UPGRADE OF DRILLING WASTE DISPOSAL AND
DRILLING RESULTS APPLICATION COMPUTING INFRASTRUCTURE

Users of the Oil and Gas Commission's (Commission) Drilling Waste Disposal Application and / or Drilling Results application will be required to upgrade their Java Runtime Environment to the Sun JRE 1.6.x by January 22, 2010.

The Commission's *Drilling Waste Disposal* application and *Drilling Results* application are web deployed rich client interfaces. The Drilling Waste Disposal application allows users to enter and access information related to sumps and the disposal of drilling waste. The Drilling Results application allows users to enter and access information related to the drilling of oil and gas wells and to submit and view directional surveys.

Executing the Drilling Waste Disposal application and the Drilling Results application presently requires either Oracle Jinitiator 1.3.1.26 or Sun JRE 1.5.0.15 Java Runtime Environment.

In order to keep our systems current and using supported technologies, as well as providing support for clients with Windows Vista and Windows 7, we have upgraded our computer infrastructure which supports the Drilling Waste Disposal and the Drilling Results application. This upgrade will now require the end user's workstation to have Sun's JRE 1.6.x installed. Instructions for installing and configuring the JRE 1.6.x client can be found by logging on to the Commission's website at https://kowari.ogc.gov.bc.ca/generic_ogc/Ext_Accnt.Logon and following the link to Rich Client Applications (Well Drilling Results / Directional Survey Submission, Drilling Waste Disposal).

Users of the Commission's Drilling Waste Disposal Application and / or Drilling Results application will be required to upgrade their Java Runtime Environment to the Sun JRE 1.6.x by January 22, 2010.

Please note that users can begin using the upgraded infrastructure immediately. Both the upgraded infrastructure and the existing infrastructure will be available until January 22, 2010.

After installing Sun's JRE 1.6.x Java Runtime Environment users must access the Drilling Waste Disposal and Drilling Results applications at the following URLs:

Drilling Waste Disposal:

https://kowari.ogc.gov.bc.ca/forms/frmservlet?config=dwd_prod

Drilling Results:

https://kowari.ogc.gov.bc.ca/forms/frmservlet?config=wda_prod
