with Nitrogen. Cathodic protection is still active. Injection building lines disconnected. Inactive boiler/instrument air building. MCC building. Generator building inactive. Office trailer and sleep quarters trailer. There is a live feed using cameras for security. The site is completely fenced in with two gates, one at the entrance to the access and one at the entrance to the facility. ERP has been updated in 2018. Retention pond has been sampled and will be pumped off soon.						North	00007824		Facility, Pipeline, Well

(Incident # 54370933) Shanghai had a leak from a Corrosion inhibitor tank that spilled into the muskeg. They immediately dispatched a vac truck unit to clean up spill Inspector found very little trace of the chemical spill on April 17th, 2019. Soaker pads have been placed where the spill occurred but no traces of inhibitor on the soaker pads. Also an absorbent boom was placed around the wooden mat where the inhibitor tank was located. No staining found on the absorbent boom. It appears that the inhibitor tank sight glass fixture had been replaced. Inhibitor tank now appears almost empty. There is a very slight sheen in a couple of spots but the site has been completely cleaned up.						North				Pipeline, Well

23-Apr-2019	0545483959-001	Kelt Exploration (LNG) Ltd.	26-Apr-2019		DLS: 02-10-088-23	Yes	Truck	Passed Inspection (Complete)	26-Apr-2019	23-Apr-2019	Planned	Fresh Water Transfer Pump Installation Meet with Kelt Exploration staff. Review and accept commissioning documentation and reports. The pump construction is complete , HMI graphics complete, pump shutdowns commissioned, fire and LEL detection is functional. However it was found that the fire and gas detection maintenance bypass timer settings for individual fire and gas detection for the entire 2-10 facility was programmed for 600 minutes (10 hours). Request Kelt review corporate HSE policy regarding max time to bypass fire and gas detection safety systems for maintenance, and lower the setting. It was noted that the transfer pump Cat 3516 Engine driver starter was a natural gas starter that was not tied into the flare system. There was an air compressor in an MCC building nearby. With new Methane Reduction Regulations coming, question if it was examined if the pump starter can be tied into the 2-10 flare system or be converted to an air start . Action Items: 1. Perform an engineering assessment as to if the transfer pump starter gas discharge can be connected to the 2-10 facility flare system, or converted to an air start. 2. Maintain a record that contains: (a) a description of the transfer pump starter, and (b) the following information for each calendar month: (i) the volume of natural gas used in start attempts; (ii) the number of hours the transfer pump starter is operated; (iii) the volume of natural gas emitted from the transfer pump starter. 3. Fire and gas detection maintenance bypass timer: Review Kelt Exploration corporate HSE maintenance bypass timer setting policy. Lower the max bypass timer setting and set as per corporate HSE policy. 4. Transfer pump fuel gas PSV- Install rain cap / blow-off sleeve on 3 in. PSV vertical discharge. 5. Transfer pump air compressor/air drier mini PSVs- Include in 2-10 facility PSV list and incorporate into PSV maintenance program. Install identification tags (PSV #) on mini PSVs. 6. Transfer pump load-out station- install car seal on Scully Ground permissive bypass switch. 7. Water Hub- Review set-up in Petrinex. Question: 1-10-88-23 (actual location) fresh water ponds was not used and set up as a water hub. The water hub could deliver to 16-33-87-23 for completions. Source wells linked to water hub, meter water in and out of water hub. Load fluid reported by completions to wells linked to 16-33-87-23. 8. Identify transfer pump truck-out meters appropriately (accounting or non- accounting) depending on determination of item (7) the reporting set-up for the water hub in						Central	00026511		Facility, Pipeline, Well

24-Apr-2019	0545487973-001	Black Swan Energy Ltd.	26-Apr-2019		NTS: B 022-C/094-H-04	Yes	Truck	Passed Inspection (Complete)	26-Apr-2019	24-Apr-2019	Planned	Measurement Inspection for M-Flow Meter Trial @ the b-22-c/94-H-4 Pad Meet with Black Swan operations and E+I staff. Review 2018 and 2019 ECF test reports for wells. Found that the ECF testing was being performed at the required frequency as outlined in Chapter 6 of the Measurement Guideline for Upstream oil and Gas Operations Manual. Noted that on the pad data spread sheet the records for Gas, CGR, WGR are in Imperial units (mmscfd, B bbls/mmscfd), and there was no LGR calculation to gauge the testing requirements for each well. Verify that the test separator condensate and water meter had recent proving, last done April 19, 2019. Noted that the test separator gas, and individual well wet gas meters last calibrations were done on Aug 9, 2018. For this trial and accuracy request all associated gas meters be calibrated. Inspect that all orifice plate sizes for all the wells and test separator gas were correct. Operations staff pulled, cleaned, and verified all orifice plates were correct. Two broken "O" ring seals were found and replaced on orifice plate holders. Noted with the b8 well on test that M-Flow meter was displaying " Unfixed Errors" - 8990- "out unreliable" and " out out of calibration" . Meet with the Black Swan Production Accountant responsible for the trial data comparison on April 25 th. Agree on the two components of the trial. 1.Individual well test: For each well perform comparisons (% diff calculations) for the M-Flow volumes, gas, condensate, and water, to those volumes of gas, condensate, and water metered by the test separator. 2.Monthly reported volumes: For each well perform comparisons (% diff calculations) for the reporting of gas, condensate (GEV), and water, as determined by the test separator to those gas, condensate (GEV), and water, using M-Flow meter data in the battery proration calculations. Action Items: 1. Calibrate the M-Flow meter water cut- Resolve "Unfixed errors". Submit M-Flow configuration/calibration data. 2. Submit M-Flow Audit and Alarm logs before commencing data gathering stage of the trial. 3.Verify Black Swan PA methodology is correct. When verifying methodology ensure the ECF = (Test Gas + GEV Condensate) / Well wet meter gas volume and the WGR= Well test water/ Well test gas volume + GEV of condensate. 4. Calibrate well, test separator, and plant inlet gas meters. Submit calibration records. 5.Provide an up-to-date measurement schematic, complete with battery and plant Petrinex codes. 6.Provide well test data taken from M-Flow data web site set -up for Black Swan b-22-c / 94-H-4 wells. 29-Apr-2019	0547206780-001	Tourmaline Oil Corp.	1-May-2019		NTS: C 060-A/094-B-16	Yes	Truck	Passed Inspection (Complete)	1-May-2019	29-Apr-2019	Audit	Process Piping Mechanical Q/A Audit Meet with the site construction manager, Tourmaline E+I staff , the Project Engineer, and the process piping QA Manager. Review process piping mechanical QA documentation that was prepared for the audit. All audit items were present for : off-site piping fabrication, owner inspector's fabrication shop inspection reports, vendor package QA documentation, and a plant material, design, construction certification affidavit. Comments- very well managed, organized and filed. Measurement - Accounting Meter Construction, Configuration, Calibration Review measurement schematic, and accounting meter list. Tourmaline production accounting will deem the C3/C4 truck-out meters as non-accounting. Inspect accounting meter construction, configuration, calibrations. Noted an alarm on the GE Flare Meter MCU, low pressure, from a gauge pressure transmitter, there was not an absolute pressure transmitter installed. Noted on the configuration of the GE flare meter MCU that the base pressure was high, programmed in at 101.3 kPa, should be site atmospheric pressure based on latitude, longitude , and elevation. Action Items: 1. Flare meter - clear low pressure alarm- evaluate whether an absolute pressure transmitter should be installed rather than a gauge pressure transmitter if there is a possibility that there can be negative gauge pressure with the flare in operation. 2. Flare meter MCU - update the base pressure from 101.3 kPa to a base pressure based on the site latitude, longitude, and elevation. 