Quarterly Oil and Gas Water Management Summary

First Quarter 2017 (Jan - Mar)

PURPOSE

This *Quarterly Oil and Gas Water Use Summary* presents short-term water use and water licence data from the Q1 January to March 2017 period.

Previous annual water use reports and quarterly water use summaries are available on the BC Oil and Gas Commission website at <u>www.bcogc.ca</u>.

BC OIL AND GAS COMMISSION

he <u>BC Oil and Gas Commission</u> (Commission) is the provincial regulatory agency with responsibilities for regulating oil and gas activities in British Columbia, including exploration, development, pipeline transportation and reclamation.

The Commission's core services include reviewing and assessing applications for industry activity, consulting with First Nations, cooperating with partner agencies, and ensuring industry complies with provincial legislation and all regulatory requirements. The public interest is protected by ensuring public safety, respecting those affected by oil and gas activities, conserving the environment, and ensuring equitable participation in production.

The Commission is responsible for reviewing, assessing, and making decisions on water authorizations from both surface and subsurface water sources. The Commission has the expertise and tools to make informed water allocation decisions, and protecting and maintaining environmental and community water needs are its first priorities.

HOW WATER IS ACCESSED

here are different ways the oil and gas industry may access water in British Columbia. Some methods are managed through provincial legislation, including:

- Water licences issued under the Water Sustainability Act (WSA) for surface and groundwater. The Commission has staff designated as Regional Water Managers with authority for issuing and administering long-term water licences.
- Short-term surface water use or diversion approvals issued under Section 10 of the WSA. Short-term water use is administered by the Commission.
- Water source wells authorized by the Commission under the Oil and Gas Activities Act (OGAA). Water source wells are a specific type of well where the water withdrawn is intended for injection into an underground formation to enhance oil or natural gas recovery.
- **Flowback water** that returns to the surface after being injected for hydraulic fracturing.
- **Produced water** that flows to the surface as a by-product of oil and gas production.

The oil and gas industry can access water by means outside of regulatory oversight:

• **Private agreements** can be made with landowners or others who have a source of surface water supply such as a dugout or a groundwater well. In some cases, private agreements may require a Waterworks water licence under the WSA.

LONG-TERM WATER LICENCES AND USE

In the first quarter of 2017, there were 22 active oil and gas related water licences, representing 24 withdrawal locations, held by 11 companies (Table 1).

The total annual licenced water volume was 19,930,492 m³.

A total of 531,420 m³ of licenced water was reported as withdrawn in the first three months of the year by four companies (Table 1, 2).

A break-down of water licence allocation and use by OGC Water Management Basin is listed in Table 4.

	TABLE 1 - SUMMARY OF WATER LICENCE AND USE FOR OIL AND GAS ACTIVITIES FROM JANUARY TO MARCH 2017

SHORT-TERM WATER APPROVAL AND USE

During January to March of 2017, there were a total of 198 short-term water use approvals in place, representing 763 withdrawal locations, held by 44 companies (Table 3).

The total water volume associated with short-term approvals that were active on the last day of the quarter was 13,040,214 m³.

A total of 282,133 m³ was reported as withdrawn by oil and gas operators during the first quarter of 2017 (Table 3).

A break-down of short-term water approval and use by OGC Water Management Basin is listed in Table 4.

	UMMARY OF SHORT-TERM APPROVAL AND USE FOR OIL AND TIES FROM JANUARY TO MARCH 2017	Q1
	Companies with Active Approvals Active Approvals	44 198
SHORT- TERM	Approved Withdrawal locations	763
	Volume Available for Use (m³) Cumulative Volume Reported Withdrawn (m³)	13,040,214 282,133

Introduction of the

WATER SUSTAINABILITY ACT

he Water Sustainability Act (WSA) came into effect on Feb. 29, 2016, resulting in changes to surface water and groundwater allocation processes by the Commission. With the implementation of the WSA, the following regulations were created or revised and brought into force:

- Water Sustainability Regulation (replaces Water Regulation).
- Groundwater Protection Regulation (revised).
- Dam Safety Regulation (revised).
- Fees, Rentals and Charge Tariff Regulation (new).

The WSA modernizes the language of the Water Act and introduces a number of significant policy changes. Examples of key items that affect oil and gas activities include, but are not limited to:

- Water in a stream, and the percolation and flow of groundwater, are vested to the Crown.
- The regulatory scheme for the diversion and use of stream water is maintained and applied to both stream water and aquifer water.
- The rights of prior appropriation are retained First In Time, First In Right (FITFIR).
- The consideration of the environmental flow needs of a stream in licensing decisions is mandated for all water allocation decisions related

to streams, and to aquifers "reasonably likely" of being hydraulically connected to a stream.

- Explicit notification, objection and appeal rights for short-term water use approvals and changes in and about a stream are specified (appeals are to the Environmental Appeal Board).
- Deep groundwater is exempted from the requirement for a water licence.
- New powers are created to be applied when streams are at risk of falling or have fallen below their critical environmental flow thresholds, to modify the existing precedence of water use for the purpose of protecting the aquatic ecosystem of streams and aquifers

and essential domestic uses (i.e., FITFIR can be overridden).

Authority is provided to statutory decision makers to require environmental mitigation or offsetting when the diversion and use of water, or changes in and about a stream, are likely to have a significant adverse impact on the water quality, water quantity or aquatic ecosystem of a stream or aquifer.

As there are significant changes resulting from the implementation of the WSA, operators are strongly encouraged to review the document <u>Water Sustainability</u> <u>Act Applications Support for Operators</u>. This supplemental outlines material changes to application manuals,

processes and fees, short-term water use approvals, water licensing, and the aforementioned regulations.

The WSA and its regulations may be viewed online:
