SUNRISE FIELD – PADDY-CADOTTE FORMATION**

The subject well was drilled and completed in the Paddy-Cadotte formation in March of 2018 for the purpose of disposal. The well was approved for an extended injectivity test in May of 2018 and was approved for continuous disposal in June of 2018. The well only disposed over a two month period, November and December of 2018, with a cumulative disposal volume of 18,400m³. On April 9th, 2021, the well was granted observation status to provide pressure monitoring in the area, which contains several other Ovintiv Paddy-Cadotte disposal wells. On August 18th, 2022, Ovintiv Canada ULC indicated to the Commission via email communication that they have no plans for future disposal and had no concerns with cancellation of the disposal approval.