3. On start-up of purge gas in the (3) flare headers ensure that the purge gas is being accurately metered by the main flare meter, approx. 2160 m3/day. 4. Submit a revised measurement schematic for well sites, water hub, , and plant, showing Petrinex battery codes and battery delineation boundaries for reporting into Petrinex. 30-Apr-2019	0547442620-001	Tourmaline Oil Corp.	2-May-2019		NTS: C 060-A/094-B-16	Yes	Truck	Passed Inspection (Complete)	2-May-2019	30-Apr-2019	Planned	Leave - To - Open Inspection (LTO) Meet with the Tourmaline Oil gas plant manager, E+I and operations staff, the site mechanical, instrument/electrical construction managers, Propak control system programmers. Review the plant permit conditions. Review final QA commissioning documentation and assess readiness to start. Inspect the plant PLC HMI display screens, and verify that all fire and gas detection systems were functional with no faults present. Reviewed the mechanical punch list, down to 20 items. Currently just finishing installing electrical insulation kits on the inlet and sales pipelines. The plan is to bring gas into the NorthRiver Midstream sales meter building up to the ESDV and buyback fuel gas to purge the process piping and equipment. Verify that operations staff have a start-up/ purge procedure in place. Perform a walk-down of process piping, and equipment. PCVs (Flash Feed and Stabilizer Overheads) in the Condensate Stabilizer Packages have a dual function as BDVs, the isolation valves on either side of PCVs will need to locked or sealed open during operation and added to the plant car seal list. Witness a satisfactory ESD function test when a fire-eye (6381-XT) in the Turbo Expander building was triggered. Recommend that Pipelines and Facilities issue the written LTO authorization. Action Items: 1. VRU- BU- 3100 Vent (6) PSV pilots safely to the outdoors. 2. Produced Water Tanks- 9010 & 9020 - Vent Fisher 912 regulator on Cata-dyne heater safely outside of the heated enclosure. 3. Inlet Area- complete installation of pipeline insulator kits, install and ground a pig barrel spill catcher . Install Pressure Alert Valve (PAV) on the inlet pig receivers. 4. NorthRiver Midstream Sales Riser- install pipeline insulator kit on plant side. 5. Lock or car seal open isolation valves on either side of PCVs on the Condensate Overheads and Flash Feeds. Submit an updated plant master car seal list.						Central	00026427		Facility, Pipeline, Well

3-May-2019	055084229-001	Trans Mountain Pipeline ULC	17-May-2019			Yes	Truck	Passed Inspection (Complete)	17-May-2019	17-May-2019	OGC Requested	This was a joint inspection conducted by the OGC with Trans Mountain present. The inspection was conducted on work spaces #194162 and #194163 on the North and South sides of the North Thompson HDD site. Activity ID #0194162 - North side work space. ROW looks good, no trespasses. Access matted with gravel, culverts open and free to flow. Wet areas look good with no erosion issues observed. Asked Trans Mountain to add a few more erosion fences where bare soil was present near drainages. (Note: This was a precautionary measure and TM was going to add them ASAP). Log decks along the cleared area all had timber marks. Brush was piled on ROW for mulching. This was going to be mulched in the near future and hauled away, with some saved for site remediation. CWD and stumps were saved for NEB retention limits. 54 stream crossing looks good, water is flowing freely. Stream setbacks and machine free zones were maintained. Activity ID #0194163 - South side work space. Overall the South side work space looks good. Area was logged and stumped. There was some minor rutting, no erosion or compaction issues are anticipated.						South			CIAS, Pipeline, Road

Area looks really good, all work is completed within permit conditions. Silt fence above stream looks good, no erosion issues are anticipated. Site was seeded with grass. Final site remediation is going to be conducted at a later date, no concerns were observed.						South			CIAS, Pipeline, Road
3-May-2019	055165902-001	Trans Mountain Pipeline ULC	22-May-2019			No	Truck	Passed Inspection (Complete)	22-May-2019	3-May-2019	OGC Requested	Inspection conducted on OGC file #9644408 on works completed at KP 516. Overall area looks, no concerns were observed. No erosion issues are anticipated. Final site remediation will be conducted at a later date. Note: There was a broken pipeline marker on the ROW, that will need to be removed or replaced.						South			CIAS, Pipeline, Road
6-May-2019	054806887-001	Shell Canada Limited	6-May-2019		DLS: A 08-26-080-19	Yes	Truck	Passed Inspection (Complete)	6-May-2019	6-May-2019	Planned	No problems found in Inspection. Rig is clean and all related equipment is well maintained.						South		17940	Pipeline, Well
6-May-2019	054858594-001	Canadian Natural Resources Limited	7-May-2019		DLS: 08-24-081-19	Yes	Truck	Passed Inspection (Complete)	7-May-2019	6-May-2019	Planned	HP Injection Facility Start-up Inspection Re: AO # 100106336 Meet with CNRL operations, engineering, E+I, and site construction managers. Review facility, compressor, and main PLC high pressure shutdown set-points. Verify that the compressor high discharge and the wellhead max injection pressure settings are set lower that the lowest calculated pressure value for the wells in the injection approval letter (schedule A). Some shutdown set-point changes were required. Verify that there were no "A" deficiencies, and all piping flanges were bolted -up and torqued to specifications. Verify that all facility shutdowns were commissioned May 1, and May 2, 2019. Verify that all electrical seals in hazardous areas are packed and poured, electrical Q/A complete. Inspect that critical pressure sensing isolation valves on the compressor discharge high pressure shutdown are locked in the open position. Isolation valves on the up and downstream side of compressor BDVs are required to be locked open when the site is active, will need to be added to the facility valve lock list. Inspect accounting meter installation. Perform a walk down of new process piping and equipment. Action items: 1. Submit a revised compressor shutdown report to show new shutdown settings. 2. Submit a revised S/D key showing new shutdown set-points. 3. Submit a revised valve lock list . 4. Submit initial Red-eye water-cut calibration, and emulsion meter proving report once done. 5. Methanol injection pumps- vent diaphragm and PSVs outside the inlet building. 6. Booster compressor PSV pilots (Stg 1 and Stg2) - vent pilots outside of the compressor package. 7. Engineering Assessment- Flare System. Ensure the integrity and condition of the flame arrestor, as plugging is an issue. Develop a system to monitor the flame arrestor so it doesn't become plugged off. Evaluate if the pressure rating of the sight glass on the flare KO tank is adequate, and is protected by the PSV on the flare KO tank. 8. Facility Integrity Management- Ensure the Mini PSVs on the methanol injection pumps are included in the facility PSV list and are include in a maintenance program. 9-May-2019	054910638-001	Pacific Canbriam Energy Limited	10-May-2019		NTS: B 072-A/094-B-08	Yes	Truck	Deficiencies Corrected	22-May-2019	9-May-2019	Planned	Gas plant Inspection Meet with Canbriam Operations staff. Sit with the gas plant lead operator and identify critical interlocks for emergency shutdown devices. It was noted at the time that the LPG Bullet bridal isolation valves and isolation valves on pressure sensing transmitters were not locked or car sealed in the open position. The plant process and instrument drawings were referenced and emergency shutdown valves were identified to be on the phase 1 and phase 2 de-ethanizer bottoms that close in the event of high LPG Bullet level, or high pressure. Inspect that all fire and gas detection systems were functional and that there were no faults. Perform a walkdown of process piping and equipment with attention to critical isolation valves related to process emergency shutdowns and plant safety system interlocks. Action Items: 1. Submit a revised measurement schematic with meter table. Include the gas multi- well effluent battery, plant, and the water hub Petrinex codes. 2. Submit the latest plant accounting meter calibration/inspection reports. Please reply to OGC concerning the above action items and to the attached deficiency through the KERMIT system. Thank you,						Central	00017909		Facility, Pipeline, Well

