Dear Ms. Syme,

**RE: OBSERVATION WELL TESTING AMENDMENT
OVV CRP HZ SUNRISE A4-24-78-17 (WA# 29764)
SUNRISE – PADDY-CADOTTE**

BC Oil and Gas Commission (Commission) staff have reviewed the July 7th, 2022 application from Ovintiv Canada ULC (Ovintiv) seeking an amendment to the required reservoir pressure testing frequency from annual to biennial for the observation well OVV CRP HZ Sunrise A4-24-78-17 (WA# 29764).

The Drilling and Production Regulation Part 1 defines an observation well as “a well or a portion of a well designated as an observation well under section 2 (7)”.

- 2 (7) An official may designate a well as an observation well if
- (a) the well is being used to monitor reservoir pressures or to obtain other formation information, and
 - (b) the well is not used to produce from, or inject or dispose of fluids into, a formation being monitored.

The subject well was drilled in 2015 and completed in the Paddy-Cadotte formation as a source well, but has never produced. A reservoir pressure test conducted in 2019 confirmed the well is in communication with the disposal wells in the Sunrise area, Paddy-Cadotte formation and the well was granted observation status on April 9th of 2021. Ovintiv intends to obtain pressure from these wells on the same schedule as their Paddy-Cadotte disposal wells, once every two years.

The Commission concurs that biennial tests will still provide sufficient reservoir pressure information, though this may change depending on future pressure data. Approval of observation status is hereby amended for OVV CRP HZ Sunrise A4-24-78-17 (WA #29764), for the Sunrise field, Paddy-Cadotte formation, with the following requirement;

- conduct one pressure test in the well once every 2 years.

All reservoir pressure tests conducted must be submitted to the Commission within 60 days of the end of the test.

Should you have any questions, please contact Logan Gray at (250) 419-4465 or the undersigned at (250) 419-4430.

Sincerely,

Ron Stefik, P.L. Eng.
Supervisor, Reservoir Engineering