16-May-2019	055099151-001	ARC Resources Ltd.	17-May-2019		DLS: 13-07-080-14	Yes	Truck	Passed Inspection (Complete)	17-May-2019	16-May-2019	Audit	Process Piping Mechanical Q/A Audit- Dawson 4 Tie-ins Met with Arc Resources Site Construction Manager, and the Owner's Inspector for the Dawson 4 plant process piping tie-ins. The Dawson 3 plant was down due to TCPL, vessel inspection, and turn-around maintenance work. In total, 146 piping tie-ins along with piping modifications were being done to accommodate the new future Dawson 4 plant, presently which pile work is being completed. Review prepared process piping mechanical Q/A documentation for (3) example welds for shop fabricated piping spools, and for on-site welding. Inspect onsite welding spool line # 114-PL-AS-1120-3BH-GT Weld # 978. Verified the welder qualifications, and correct welding rods, E6010- root, the use and storage of E7018-1 low hydrogen rods for the hot pass fill, and cap. Confirmed rod oven temp was at 125 degrees C- Ok. Verify that Alstar Oilfield Services has met and exceeded the required components in BCOGC's Mechanical Process Piping Q/A Audit list. No further action is required concerning the Process Piping Mechanical Q/A Audit for the Dawson 4 tie-ins. For the control and ESD valve relocates, met with the Schneider Electric PLC programmer and cycle ESD- 69103. Could not witness a test of test PV-126301 as the instrument air was off. Commissioning documentation was received for PV-126301 on May 17 2019 confirming the valve was functional. Once the Dawson 3 plant is online and stable after the turn-around please contact OGC to arrange a turn-around inspection. Thank you,					South	00018270		Facility, Pipeline, Well
21-May-2019	055157346-001	Venturion Oil Limited	22-May-2019		DLS: 10-36-081-14	Yes	Truck	Deficiencies Corrected	27-May-2019	22-May-2019	Complaint	Operator present at the time of inspection. Several small leaks / staining were found in the compressor building and the inlet building. Operator will start to repair and clean up immediately. Areas of ground staining were found beside the compressor building and the sales meter skid, operator will start remediation of these small areas immediately. Pipeline risers on the lease were inspected, one ESD was found to be leaking, operator will fix immediately.					South	00007696	23030	Facility, Pipeline Project, Well
21-May-2019	055168505-001	Murphy Oil Company Ltd.	22-May-2019		NTS: C 039-A/093-P-09	Yes	Truck	Deficiencies Corrected	27-May-2019	21-May-2019	Planned	Disposal Well Inspection - Approval Order # 09-02-003 Amend # 2 Meet with a Murphy Oil field operator, Inspect the water disposal well. Found that there was no casing pressure transmitter installed (see attached deficiency). Could not confirm recent calibration of the wellhead tubing pressure transmitter. Found the flow meter at the well to be non-accounting , Murphy has reported to be using NorthRiver Midstream flow meter at the a-21-B/93-P-9 Tupper Plant to report flow volumes. The Commission would like this reviewed as the operating company the "Permit Holder" Murphy Oil is responsible for the reporting accuracy and calibration of the disposal meter. Noted: the SCADA page that displays the c-39-A/93-P-09 wellhead tubing pressure still has old information displayed for wellhead tubing and casing pressures for an old de-activated disposal well? This needs to be cleaned up. Found there was no log kept to record daily inspection. Action Items: 1. Install wellhead casing pressure transmitter and connect to the SCADA system for continuous recording. 2. Casing and tubing pressure alarms- configure SCADA alarms for high tubing and high casing pressures. 3. Configure the casing pressure transmitter lower range to measure if the casing goes negative. 4. Post on site the most recent Approval for Disposal of Produced Water, and the most recent Packer Isolation Test. 5. Submit the most recent packer Isolation Test 6. Submit the most recent Reservoir Pressure Test. 7. Develop a log to record the operators daily inspection of observed wellhead tubing and casing pressures.					South		24405	Well
21-May-2019	055180807-001	Murphy Oil Company Ltd.	22-May-2019		DLS: D 16-01-078-18	Yes	Truck	Passed Inspection (Complete)	22-May-2019	21-May-2019	Planned	Disposal Well Inspection- Order 15-02-004 Inspect the water disposal well. Verify that the disposal pump shutdowns were set below the max wellhead injection pressure being set at 6700 KPa and that the transmitters were being calibrated annually- last calibrations were Oct 1, 2018 - ok. The disposal flow meter calibration was last done Jan 28, 2019- ok. One note made was that the tubing pressure transmitter range on the calibration tag was in PSI, not sure why this was the case? Verified the SCADA value for the tubing pressure transmitter matched the transmitter display. Questioned if there was a high tubing pressure alarm, or a high casing pressure alarm, and shutdown on the wellhead transmitters. Request the SCADA shutdown Key. Action items: 1. Ensure that there is a high wellhead tubing pressure and a high casing pressure alarm and pump shutdown programmed into the SCADA system. On high casing pressure it is a critical to alarm and shutdown in the event of loss of hydraulic isolation in the wellbore or formation. 2. Submit the site shutdown key. 3. Submit the most recent lab analysis (Density) of the disposed water. 4. Post current Water Disposal Permit on site. 5. Post the most recent Packer Isolation Test on site. Please reply to OGC concerning the above action items. Thank you,					South		26366	Well

22-May-2019	055217693-001	NorthRiver Midstream Inc.	24-May-2019	31-Aug-2019	NTS: D 098-I/094-G-01	No	Truck	Deficiencies Corrected	3-Sep-2019	22-May-2019	Planned	COMMENTS: -the d-A98-I wellhead has gauges and 1/4 turn valves remaining on outlets. In order to meet the minimum suspension requirements in the OGC Well Completion, Maintenance, and Abandonment Guideline..."bullplugs or blind flanges with needle valves must be installed on all outlets except the surface casing vent". This needs to be completed ASAP. - Also, d-A98-I, WA# 23757, currently has a surface casing vent flow. I see as per the OGC database, that a bubble test was conducted in January 2018, at which point no bubbles were found. As per this inspection, there still remains a surface casing vent flow. I found that the SCV filled a latex glove completely, but did not blow off of assembly. IRIS shows a bubble test conducted in January 2018 showed no bubbles. Please submit a SCVF report via ESUBMISSION within 30 days and let me know once this has been completed. Thank you,						Central		14235, 23757	Pipeline, Well

There are several locations of ground movement along the hill. One slide has gone down to the creek Segment 4 has partially repaired from break-up and still requires the road prism and ditch lines to be completed when ground conditions will allow. Culverts need to be cleaned out and maintained to ensure proper functioning. Segment 5, the 4 1/2 km hill has had slumping that has damaged the road. Repairs were being completed at the time of the inspection. It was observed that repairs are outside of the road allowance. 1. Please provide self disclosure for all work being currently completed out of the road allowance to the BCOGC. 2. Ensure that all work off right of way is properly permitted through the BCOGC. Reviewed grubbing activities around watercourse (WC) 8113 as well as the fish passage assessment with the perched culvert across the Wathl road with the Haisla liaison to explain how WC 8113 was previously identified as an S3 watercourse but with the fish passage blockage at the culvert it is currently designated as a S6 watercourse. Continued below the Wathl road following WC 8113 (changes to WC 2059 below road) and measured temporary work spaces (TWS) with respect to riparian reserve zones. Also inspected temporary bridge install on pipeline ROW across WC 2059. Excellent felling away from WC 2059 and removal of trees, no impact to watercourse noted. Also looked at TWS's around WC 727 and 728 with respect to riparian reserve zones. Issue has been referred back to BCOGC for clarification on permit condition 21.						South			CIAS, Pipeline, Road
